Yet whereas Machiavelli is troubled by the universal pacification that is the outcome of an "effectual" politics and regrets what is arguably its inevitability, Hobbes is an unqualified proponent of it – another symptom of his narrowing of Machiavelli's vibrant phenomenology of political existence to a mere set of authoritarian techniques. Hobbes is confident that men can be changed by his new psychology of power seeking, brought to trade in their dangerous ambitions for honor and glory in exchange for a guaranteed net gain in security and material well-being. **Although the Sovereign holds in reserve the emergency capacity to terrorize the contumacious, this is probably not (to amplify an earlier observation) Hobbes's preferred solution.** Indeed, the need for its constant use might prove that vainglorious ambition was not eradicable, calling into question Hobbes's core contention that the pursuit of honor is not strictly speaking or intrinsically a facet of human fulfillment at all, in contrast with what the classical political thinkers would have maintained. For Hobbes, the solid and lasting change in human conduct will come not primarily through terror and direct coercion, but through the steady and peaceable spread of "right reason," of enlightenment. Under the influence of the new psychology of appetitive desire, man will come to set aside martial strife and pride and, as Voltaire urged, to cultivate his garden. **When James Madison argues that the new American republic's checks and balances will allow "ambition to counter-act ambition," the Machiavellian surface of this observation is underlain by the Hobbesian premise that ambition will already have been largely channeled into the competition for success through the peaceful arts of commerce.** It is not that a Cato will counteract a Catiline but that a Bill Gates will counteract a Warren Buffet.

>
> X. For this cause reason will never call to its aid blind and fierce impulses, over whom she herself possesses no authority, and which she never can restrain **save by setting against them similar and equally powerful passions, [nisi pares illis similisque opposuerit] as for example, fear against anger, anger against sloth, greed against timidity. May virtue never come to such a pass, that reason should fly for aid to vices!** The mind can find no safe repose there, it must needs be shaken and tempest-tossed if it be safe only because of its own defects, if it cannot be brave without anger, diligent without greed, quiet without fear: such is the despotism under which a man must live if he becomes the slave of a passion. **Are you not ashamed to put virtues under the patronage of vices? Then, too, reason ceases to have any power if she can do nothing without passion, and begins to be equal and like unto passion;** for what difference is there between them if passion without reason be as rash as reason without passion is helpless? **They are both on the same level, if one cannot exist without the other. Yet who could endure that passion should be made equal to reason? [Par utrumque est, ubi esse alterum sine altero non potest. Quis autem sustineat adfectum exaequare rationi?]**

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA472#v=onepage&q&f=false

By denying the capacity of all varieties of honor seeking for moral or philosophical transcendence, Hobbes might at first blush appear to be more realistic than the ancients, given what we know from history and experience about how people really act when they claim to be motivated by honor – amply demonstrated, as Hobbes believed, by Thucydides' history of ancient Greece and by the political strife of his own England. **Yet Hobbes's reductionist account of honor seeking is for the ultimate purpose of suppressing or even eradicating honor seeking altogether. The notion that political ambition of the kind leading to empire and immortal glory could be extirpated from human beings arguably makes Hobbes ultimately much *more* optimistic than the ancients about the prospects for permanent peace** – optimistic to the point of being delusional himself, based on how people have actually acted since Hobbes's efforts to enlighten them about their own motive of self-preservation.

Hobbes's social contract requires that one honor-seeking man – the Sovereign – discipline his pleasures so as to crush methodically all the other proud ones. He can then allow the peaceable majority to prosper and live as they please in private life as long as they do not contest the Sovereign's absolute authority.

https://books.google.fi/books?id=6wweBQAAQBAJ&lpg=PP1&hl=fi&pg=PT550#v=onepage&q&f=false

For all that he rejected Hobbes's general philosophy, Thomas Barlow's *The original of kingly and ecclesiastical government* (1681) could occasionally echo *Leviathan*. **Rubbishing the idea that there could be such a thing as a free state, or republic,** Barlow commented that 'I could find the word *Libertas*, fairly written over their Gates, but within their Walls the greatest Bondage and arbitrary power that could be possibly be imagined in any part of the world, but no Liberty at all that I could find, but only some few there were, who had liberty to do what they would with all the rest.' **The passage paraphrases Hobbes's disparaging remarks about Lucca in chapter 21 of *Leviathan*. Barlow's lesson is similarly Hobbesian in its anti-republicanism: when it comes to liberty, it is not self-government that matters, but rather the extent to which you are left alone.**195

Mankind is inclin'd to vice, and the way to virtue is so hard, that it wants encouragement; but when all honours, advantages and preferments are given to vice, and despised virtue finds no other reward than hatred, persecution, and death, there are few who will follow it.
…

The first fruit was such an entire degeneracy from all good, that Rome may be justly said never to have produced a brave man since the first age of her slavery. Germanicus and Corbulo were born *expirante libertate;*3 and the recompence they received did so little encourage others to follow their example, that none have been found in any degree like to them; and those of the most noble families applied themselves to sleep, laziness, and luxury, that they might not be suspected to be better than their masters. **Thrasea, Soranus, and Helvidius were worthy men, who resolved to persist in their integrity, tho they should die for it; but that was the only thing that made them eminent; for they were of unknown families, not Romans by birth, nor ever employ'd in war:** And those emperors who did arrive to any degree of virtue, were Spaniards, Gauls, Africans, Thracians, and of all nations, except Romans.

Those who have estates at a rack rent, have no dependents. Their tenants, when they have paid what is agreed, owe them nothing; and knowing they shall be turn'd out of their tenements, as soon as any other will give a little more, **they look upon their lords as men who receive more from them than they confer upon them. This dependence being lost, the lords have only more money to spend or lay up than others, but no command of men; and can therefore neither protect the weak, nor curb the insolent. By this means all things have been brought into the hands of the king and the commoners,** and there is nothing left to cement them, and to maintain the union. The perpetual jarrings we hear every day; the division of the nation into such factions as threaten us with ruin, and all the disorders that we see or fear, are the effects of this rupture. These things are not to be imputed to our original constitutions, but to those who have subverted them: **And if they who by corrupting, changing, enervating and annihilating the nobility, which was the principal support of the ancient regular monarchy, have driven those who are truly noblemen into the same interest and name with the commons,** and by that means increased a party which never was,

and I think never can be united to the court, they are to answer for the consequences; and if they perish, their destruction is from themselves.

> Though proscribed and a fugitive, [the Earl of Argyll] was still, in some sense, the most powerful subject in the British dominions. In wealth, even before his attainder, he was probably inferior, not only to the great English nobles, but to some of the opulent esquires of Kent and Norfolk. **But his patriarchal authority, an authority which no wealth could give and which no attainder could take away, made him, as a leader of an insurrection, truly formidable. No southern lord could feel any confidence that, if he ventured to resist the government, even his own gamekeepers and huntsmen would stand by him.** An Earl of Bedford, an Earl of Devonshire, could not engage to bring ten men into the field. Mac Callum More, penniless and deprived of his earldom, might at any moment raise a serious civil war. He had only to show himself on the coast of Lorn; and an army would, in a few days, gather round him.

> Only radicals embraced *le tolérantisme*, then, as did Morelly, in 1751, with the added admonition that it should be regarded as an essentially political rather than theological construct, something which has to be imposed, against their wishes, on the churches and sustained by the secular authority.94 **For every church or sect in Europe which in his time endorsed toleration, he contended, would speak very differently were they not obliged by present circumstances to embrace that principle.**

http://www.jacobite.ca/documents/16870404.htm

We cannot but heartily wish, as it will easily be believed, that all the people of our dominions were members of the Catholic Church. **Yet we humbly thank Almighty God, it is and has of long time been our constant sense and opinion (which upon divers occasions we have declared) that conscience ought not to be constrained nor people forced in matters of mere religion;** it has ever been directly contrary to our inclination, as we think it is to the interest of government, which it destroys by spoiling trade, depopulating countries, and discouraging strangers, and finally, that it never obtained the end for which it was employed.
...

We do likewise declare, that it is our royal will and pleasure, that from henceforth the execution of all and all manner of penal laws in matters ecclesiastical, **for not coming to church, or not receiving the Sacrament, or for any other nonconformity to the religion established, or for by reason of the exercise of religion in any manner whatsoever,** be immediately suspended; and the further execution of the said penal laws and every of them is hereby suspended.

https://www.gutenberg.org/files/1349/1349-h/1349-h.htm#link2HCH0018

From the Nonconformist point of view, Peter had very strong claims to be considered Antichrist. He had none of the staid, pious demeanour of the old Tsars, and showed no respect for many things which were venerated by the people. He ate, drank, and habitually associated with heretics, spoke their language, wore their costume, chose from among them his most intimate friends, and favoured them more than his own people. **Imagine the horror and commotion which would be produced among pious Catholics if the Pope should some day appear in the costume of the Grand Turk, and should choose Pashas as his chief counsellors!**
...

The Nonconformists were constantly convicted of political disaffection—especially of "insulting the Imperial Majesty"—and were accordingly flogged, tortured, and beheaded without mercy. But when Peter had succeeded in putting down all armed opposition, and found that the movement was no longer dangerous for the throne, he adopted a policy more in accordance with his personal character. Whether he had himself any religious belief whatever may be doubted; certainly he had not a spark of religious fanaticism in his nature. Exclusively occupied with secular concerns, **he took no interest in subtle questions of religious ceremonial,** and was profoundly indifferent as to how his subjects prayed and crossed themselves, provided they obeyed his orders in worldly matters and paid their taxes regularly. **As soon, therefore, as political considerations admitted of clemency, he stopped the persecutions,** and at last, in 1714, issued ukazes to the effect that all Dissenters might live unmolested, provided they inscribed themselves in the official registers and paid a double poll-tax. Somewhat later they were allowed to practise freely all their old rites and customs, on condition of paying certain fines.

> After all, I am much inclined, for the honour of human nature, to believe, that all this doctrine concerning the divine right of kings was, at first, encouraged and cherished by many, from motives, mistaken certainly, but pardonable, and even laudable, and that it was intended not so much to introduce the tyranny of princes, as to form a barrier against the tyranny of priests.
> …
>
> It is not improbable, that, in this disagreeable predicament, the divine right of kings was considered as the only principle, which could be opposed to the claims of the papal throne; and as the only means, which could preserve the civil, from being swallowed by the ecclesiastical powers.
>
> This conjecture receives a degree of probability from a fact, which is mentioned in the history of France.
>
> **In a general assembly of the states of the kingdom, it was proposed to canonize this position—"that kings derive their authority immediately from God." That such a proposition was made in an assembly of the states, the most popular body known in the kingdom, will, no doubt, occasion surprise. This surprise will be increased, when it is mentioned, that the proposition was patronized by the most popular part of that assembly: it was the third estate, which wished to pass it into a law.** But every thing is naturally and easily accounted for, when it is mentioned further, that the principal object, which the third estate had in view by this measure, was to secure the sovereign authority from the detestable maxims of those, who made it depend upon the pope, by giving him a power of absolving subjects from their oath of allegiance, and authorizing those who assassinated their princes as hereticks.n

https://archive.org/details/enlightenmentcon0000isra/page/270/mode/2up?view=theater

If the Gospel maxim 'Contrains-les d'entrer' justifies in enforcing ecclesiastically sanctioned religious uniformity on their subjects, then it would be wholly inconsistent, declares Bayle, to deny ecclesiastics and common people the right, and also the obligation, to compel kings always to submit to the requirements of religion and the church. It is absurd, he insists, for theologians to maintain that Jesus Christ decrees coercion for ordinary individuals, and then refuse to allow that this applies also to kings, denying that 'l'Église ait droit de les déposer';37 and while Catholic apologists try to circumvent such blatant inconsistency by saying God expressly decrees that 'c'est par lui que les rois règnent,' in turbulent times, like the French Wars of Religion, this rule is routinely ignored. Nor, once it is established that individuals must be compelled to submit to theological requirements, argues Bayle, can there be the slightest prospect of political stability for anyone: **it is clear and necessary consequence of the position he seeks to refute, he contends, to spare neither crowned heads, 'ni rien qui soit au monde, quand il s'agit d'avancer la prospérité de la religion.'**38

> "But, sir, what then becomes of what Father Petau2 himself is obliged to own, in the preface to his Public Penance, 'that the holy fathers, doctors, and councils of the Church agree in holding it as a settled point, that the penance preparatory to the eucharist must be genuine, constant, resolute, and not languid and sluggish, or subject to after-thoughts and relapses?'"
>
> "Don't you observe," replied the monk, **"that Father Petau is speaking of the *ancient Church?* But all that is now *so little in season*, to use a common saying of our doctors, that, according to Father Bauny, the reverse is the only true view of the matter.**

…

Rather like the Arminians and Socinians he professes to scorn, but totally unlike the orthodox Calvinists he claims to align with, Bayle entirely rejects the common assumption that plurality of sects endangers the body politic, maintaining that society actually becomes less divisive thereby and more stable. If plurality of creeds often foments strife this occurs because each church refuses to countenance the others and seeks to impose its doctrine by force: in a word discord and conflict 'vient non pas de la tolerance, mais de la non-tolérance.'39 **Where Bayle especially differs from Locke, Le Clerc, and the Remonstrants, and indeed also Montesquieu, is in his contention that all organized churches persecute when they can and, hence, that toleration must and can only be a political construct enforced by the secularized state. Toleration, consequently, always finds itself pitted against popular opinion which Bayle deems irredeemably theological and hence inherently intolerant.**

…

In his *Défense de L'Esprit des lois* (1750), directly contradicting Bayle's thesis that a genuinely Christian society surrounded by non-Christian or insincerely Christian neighbours would not be viable, indeed, being politically and militarily weakened by its Christian ethic, would eventually be overwhelmed, Montesquieu contends that the *principes de christianisme* (a term of Le Clerc's) would, on the contrary, prove more viable and ultimately stronger than the mere worldly moralities of non-Christian republics and monarchies.43

>
> **In your writings beware of falling into an error similar to that of a celebrated author, who thinks he is serving the cause of monarchy when describing religion as a fruitless ally. How is it possible that he should not better feel the consequences of that sarcastic sentence borrowed from Bayle and Rousseau,** he who, in the midst of the most pressing and most apposite exhortations to princes to unite and combine against Jacobinism, forgets himself so

> far as to say, “In a similar crisis, the Romans would have flown to arms resolved to conquer or die, *the primitive Christians would have sung hymns to Providence and rushed to martyrdom*; their successors neither die nor fight.”3

…

Quintessentially Baylean is his claim that sovereigns need unlimited authority in the practical sphere of action, to curb crime and suppress those who harass their neighbours and destroy public peace ‘où chacun doit être sous la majesté des lois,’ while simultaneously proclaiming the sovereign’s total lack of legitimate sway in the sphere of private conscience, morality, and belief.48 Here indeed is the problematic crux on which Bayle’s political thought hinges. For if some features of his system evince radical traits – especially his sweeping toleration, subordination of theology to philosophy, and deployment of atheism – his insistence on the need for unrestricted monarchy in the public sphere, with a free hand to suppress all disorder, unruliness, and opposition, at first sight look far more Hobbesian than radical.49

…

Bayle *does* admittedly consider unrestricted monarchy the safest and most reliable form of political organization and shows no interest at all, unlike Boulainvilliers and Montesquieu, in devising, or even acknowledging the need for, institutionalized constitutional constraints on monarchical power. Indeed, where Montesquieu felt a deep aversion to Louis XIV’s policy of crippling or eliminating ‘intermediary powers,’ like the *parlements* and the remaining French provincial estates, Bayle was positively averse to schemes for applying limits to royal authority.50 Yet he was not an opponent, as Jurieu maintained, of the ‘Glorious Revolution’ as such. If he was not, like Boulainvilliers and Montesquieu, an enthusiast for the post-Glorious Revolution ‘British model,’ he nonetheless demonstrated his loyalty to the States General and William III and did not criticize the Dutch intervention in Britain as distinct from the Huguenot resort to arms against Louis XIV. **Indeed, though not unsympathetic to (the tolerant) James II,**51 **his remarks about ‘suppositious’ royal heirs in the article on François I of France in the *Dictionnaire* damaged the Jacobite cause.** For Bayle was no conventional champion of ‘l’absolutisme monarchique’;52 in particular, he was never a stickler for the hereditary principle, much less ‘divine right’ or social hierarchy.53

Rather Bayle dreads the disruptive consequences of ‘constitutions de gouvernement,’ **fearing that division of legislative power ‘entre un prince et un corps de juges’ only hinders firm government and obstructs law-making, with judges constantly thwarting what the sovereign intends.** He repeatedly cites the disastrous consequences of the French *parlements*’ interventions during the Wars of Religion when judges and office-holders sought to curtail royal authority, manipulate administration of justice, and block royal edicts.54 Denying the *parlements* should form a constitutional check on royal power, and supporting absolutist steps to reduce their powers, **Bayle argued that France had never, before or since, been so sunk in disorder and anarchy as during the reigns of Charles IX and Henri III when the crown was, for a time, effectively subjected to constitutional restraints.**55

Bayle’s absolutism, unlike the clerically sanctioned variety propagated at the courts of Paris, Madrid, Lisbon, and Vienna, was thus a purely secular, essentially Bodinian, construct devoid of confessional content.

…

Monarchy, holds Bayle, should be absolute but only in what he deems the public sphere. His absolutism encompasses no right to invade the private world of conscience, belief, thought, individual property, or personal lifestyle, is purely functional rather than legitimist, and has no relevance to the sphere of established republics like the United Provinces, Genoa, Lucca, or Venice. **For what Bayle is really urging is not monarchical absolutism *per se* but the undivided sovereignty and supremacy of the secular state,** however constituted, over lesser authorities, factions, and especially (but not only) all types of brigandage, lawlessness, factionalism, aristocratic influence, and ecclesiastical power.57

…

Even so, he judges republics and republicanism inadvisable in the main.59 While a republican constitution like that of the Dutch or Venetians can function well in a particular context, and remain stable, he seriously doubts, like Montesquieu later, whether republican governments can attain more generally the orderliness and freedom from faction requisite for stability. **Here, for once, agreeing with Le Clerc, who thought the ancient republics or Athens and Rome offer no useful model to posterity, Bayle deems self-rule by the people in principle no better, and usually worse, than the sway of an absolute monarch.**60

The ancient Greek democratic republics Bayle, like Hobbes, reckoned a disaster, though this was less the fault of the Greeks, in his view, than democracy as such.61 **In his *Dictionnaire* article on Julius Caesar’s assassin Marcus Junius Brutus, ‘le plus grand républicain que l’on vit jamais,’ Bayle agrees with Dio Cassius that experience shows monarchy to be preferable to democratic**

government, classical history proving that cities and individuals encounter fewer difficulties and adversities 'sous l'authorité d'un seul, que sous le gouvernement populaire.' **Although a few societies have prospered under a democratic government, he adds, that was only until they gained a certain 'point de grandeur, et de puissance,' after which they invariably sank into internecine conflict and chaos owing to envy, faction, and ambition.** Once Rome's power attained a certain point it became impossible that her inhabitants should not abandon the bridle on their greed and passions 'au milieu de la liberté républicaine.'62

Where Montesquieu's political ideal was that of limited monarchy, Bayle was less a defender of monarchical absolutism in the usual sense, and still less of 'divine right,' than a supporter of unified, undivided, and uncompromisingly secular sovereignty, preferably monarchical, but, where it works, also republican.63 **This might still seem to leave him without radical credentials in politics beyond toleration and individual liberty. But there is a further dimension to his radicalism:** for unlike Montesquieu, but like Vico contemplating the *conditio humana* from the standpoint of Naples' unruly history, Bayle sees monarchy as more than just the safest path to a secure and orderly existence for subjects, the highest political good. He envisages it also as the aptest way to establish equality before the law and eliminate privilege, baronial factionalism, and society's disruption by nobles. **In Bayle, like Vico, absolutism becomes a levelling instrument invaluable for eradicating factional, aristocratic, and especially ecclesiastical interference with legislation, administration, and enforcement of the laws. It is for this reason especially that mixed monarchy could hold no attraction for him.**

Monarchy then, is esteemed by Bayle partly as a tool for disarming noble factions which he, like Vico, considers incorrigibly ambitious, antisocial, and violent. To demonstrate how easily constitutional limits on monarchy can be ruinously exploited, at the expense of everyone else (but the dominant clergy), by a powerfully entrenched nobility, or corrupt legal aristocracy, to further ther own power and privileges, Bayle (like Vico and de Hooghe) cites the case of Poland, Europe's most dismal fiasco, to his mind, where the nobility, through opposing royal authority, had virtually emasculated the state and its institutions. What could be more appalling or despicable, he asks, than the demise of a formerly flourishing haven of coexistence and toleration through noble arrogance allied with ecclesiastical ambition and popular credulity, manipulating intolerance and office-holders' negligence?64

Bayle, then, offers nothing whatever of that partiality for nobility, or checks, limiting agencies, and intermediary institutions, so typical of Boulainvilliers and Montesquieu. Quite the contrary, Bayle deems all hierarchical privilege and priority, noble, ecclesiastical, or judicial, a constant menace to both individual liberty and everyone's tranquillity.65
…

Bayle, much as he resists all theological involvement in government, denies any right of any segment of society to oppose the ruler in the name of popular sovereignty.67 The least suggestion of popular participation fills him with dread, the people in his eyes being irretrievably sunk in superstition – and hence devoid of rationality. In his politics, the menace of insurrection, demagoguery, and fanaticism always outweigh that of tyranny, being ineradicably rooted in subservience to theological notions: **what would have happened to Europe in the sixteenth century, he asks rhetorically, if the fanatic Munzer 'eût pu gagner deux batailles?'**68
…

Where Spinoza's philosophy teaches democratic republicanism, and the core radical tradition in the eighteenth century was firmly republican and democratic, especially after 1750, explicitly in Mably, Morelly, and Boulanger, and in Diderot at least in underlying tendency, Bayle rejects democratic republicanism as a plausible option because he thinks the common people, for all the efforts of philosophers, can never be emancipated from the sway of credulity or subservience to religious demagogues. While he envisaged philosophy – as the project of the *Dictionnaire* proclaims – as the chief engine of 'enlightenment' and our best hope if men are ever to be freed from the tyranny of superstition, and hence be civilized and humanized, **he evinces nevertheless unmitigated pessimism regarding the 'multitude.'**69 The deep emotion he invests in the quarrels over *consensus gentium* and whether idolatrous paganism is worse than 'atheism' was rooted ultimately in his insuperable abhorrence of popular zeal as 'une peste très-dangereuse aux societez.'70

Constitutional doctrines locating sovereignty in the people, and proclaiming the people's right to resist tyrannical kings, like those of the *Monarchomachi*, **strike Bayle as serving no purpose other than encouraging malcontent nobles and clergy to scheme,** plot rebellion, and take up arms against kings. **Such doctrines, he thinks, foment a basically theological view of politics.**71 What he conceives as the people's ingrained proneness to be manipulated by nobles, churchmen, magistrates, or demagogues urging the dictates of religion emerges with brutal clarity in the article on 'Loyola' in the *Dictionnaire* where he stresses the need to counter what he sees as a constant peril. **In France, it was especially the Jesuits, in his view, who proclaim the notion that royal authority 'est inférieure à**

celle du people' and that kings may justifiably be deposed by the people where they, or rather their religious instructors, consider this necessary.72

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA17#v=onepage&q&f=false

Contrary to Roche, Lilti, Citton, Negri, and here also Borghero, "Spinozism" *was* broadly coherent and meaningful as a concept and tradition, albeit not infrequently detached from Spinoza's political and social thought so that, in practice, one could, **like Boulainvilliers, La Mettrie, or Goethe,** be a "Spinozist" in important respects, and in Boulainvilliers' case a key figure of the clandestine literature, without strictly being part of the Radical Enlightenment at all. **Laurent Bove is very likely correct in arguing that Boulainvilliers' "spinozisme" was confined to his attack on religion, and not reflected in his political and social writing to the extent I earlier suggested;** still, this does not obviate the main reason for including Boulainvilliers as a notable contributor to the rise of the Radical Enlightenment given his pivotal role as an underground transmitter of Spinozist texts and concepts in France.45

https://archive.org/details/enlightenmentcon0000isra/page/282/mode/2up?view=theater

Cultivating the right attitudes and *moeurs* enabled the French monarchy to flourish during the Middle Ages, which he conceived as a kind of golden age, **prompting Voltaire later to ridicule him for portraying French feudalism as 'le chef-d'oeuvre de l'esprit humain.'**105 Since the late fifteenth century (i.e. the reign of Louis XI), however, a combination of adverse developments, argues Boulainvilliers, had lowered the standing and prestige of the *noblesse*. In the sixteenth century, Italian influence had further sapped French aristocratic values, by introducing deplorable courtly servility and flattery, effeminate refinement, and also the study of Greek political literature. **Since Frenchmen dwelt in a monarchy completely opposed 'à l'esprit républicain et aux maximes des Grecs et des anciens Romains,'**106 **there was, he claims (echoing Hobbes), much that was highly damaging in the elite being educated in Latin and Greek texts. His antipathy to what today we call the Renaissance extended also to Machiavelli, a theorist less of republicanism, in his view, than of base tyranny and moral irresponsibility.**107

https://www.newadvent.org/cathen/02713a.htm

Now, what caused Frenchmen or nobles to be dispossessed of their rights? **First, the Crusades. To defray the expenses of these expeditions many noblemen either mortgaged or sold their fees and wealthy plebeians,** who were not noble, but, according to Boulainvilliers, "ignoble", thus became the owners of fees and, by introducing themselves into the nobility, corrupted it. Next came the ignorance of the lords or owners. **The ignorance and negligence of the lords rendering them generally incompetent to discharge the functions that rightfully belonged to them, the principal of which was to dispense justice in their fees, they soon transferred all their judicial authority to clerks or jurists.** Thanks to the dignity of their role, these clerks or jurists soon became as important as the lords and thus originated the *noblesse de la robe* (nobility of the long robe) which Boulainvilliers considers a monstrosity.

Finally came the policy of the Capetian Kings which Boulainvilliers regards as chiefly instrumental in ruining feudalism and therefore the French nation. This policy consisted in adding the great fees to the royal domain by reason of conquest, purchase, or marriage, with the result that the Kings of France assumed an importance theretofore unknown to them, and which soon became entirely disproportionate; **while the lords, fascinated by the brilliancy of the royal courts, instead of remaining the peers of these kings, became their servants.** The kings diminished the power of the French nobles still more by favouring the emancipation of the communes and raising to the ranks of the nobility plebeians whom they entrusted with high offices to which they had no right. **Moreover, they admitted to seats in the States General, which should have been composed exclusively of representatives of the French, delegates from among the lower clergy and liberated serfs,** and of course this arbitrary measure completed the overthrow of the nobility. Such then, is the teaching set forth in Boulainvilliers's three most important works: 'Histoire de l'ancien gouvernement de France", "Lettres sur les parlements ou Etats-Généraux", and "Essais sur la noblesse" which, taken as a whole, constitute an earnest plea for feudalism against monarchism. These works written by Boulainvilliers for his grandchildren, did not appear until after his death.

https://books.google.fi/books?id=VJ1WDwAAQBAJ&lpg=PP1&hl=fi&pg=PA53#v=onepage&q&f=false

Long before Rousseau's *First Discourse*, and long before the rise of the sentimental novel in the 1740s, Henri de Boulainvilliers placed a premium on authenticity. Like other noble reformers associated with the Burgundy circle – the group of advisors who, until 1712, sought to prepare the ill-fated Duke of Burgundy to take over as monarch one day – **Boulainvilliers was motivated by a strong distaste for the posturing, artificiality, and calculating ambition that characterized the "court society" of Louis XIV** (here the phrase court society is employed in the way intended by Norbert Elias, referring not only to the gilded halls of Versailles proper but to the competitive quest for status that marked relations between all who were in or near elite circles in the late seventeenth and early eighteenth centuries.)3 **The proliferation of what Boulainvilliers took to be false markers of**

status implanted in this proud Norman an obsession with unmasking impostors. The determination to separate the true from the false nobles led to a critique of modern social hierarchies that was central to his attack on despotism.
…

“At the start,” Boulainvilliers observed in the *History of the Former Government of France* that he wrote between 1709 and 1711, “the Franks were all free and perfectly equal and independent.”8 He noted that all mature males carried arms in anticipation of the next battle, and this rough warrior equality shaped the political structure of the Frankish people, since these “lovers of liberty” took for granted their right to elect their kings and thereby “avoid oppression.”9

>
> FRÉRET, NICOLAS (1688-1749), French scholar, was born at Paris on the 15th of February 1688. His father was *procureur* to the parlement of Paris, and destined him to the profession of the law.
> …
>
> He was hardly twenty-six years of age when he was admitted as pupil to the Academy of Inscriptions. One of the first memoirs which he read was a learned and critical discourse, *Sur l’origine des Francs* (1714). **He maintained that the Franks were a league of South German tribes and not, according to the legend then almost universally received, a nation of free men deriving from Greece or Troy, who had kept their civilization intact in the heart of a barbarous country. These sensible views excited great indignation in the Abbé Vertot, who denounced Fréret to the government as a libeller of the monarchy.** A *lettre de cachet* was issued, and Fréret was sent to the Bastille.

…

When service ceased to be a personal duty and feudal levies were supplemented or supplanted by mercenaries and commoners, noble status came to be regarded as the equivalent of “exemption from the *taille*.” Social superiority, in other words, was only the expression of a legal privilege granted and guaranteed by the crown, and not a signifier of inborn qualities or innate moral rectitude.19
…

A turning point had come with the Italian wars and the introduction of Italian manners at the royal court which, “under the pretext of a greater politeness,” led French nobles to abandon many of their ancient customs – keeping their heads proudly covered even in the presence of the king, for example – and to become “great imitators” of the Italians.22 Then, in the course of the reign of Francis I, “the magnificence of dress, buildings, homes, [and] retinue, gave France a new face.” Nobles left the countryside and “struggled in every which way to win the favor of kings or those who surrounded them.” **An essential merit grounded in distinguished birth was no longer sufficient to ensure the success of the young noble scion. It now became necessary to add “charm, and next came accommodation, which soon degenerated into servility and the loss of self [*oubly de soy mesme*].”** Bending to the new if generally unspoken requirements of courtly protocol, the nobility had “embraced the shadows of court and favor and forgotten its true dignity.”23 The reigns of Henry II and Henry III “were the reigns of favorites, that is to say, of factions and of artifice.”24 Building on the precedent of Francis I, who had introduced the sale of offices to help pay for his wars, his successors created new ennobling offices to sell, and distributed letters of ennoblement to “an infinity of families” that were wealthy and happy for the chance to raise themselves above the common herd.25

Boulainvilliers considered it no accident that it was also in the sixteenth century, at the time of the Estates-General meeting of 1576, that princes of the blood were accorded a special place, elevated above the rest of the nobility by virtue of their placement in the line of royal succession.26 Cultivating a thirst for rank and distinction, and multiplying the means for claiming such distinctions, had been a divide-and-conquer technique of government used by kings since the late fifteenth century. Already they had erected “duchies and peerages to satisfy the most wealthy and favored courtiers, with no attention given to their birth.” New orders of chivalry had also been founded – first the Order of St. Michael under Louis XI in 1469, then the Order of the Holy Ghost under Henry III in 1578 – and a range of offices were created, all for the purpose of “dividing the nobility and lowering it [in importance] beneath courtly favors.” As a result of these developments, Boulainvilliers lamented, “the title of gentleman [*gentilhomme*] has been debased, so much so that it is the least praiseworthy title currently in use among us.” The creation of “offices of governor, lieutenant general, and an infinity of other posts of all sorts, **all proceeding alongside the sale of nobility of which has, over the past hundred years, assimilated twenty thousand commoner families into the nobility, without even counting those who have acquired the status through the possession of certain positions in the judiciary or the chancelleries,** all of this, I say, has increasingly diminished and confused the ancient nobility, leaving it no real grandeur except through the power of the sovereign, who confers dignities, or through money without which virtue has no standing.”27 Ever since the sixteenth century,

“history has shown us nothing but extreme confusion among all the members of the state,” and the chief beneficiary of this confusion had been **a monarchy that – <u>like that of the Turks</u> – used the unregulated mixing of the blood and status of its subjects to extend its authority and undercut any opposition to its designs.**28

> https://quod.lib.umich.edu/e/eebo/A32922.0001.001?rgn=main;view=fulltext
>
> And again, when ever the King shall please to take his Progresse into the Country, let him so contrive his *Gists,* as that He may lye upon these Barons; and so under the pretext of doing them Honour, may force them to be at a great charge in entertaining Him. **Let Him give a willing ear to the People, when they make any complaints of them.** Neither ought *Nobility* to be higher prized by the King, then *Virtue;* which is a Rule that deserves to be observed above all the rest. Besides, in all the Metropolian Cities in his several Kingdomes, as at *Lisbon, Toledo, Antwerp,* and the rest, as well in this, as in the other Hemisphere, **the King under pretext of doing them honours may constitute, in each of them, five, eight, or ten Ranks, or Orders of Barons; such as are at *Naples*;** that when they are to treat of any Affairs of State, each of them may go into his own Order and Place. **For being thus divided, they will never be able to determine any thing that shall be Prejudicial to the King,** by reason of the Ambition that will be amongst them, and so, where there shall be three Lawes perhaps made, to the Kings prejudice, there will alwaies be eight made for his advantage. **<u>And the common People also may in like manner, be distributed into their several *Classes* and Ranks.</u> And this is much the more honourable, and secure way, then to cause divisions, and sidings into parties among them, which is the counsel of some Writers, who have a Saying, *Divide, & impera*: Cause Divisions among thy subjects, and thou shalt rule them well enough.**

…

“Thus one attacked the nobility by the head, by establishing, in violation of ancient usage, distinctions and ranks for those who were richest or who were allied with or related to kings. And thus one attacked the nobility by the tail, by securing entry into it for popular families [that is, common families] lately risen from servitude.”30

…

This concern for the nature of the hierarchy constructed *within* the nobility explains many of Boulainvilliers’s obsessions in the first years of the eighteenth century. Louis XIV’s legitimization of his bastard children and the anxieties this aroused among princes and other titled nobles; the new pretensions of the parlements in the wake of the establishment of the Regency government, which the parlement of Paris had validated by rescinding the late king’s last will and testament; the “affaire du bonnet” that pitted magistrates of the parlements against the dukes and peers of the realm, who claimed that the judges should doff their caps to them in a sign of deference whenever they asked their opinions and counsel in *lit de justice* ceremonies; the continuing sale of ennobling offices and letters of nobility during the financially ruinous War of the Spanish Succession; for Boulainvilliers, all of these controversies involved the unauthorized fabrication of “masks of virtue” – artificial strata of nobility – that resulted in “iniquity and injustice” for the nation as a whole.31 The proliferation of legal titles and distinctions that came from royal favor or caprice or money amounted to nothing more than a set of “accidental dignities” whose existence had nearly suffocated the qualities of soul that characterized the originally free and independent Franks. **“True and incommunicable nobility” – that simple but natural distinction that came from the ancient nobility’s rights of birth – “subsists always,” but pride in the shared equality that arose from inborn distinction had to be rekindled if the nation was to have any chance to turn back the tide of despotism.**32

…

Repeating one of the central arguments of Boulainvilliers, Alès de Corbet insisted that nobility existed independent of any “positive law” and that monarchs lacked the authority to create new nobles.33 **Tellingly, however, both the abbé, in his *Letters on the origin of the French Nobility*, and Alès de Corbet, in his *Origin of the French Nobility*, emphasized the dignity and value of all subjects of the French crown – whether noble or common.**

…

Alès de Corbet, more consistent with the vision of Boulainvilliers, sought to preserve distinctions that rightfully belonged to the nobility alone. He too, however, eagerly affirmed the worth of those outside the nobility. **“<u>I am far from regarding other citizens as having descended from vile blood, still soiled, so to speak, by the legacy of slavery.</u> … I wish to demonstrate [in this history] that a great number of families, not only among the high bourgeoisie but even among the lower sort, have enjoyed the advantages of liberty since time immemorial, and that several shared with the most illustrious families the honor of having shared the blood not only of Roman and Gaulish nobles but even that of the brave Franks, their conquerors.”**36

…

Alès de Corbet wanted to affirm more than the legal and historical reality of status differences, however. He placed great emphasis on the moral value and the moral function of such status differences, which, he

acknowledged, arose against a background of natural equality between men. **(He even quoted Rousseau at length on natural equality and its corollary – the inevitable development of social inequalities.)**43 His main point about the establishment of inequalities, one resonant with the political currents of the 1760s, was that noble status had always reflected and must continue to reflect the collective will of the people. **Status must follow, but never precede, a reputation for glorious actions and generous inclinations. (In this respect, Alès de Corbet was no less insistent than Mignot de Bussy that aristocracy must have a meritocratic basis, with the key merits embedded in the family lineage through the force of habit.)** Because of the people's role in ensuring the legitimacy of noble status, Alès de Corbet, like Boulainvilliers before him, contested the monarchy's claim that it had the authority to create nobles and to grant nobility in exchange for money or the promise of future services. **True nobility is created only when moral qualities have become such an unconscious habit in some families that the posterity of those families comes to be recognized, respected, and honored by their fellow citizens.**
…

Alès de Corbet envisioned a nobility whose existence, and whose privileges, would be accepted and remain consonant with "public opinion" **(in this argument one hears an echo of Boulainvilliers's assertion that royal authority among the early Franks only subsisted with the continued support of the nation assembled on the Champ de Mars).**
…

"Ennoblement thus happens to men already distinguished by their virtue and brilliant actions; at that moment the Prince, who is nothing more than the organ of the public's voice, moves to ensure that their posterity will enjoy both the privileges and the consideration due to nobility."45
…

By the time Alès de Corbet wrote his "Origins of the French Nobility" in 1766, in other words, the cultural, intellectual, and political climate of France was far different from that prevailing under the waning years of Louis XIV. Boulainvilliers's early eighteenth-century dream of mitigating royal despotism through the mechanism of a revitalized and newly self-conscious nobility had largely faded from view. Talk of rights and liberties and of the history of the French nation resonated in circles much wider and more socially heterogeneous than those Boulainvilliers had addressed.
…

As is well known, between the meeting of the Assembly of Notables in February 1787, and the late summer of 1788, prominent nobles had taken the lead in the fight against Louis XVI's "ministerial despotism." In resisting the broad reform agendas of first Calonne and then Brienne, and in calling on the king to convene an Estates-General, nobles had effectively performed, whether by design or by force of circumstance, the role assigned to them in the political imaginations of both Boulainvilliers and Montesquieu – the role of bulwark against despotism. In so doing, they had earned a certain amount of good will in the process. **But when representatives and self-appointed spokespersons for the second estate made the fateful decision to defend corporate prerogatives while they simultaneously championed the nation's rights in the fall of 1788, a newly politicized public seized on this apparent contradiction as a sign of fecklessness and insincerity and moved opinion decisively against the corporate claims of the second estate.**49 The reaction inspired by the intransigence of prominent aristocrats – a reaction that included the abbé Sieyès's influential *What is the Third Estate?* – set the stage for the Third Estate's final appropriation of power in the spring of 1789.
…

The engineer, essayist, and devoted Jacobin Jacques-Antoine Dulaure would later crystallize this key contradiction within aristocratic thinking by using imagery that evoked the Frankish fantasies of Boulainvilliers himself. **In his *Critical History of the Nobility* in 1790, written in the wake of the abolition of nobility in June of that year, Dulaure observed that the very existence of hereditary nobility represented a "crime against the rights of that part of the nation deprived of it." Hereditary nobility, he wrote scathingly, had emerged from a "cesspool of darkness and horrors" that characterized the "barbarous centuries" that followed the fall of Rome, a time of "blindness and violence."** Thankfully, he added in the afterglow of the nobility's legal abolition, all citizens now recognized that "equality of rights [constitutes] the strength and honor of any government," and hereditary privilege is "the source of every problem."52

https://archive.org/details/newscienceofgiam030174mbp/page/n211/mode/2up?view=theater

In this fashion, to use the well-known phrase of the jurisconsult Pomponius, "things themselves dictating it, kingdoms were founded" (*rebus ipsis dictantibus, regna condita*), **a phrase in keeping with the doctrine of Roman law which declares that the natural law of nations was established by divine**

providence (*ius naturale gentium divina providentia constitutum*). Such was the generation of the heroic kingdoms. And since the fathers were sovereign kings of their families, the equality of their state and the fierce nature of the Cyclopes being such that no one of them naturally would yield to another, **there sprang up of themselves the reigning senates, made up of so many family kings.** These, without any human discernment or counsel, were found to have united their private interests in a common interest called *patria*, which, the word *res* being understood, means "the interest of the fathers."
...

585 Evidence that the first kings on earth were of this nature is afforded by the fact that the heroic poets imagined Jove in heaven to have just such kingship over men and gods, as is shown by that golden passage in Homer where Jove explains to Thetis **that he can do nothing contrary to what the gods have once determined in their great celestial council. Here speaks a true aristocratic king. On this episode the Stoics later erected their dogma of a Jove subject to fate, but in fact Jove and the other gods held council concerning the affairs of men and freely determined them.**
...

And among all human possibilities, once we have seen that civil governments were not born either of fraud or of the violence of a single man (as we have already shown and shall show more fully later), **one cannot imagine any way but the one we have described by which civil power could emerge from family authority, or the eminent domain of civil states from the paternal natural domains** (which, as we have indicated above, were *ex iure optimo* in the sense of being free of every private or public encumbrance).

https://archive.org/details/newscienceofgiam030174mbp/page/n141/mode/2up?view=theater

Solon, however, had admonished the plebeians to reflect upon themselves and to realize that they were of like human nature with the nobles and should therefore be made equal with them in civil rights. Unless, indeed, Solon was [a poetic character for] the Athenian plebeians themselves, considered under this aspect [of knowing themselves and demanding their rights].

415 The ancient Romans must also have had such a Solon among them. For the plebeians in the heroic struggles with the nobles, as ancient Roman history openly tells us, kept saying that the fathers of whom Romulus had composed the Senate (and from whom these patricians were descended) *non esse caelo demissos*; that is, that they did not have that divine origin of which they boasted, **and that Jove was equal [just] to all. This is the civil history of the expression, *Iupiter omnibus aequus*, into which the learned later read the tenet that all minds are equal and that the differences they take on arise from differences in the organization of their bodies and in their civil education. By this reflection the Roman plebeians began to achieve equality with the patricians in civil liberty, until they entirely changed the Roman commonwealth from an aristocratic to a popular form.**

>
> § 2.326 FERUS IVPPITER summae necessitatis est, cum etiam sacerdos in convicia ruit deorum: quod servat Vergilius ne umquam tradat Aeneae. **'ferus' autem invidiose dictum est, et ad tempus epitheton: nam Iuppiter aequus est omnibus, ut "rex Iuppiter omnibus idem".** hinc et paulo post "ipse deos in Dardana suscitat arma", hoc est qui aequalis esse consuevit.

...

416 **Hence Solon was made the author of that celebrated saying, "Know thyself," which, because of the great civil utility it had had for the Athenian people, was inscribed in all the public places of the city.** Later the learned preferred to regard it as having been intended for what it is, a great counsel respecting metaphysical and moral things, and because of it Solon was reputed a sage in esoteric wisdom and made prince of the Seven Sages of Greece. In this way, **because from this reflection there sprang up at Athens all the orders and laws that shape a democratic commonwealth,** and because of the first peoples' habit of thinking in poetic characters, these orders and laws were all attributed by the Athenians to Solon, just as, by the Egyptians, all inventions useful to human civil life were attributed to Hermes Trismegistus.

https://archive.org/details/newscienceofgiam030174mbp/page/n327/mode/2up?view=theater

THREE KINDS OF GOVERNMENTS

925 The first were divine, or, as the Greeks would say, theocratic, in which men believed that everything was commanded by the gods. This was the age of oracles, which are the earliest thing we read of in history.

926 The second were heroic or aristocratic governments, which is as much as to say governments of the optimates in the sense of the most powerful. In Greek they were called governments of Heraclids (men sprung from the race of Hercules), in the sense of nobles; these were scattered throughout early Greece, and survived at Sparta. They were also called governments of Curetes, which the Greeks found scattered in Saturnia (ancient Italy), Crete and Asia; and hence governments of Quirites among the Romans, that is of armed priests in public assembly. In governments of this kind, **in virtue of the distinction of a nobler nature ascribed to divine origin, as we have noted above, all civil rights were confined to the ruling orders of the heroes themselves, and the plebeians, being considered of bestial origin, were only permitted to enjoy life and natural liberty.**

927 The third are human governments, in which, **in virtue of the equality of the intelligent nature which is the proper nature of man, all are accounted equal under the laws, inasmuch as all are born free in their cities.** This is the case in the free popular cities in which all or the majority make up the just forces of the city, in virtue of which they are the lords of popular liberty. It is also the case in monarchies, **in which the monarchs make all their subjects equal under their laws, and, having all the force of arms in their own hands, are themselves the only bearers of any distinction in civil nature.**

https://archive.org/details/newscienceofgiam030174mbp/page/n363/mode/2up?view=theater

1007 The monarchical form was introduced in accordance with this eternal natural royal law, felt by all the nations which recognize in Augustus the founder of the Roman monarchy. This law has escaped the notice of the interpreters of Roman law, preoccupied as they have all been with the fable of the "royal law" of Tribonian, of which he openly professes himself the author in the *Institutes*, but which he attributes to Ulpian at one point in the *Pandects*. Yet it was well understood by the Roman jurisconsults, who were well acquainted with the natural law of nations. For Pomponius, in his brief history of Roman law, discussing the royal law of which we speak, described it for us in the well-considered phrase: ***rebus ipsis dictantibus, regna condita*:—"kingdoms were founded at the dictation of things themselves."**

1008 This natural royal law is conceived under this natural formula of eternal utility: Since in the free commonwealths all look out for their own private interests, into the service of which they press their public arms at the risk of ruin to their nations, to preserve the latter from destruction a single man must arise, as Augustus did at Rome, and take all public concerns by force of arms into his own hands, leaving his subjects free to look after their private affairs and after just so much public business, and of just such kinds, as the monarch may entrust to them. Thus are the peoples saved when they would otherwise rush to their own destruction. In this truth the professors of modern law concur when they say that *universitates sub rege habentur loco privatorum*—"corporations are treated as private persons under the king"—because the majority of the citizens no longer concern themselves with the public welfare. Tacitus, most learned in the natural law of nations, points out as much in his *Annals* within the family of the Caesars itself, by this order of human civil ideas: As the death of Augustus became imminent, *pauci bona libertatis incassum disserere***—**"a few spoke in vain of the blessings of liberty"; as soon as Tiberius came, *omnes principis iussa adspectare***—**"all looked to the commands of the emperor"; under the three subsequent Caesars first came *incuria* or indifference and finally *ignorantia reipublicae tanquam alienae*, ignorance of public affairs as something foreign. **Thus, as the citizens have become aliens in their own nations, it becomes necessary for the monarchs to sustain and represent the latter in their own persons. Now in free commonwealths if a powerful man is to become monarch the people must take his side, and for that reason monarchies are by nature popularly governed:** first through the laws by which the monarchs seek to make their subjects all equal; then by that property of monarchies whereby sovereigns humble the powerful and thus keep the masses safe and free from their oppressions; further by that other property of keeping the multitude satisfied and content as regards the necessaries of life and the enjoyment of natural liberty; and finally by the privileges conceded by monarchs to entire classes (called privileges of liberty) or to particular persons by awarding extraordinary civil honors to men of exceptional merit (these being singular laws dictated by natural equity). **Hence monarchy is the form of government best adapted to human nature when reason is fully developed,** as we have said before.

https://archive.org/details/newscienceofgiam030174mbp/page/n43/mode/2up?view=theater

39 The last type of jurisprudence was that of natural equity, which reigns naturally in the free commonwealths, where the peoples, each for its particular good (without understanding that it is the same for all), are led to command universal laws. They naturally desire these laws to bend benignly to the least details of matters calling for equal utility. This is the *aequum bonum*, subject of the latest Roman jurisprudence, which from the times of Cicero had begun to be transformed by the edict of the Roman praetor. **This type is also and perhaps even more connatural with monarchies, in which the monarchs have accustomed their subjects to attend to their own private interests, while they themselves have taken charge of all public affairs, and desire all nations subject to them to be made equal by the laws, in order that all may be equally interested in the state.**

Wherefore the emperor Hadrian reformed the entire heroic natural law of Rome with the aid of the human natural law of the provinces, and commanded that jurisprudence should be based on the Perpetual Edict which Salvius Julianus composed almost entirely from the provincial edicts.

https://archive.org/details/newscienceofgiam030174mbp/page/n369/mode/2up?view=theater

1023 Again, the barbaric wars of the heroic times meant the ruin of conquered cities, and the surrendered foes became herds of laborers scattered over the countryside to cultivate the fields of the victors. (Such, as we explained above, were the heroic inland colonies.) Then the magnanimity of the popular commonwealths, as long as they were ruled by their senates, took from the vanquished the law of heroic nations but left them in free enjoyment of the natural law of human nations of which Ulpian speaks. (As conquests were extended, all the rights later called *propriae civium romanorum* were restricted to Roman citizens. These rights, such as solemn nuptials, paternal power, *sui heredes*, agnates, gentiles, quiritary or civil ownership, mancipation, usucapion, stipulation, testaments, guardianship and inheritance, must all have been possessed as civil law rights of their own by the subject nations when they were still free.) **Finally came the monarchies, which seek, as under Antoninus Pius [i.e. Caracalla], to make one Rome of all the Roman world. For it is a vow characteristic of great monarchs to make one city of the whole world, as Alexander the Great used to say that for him all the world was a single city of which his phalanx was the citadel. Thus the natural law of nations, developed in the provinces by the Roman praetors, came home at long last to dictate laws in the Romans' own house. The heroic law which the Romans had exercised over the provinces was relinquished, because monarchs desire all their subjects to be made equal by their laws.**

And Roman jurisprudence, which in heroic times had been based entirely on the Law of the Twelve Tables, and which in the times of Cicero (as he notes in his *Laws*) had begun to follow the edict of the Roman praetor, finally, from the days of the emperor Hadrian on down, concerned itself entirely with the *Edictum perpetuum* or "Perpetual Edict," composed and arranged by Salvius Julianus almost wholly from the provincial edicts.

https://archive.org/details/newscienceofgiam030174mbp/page/n359/mode/2up?view=theater

1002 Hence, as we believe, **it came about that in the rude days of the returned barbarism the nations forgot the Roman laws, so much so that whoever invoked one on his behalf was severely punished in France, and in Spain even suffered death. Certainly in Italy the nobles counted it a disgrace to regulate their affairs by Roman laws and professed to be subject to those of the Lombards.**

>
> **It is only in this casual reference to an act of immorality that we find in all the laws of Rothari [22 November 643 AD] the slightest express reference (doubtless there are many implied references) to the great mass of the subject population of Italy who called themselves, and were called by their conquerors, by the once proud name of Roman.**
> …
>
> The Roman Law, as codified by Justinian, was then in force at Ravenna and at Naples, as it is now, with necessary modifications, in force at New Orleans and at Batavia. Yet to this Code, one of the most splendid achievements of the human intellect, King Rothari and his peers do not refer in one line of their Edict. **Their only mention of the great name of Rome, as has been already pointed out, is in that passage where an injury done to a Roman female slave is assessed at a lower rate than a similar injury to her Teutonic fellow-sufferer.**
> …

> The Code of Rothari, promulgated on the sacred soil of Italy, in a land which had once witnessed the promulgation of the Code, the Institutes, and the Digest of Justinian, **is like the black tent of the Bedouin pitched amid the colonnades of some stately Syrian temple, whose ruined glories touch no responsive chord in the soul of the swart barbarian.**

The plebeians, who were slow in shaking off their old customs, continued to observe some Roman laws by force of habit. This is the reason why the corpus of the laws of Justinian and other monuments of western Roman law were lost to us in Italy, and the Basilica and other monuments of eastern Roman law fell into oblivion among the Greeks. **But later, when the monarchies were reestablished and popular liberty reintroduced, the Roman law comprised in the books of Justinian was universally received, so that Grotius declares that it is now a natural law of the nations of Europe.**

https://archive.org/details/newscienceofgiam030174mbp/page/n391/mode/2up?view=theater

1083 From all the matters here enumerated, we must conclude that the realms were everywhere aristocratic, we do not say in constitution but in government, as in the cold north that of Poland still is (and as those of Sweden and Denmark were until a century and a half ago). **In time, if extraordinary causes do not impede its natural course, Poland will arrive at perfect monarchy.**

1084 So true is this that Bodin himself goes so far as to say of his kingdom of France that it was aristocratic, not in government as we assert but in constitution, during the Merovingian and Carlovingian dynasties. But here we may ask Bodin how the kingdom of France became perfectly monarchical as it now is? Perhaps by some royal law by which the paladins of France divested themselves of their power and conferred it upon the kings of the Capetian dynasty?—**If he has recourse to the fable of the royal law invented by Tribonian, by which the Roman people supposedly divested itself of its free sovereignty and conferred it on Augustus,** to prove it a fable it suffices to read the first pages of the *Annals* of Tacitus in which he narrates the last acts of Augustus, legitimizing the beginning of the Roman monarchy in his own person, as indeed all nations perceived that it began with Augustus.—Perhaps because France was conquered through force of arms by one of the Capetian kings?—But all the histories keep it at a safe distance from such an unhappy fate. **Bodin therefore, and with him all the other political and legal authorities who have written on public law, must recognize this eternal natural royal law by which the free power of a state, just because it is free, must be actualized.** Namely, that in proportion as the optimates lose their grip the strength of the people increases until they become free; and in proportion as the free peoples relax their hold the kings gain in strength until they become monarchs. Wherefore, just as the natural law of the philosophers (or moral theologians) is that of reason, so this natural law of nations is that of utility and of force, which, as the jurisconsults say, is observed by the nations *usu exigente humanisque necessitatibus expostulantibus*, "as use requires and human necessities demand."

1085 From all these beautiful and elegant expressions of ancient Roman jurisprudence, with which the learned feudists do in fact mitigate and might even further mitigate the barbarousness of feudal doctrine (since the ideas of the latter fit the expressions of the former in their full propriety, as we have shown), **let Oldendorp (and all the others with him) consider whether feudal law was born from the sparks of the fire set by the barbarians to Roman law.** On the contrary, Roman law was born from the sparks of the fiefs observed in the first barbarism of Latium, such fiefs as were the origin of all the commonwealths in the world. As we have demonstrated this in a particular discussion above of the Poetic Politics of the first commonwealths, so in this [fifth] book (in a demonstration promised in the Idea of the Work) we have seen that the new realms of Europe have their origins within the eternal nature of fiefs.

1086 But finally, **with the studies undertaken in the universities of Italy and the teaching of the Roman laws contained in the books of Justinian, laws therein based on the natural law of human nations, minds already developed and grown more intelligent were dedicated to the cultivation of the jurisprudence of natural equity, which makes the common people and the nobles equal in civil rights, just as they are equal in human nature.** And just as from the time when Tiberius Coruncanius began to teach the laws publicly in Rome their secrecy began to slip from the hands of the nobles, and the power of the nobles gradually declined, so it happened in the case of the nobles of the realms of Europe, which had been ruled by aristocratic governments before passing into free commonwealths and thence into perfect monarchies.

1087 **These last two forms of state, since both involve human governments, readily admit of change from either to the other, but a return from either to an aristocratic state is almost impossible in the nature of civil things.** So much so that Dion of Syracuse, although he was a member of the royal family and had driven into exile a monster of princes, Dionysius the tyrant, and although he was so well favored with civil virtues as to be worthy of the friendship of the divine Plato, was nevertheless barbarously slain when he attempted to restore the aristocratic state. And the

Pythagoreans (that is, as above explained, the nobles of Magna Graecia), for the same attempt, were all cut in pieces save for the few who had taken refuge in strongholds and were burned alive by the multitude. **For the plebeians, once they know themselves to be of equal nature with the nobles, naturally will not submit to remaining their inferiors in civil rights; and the equality they seek may be found either in free commonwealths or under monarchies.** Wherefore, in the present humanity of the nations, the few remaining aristocratic commonwealths must take infinite pains and shrewd and prudent measures to keep the multitude at the same time dutiful and content.
…

1089 **Today a complete humanity seems to be spread abroad through all nations, for a few great monarchs rule over this world of peoples.** If there are still some barbarous peoples surviving, it is because their monarchies have persisted in the vulgar wisdom of imaginative and cruel religions, in some cases with the less balanced nature of their subject nations as an added factor.

1090 Beginning with the cold north, the Czar of Muscovy, although Christian, rules over men of sluggish minds. The Knyaz or Khan of Tartary dominates an effeminate people, like to the ancient Seres who formed the larger part of his great empire, a part which is now united with that of China. The Negus of Ethiopia and the powerful kings of Fez and Morocco reign over peoples too weak and sparse.

1091 In the mid-temperate zone, however, where the nature of men is better balanced, to begin with the Far East, the Emperor of Japan practices a humanity similar to that of the Romans at the time of the Carthaginian wars. He imitates their ferocity in arms, and, as learned travelers observe, his language has a Latin ring about it. **Yet, through a religion of fierce and terrible imagination with dreadful gods all armed with frightful weapons, he retains much of the heroic nature. For the missionary fathers who have been there report that the greatest difficulty they have encountered in converting the people to Christianity is that the nobles cannot be persuaded that the plebeians have the same human nature as themselves.** The Emperor of the Chinese, who reigns under a mild religion and cultivates letters, is most humane. The Emperor of the Indies is rather humane than otherwise, and practices in the main the arts of peace. The Persian and the Turk have mingled the rude doctrine of their religion with the softness of Asia, which they rule; and thus both, and particularly the Turks, temper their arrogance with magnificence, pomp, liberality and gratitude.

1092 **But in Europe, where the Christian religion is everywhere professed, inculcating an infinitely pure and perfect idea of God and commanding charity to all mankind, there are great monarchies most humane in their customs. It is true that those situated in the cold north, such as Sweden and Denmark until a hundred and fifty years ago, and Poland and even England still today, although they are monarchic in constitution yet seem to be governed aristocratically; but if the natural course of human civil things is not impeded in their case by extraordinary causes they will arrive at perfect monarchies. In this part of the world alone, because it cultivates the sciences, there are furthermore a great number of popular commonwealths, which are not found at all in the other three parts.** Indeed, because of the recurrence of the same public utilities and necessities, there has been a revival of the form of the Aetolian and Achaean leagues. Just as the latter were conceived by the Greeks because of the necessity of protecting themselves against the overwhelming power of the Romans, so the Swiss cantons and the united provinces or states of Holland have organized a number of free popular cities into two aristocracies, in which they stand united in a perpetual league of peace and war.
…

1094 Now to come back to our subject, **in Europe today there are only five aristocracies:** namely, Venice, Genoa and Lucca in Italy, Ragusa in Dalmatia and Nuremberg in Germany. Almost all of them have small territories.

https://archive.org/details/radicalenlighten0000isra/page/668/mode/2up?view=theater

For while he was neither a republican nor democrat, **Vico's advocacy of 'enlightened' monarchy is unquestionably linked to a vigorous social egalitarianism. Indeed, within the entire corpus of Early Enlightenment radical thought no other thinker produced so devastating a critique of nobility as did Vico.**

Vico's Providence is in fact nothing other than the historical process which gradually shepherds mankind, as he describes it, from barbarism to a more settled, orderly state, and a society based upon reason. **People act from selfish motives, but this does not inhibit the wider historical process.** Thus, for example, 'the reigning orders of nobles mean to abuse their lordly freedom over the plebeians' but in time, precisely through trying to exploit them, they themselves 'are obliged to submit to the laws which establish popular liberty.'27 Nobility in Vico's schema arises during the heroic age and entails domination of society and property through sheer violence and exploitation. But with time 'and the far greater development of human minds, the common people finally grow distrustful of the claims of heroism and begin to conceive themselves to be of equal human nature with the nobles.'28 With this the

principle of equality begins and Providence, as Vico puts it, 'permitted' a struggle in which the people emerged as sovereign. Moreover, once the power of the nobles declines it cannot be revived. 'For the plebeians, once they know themselves to be of equal nature with the nobles, naturally will not submit to remaining their inferiors in civil rights; and they achieve equality either in free commonwealths or under monarchies.'29 But Providence, insists Vico, ensures that popular régimes, with their inherent weaknesses, rapidly degenerate into 'anarchy or the unchecked liberty of free peoples which is the worst of all tyrannies.' **Thus great monarchies, according to Vico, spring from liberty itself, that is, 'Providence ordains that the very form of the monarchic state shall confine the will of monarchs, in spite of their unlimited sovereignty.' 'For without this universal satisfaction and content of the peoples,' contends Vico, not unlike Spinoza in the *Tractatus Politicus*, 'monarchic states are neither lasting nor secure.'**30 **By their nature monarchies 'seek to make their subjects all equal,' and 'humble the powerful and thus keep the masses safe and free from their oppressions.'**31

A drastic inequality in distribution of land and wealth prevails during the heroic age, which is based partly on violence but equally, or more, on credulity and ignorance. For both nobles and serfs believe their social system is ordained by the gods.32 The fact that for Vico 'monarchy is the form of government best adapted to human nature when reason is fully developed,'33 implies that the progress of human reason involves a related process of social and political struggle. Hence social violence, including revolution, is neither good nor bad in itself, but just the inevitable accompaniment of historical development.34 Before making judgements about popular tumults one must first determine what they are about. For if its purpose is to overthrow the tyranny and pretensions of aristocracy, Vico seems clearly to infer that revolution is good. **Hence, Vico's 'divine Providence' furnishes what has aptly been termed a 'natural right to insurrection'** arising from man's inevitable eventual quest for self-liberation from oppression and exploitation.35

https://books.google.fi/books?id=tSE6DwAAQBAJ&lpg=PT200&hl=fi&pg=PT101#v=onepage&q&f=false

In Vico's estimation, "this public virtue" of the ancients was not what it purported to be. It was, in fact, not public at all; it was not rooted in self-sacrifice and in a concern for the "common good." If the ancients "did not hesitate, for the safety of their various fatherlands, to consecrate themselves and their families to the will of the laws," it was because – in "maintaining the common security of the fatherland" – they could at the same time keep "secure for each of them a certain private monarchical reign over his family." **The public virtue so celebrated in antiquity was grounded on "the grievous, ugly, and cruel private vices" of an aristocracy intent on retaining absolute control of a *familia* that included slaves and clients as well as children and wives.**95

> http://attalus.org/translate/valerius5b.html#c6
>
> We have seen piety to personal relatives, and we will now show it towards our native country; **to whose majesty paternal authority, though almost equal to that of the gods, has ever submitted, and to which brotherly affection willingly yields, and for good reason too. For a family may be ruined, and yet the commonwealth could be safe; but the ruin of the commonwealth necessarily draws with it the destruction of every family.**

In a strikingly similar fashion, Montesquieu later traced the "frightful tyranny" of emperors like Caligula not to lawless rule itself but to a cause more profound: "the *esprit general* of the Romans." **When the republic fell, he contended, "their fierce humor remained; the citizens were treated as they themselves had treated the enemies they had conquered, and they were governed on the same plan.**"

>
> **For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/348/mode/2up?view=theater

In June 1740, when Frederick II came to the throne as Voltaire's declared disciple, he proclaimed toleration in two celebrated pronouncements. **When the General Directory inquired whether a Roman Catholic might become a citizen of Frankfurt an der Oder, he wrote in vigorous if rather uncertain German:** *Alle religionen seindt gleich und guht, wan nuhr die leute so sie profesieren Erlige leute seindt und wenn Türken und Heiden kähmen und wollten das Land pöpliren so wollen wir sie Mosqueen und Kirchen bauen* – **"All religions are equal and good, if only those people who profess them are honest people; and if Turks and heathens came and wanted to populate the country, we would build them mosques and churches."** Again, asked whether the Roman Catholic schools for soldiers should remain open, he replied: *Die Religionen müssen alle toleriret werden und mus der Fiscal nuhr has Auge darauf haben, dass keine der anderen Abbruch tuhe,* ***denn hier mus ein jeder nach seiner Fasson selich werden*** – "Religions must all be tolerated; only the Attorney General

should see to it that none of them injures any other, for here everyone must be saved in his own fashion."9

Frederick – Epicurean, atheist, and cynical exploiter of the human animal – was an exception in his House. But the outline of his religious policy was much the same as that of his predecessors in his own state and that of his contemporaries elsewhere. **The territorial churches – *Landeskirchen* – of the German states were more dependent on the secular power than the Anglican church under Walpole, and to say that is to say a good deal. Germany was a conglomeration of Erastian states: Hobbes, had he lived to see it, would have approved.**

https://www.gutenberg.org/files/2333/2333-h/2333-h.htm#link2H_4_0004

With these associates, and others of the same class, Frederic loved to spend the time which he could steal from public cares. He wished his supper parties to be gay and easy. **He invited his guests to lay aside all restraint, and to forget that he was at the head of a hundred and sixty thousand soldiers, and was absolute master of the life and liberty of all who sat at meat with him.** There was, therefore, at these parties the outward show of ease. The wit and learning of the company were ostentatiously displayed. The discussions on history and literature were often highly interesting. **But the absurdity of all the religions known among men was the chief topic of conversation; and the audacity with which doctrines and names venerated throughout Christendom were treated on these occasions startled even persons accustomed to the society of French and English freethinkers.**

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n51/mode/2up?view=theater

While only Prince-royal he was in correspondence with Voltaire, chiefly on religion or metaphysics; and even at that early age it appears he deemed himself a Philosopher; for he says—"To speak with my usual freedom, I must confess to you, that whatever regards the *God made man* displeases me in the mouth of a Philosopher, who should be above popular error. Leave to *the great Corneille*, when *doating and falling back to childhood*, the insipid talk of versifying the *Imitation of Christ*; and whatever you may give us, let it be your own. **We may speak of fables, but merely as fables;** and a profound silence in my opinion should be kept concerning those fables of the Christians which have been sanctified by time and the credulity of the absurd and stupid."7

7. From Frederic, May, 1738, Vol. 64, Let. 53, P. 275.

…

He upbraids Voltaire with the praises that he had bestowed on Christ, and three years after is not ashamed to write—"For my part, I own that, whatever people may enlist under the banners of Fanaticism, I never shall. **I may indeed compose a few Psalms to raise a good opinion of my orthodoxy. Socrates incensed the household Gods, so did Cicero, and he was not credulous.** We must give way to the fancies of a frivolous people, in order to avoid blame and persecution; for, after all, what is most desirable in the world is to live in peace; let us then live foolishly with fools, that we may live quietly."11

11. From Frederic, 6 Jan. 1740, Vol. 64, Let. 107, P. 471.

The same Frederic had written, that the Christian religion *yielded none but poisonous weeds*;12 and Voltaire had congratulated him, ***as having above all Princes fortitude of soul, with sufficient perspicacity to see that for the seventeen hundred years past the CHRISTIAN SECT had never done any thing but harm,***13 though we afterward find him the opponent of that work of Philosophic insight, or rather of infamous profligacy, *the System of Nature*.

13. To Frederic, 5 April, 1767, Vol. 65, Let. 159, P. 374.

"One might be tempted," he says, to suspect its author of want of sense and skill when, calumniating the Christian religion, he imputes to it failings that it has not. **How can he with truth assert that religion can be the cause of the misfortunes of mankind! He would have been more correct, had he simply said, that men from ambition and self-interest, *concealed under the veil of religion*, had sought to disturb the world and gratify their passions.** What is there reprehensible in the morals of the commandments? Were there in the whole Gospel but this single precept, *Do as thou wouldst be done by*, we should be obliged to confess, that those few words contained the whole quintessence of morality: —The forgiveness of injuries, charity, and humanity—were not these preached by Jesus in his excellent sermon on the mount?"14

…

But, strange to say, after having viewed religion in so clear a light, he compliments Voltaire on being its scourge,15 he still communicates plans for its destruction,16 and foresees, that should it be preserved

and protected in France, *the fine arts and higher sciences must fall*, and that *the rust of superstition will completely destroy a people, otherwise amiable and born for society*.17

17. From Frederic, 30 July, 1774, Vol. 66, Let. 59, P. 137.

https://archive.org/details/marquisdargenson00ogleuoft/page/64/mode/2up?view=theater

It was in this very summer of 1732 that the great conflict of old French privilege and tradition against the arrogant zeal of the Ultramontane party reached its acutest stage; and it happened that that was the question of all others with which d'Argenson was competent to deal. **He had been for some years a member of the ecclesiastical committee of the Council, and at the Entresol, as we have seen, he had been charged with the department of canon law.**[178]
…

Among the documents destroyed at the Louvre was one written by d'Argenson when the struggle was at its height. It is in the form of a letter from an Englishman to a Frenchman.[182] In the course of it he says: **"Wherever the sovereignty may reside, it is necessary that authority should be entire, without partition, and should bow to the judgments of God alone."** He proceeds to urge the necessity of doing away with the superior courts, or of placing them absolutely at the disposal of the Crown. In replying to the objection that that would establish "a veritable Turkish government," he reveals the secret of his peculiar attitude with regard to royalty in France. "What of it?" he rejoins. "You live in France under a despotic authority. The die is cast, so to speak. You must either obey it or destroy it entirely." **Its only restraint must be that imposed by "opinion, reason, delicacy, public spirit. Is it not the case that for two centuries the progress of authority in France has been that of peace, art, and morality, and is it not increasingly active in suppressing violence, whether public or private?**"

https://www.ourcivilisation.com/smartboard/shop/bruyere/chap9.htm

40. **The nobility risk their lives for the safety of the State and the glory of their sovereign; the magistrate relieves the Prince of part of the responsibility of judging the nation:** both of these functions are lofty and exceptionally useful; men are scarcely capable of greater things, **and I cannot think whence the Law and the Army have derived the contempt they feel for one another.**

https://archive.org/details/marquisdargenson00ogleuoft/page/178/mode/2up?view=theater

What d'Argenson proposed was simply to dismiss the score or so of clerks, tax-collectors and hangers-on who managed parochial affairs under the direction of the Sub-delegate without sympathy or regard for the wishes of the people: and to transfer these affairs to a little parish council, consisting, for example, of the neighbouring squire, the village curé, a couple of farmers, and an erudite cobbler or so, who would look after the roads, assist the poor, assess and collect the parochial taxes, and attend to all matters which were not beyond the capacity of half-a-dozen intelligent countrymen, guided and supervised by the Sub-delegate. **The two poles upon which the system revolved were not "royalty" and "a democratic society,"**[419] **but in plain prose, the bureau of the Controller-General at Versailles, and the parish room or the inn parlour of the village of Argenson in the "généralité" of Touraine.**
…

M. de Boulainvilliers and d'Argenson had been struck by the same evils; but the former attributed them to the iniquitous usurpation by which the people had been withdrawn from the protection of their feudal lords, and subjected to oppression by the irresponsible minions of the royal authority. His remedy was a reversion to the society of the thirteenth century. D'Argenson's proposal was a very different one. He saw very clearly that as a great political instrument the French noblesse existed no longer; and that if local government was to be reformed, the reform must come from the people themselves. If these shopkeepers, peasants and the rest, had no political tradition or knowledge, they were primarily concerned in acquiring it; and he enunciates, perhaps for the first time, the great principle of all democratic development, **the principle that in matters of government interest is more valuable than intelligence.**
…

The Catholic Establishment shall be maintained as

"la base de la morale, dont le maintien est essentiel à la tranquillité et au bonheur public. Ceux que auraient le malheur de n'être pas convaincus des vérités qu'elle nous enseigne"

will be ineligible for public office; but no step shall be taken in the direction of persecution or proscription.

Complete toleration shall be maintained in so far as it is compatible with public order.

Such was the constitution projected by d'Argenson during the few years before his death. Its real meaning is clear and unmistakable: yet it has not escaped the evil fortune which has pursued so many of its author's plans. It is true that to concede to thirty-two provincial assemblies a virtually absolute power, while providing that the authority of the Crown shall be in no way diminished, may appear at first sight as strange an inconsequence as M. de Broglie[429] and others have found it. Yet a patient reading of d'Argenson's scheme is sufficient to show that with all its elaborate reservations, **it involved nothing more nor less than the provisional surrender of the Sovereignty of France into the hands of the French people.**
...

The provision that the King alone should make laws and impose taxes might be really little more than a constitutional fiction, which, so long as the laws were prudently made and the taxes equitably imposed, might pass as undisputed fact. The proposition that the royal ordinances must always be accepted might prove to be a fiction of the same kind. **Indeed, in certain eventualities the whole scheme might be one continued fiction in so far as it relates to the Crown.**
...

It is true that we do not find him stating, in this uncompromising way, the revolutionary aspect of his programme; he would have shrunk from formulating it clearly even to himself. At the same time we know that it was by no means distant from his mind. Notwithstanding, he cannot have regarded it as of any immediate or direct importance; for he could not but think that only by an access of inconceivable folly on the part of the people or of inconceivable madness on the part of the Crown, could such a revolutionary ferment be occasioned.

We cannot better appreciate the spirit and scope of d'Argenson's proposal than by comparing it with the universally admired design broached, about twenty years later, by the great minister Turgot. The principle of the two policies was practically the same. Turgot proposed, like d'Argenson, to entrust to the people and popular organisations the whole administration of the interior, while retaining the entire legislative authority in the hands of the Crown.[432] The people, as in d'Argenson's scheme, had merely the power of suggesting legislation, though the actual law must proceed from the King. Between the two plans, however, there was one great difference of detail. **D'Argenson had surrounded the authority of the Crown with a sacred barrier; behind that barrier the people might exercise all the effective powers of popular control: beyond it they were forbidden to pass. In the proposal of Turgot that barrier was destroyed.** Above the circle of Provincial Estates he desired to constitute a Municipality of the Whole Realm; by doing so he would have brought the sphere of popular action into direct juxtaposition with that of the Crown, and have surrounded the very palace gates with the acclamations or with the clamour of the people.

https://archive.org/details/marquisdargenson00ogleuoft/page/156/mode/2up?view=theater

The clergy refused to administer extreme unction to those who had not accepted the Bull Unigenitus; they were opposed by the resolution of the Parlement of Paris; the Crown interfered on behalf of the clergy; and Church and Crown united their forces in an endeavour to coerce the Parlement. **At the same time the attempt of the Controller-General Machault to force the vingtième upon clergy and people alike united the Church and the Parlement in opposition to the Crown.**
...

D'Argenson's attitude throughout the controversy may be summed in a single word. **He was with the Parlement against the Church, and with both against the Crown.**
...

So acute an observer could not fail to see that the most alarming features of the struggle were the indirect results which it might produce. It had scarcely begun when he devoted to it one of the boldest and most penetrating of all his reflections.

> "I am afraid that all this, if pushed too far, may produce some great outbreak. **Men may arise who, under colour of the clerical cause, will sustain the cause of the nation. With little merit or ability of their own, these men will obtain influence, they will secure the affection of the people.** Let no one say that such men exist no longer. The statue is in the block of marble; the meanest of men will rise to the occasion. Even to-day mark how many writers there are of learning and enlightenment. For some years the wind has been blowing from England upon these materials; the materials may catch fire. Look at the tone of the remonstrances against the vingtième prepared by the Parlements and the Estates. These Attorneys-General of Parlement, these syndics of Estates, such might be these great men I speak of; the whole nation might catch fire, the Nobility throwing in its lot with the Clergy, and afterwards the Third Estate. If the result

> were that it became necessary to summon the States-General of the Realm, they would find occasion to regulate the finances and the demands of money for the future. **Those Estates would not assemble in vain. Let the men in power have a care; they would be very much in earnest**" (December, 1750).[385]

D'Argenson's apprehensions were soon confirmed. A year later he writes:

> "To-day the popular mind is occupied with this approaching revolution in the government; people talk of nothing else, and every one is full of it, even the bourgeois" (November, 1751).[386]

Among high and low the feeling was the same.

> "**The evil consequences of our absolute monarchy are finally persuading every one, both in France and throughout Europe, that it is the worst of all forms of government. Among men of enlightenment (*philosophes*) I hear nothing but the confident assertion that even anarchy is to be preferred to it;** for it leaves to each inhabitant at least the enjoyment of his property, and whatever disorders or acts of violence may occur are to the prejudice of private people only, and not, as now, to the body of the state" (September, 1752).[387]

These eight years of clamour and coercion, violence and weakness, produced a very profound impression upon French society, and upon d'Argenson himself.

> "The opinion of the nation is gaining ground, and may lead us far. **It is remarked that never until to-day have the names of 'Nation' and 'State' been so frequently in use.** Under Louis XIV. these two names were never pronounced, and people had no idea even of their meaning. Never has knowledge of the rights of the nation and of liberty been so widely diffused as it is to-day. **Even I, who have always made these matters the subject of thought and study, had a very different mind and feeling with regard to them. The change is due to the Parlement and the English**" (June, 1754).[388]

...

Among the "honnêtes gens tranquilles, qui ne maîtrisent pas leur langue," none had more reason to tremble than d'Argenson. **For some time a remarkable political work of his[395] had been circulating quietly among the Philosophic party; and his religious opinions were at least as licentious as any to be found even among the clergy.[396] By political profession he was an adherent of the Gallican Church; by private conviction he was a deist after the manner of Voltaire, but with none of Voltaire's apostolic bitterness.** Deist or Gallican, he was a confirmed enemy of obscurantism in all its forms.[397]

...

He tells us how Madame de Pompadour invited Diderot and d'Alembert to resume the work upon the Encyclopædia which their Jesuit enemies had been unable to continue: and his reflections from time to time enable us to measure the growing influence of the Philosophic leaders. In May, 1754, was written this eloquent tribute to their advancing power.

> "**It is averred that everything is preparing in France for a great reform in religion. It will be a very different thing from that rude Reformation, a medley of freedom and superstition, which came to us from Germany in the sixteenth century.** Both have been brought about by the intolerable tyranny and avarice of the priests; **but as our age and nation are far more enlightened than that of Luther, we shall not stop half way. Priest, priestcraft, revelation, mystery, all will be banished; and we shall be content to see God through the greatness and goodness of His works. It is in our own hearts that He has written His law, His love, our gratitude, our hopes in Providence, and our fear of its justice. As to the attributes of God, we are as wise as the priests;** we can adore Him by ourselves, and without the help of these persons pious by profession, who call themselves the ministers of the altar and who are only the drones of the hive" (May, 1754).[400]

And before blotting his page, he enables us to comprehend in a single glance the parallel movements of the time.

> "Soon with this reformation in religion will come the reformation in government. **Political tyranny is interlinked with ecclesiastical tyranny. Against them are turned the two branches of the forward movement,[401] the one in the direction of moderate democracy, the other towards adoring God in mind and heart alone.** We give up the attempt to do anything more with these two forms of government, and in politics and society we see matters as they ought to be. ... **Nature tells us all that we need; we listen and follow her when the imposture of tyranny exists no longer.**"[402]

We have only to compare Citizen d'Argenson with the former Absolutist of 1732 to realise the rate at which France was travelling.

> [5] **"In the republic," says the Marquis d'Argenson, "each man is perfectly free in what does not harm others."** This is the invariable limitation, which it is impossible to define more exactly. I have not been able to deny myself the pleasure of occasionally quoting from this manuscript, though it is unknown to the public, **in order to do honour to the memory of a good and illustrious man, who had kept even in the Ministry the heart of a good citizen, and views on the government of his country that were sane and right.**

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n81/mode/2up?view=theater

At this time the court of Louis XV began to be overrun with ministers who on religious matters thought like a Voltaire or a Frederic.—They had no ecclesiastical states, no ecclesiastical electors to pillage; but the possessions of the numerous religious orders dispersed through France could satiate their rapacity, and they conceived that the plan of Frederic might be equally lucrative to France. **The Marquis D'Argenson, counsellor of state and minister of foreign affairs, was the great patron of Voltaire. It was he who, adopting all his ideas, formed the plan for the destruction of all religious orders in France. The progress of the plan was to be slow and successive, lest it should spread alarm.** They were to begin with those orders that were least numerous; they were to render the entrance into the religious state more difficult; and the time of professions was to be delayed until that age when people are already engaged in some other state of life. The possessions of the suppressed were artfully to be adapted to some pious use, or united to the episcopal revenues. **Time was to do away with all difficulties, and the day was not far off when, as lord paramount, the Sovereign was to put in his claim to all that belonged to the suppressed orders,** even to what had been united, for the moment, to the sees of the bishops; the whole was to be added to his domains.

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n151/mode/2up?view=theater

A minister whose assiduity in corresponding with Voltaire indicates more clearly their perfect coincidence with each other, was the *Marquis D'Argenson*, whom we have already noticed tracing the plan for the destruction of the religious orders. **It was he who first protected Voltaire at Court and with the Marquise de Pompadour; he was also one of the most impious of his disciples; and to him it is that Voltaire writes constantly, as to one of the adepts with whom he was most intimate. In fact, he appears more resolute in his antireligious opinions than his master; his Philosophism coincided more with that of the King of Prussia's; for he was also convinced that he was not two-fold, and that he had nothing to fear or hope for, when once his body should rest in eternal sleep.**2

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n243/mode/2up?view=theater

AMONG the adepts who must have foreseen the consequences which naturally ensued from the application of a pretended equality of rights, and of an irreligious liberty, to politics, none could have done so more intuitively than the Marquis D'Argenson. **This man, minister of the foreign department, had lived during the greater part of his life near the person of his Sovereign, and enjoyed that favour, to which he was thought to be entitled by having consecrated his life to the Royal service.** Yet he was the man who, during the reign of Lewis XV, drew the outlines of those Sophisticated Systems, which were to oppose Regal authority, and gradually metamorphose the French Monarchy into a Republic.

We have seen Voltaire, as early as the year 1743, extolling the affection which this Marquis bore to Equality, to Liberty, and to the Municipal Government. These praises of the Premier Chief evidently show, that Mr. D'Argenson had already conceived his Municipalizing System, and all those wild plans, **which the future rebels, under the title of a Constituent Assembly, were to adopt as one of the leading features of their Royal Democracy,** at once the most senseless and most seditious as well as the most heterogeneous form of government that could be conceived, and more especially for Frenchmen: They also prove, that he made no secret of his plans to his confidents and co-operators.

His system consists in the division and subdivision of the Provinces into small States, first called *Provincial Administrations* by Necker, and afterwards termed *Departments* by Turgot and Mirabeau.

According to D'Argenson's plan, **resumed and corrected by Turgot and Necker,** each of those petty states was, under the inspection of the King, to be charged with the interior administration of its

districts, and the levying of taxes; to superintend the different plans adopted for the relief of the people; to inspect the hospitals, the high roads, the establishments useful to commerce, and other such objects. The administrators could not determine on any subject of importance without the orders of his Majesty, and this was judged a sufficient fence to the Royal prerogative, especially as at the first formation of these provincial administrations, one half of the members were to be nominated by the King, which half when assembled chose the remaining moiety. The distinction of the three orders, of the Clergy, the Nobility, and the third Estate, was preserved, as it used to be in the States General.1

The towns and boroughs, and even the villages were to have their respective municipalities, all acting on the same plan, and under the direction of the Provincial Administrations, in their secondary districts.

Though at first sight this system appears extremely advantageous, yet, on examination, **we shall find, that its sole tendency was to apply Republican forms, as much as circumstances would permit, to a Monarchical government;** that its object was to cramp the authority of the Monarch, to clog and weaken it; **and to annihilate the power of his officers, or direct agents, the intendants of provinces.**

Soon was France by means of these assemblies and their committees, or permanent offices, to be filled with ambitious men starting forth in the new political career; men indeed who, in the first instance, would have recognized the authority of a King, but who would soon have considered themselves better informed of the wants of the people (being nearer to them) than his ministers, and therefore more fully acquainted with the means of alleviating their distresses. Remonstrances and philosophic reasonings would soon have followed, and sufficed to justify disobedience. The people, under a fond persuasion, that these provincial administrators supported their interests against the court, would easily have been brought to believe them the bulwark of their liberties and privileges, assigning every happy event to them, and attributing every misfortune to the King and his ministers. **Each municipality coalescing with the administrators, a hundred petty Republics start into existence, ready to league against their Sovereign, who, under the title of King, would scarcely have retained the authority of a Doge.**

In time we should have seen a swarm of polticasters, or petty tribunes, sallying forth from these administrative bodies, who would have left no means untried to persuade the populace that such a King was rather a burden than an advantage to the state; that it would be proper to lay him aside, since he was unnecessary; that the provincial and municipal administrations would then be able to follow up in a more effectual manner, the salutary measures they had conceived for the good of the people: and thus, step by step, the Monarchical government would have been overthrown, and a municipal administration established, with the freedom of which Voltaire and D'Argenson had been so fascinated in Holland. **The man who could not readily foresee that such would be the consequence of this municipalizing system, must have been very ignorant of the character of Frenchmen,** and especially of French Philosophers when drawn into the vortex of modern politics.

Even the admission of the clergy into these provisional administrations must have proved a fatal boon to the church, as it necessarily tended to change the spirit of its ministers. **Priests and bishops were admitted, or rather called upon, to form a part of their administrations, so foreign to their sacred functions, for the conspiracy had not yet attained sufficient force to cast them off.** The zeal for salvation was to be superseded by the wild ambition of moving in a sphere so contrary to their calling. Already were several prelates distinguished by this new title of Administrators. Soon should we have seen them become rather the disciples of D'Argenson, Turgot and Necker, than of Christ; **soon seen the bishoprics conferred upon none but Morellets and Beaudeaus, with whom religion would have been a very subordinate object, when compared to the glorious enterprize of system-making, or of resisting the Ministers and the Sovereign.** This was a sure method of ruining the church, by robbing her of the real bishops, and substituting petty politicians, who would easily be carried away by the torrent of impiety and ambition, and join with heart and hand a Brienne or an Expilly.

Whatever might have been the consequence to the church, it is very evident that all these new forms of administration tended directly to republicanize the state. Each of these petty administrators would soon have swelled himself into the representative of the province, and the aggregate would have styled themselves the Representatives of the Nation. The bare appellation of National Representative, combined with Modern Philosophism, sufficed to crush the Monarchy.

[1] **Sovereigns always see with pleasure a taste for the arts of amusement and superfluity, which do not result in the exportation of bullion, increase among their subjects. They very well know that, besides nourishing that littleness of mind which is proper to slavery, the increase of artificial wants only binds so many more chains upon the people. Alexander, wishing to keep the Ichthyophages in a state of dependence, compelled them to give up**

> **fishing, and subsist on the customary food of civilised nations.** The American savages, who go naked, and live entirely on the products of the chase, have been always impossible to subdue. What yoke, indeed, can be imposed on men who stand in need of nothing?

https://archive.org/details/in.ernet.dli.2015.505416/page/n181/mode/2up?view=theater

In the first place, **Acts VII and IX of 1715 had already extended the *crimen laesae majestatis* to refer to the taking up of arms against the King, and to extend punishment beyond the offenders themselves, and to condemn their whole families to a forfeiture of their property. Hereby the Hungarian magnates were deprived of a means of protecting their own privileges and the rights of their country, to which they had often resorted during the seventeenth century.** We cannot assert that this measure endangered the existence of the nobility as such, but there can be no doubt that it restricted the policy of the several magnate families to much narrower limits than those they had possessed in the sixteenth and seventeenth centuries.

In the second place, **it was part of the King's policy to raise men belonging to the gentry to a position of wealth and dignity equal to that of the older and more prominent families of magnates. In this manner a kind of aristocracy of office rose into being side by side with the aristocracy of birth.** In the nature of things, the members of this new aristocracy (a species of *novi homines*) owed their distinction primarily to the offices they held; and in this manner the King's service was as it were set up in opposition to the personal and family authority derived from descent from an ancient and famous house.1

In the third place, **by constant residence in Vienna or in the neighbourhood of the Court, by having their sons educated in such surroundings, and by intermarriage with the leading Austrian families,**2 **the Hungarian magnates began to lose that strong national sentiment which had previously been their distinguishing feature. Though not yet an accomplished fact, we see the day approaching when the Hungarian aristocrats considered their national tongue and manners as strange and foreign.**3 The fact that they represented not merely a privileged class but the whole nation, had always constituted the mainstay and the surest foundation of the authority of the nobility in opposition to the kingly power. **Now the nobility itself began to be disloyal to its own traditions.** That Hungarian aristocracy—which had been a military one for so many centuries, and in the course of the eighteenth century had been transformed into an official and governing class—now assumed the character of a Court nobility. Personal service in the immediate neighbourhood of the monarch at Vienna now became their chief ambition, supplanting in importance their duty (a duty which their birth should have obliged them to undertake) towards the country for which their ancestors had lived and died.
…

The legislative system of Hungary had indeed protected the property of the nobility against every political or legal danger; but no legislature has the power to provide that the expenditure shall not exceed the receipts. The law of aviticity (which secured the possessions of the noble families (1351)), a number of other more or less calculated legislative measures, above all the fact that in Hungary persons not of noble birth could not possess landed property, protected the estates of the Hungarian magnates, whether they were ancestral or recently acquired. The continual increase of colonisation and of foreign trade added to their revenues. **The deficiency of the means of communication and the decline of industry, together with the abundance and cheapness of labour and of food-stuffs, made it practically impossible for the magnates to spend their whole incomes, so long as they stayed in their own country. On Hungarian soil, like Antaeus, the nobles could not but derive fresh strength from mother earth.**

Once on foreign soil this advantage ceased, and the strength derived from it was gone. In Vienna the Hungarians exchanged the simple and healthy enjoyments of their homes for the extravagances of a Court life on a high level of culture and civilization. **In Court society they could not wear their ancestral costumes (which, though representing a value of thousands of florins, were often centuries old), but were compelled to adopt the dress of fashionable Europe.** Their ancestral estates were unable to supply the wants of their owners who lived on foreign soil. As many, if not more, servants were required where everything had to be bought for money, whereas at home everything had been provided by the soil and had cost next to nothing. The somewhat vulgar but comparatively cheap pleasures of the table were replaced by the Court entertainments, balls, games and the like, which, though more refined and aristocratic, were far more expensive.1
…

Yet it was no easy matter, during the reign of a sovereign like Maria Teresa, for any family to avoid such a course, unless it chose to allow its ancestral fame and glory to rust within the bastions of an ancient castle. Family pride required that Hungarian magnates should take part in the entertainments and service of the Court, side by side with the Bohemian and German aristocracy. It was

here only that they could acquire those administrative and military qualifications, which enabled them to serve their country and their sovereign in positions of increasing dignity.
…

An extremely clear-sighted and clever traveller, whose only defect is that he is too fond of fault-finding, describes the relations between the Hungarian noblemen and the Court at Vienna in the following terms:2

“**The proud Hungarians, who on their country estates were engaged in planning schemes of liberty, have been allured to the Court or to town.** By the grant of dignities, titles, and offers of marriage, and in other ways, every opportunity has been given them of spending their money in splendour, of contracting debts, and of throwing themselves on the mercy of the sovereign when their estates have been sequestrated. Thus enticed away from their homes, the Hungarians have thought it an honour to form connections by marriage with some of the great German families, whose authority at Court and whose influence on the affairs of the whole monarchy is altogether greater than that of the Hungarians. By wedding women from Vienna they have limited their own freedom of action, and their foreign wives, by introducing more refined customs and a higher standard of comfort into their new homes, have done all in their power to bring about sequestration, **The whole aristocracy of Hungary is now related to that of Vienna, and these alliances have served to propagate the so-called fine manners, which have exhausted the resources of the Hungarians and made them the slaves of the Court.** There is scarcely a single prominent family in Hungary which is free from debt, and, following the example of their Viennese compeers, the Hungarian nobles take particular pride in their debts. **Having thus converted the most powerful part of the Hungarian nobility into spendthrifts, debauchees, and cowards, the Court has no longer occasion to fear a revolt.**

>
> 21. The succeeding winter was employed in the most salutary measures. In order, by a taste of pleasure, to reclaim the natives from that rude and **unsettled [dispersi]** state which prompted them to war, and reconcile them to quiet and **tranquillity, [otio]** he incited them, by private instigations and public encouragements, to erect **temples, courts of justice, [fora] and dwelling-houses.** He bestowed commendations upon those who were prompt in complying with his intentions, and reprimanded such as were dilatory; **thus promoting a spirit of emulation which had all the force of necessity.** 2 **He was also attentive to provide a liberal education for the sons of their chieftains, preferring the natural genius [ingenia] of the Britons to the attainments [studiis] of the Gauls;** and his attempts were attended with such success, that they who lately disdained to make use of the Roman language, were now ambitious of becoming eloquent. Hence the Roman habit began to be held in honor, and the toga was frequently worn. **At length they gradually deviated into a taste for those luxuries which stimulate to vice; porticos, and baths, and the elegances of the table: [conviviorum elegantiam] and this, from their inexperience, they termed politeness, while, in reality, it constituted a part of their slavery. [Idque apud imperitos humanitas vocabatur, cum pars servitutis esset.]**

https://archive.org/details/in.ernet.dli.2015.218820/page/n263/mode/2up?view=theater

When Frederick heard the news of Maria Theresa's death, his first words were: “*Voilà un nouvel ordre des choses!*” The new order made itself felt in almost every sphere; the nobility was put on an equality before the law with the middle classes.
…

All processions and pilgrimages were banned, holy days considerably diminished, various brotherhoods broken up, monasteries and church property secularized.
…

The universities were robbed of all their privileges and completely officialized, to their considerable detriment; **for the new education decree changed them from homes of scientific research to mere training centres for future officials,** and only those subjects which could serve this end were taught, and taught by miserably paid professors.
…

The idea was to metamorphose, at a moment’s notice and without consulting anybody’s wishes, a clerical population into a liberal, a peasant and bourgeois society into a bureaucratic.

But most ill-timed of all were the attempts to force into a unitary state the whole variegated mass of Germans, Poles, Czechoslovaks, Serbocroats, Ruthenians, Roumanians, and Italians, which could only hang together, if at all, as a federal state. **“The German language,” ran an Imperial edict, “is the universal language of my kingdom”; it was the obligatory medium of intercourse in all schools and offices. The aim of this forced Germanization, which extended to all the provinces with the exception of Belgium and Lombardy, was merely centralist, and not at all nationalistic**—for the Emperor, in accordance with the fashion of the time, was cosmopolitan-minded—but it aroused nevertheless the bitterest resentment.

> https://ccel.org/g/gibbon/decline/volume1/chap21.htm#tole

> The partial acts of severity which he occasionally exercised, though they were secretly prompted by a Christian zeal, were coloured by the fairest pretences of justice and the public good; **and while Constantine designed to ruin the foundations, he seemed to reform the abuses, of the ancient religion.**

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n329/mode/2up?view=theater

Initiated in the Sophisticated mysteries, Joseph II had found means of combining the ideas of Equality and Liberty with those of the Despot, **and, under pretence of reigning like a Philosopher, levelled every thing around him, that he and his systems might tower alone above the ruined plane. With his pretended Liberty of conscience, he would have been the greatest persecutor of his age, had not the French Revolution followed him so closely. With his pretended Equality, he only sought to vilify and plunder the Nobility, and to fling their fortunes into the hands of their vassals, in order to overthrow the laws of the Empire, and those of property as well as those of religion, that he might not meet with a greater opposition from the Nobility than he would from their vassals.—With all his pretensions to genius, the most awful lessons were necessary to persuade him that the real tendency of this Philosophism of Equality and of religious and political Liberty, was the destruction of the throne as well as of the altar.**

Such was the Philosophy of that Prince: whatever may have been his intentions, his innovating genius was unfortunate enough to furnish the pretext for a most cruel insurrection against the Nobility of a large portion of his dominions. **The celerity with which he was accustomed to make himself obeyed, may cast cruel doubts on the dilatory manner in which he went to the succour of the unhappy victims.**

https://www.ccel.org/g/gibbon/decline/volume1/chap2.htm#POP

We are informed that when the emperor Claudius exercised the office of censor, he took an account of six millions nine hundred and forty-five thousand Roman citizens, who, with the proportion of women and children, must have amounted to about twenty millions of souls. The multitude of subjects of an inferior rank was uncertain and fluctuating. But, after weighing with attention every circumstance which could influence the balance, it seems probable that there existed, in the time of Claudius, about twice as many provincials as there were citizens, of either sex, and of every age; and that the slaves were at least equal in number to the free inhabitants of the Roman world. The total amount of this imperfect calculation would rise to about one hundred and twenty millions of persons; **a degree of population which possibly exceeds that of modern Europe,** (62) **and forms the most numerous society that has ever been united under the same system of government.**

https://ccel.org/g/gibbon/decline/volume1/chap2.htm#COU

The natives of Europe were brave and robust, Spain, Gaul, Britain, and Illyricum supplied the legions with excellent soldiers, and constituted the real strength of the monarchy. **Their personal valour remained, but they no longer possessed that public courage which is nourished by the love of independence, the sense of national honour,** the presence of danger, and the habit of command.

https://ccel.org/g/gibbon/decline/volume1/chap7.htm#WAN

The superior prerogative of birth, when it has obtained the sanction of time and popular opinion, is the plainest and least invidious of all distinctions among mankind. The acknowledged right extinguishes the hopes of faction, and the conscious security disarms the cruelty of the monarch. **To the firm establishment of this idea, we owe the peaceful succession, and mild administration, of European monarchies.** To the defect of it, we must attribute the frequent civil wars, through which an Asiatic despot is obliged to cut his way to the throne of his fathers. Yet, even in the East, the sphere of contention is usually limited to the princes of the reigning house, and as soon as the more fortunate competitor has removed his brethren, by the sword and the bowstring, he no longer entertains any jealousy of his meaner subjects. **But the Roman empire, after the authority of the senate had sunk into contempt, was a vast scene of confusion. The royal, and even noble, families of the provinces, had long since been led in triumph before the car of the haughty republicans.** The ancient families of Rome had successively fallen beneath the tyranny of the Caesars, and whilst those princes were shackled by the forms of a commonwealth, and disappointed by the repeated failure of their posterity, (1) it was impossible that any idea of hereditary succession should have taken root in the minds of their subjects. **The right to the throne, which none could claim from birth, every one assumed from merit.** The daring hopes of ambition were set loose from the salutary restraints of law and prejudice; and the meanest of mankind might, without folly, entertain a hope of being raised by valour and fortune to a rank in the army, in which a single crime would enable him to wrest the sceptre of the world from his feeble and unpopular master. **After the murder of Alexander Severus, and the**

elevation of Maximin, no emperor could think himself safe upon the throne and every barbarian peasant of the frontier might aspire to that august, but dangerous station.

https://ccel.org/g/gibbon/decline/volume2/chap44.htm#ofpersons

The distinction of ranks and *persons* is the firmest basis of a mixed and limited government. In France, the remains of liberty are kept alive by the spirit, the honours, and even the prejudices, of fifty thousand nobles. (99) **[1788] Two hundred families supply, in lineal descent, the second branch of English legislature, which maintains, between the king and commons, the balance of the constitution.** A gradation of patricians and plebeians, of strangers and subjects, has supported the aristocracy of Genoa, Venice, and ancient Rome. **The perfect equality of men is the point in which the extremes of democracy and despotism are confounded; since the majesty of the prince or people would be offended, if any heads were exalted above the level of their fellow-slaves or fellow-citizens.** In the decline of the Roman empire, the proud distinctions of the republic were gradually abolished, and the reason or instinct of Justinian completed the simple form of an absolute monarchy. The emperor could not eradicate the popular reverence which always waits on the possession of hereditary wealth, or the memory of famous ancestors. He delighted to honor, with titles and emoluments, his generals, magistrates, and senators; and his precarious indulgence communicated some rays of their glory to the persons of their wives and children. **But in the eye of the law, all Roman citizens were equal, and all subjects of the empire were citizens of Rome.** That inestimable character was degraded to an obsolete and empty name. The voice of a Roman could no longer enact his laws, or create the annual ministers of his power: his constitutional rights might have checked the arbitrary will of a master: **and the bold adventurer from Germany or Arabia was admitted, with equal favor, to the civil and military command, which the citizen alone had been once entitled to assume over the conquests of his fathers.**

https://archive.org/details/B-001-015-424/page/n207/mode/2up?view=theater

At the top was the court, in which the divergent interests of the barons found expression. **The king slipped into it some ecclesiastics, not any of the great bishops, who were as baronial as the barons, but humble priests who had in strict reason no place in what was really an assemblage of petty sovereigns. But their habit and their knowledge brought them respect: and their opinions supported the king's.** Next, he introduced some lawyers of plebeian rank, who sat humbly on the steps of the benches reserved for the peers and upper barons—as Saint-Simon contemptuously records6—that they might be consulted when it was convenient to do so. **Raised from nothing by the king, they gave advice, having for its inspiration the Roman law,**7 **which was always favourable to the central authority.**

> 7. The monarchy was at first hostile to the Roman law, on which the Emperor rested his claims. It became friendly to it, once there was nothing to be feared from the Emperor, because it buttressed its own claims to absolutism.

In the end the sovereign permitted them to express opinions, thus subverting the primitive constitution by which a man's importance in the state was in proportion to the strength which he wielded in society. At long last, the court became the parliament—the expression of none but the royal interest.
…

Infantry did not become capable of withstanding cavalry charges until the Swiss had revived the Greek tactical formation of the "hedgehog": and it was only then that, backed by plebeian mercenaries, the monarchy could make itself absolute.

The nerve centres of the political high command were at first the "great officers of state," powerful barons who supervised, controlled, and bridled the king, and on occasion turned against him. The king in his turn took every occasion of noiselessly removing these dangerous auxiliaries. That was what happened to the seneschal. This "officer of state" was charged with the oversight of the king's table, and, when that was served, with victualling the king's men-at-arms; this meant that it was he who also led them to battle and was their military commander. But, besides that, since the provisioning of the court fell in those days on the provosts who administered the royal estates, the seneschal, as was natural, controlled the provosts and superintended the estates.

When functions of this character had been concentrated in the hands of a baron who was already powerful in his own right, anything might be feared. It took a palace revolution to bring about the fall of Étienne de Garlande in 1127, and Philip Augustus did away with the office in 1191. **Later, however, the constable, who carried the king's sword, was to prove, as is shown by the Constable de Bourbon's treason, no less dangerous.**9

9. Once more, the word “treason” implies the idea of a state as the kings conceived it and as we conceive it. But the constable saw things differently: **the realm in his eyes was a confederation of manors, at the head of which was Francis I. And one of the offices of the confederation was that of constable: but it was lawful for a confederate member to quit the confederation and rely on his own forces.** Men thought thus throughout the Middle Ages. In the time of Francis I this conception no longer corresponded to reality in France, but it still corresponded to it in Germany, where the Empire had visibly taken on the character of a confederation of aristocratic authorities and where the central authority had been reduced to a shadow.

It was in the military sphere that the monarchy let itself be served longest by the great barons. In all others it may be seen having systematic recourse to plebeian servants.

What could be more essential to the royal authority than finance? And how could its management possibly be left to a powerful baron, such as the chamberlain, whose key denotes that the safe is in his keeping? For that reason the sovereign took for the effective administration of his revenues humble ecclesiastics and mere bourgeoisie. **Borelli de Serres has given us the names of these officials from the time of Philip the Fair in the late thirteenth and early fourteenth centuries: all of them are men of humble rank.**

There we see it: plebeian counsellors, plebeian soldiers, plebeian officials; these are the instruments of a Power which seeks, more or less consciously, to make itself absolute.

3. In popular imagination a monarchy keeps its employments for the nobles and excludes from them the common people. **In fact the exact opposite happens; it endures the services of the great only so far as it stays under aristocratic tutelage; but it calls on the services of the common people so far as it aims at becoming absolute.**

The most total Power that Europe in the days of the *ancien régime* ever knew was that of the Ottoman Turks. And where, if you please did their *grand seigneur* find his most faithful soldiers and his surest servants? Not among the Turkish nobility, the companions of his conquests, of whose pride and turbulence he went in fear. He recruited his janissaries among the subject Christian races. To them, too, he went for his administrators, and even for his grand vizier. In this way he raised above the natural aristocracy **a statocracy composed of men who had nothing and owed him everything.**10

Our French kings moved on the same road. **Some of them moved consciously, as in the case of Louis XI (1461-1483), who is shown us by Commines as being “the natural friend of the middle class and the enemy of the great who could do without him.”** The other kings followed instinctively the same course.

The natural requirements of Power made the fortunes of the common people. All those “little people,” whom Dupont-Ferrier11 shows us staffing the Treasury Court and the Taxes Court, no sooner found their niche in the state than they set about advancing their own fortunes along with their employer’s. At whose expense? The aristocrats’. **With a boldness born of obscurity they encroached progressively on the taxing rights of the barons and transferred to the royal treasury the incomes of the great.** As their invasions grew, the financial machine grew larger and more complicated. That there might be new posts for their relations, they discovered new duties, so that whole families came to take their ease in a bureaucracy which grew continually in numbers and authority. Again, as more and more taxes were demanded from the people of the realm, the middle-class officials of the Taxes Court took the chance presented to secure the elevation of their provincial colleagues. Assessment and collection were at first entrusted to men chosen by the taxpayers; but these officials soon came to be appointed by the administration and continued in office from one tax to the next, spawning the while a whole hierarchy of underlings—deputies, clerks, registrars. **So it was that everywhere the service of the state became the road to distinction, advancement, and authority for the common people.**12

The judicial world went the way of the financial. **The poor bachelors of law who were summoned to the king’s court steadily pushed the barons out of it, gained assurance, put on a periwig, became the parliament,° and forced their way by degrees even into the baronial estates; this last they did by setting up as judges between the baron and his followers: in other words, by robbing him of his authority.**

What a sight it is, this rise of the clerks,13 this swarming of busy bees who gradually devour the feudal splendour and leave it with nothing but its pomp and titles! Does it not leap to the eye that the state has made the fortunes of all these common people, just as they have made the state’s?

13. On the eve of the Wars of Religion, Augustin Thierry wrote: “**The Third Estate found itself, by a sort of prescriptive right which operated less completely against the clergy than against the nobility, holding nearly the whole of the offices in the civil administration, including the highest, including even those which have since received the name of ministries.** It was from the plebeian class, rising by way of university degrees and more or less numerous tests, that there came the

> Chancellor Keeper of the Seals, the Secretaries of State, the Master of Requests, the advocates and procurators of the crown, and the entire judicial body. Similarly, in the financial administration, the officials of every rank—superintendent treasurers, intendants, controllers, receivers general and particular—all belonged to the class of educated bourgeoisie who went by the name of 'gentlemen of the robe.' As for the jurisdiction of the seneschals, the bailiffs and the provosts of the king—if these offices were still held by gentlemen at all, the gentlemen must needs find substitutes and assessors to do the work." A. Thierry, *Histoire du Tiers État* (ed. 1836) pp. 83-84.

They are bound by a passionate attachment to the offices the possession of which transforms their lives. When the King was mad and the Dauphin imbecile, and the Duke of Burgundy, flown with pride and popularity, had given Paris over to anarchy and butchery, it was Jean Jouvenel, King's Advocate, who, all alone, vindicated and retrieved the laws of the state.

Their love of office, though essentially conservative, has its aggressive side. In putting down the mighty they not only serve the state, they take their revenge at the same time. There are, as it happens, certain aristocratic interests which are also the interests of society. "The continuance of prosperity," said Renan, "needs to be safeguarded by institutions which, though admittedly they give a privileged position to some, form notwithstanding organs of the national life without which certain of its needs stay unsupplied."14 **There is no asking your plebeian official to understand the meaning of that. "The various small fortresses," adds Renan, "in which are stored the things that pertain to society, come to look like feudal castles."** Against these feudal castles the men of the king tirelessly renew their attacks.

The historians of the Italian cities picture to us the bourgeoisie setting out on expeditions against the nearby châteaux, attacking them, and, once they had taken them, demolishing them stone by stone. Those who had been the barons were forced by the bourgeoisie to live, alongside themselves, the lives of plain citizens; and in this way the citizens extended the city's authority over the open country. The same memories of past humiliations and deeply felt jealousies, the same passion for the city—which is the City of Command—to which he belongs, impel the politician of the people to destroy every private authority, and anything else that bounds, limits, or stays the majesty of the public authority.
…

In favouring the freeing of the serfs and limiting the right of the barons to exploit their underlings, the king thereby weakens his natural enemies. In encouraging the formation of a stratum of well-to-do bourgeoisie, an oligarchy of commoners and a mercantile class, he gets himself servants and assures himself support. **In instituting the farming of taxes, he opens to this bourgeoisie the gates of the state. In allowing these taxes to become a heritable property, he links with his own fortunes entire families among the bourgeoisie. He encourages the universities, which provide him with his most effective champions. These maintain his cause, whether against the Emperor or the Pope,** in brilliant theses, but, also and still more, they gnaw darkly and continuously at the foundations of baronial right. Augustin Thierry has, therefore, good reason to assert:

> **For a period of six centuries, from the twelfth to the eighteenth, the histories of the Third Estate and royalty are indissolubly linked together. … From the coming of Louis the Fat to the death of Louis XIV,** each decisive period in the advance of the various plebeian classes towards liberty, well-being, enlightenment and social importance, corresponds, in the list of reigns, to the name of a great king or of a great minister.15

During minorities, or when the sovereign was a weak one and took his orders from the nobility, as was the case with Louis X or Louis XVI, this advance was interrupted and a reaction took shape.

But, the greedier was the monarch of Power, the harder he hit the social princes and the further he pushed the work of emancipation. This was well understood by the Third Estate, and, at the States-General, its representatives—who knelt down to speak—were the most ardent supporters of Power. **Sometimes, when their grievances had anticipated the wishes of the king, they incited him to speed his seizure of the baronial jurisdictions.**16

> 16. When the process had already gone a long way, the Third Estate at the States of 1562 protested that the barons were exacting *corvées* and taxes in excess of their legal rights, and were haling their subjects "before judges who were their own liegemen"; it claimed that **"for the future, in causes between barons and their subjects in which the former have a personal interest, the subjects should only be summoned before a *royal* judge of the province."** How useful complaints of this kind were to the expansion of Power!

At other times they gave vigorous support to his authority, as at the first convocation summoned by Philip the Fair, **and we even see them handing to the monarchy in 1614 an irrevocable mandate**

to do what it pleased,17 **such as might have emanated from the brain of a Hobbes and to which only a class with a vested interest in absolutism could ever have agreed.**

> 17. Here is the article which the Third Estate put at the head of its memorandum entitled “The Fundamental Law”: “The king shall be entreated to promulgate in the assembly of his Estates, as a fundamental law to be known to and kept inviolate by all, that, as he is the recognized sovereign in his state, **holding his crown from God alone,** there is no authority on earth of any kind, temporal or spiritual, which has any power in his realm to take it from the sacred person of our king, or to dispense and absolve his subjects from the obedience which they owe him, on any cause or pretext whatsoever, and that all his subjects, of whatever quality and condition, will keep this law for true and sacred and as conforming to the word of God, without distinction, equivocation or limitation of any kind; it shall be sworn to by all the States deputies and after them by all the beneficiaries and officers of the realm, before entering on the possession of their benefices and the performance of their duties; all tax-collectors, regents, doctors and preachers shall be instructed to teach it and make it known; **that the contrary opinion, that it is lawful to kill or depose our kings, to rise up in rebellion against them and to shake off the yoke of obedience to them for any reason whatever, is impious, detestable, contrary to truth and contrary to the constitution of the State of France, which is in direct dependence on God alone.**"
>
> No doubt this declaration is occasional, and is in response to a campaign organized by the Jesuit doctors; in it may be felt the memory of the frightful disorders of the days of the League. But, whatever the particular reasons which inspired it, the declaration was made, and is unquestionably an unlimited and irrevocable mandate.
>

>
> 28 **And base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to nought things that are:** 29 **That no flesh should glory in his presence.**

The aristocracy was no less aware that the principal instrument of its progressive decline was the plebeian staff into whose hands Power was falling ever more completely. **We have only to listen to Saint-Simon’s° bitter cries against Mazarin. Saint-Simon well understood that at the time of the Fronde a revolution happened, not of the tumultuous sort at which the Frondeurs tried their hand, but rather an invisible one,** which was accomplished by the minister who was Richelieu’s heir and Louis XVI’s tutor.

> **All his attention and care were devoted to abolishing in every possible way the distinctions of birth and to despoiling persons of quality of every sort of authority, for which purpose he tried to keep them away from affairs of state;** to bringing into the administration people of as low extraction as his own; to magnifying their offices in point of power, distinction, credit and wealth; to persuading the king that as every nobleman was the natural enemy of his authority, he should prefer to them, to handle his affairs, **men of no account, who could at the first sign of discontent be reduced to insignificance by having their employments taken from them as easily as the gift of them had raised them from insignificance;** whereas the nobility, being already men of importance by reason of their birth, their marriage connections and often by their establishments, acquired through high office and ministerial patronage a formidable strength and became, for the same reason, dangerous to remove from office. **That was the cause of the entry into public life of men of the pen and the long robe and of the destruction, still felt and seen, of the nobility at a rate which will seem a prodigy; the men of the pen and the long robe well knew the means of hastening this destruction, and made their yoke worse every day until a point was reached at which the greatest nobleman in the land became of no use to anyone and became in a thousand and one ways dependent on the vilest plebeian.**18

And again, speaking of Mazarin, he said:

> **A foreigner coming from the dregs of the people, a man of no account and having no other gods than his own greatness and power, has no care for the state [i.e. nation] that he governs other than as he is himself affected. He despises its laws, its genius, its interests; he disregards its rules and forms; *he thinks only of subjugating and confounding all, of contriving that the all shall be the common people.***

Let us stop to admire how the invective of a great writer flourishes in the soil of truth. To subjugate and confound all, to contrive that the all shall be the common people, therein is the real genius of a monarchical administration. **Historians of the sentimental school have sometimes regretted that royalty became absolute, while at the same time rejoicing that it installed plebeians in office. They deceive themselves. Royalty exalted plebeians just because it aimed at becoming absolute; it became absolute because it had exalted plebeians.**

…

The French aristocracy managed badly the day-to-day defence of itself; it proceeded by way of violent, disorderly, clumsy, and brutal counter-offensives, as when, in Louis X's reign, it hanged Enguerrand de Marigny and put to the torture Pierre de Latilly, Chancellor of France, and Raoul de Presle, King's Advocate.21

> 21. A. Thierry, *op. cit.*, p. 29. "The lawyers of the fourteenth century, who were the founders and ministers of the royal autocracy, came to the end common to great revolutionaries. The boldest perished in the reaction of the interests they had injured and the folkways they had violated."

It could not carry with it the Third Estate by making it understand that the only motive for freeing it from superiorities which time had sweetened was to subject it to the crushing domination of the state. If the two did find themselves working together, as at the start of the Fronde, the aristocracy soon lost the others' support through incapacity to give its revolt the appearance of a defence of the general interest; soon it was split itself by the greed of the rebels, each of whom was ready, if it was made worth his while, to make his private treaty of peace with the crown.

In short, it lacked the political sense, and knew no other way of recapturing lost positions than under cover of civil disturbances, such as the Wars of Religion or the Fronde—events which weakened authority and so allowed the nobles to resume in the general disorder their part of petty potentates whose return to the fold, when the task of pacification began, would have to be bought.22

> 22. Saint-Simon saw clearly how disturbances worked to the advantage of aristocracy: "All that Henry IV could do, with the support of his faithful nobles, was, after endless toil, to get himself fully recognized for what he claimed to be, ***by buying as it were the crown from his subjects*** **by means of treaties and the millions in money which they cost him,** ***the vast establishments and the assured places for Catholic and Huguenot leaders*****.** Nobles with places so assured, and who yet felt much disappointed after the positions which each had dreamt of for himself, were a difficult team." *Op. cit.*, Vol. XXVII, p. 9.

The English aristocracy knew better how to work together; the reason perhaps being that, **whereas in France the Parliament passed into the hands of the lawyers and so became an instrument of the crown, in England it remained an organ of the social authorities and a rallying-point for their opposition.** So well did it understand the art of giving to its resistance a plausible show of public advantage that the Magna Charta, to take one instance, though in reality nothing more than the capitulation of the king to vested interests acting in their own defence, contained phrases about law and liberty which are valid for all time.

Whereas the French nobles got themselves known to the people as petty tyrants, often more unruly and exacting than a great one would be, **the English nobles managed to convey to the yeoman class of free proprietors the feeling that they too were aristocrats on a small scale,** with interests to defend in common with the nobles.
…

The English aristocracy, perhaps because of the nabobs' infiltration into it, was so well in control of economic phenomena that it stopped dead every attempt at monetary devaluation, thereby assuring the stability of its income in terms of goods, and in the eighteenth century even raising its value, thanks to the downward movement of prices during that period.

Thus armed with power and wealth, the British aristocracy was, under the Hanoverian kings, to be the true master of the state. When at a much later date democracy raised its head, it was to find in England a Power quite surrounded by a network of aristocratic defences, whereas in France it seized at a stroke a Power which was an unrestricted monarchy.
…

Saint-Simon shows us the upper nobility waiting for the death of Louis XIV to recover the ground which they had lost since Mazarin. How to do it? Was it a case of setting up against the king a moderating counter-authority? The dukes thought otherwise and aimed at laying hands on the state. **Apt scholars of the plebeian officers of state, whose victims they had been, their only idea of political action was to use the levers of state authority.**

> My plan [says Saint-Simon] was to start installing in the ministry nobles with all the dignity and authority that belonged to them, **thereby displacing the clerks and the lawyers; I planned to manage things prudently and gradually and empirically, so that bit by bit this rabble should lose all its posts which were not of a purely judicial character and be replaced in all its offices by seigneurs and nobles only;** in this way the entire field of administration would have come under the nobility.26

This senseless project, seasoned by Fénelon's utopian ideas, had already entered the head of the Duke of Burgundy. It implied to start with a mistake as to the composition of the aristocracy; **it was no longer composed exclusively of the nobility, but included also the class of gentlemen of the robe, who had interests in common with the nobility—whom the nobility were now in their folly seeking to shut out.** It implied, secondly, a non-comprehension of the aristocracy's historical role, which was, not to govern, but to act as buffer-stop to the government. The examples furnished by Venice and England of government by aristocracy had turned French heads. **But the composition and temperament of the Venetian nobility were quite different. It was not a collection of independent princes with separate interests which one prince had brought into subjection, but a body of notable citizens who had been elevated to the charge of public affairs.** As for the English nobility, it had fitted itself into the government by means of a long *tête-à-tête* with it in Parliament.

The reaction that occurred in France in 1715 resulted merely in the disorganization of the state, through "the ignorance, idleness and frivolity of a nobility whom practice had made good for nothing but getting themselves killed."27 The plebeian clerks, who had had to be kept on as the secretaries of the now preposterous councils, were noiselessly reinstalled as heads of the administration. But now Power had been weakened, to the profit of those competent folk, the gentlemen of the robe. In origin they were statocrats. Raised up in the shadow of the state, as they acknowledged,28 they prided themselves, and with good reason, on having raised up the state:

> ***If the pride of the great vassals has been forced to humble itself before the throne of your ancestors, to renounce its independence, and to recognize in the king a supreme jurisdiction and a public authority which is superior to that exercised by themselves...***29 these are all services, the most important doubtless ever rendered to the royal authority, which are due, as history testifies, to your Parliament.30

29. At this point the Parliament added: "... if the independence of your crown has been maintained against the attacks of the Court of Rome, whereas sovereigns nearly everywhere had bent their necks beneath the yoke of ultramontane ambition; lastly, **if the sceptre has been passed down to the eldest son of the royal house by the longest and most prosperous succession of kings ever seen in the annals of Empires...**"

30. Representations of December 3, 1770.

Strong in services rendered, the now wealthy heirs of Power's lawyer-servants claimed henceforward to control its actions,31 and assuredly there was no other body of men in the country better qualified to hold Power in check.

31. **The clergy's remonstrances in 1788 show what a hold ideas of the limitation of Power had now taken: "The will of the prince may, if it has not been elucidated by his courts, be regarded as *his will of the moment*. It only acquires the majesty which assures it of execution and obedience if the explanations and remonstrances of your courts have first been heard in your privy council."** The truth is that the idea that every expressed wish of the sovereign had not *ipso facto* sovereign force played a role of capital importance under the *ancien régime*. It was eclipsed momentarily, and then not completely, only at the height of Louis XIV's reign.

If offices were bought, the control over the sales exercised by this body hedged in the appointment of a new magistrate with guarantees which ensured that no senate was ever recruited better. If the members of the Parliament were not elected by the public, they deserved on that account more of the public confidence, as being less its flatterers by design than its champions by principle. Taken as a whole, they formed a weightier and more capable body of men than those of the British Parliament. Was it right, then, for the monarchy to accept and sanction this counter-Power? Or did its dignity demand that it react against the pretensions of Parliament? **That was the policy of one party, which called itself Richelieu's heir and was in fact led by d'Aiguillon, a great-nephew of the great Cardinal. But if the need was to smash now this aristocracy of the robe and extend the royal authority ever further, it had to be done as in former days to the plaudits of the common people and by employing a new set of plebeians against the present wearers of periwigs.** Mirabeau saw as much, but d'Aiguillon's faction were blind to it.

That faction consisted of nobles who had been more or less plucked by the monarchical Power and were now getting new feathers by installing themselves in the wealth-giving apparatus of state which had been built by the plebeian clerks. Finding that offices were now of greater value than the manors, they fell to on the offices. Finding that the bulk of the feudal dues had been diverted into the coffers of the state, they put their hands in them. And, occupying every place and obstructing every avenue leading to Power, **they succeeded in weakening it both by their incapacity and by their feeble efforts to prevent it from attracting, as formerly, to its banners the aspirations of the common people.**

In this way the men who should have served the state, finding themselves discarded,32 turned Jacobin.

> 32. **Notably by the ridiculous regulation of 1780 which made a patent of nobility going as far back as 1400 a condition of belonging to the court.** In this way the king was forced to live in the midst of an unadulterated nobility. And for what purpose? **The purpose was pure greed, so as to have a monopoly of the favours and places which the king did not grant to those who were out of his sight.**

https://archive.org/details/B-001-015-424/page/n249/mode/2up?view=theater

Louis XIV had strictly excluded the nobles from every political office, but now this crowd of courtiers, greedy of power and place, started to wage a continuous war against the king's ministers, each of whom had henceforward to raise his own faction to maintain himself in office.
…

To keep the men of law in service to authority, as in their beginning they had been, all that was needed was that their ranks should be filled either from the bodies of poor clerks attached to the courts or, at the least, from a middle class between whom and the nobility there was a great social gulf. But hereditary offices, which had at first attached certain middle-class families to the interests of the state, had detached them from the middle class, and made of them a distinct caste, which constant intermarriage bound to the interests of the higher nobility. **The Parliament men, who were at first statocrats, with no more status than their offices gave them, had become aristocrats, with an authority proper to themselves and interests which were distinct from those of the state.** If an attempt was made to cut down the absurdly bloated number of officials, which got in the way of the dispatch of business, the Parliament men obstructed it. The reason was that the officials, like the Parliament men, had bought their offices (which had been created in lean times to bring in a revenue) and the Parliament men could not permit any attack on a form of property7 which gave them their own importance. If an attempt was made to spread taxation evenly over all the orders, with regard henceforward paid to nothing but ability to pay, the Parliament men, who themselves had fiscal privileges, made common cause with everyone else who had them. In view of the conflict looming inevitably between Power and themselves, **they made themselves, they who were by tradition the enemies of local immunities, the paradoxical defenders of those very immunities.**

They became in the end so strong that Maupéou's dismissal of them in 1770 amounted to a *coup d'état*. Such was the feebleness of authority at the time that some courtiers of the parliamentary faction were able to maltreat the Minister of Finance in the antechamber of the king itself.8

Behind the Parliament were the nobility, the clergy, the provinces, and the princes themselves. There was no king's party to be found. Or, rather, it was the people.

8. In 1788 the administration confronted everywhere forces which thwarted it. It had been reduced to the lowest level of impotence. The Revolution was suddenly to liberate it from all its adversaries.

The retreat of the monarchy had gone so far that it had had to throw to popular clamour its provincial intendants, who were the executors of the central government's will; **they were succeeded by provincial assemblies—a move which was in the opposite direction to all French history.** The Revolution, on the other hand, was to subject the entire country, more strictly and uniformly than ever before, to the will of Power.

The work of the Revolution was the restoration of absolute monarchy. The direction of the common people's aspirations had been understood by Philip the Fair: for that reason he—the first to do it—had summoned the Third Estate to the States-General. **Nearly five centuries later the event still justified him; but Louis XVI was no Philip the Fair. And the restoration was to take place without a king.**
…

But one thing is clear enough: that from the start the Constituent Assembly sacrificed the interests of just those privileged persons who had demanded the convocation of the States-General. A few sessions saw the destruction of privileges on which the kings had never dared lay hands. **The suppression of the States-Provincial, which had been an object of royal policy for centuries, was the work of a moment. The vast possessions of the clergy were made over no less swiftly to Power, and the Parliaments, whose obstructionist tactics had brought about the convocation of the States-General, received a more summary dismissal than in the time of Maupéou.**

The checks and balances were all swept away, and here, as Mirabeau saw, lay the king's great opportunity.9 He wrote to him: **"The idea of forming all the citizens into but one class would have pleased Richelieu, for an equality of this kind facilitates the work of Power."**10 Mirabeau saw himself filling the part and place of the great Cardinal, gathering the fruits of this stupendous lopping of heads.

> 9. In a memorandum of remarkable lucidity he notes: “In the course of a single year liberty has triumphed over more of the prejudices impeding authority, *has wiped out more enemies of the throne*, and has obtained more sacrifices for the national prosperity, than the royal authority could have done in several centuries. I have always called attention to the fact that the obliteration of the clergy, the Parliaments, the state lands, the feudal nobility, the provincial jurisdictions and every species of privilege was a victory both for the nation and for the monarchy.” Twenty-eighth memorandum for the Court, dated September 28, 1790, in *Correspondance de Mirabeau avec le Comte de La Marck*, in 3 vols. (Paris: 1851) Vol. II, p. 197.

…

“Yes, I assure you,” cried Mirabeau, “I can think of nothing more terrible than a sovereign aristocracy of six hundred people.” Yet it came, inexorably.

…

“As for the equilibrium of powers, we have in the past let ourselves be the dupes of its prestige...” exclaimed Robespierre, but now,

> **what do we care for devices devised to balance the authority of tyrants?** It is tyranny that must be extirpated: the aim of the people should be, not to find in the quarrels of their masters short breathing-spaces for themselves, but to make their own right arms the guarantee of their rights.12

In other words: when the Power was held by others, we favoured limiting it; now that we hold it ourselves, it cannot be too big.

…

By all means let the people be an absolute sovereign in the hour of choosing its representatives, for in that way the representatives hold from it unlimited authority. <u>But when it has conferred on them this authority, its role is finished and it is of no further importance: it is now the subject, and only the assembly is sovereign.</u> Only the assembly is the place where the general will is formed,15 and consultation with the people is no more than a species of cookery **which boils down the entire nation into a microcosm of six hundred persons who, by an exceedingly courageous fiction, are deemed to be the assembled nation itself.**16

Yet this exalted sovereignty, which dared to send the king to the scaffold and rejected contemptuously the Girondins’ proposal of appeal to the electoral assemblies, abased and humbled itself—before whom? Before the bands of unbridled fanatics who were welcomed at the bar of the Convention and whose crazy petitions were accepted as the expression of the popular will.

…

The true incarnation of this new Power was Sieyès. No one had played a larger part than he in the unfolding of the Revolution; having been a member of the Constituent Assembly, of the Convention, and of the Committee of Public Safety, a Director and a Consul, he prompted, no doubt, these words of Napoleon, which, had he been in a position to do so, he would have spoken on his own account: “The Revolution is closed; its principles are fixed in my person. The government in being is the representative of the sovereign people. There can be no opposition to the sovereign.”

…

The wish of the population was to be quit of the royal intendants and to administer itself by localities. The Constituent Assembly gave it apparent satisfaction by entrusting all departments of government to elected local assemblies. But simultaneously it destroyed just those historical units which had the ability and the will to govern themselves. **<u>The geometrical intelligence of Sieyès conceived the idea of cutting up the country into twenty-four equal rectangles, themselves divided into nine equal *communes*, which, by the same infantile geometry, spawned nine cantons each.</u>**18 **Though this crazy plan was not followed through, it remained the ideal of the creators of the *départements*. It was safe enough after that to give these artificial creations an autonomous existence!** As though there were danger of such as they feeling the breath of a life of their own!

> The systematic spirit [said Benjamin Constant]19 at first went into raptures over symmetry. The passion for Power soon found out what an immense advantage this symmetry procured it. **It nearly came to the point of denoting cities and provinces by numbers, just as numbers were used to denote legions and army corps:** so great was the apparent fear of any moral idea being attached to whatever was done!

…

Independent, majestic, and capable of withstanding the king himself, the judiciary influenced profoundly the character of the people.

> **Judicial habits had become in many respects the habits of the nation.** The courts had spread the idea widely that every dispute was subject to argument and every decision to appeal; they had made publicity customary and formality desirable, both of them things which keep servitude at bay.23

This independence has never reappeared: **“The subordination of the magistracy to the government is one of the triumphs of the Revolution. At the moment of proclaiming the rights of man, it destroyed their castle and paralysed their defenders.”**24

---

https://archive.org/details/cu31924014201044/page/n29/mode/2up?view=theater

ONE of the first measures of the French Revolution was an attack upon the Church. **Of all the passions to which that Revolution gave birth, that of irreligion was the first kindled, as it was the last extinguished.** Even when the first enthusiasm of liberty had worn off and peace had been purchased by the sacrifice of freedom, hostility to religion survived. Napoleon subdued the liberal spirit of the Revolution, but he could not conquer its anti-Christian tendencies. Even in the times in which we live, **men have fancied they were redeeming their servility to the most slender officials of the state by their insolence to God, and have renounced all that was free, noble, and exalted in the doctrines of the Revolution, in the belief that they were still faithful to its spirit so long as they were infidels.**

> https://biblehub.com/luke/19-14.htm
>
> **But his citizens** [*politai*] **hated him, and sent a message after him, saying, We will not have this man to reign over us.**

https://www.gutenberg.org/cache/epub/28046/pg28046-images.html#BARERE **[April, 1844]**

The policy of the Jacobins, in this situation, was to subject France to an aristocracy infinitely worse than that aristocracy which had emigrated with the Count of Artois—to an aristocracy not of birth, not of wealth, not of education, but of mere locality. **They would not hear of privileged orders; but they wished to have a privileged city. That twenty-five millions of Frenchmen should be ruled by a hundred thousand gentlemen and clergymen was insufferable; but that twenty-five millions of Frenchmen should be ruled by a hundred thousand Parisians was as it should be.** The qualification of a member of the new oligarchy was simply that he should live near the hall where the Convention met, and should be able to squeeze himself daily into the gallery during a debate, and now and then to attend with a pike for the purpose of blockading the doors. It was quite agreeable to the maxims of the Mountain that a score of draymen from Santerre’s brewery, or of devils from Hébert’s planting house, should be permitted to drown the voices of men commissioned to speak the sense of such cities as Marseilles, Bordeaux, and Lyons; **and that a rabble of half-naked porters from the Faubourg St. Antoine should have power to annul decrees for which the representatives of fifty or sixty departments had voted.**

>
> The Empire was immense, **and the people in this immense Empire, so far from being Sovereign, were a people enslaved by a Despotic Metropolis, by an army *of four hundred thousand soldiers* called Citizens, always ready to burst forth from an entrenched camp called *Rome*, to crush any town or province which should dare to assert its own liberties.** Athens followed the same conduct with respect to its colonies and allied towns.
>
> These examples adduced by Jean Jaques only showed what the French Revolution has, since, so well demonstrated: that when the inhabitants of an immense town, like Rome or Paris, take up their arms, they may style their Revolutions by the names of Equality and Liberty, but all the real distinction is, that in place of one King whom they may have banished or murdered, the inhabitants are transformed into four or five hundred thousand Despots and Tyrants over the Provinces, while they in their turn are tyrannized by their tribunes. **Are not the ashes of Lyons, are not the unfortunate people of Rouen or Bourdeaux the unhappy examples that may be cited to show what fate awaited the miserable town that might attempt to shake off the yoke of the suburbs of St. Marceau, St. Antoine, or of the citizens of Paris?**

It was necessary to find some pretext for so odious and absurd a tyranny. Such a pretext was found. **To the old phrases of liberty and equality were added the sonorous watchwords, unity and indivisibility. A new crime was invented, and called by the name of federalism. The object of**

the Girondists, it was asserted, was to break up the great nation into little independent commonwealths, bound together only by a league like that which connects the Swiss cantons or the United States of America. The great obstacle in the way of this pernicious design was the influence of Paris. To strengthen the influence of Paris ought therefore to be the chief object of every patriot.

The accusation brought against the leaders of the Girondist party was a mere calumny. They were undoubtedly desirous to prevent the capital from domineering over the republic, and would gladly have seen the Convention removed for a time to some provincial town, **or placed under the protection of a trusty guard, which might have overawed the Parisian mob;** but there is not the slightest reason to suspect them of any design against the unity of the state. Barère, however, really was a federalist, and, we are inclined to believe, the only federalist in the Convention.
…

He long continued to maintain that the ascendency of one great city was the bane of France; that the superiority of taste and intelligence which it was the fashion to ascribe to the inhabitants of that city were wholly imaginary; and that the nation would never enjoy a really good government till the Alsatian people, the Breton people, the people of Bearn, the people of Provence, should have each an independent existence, and laws suited to its own tastes and habits. **These communities he proposed to unite by a tie similar to that which binds together the grave Puritans of Connecticut and the dissolute slave-drivers of New Orleans. To Paris he was unwilling to grant even the rank which Washington holds in the United States.** He thought it desirable that the congress of the French federation should have no fixed place of meeting, but should sit sometimes at Rouen, sometimes at Bordeaux, sometimes at his own Toulouse.

https://en.wikisource.org/wiki/Napoleon%27s_Addresses/Part_II#Proclamation_to_the_Troops_on_Embarking_for_Egypt.2C_June.2C_1798

"The people amongst whom we are going to live are Mahometans. The first article of their faith is this: 'There is but one God and Mahomet is His prophet.' Do not contradict them. **Behave to them as you behaved to the Jews—to the Italians. Pay respect to their muftis and their imaums, as you did to the rabbis and the bishops. Extend to the ceremonies prescribed by the Koran and the mosques the same toleration which you showed to the synagogues, to the religion of Moses and of Jesus Christ.**

"**The Roman legions protect all religions.** You will here find customs different from those of Europe. You must accommodate yourselves to them.
…

"People of Egypt: You will be told by our enemies, that I am come to destroy your religion. Believe them not. **Tell them that I am come to restore your rights, punish your usurpers, and raise the true worship of Mahomet. Tell them that I venerate, more than I do the Mamelukes, God, His prophet, and the Koran. Tell them that all men are equal in the sight of God; that wisdom, talents, and virtue alone constitute the difference between them.** And what are the virtues which distinguish the Mamelukes, that entitle them to appropriate all the enjoyments of life to themselves? **If Egypt is their farm, let them show their lease, from God, by which they hold it.** Is there a fine estate? It belongs to the Mamelukes. Is there a beautiful slave, a fine horse, a good house? All belong to the Mamelukes. But God is just and merciful, and He hath ordained that the Empire of the Mamelukes shall come to an end. Thrice happy those who shall side with us; they shall prosper in their fortune and their rank. Happy they who shall be neutral; they will have time to become acquainted with us, and will range themselves upon our side. But woe, threefold woe, to those who shall arm for the Mamelukes and fight against us! For them there will be no hope; they shall perish."

In 1810, after acknowledging to [Benjamin] Rush that his wife opposed the classics on feminist grounds, Adams noted: "**Hobbes calumniated the classics because they filled young men's heads with ideas of liberty and excited them to rebellion against Leviathan. Suppose we should agree to study the oriental languages, especially the Arabic, instead of the Greek and Latin. This would not please the ladies so well, but it would gratify Hobbes much better.** According to many present appearances in the world, many useful lessons and deep maxims might be learned from the Asiatic writers. There are great models for the imitation of the emperors of Britain and France." **Having cited Tamerlane, who had once declared that "as there is but one God, there ought to be but one King," as a typical hero in oriental literature, Adams asked facetiously: "Where can you find in any Greek or Roman writer a sentiment so sublime and edifying for George and Napoleon? There are some faint traces of it in the conduct of Alexander and Caesar, but far less frank and noble, and these have been imprudently branded with infamy by Greek and Roman orators and historians."** Adams further claimed that what little classical learning Napoleon possessed had "damped his ardor and prevented his rising as yet to the lofty heights of the Asiatic emperors." When Rush blamed the "classical revival" in Europe on Napoleon, Adams disagreed, writing: "I cannot … do so much honor to him as to ascribe this … resurrection of learning to him; it is rather due to the American Revolution. This great event turned the thoughts and studies of men of learning to the ancient Greeks, their language, their language, their antiquities, their forms of government."2

The first thing that the revolutionists in France aimed at was to destroy nobility altogether: now this has been considered by the present ruler as depriving him of gratifying his vanity, and rewarding services at a cheap rate; but it is worth observing in what an artful manner he has restored titles. In the first place, the titles created are only personal; **they are not hereditary, as they had been since Hugh Capet's time;** but moreover, they are not official, or magisterial, as before his time, but merely dependent on the will of the chief ruler. This is a very great change; **for when they were official, though they were not hereditary, they were sure to exist in succession, independent of the will of the Prince; but now they are entirely dependent on his will.**

After stating this as a fact hitherto unnoticed, it may not be useless to observe, that the change is highly agreeable to revolutionists of all descriptions, who, considering themselves as men of merit, are greatly displeased with seeing rank and honours passing from father to son. They have, it must be admitted, many specious arguments in favour of personal nobility, of which the first of all is, that personal merit, or public service, being the origin of title, ought to be its attendant throughout. **Now all those things added together make the present danger to hereditary rank greater than when first attacked; for equality, being impracticable, could not last long: this being practicable, and agreeable both to rulers and people, may very possibly be established in other countries;**

https://archive.org/details/napoleoninexile01omegoog/page/182/mode/2up?view=theater

During the conversation, I took the liberty of asking the emperor his reasons for having encouraged the Jews so much. He replied, "**I wanted to make them leave off usury, and become like other men.** There were a great many Jews in the countries I reigned over; by removing their disabilities, and by putting them upon an equality with Catholics, Protestants, and others, **I hoped to make them become good citizens, and conduct themselves like others of the community. I believe that I should have succeeded in the end.** My reasoning with them was, that, as their rabbins explained to them, that they ought not to practise usury to their own tribes, but were allowed to do so with Christians and others, that, therefore, as I had restored them to all their privileges, and made them equal to my other subjects, they must consider me to be the head of their nation, like Solomon or Herod, and my subjects as brethren of a tribe similar to theirs. That, consequently, they were not permitted to practise usury with me or them, but to treat us as if we were of the tribe of Judah. That having similar privileges to my other subjects, they were in like manner, to pay taxes, and submit to the laws of conscription and others. **By this, I gained many soldiers. Besides, I should have drawn great wealth to France, as the Jews are very numerous, and would have flocked to a country where they enjoyed such superior privileges. Moreover, I wanted to establish an universal liberty of conscience. My system was to have no predominant religion, but to allow perfect liberty of conscience and of thought, to make all men equals whether Protestants, Catholics, Mahometans, Deists, or others;** so that their religion should have no influence in getting them employments under government. In fact, that it should neither be the means of serving, or of injuring them; and that no objection should be made to a man's getting a situation on the score of religion, provided he were fit for it in other respects. **I made every thing independent of religion.** All the tribunals were so. Marriages were independent of the priests; even the burying grounds were not left at their disposal, as they could not refuse interment to the body of any person, of whatsoever religion. My intention was to render everything belonging to the state and the constitution, purely civil and independent of any religion. **I wished to deprive the priests of all influence and power in civil affairs,** and to oblige them to confine themselves to their own spiritual matters, and meddle with nothing else." I asked if uncles and nieces had not a right to marry in France. He replied, "Yes, but they must obtain a special permission." I asked if the permission were to be granted by the pope. "By the pope?" said he, "No;" **catching me by the ear and smiling, "I tell you that neither the pope, nor any of his priests, had power to grant any thing.—By the sovereign."**

https://www.marxists.org/reference/archive/hegel/works/hi/lectures3.htm

The political institutions were united in the person of the Emperor; no moral bond any longer existed; **the will of the Emperor was supreme, and before him there was absolute equality.** The freedmen who surrounded the Emperor were often the mightiest in the empire; for caprice recognizes no distinction.

https://marxists.architexturez.net/archive/marx/works/1844/condition-england/ch01.htm

The eighteenth century represents the revival of the spirit of antiquity as against that of Christianity. Materialism and the republic; the philosophy and politics of the ancient world, arose anew, and the French, the exponents of the ethos of antiquity within Christianity, assumed the historical initiative for a time.
…

That Germany, France and England are the three foremost countries at the present moment in history, I can doubtless take for granted; **that the Germans represent the Christian spiritual principle, the French that of classical materialism, in other words, that the former represent religion and the church and the latter politics and the state, is equally obvious or will be made so in due course;** the significance of the English in recent history is less conspicuous and yet for our present purpose it is the most important.

https://archive.org/details/in.ernet.dli.2015.156971/page/n59/mode/2up?view=theater

These gladiators and fighters with wild beasts, were sprung from every European nation; and the kings, nobles, and serfs of these nations were all slaves alike of the Roman Emperor, who showed them, in this most practical of ways, that all men were equals; just as, on the other hand, he himself was often shown most palpably by his own Pretorian Guard, that he also was no more than a mere slave.

https://archive.org/details/in.ernet.dli.2015.156971/page/n73/mode/2up?view=theater

To the Greek the fair, strong man alone was free, and this man was none other than *himself*; whatever lay outside the circle of Grecian manhood and Apollonian priesthood, was to him *barbarian*, and if he employed it,—*slave*. **True that the man who was not Greek, was actually barbarian and slave; but he was still a *man*, and his barbarianism and his slavery were not his nature but his fate: the sin of history against his nature,** just as to-day it is the sin of our social system, that the healthiest nations in the healthiest climates have brought forth cripples and outcasts. This historical sin, however, was destined soon to be avenged upon the free Greek himself. Where there lived among the nations no feeling of *absolute human-love*, the Barbarian needed only to subjugate the Greek: and all was over with Grecian freedom, strength, and beauty. Thus, in deep humiliation, two hundred million men, huddled in helpless confusion in the Roman empire, too soon found out that—when *all* men cannot be *free alike* and *happy*—all men must *suffer alike* as *slaves*.

https://archive.org/details/11ShahakJewishHistoryJewishReligion/page/n45/mode/2up?view=theater

However, all this was changed by two parallel processes – **beginning in Holland and England,** continuing in revolutionary France and in countries which followed the example of the French Revolution, and then in the modern monarchies of the 19th century: the Jews gained a significant level of individual rights (in some cases full legal equality), **and the legal power of the Jewish community over its members was destroyed. It should be noted that both developments were simultaneous, and that the latter is even more important, albeit less widely known, than the former.**
…

Similarly, one can quote from the *responsa* written shortly before 1832 by the famous Rabbi Moshe Sofer of Pressburg (now Bratislava), in what was then the autonomous Hungarian Kingdom in the Austrian Empire, **and addressed to Vienna in Austria proper, where the Jews had already been granted some considerable individual rights.**2 **He laments the fact that since the Jewish congregation in Vienna lost its powers to punish offenders, the Jews there have become lax in matters of religious observance,** and adds: 'Here in Pressburg, when I am told that a Jewish shopkeeper dared to open his shop during the Lesser Holidays, I immediately send a policeman to imprison him.'

This was the most important social fact of Jewish existence before the advent of the modern state: observance of the religious laws of Judaism, as well as their inculcation through education, were enforced on Jews by physical coercion, from which one could only escape by conversion to the religion of the majority, amounting in the circumstances to a total social break and for that reason very impracticable, except during a religious crisis.3

However, once the modern state had come into existence, the Jewish community lost its powers to punish or intimidate the individual Jew.
…

Nicholas I of Russia was a notorious antisemite and issued many laws against the Jews of his state. **But he also strengthened the forces of 'law and order' in Russia** – not only the secret police but also the regular police and the gendarmerie – **with the consequence that it became difficult to murder Jews on the order of their rabbis,** whereas in pre-1795 Poland it had been quite easy. 'Official' Jewish history condemns him on *both* counts.
…

The Metternich regime of pre-1848 Austria was notoriously reactionary and quite unfriendly to Jews, but it did not allow people, even liberal Jewish rabbis, to be poisoned. During 1848, when the regime's power was temporarily weakened, the first thing the leaders of the Jewish community in the Galician city of Lemberg (now Lvov) did with their newly regained freedom was to poison the liberal rabbi of the city, whom the tiny non-Orthodox Jewish group in the city had imported from Germany. One

of his greatest heresies, by the way, was the advocacy and actual performance of the Bar Mitzvah ceremony, which had recently been invented.

https://archive.org/details/cu31924014201044/page/n33/mode/2up?view=theater

But a close inspection brings to light from under the ruins an immense central power, which has gathered together and grasped all the several particles of authority and influence formerly scattered among a host of secondary powers, orders, classes, professions, families, and individuals, sown broadcast, so to speak, over the whole social body. No such power had been seen in the world since the fall of the Roman empire.
…

It was the simple, regular, grand form of this central power which Mirabeau discerned through the dust of the crumbling institutions of olden time. The masses did not see it, great as it was. Time gradually disclosed it to all; and now, princes can see nothing else. Admiration and envy of its work fill the mind, not only of the sovereigns it created, but of those who were strangers or inimical to its progress. **All are busy destroying immunities, abolishing privileges throughout their dominions; mingling ranks, leveling, substituting hired officials in the room of an aristocracy, a uniform set of laws in the place of local franchises,** a single strong government instead of a system of diversified authorities. Their industry in this revolutionary work is unceasing; when they meet an obstacle, they will sometimes even borrow a hint or a maxim from the Revolution. They have been noticed inciting the poor against the rich, the commoner against the noble, the peasant against his lord. The French Revolution was both their scourge and their tutor.

https://oll.libertyfund.org/title/acton-the-history-of-freedom-and-other-essays#lf0030_label_352

The Roman republic laboured to crush the subjugated nations into a homogeneous and obedient mass; but the increase which the proconsular authority obtained in the process subverted the republican government, and the reaction of the provinces against Rome assisted in establishing the empire. **The Cæsarean system gave an unprecedented freedom to the dependencies, and raised them to a civil equality which put an end to the dominion of race over race and of class over class. The monarchy was hailed as a refuge from the pride and cupidity of the Roman people; and the love of equality, the hatred of nobility, and the tolerance of despotism implanted by Rome became, at least in Gaul, the chief feature of the national character.**
…

Roman Gaul had so thoroughly adopted the ideas of absolute authority and undistinguished equality during the five centuries between Cæsar and Clovis, that the people could never be reconciled to the new system. **Feudalism remained a foreign importation, and the feudal aristocracy an alien race, and the common people of France sought protection against both in the Roman jurisprudence and the power of the crown.**
…

The monarchy which had been engaged from the thirteenth century in curbing the nobles, was at last thrust aside by the democracy, because it was too dilatory in the work, and was unable to deny its own origin and effectually ruin the class from which it sprang. All those things which constitute the peculiar character of the French Revolution,—**the demand for equality, the hatred of nobility and feudalism, and of the Church which was connected with them, the constant reference to pagan examples,** the suppression of monarchy, the new code of law, the breach with tradition, and the substitution of an ideal system for everything that had proceeded from the mixture and mutual action of the races,—all these exhibit the common type of a reaction against the effects of the Frankish invasion.
…

Monarchy unconnected with aristocracy became popular in France, even when most uncontrolled; whilst the attempt to reconstitute the throne, and to limit and fence it with its peers, broke down, because the old Teutonic elements on which it relied—hereditary nobility, primogeniture, and privilege—were no longer tolerated. **The substance of the ideas of 1789 is not the limitation of the sovereign power, but the abrogation of intermediate powers. These powers, and the classes which enjoyed them, come in Latin Europe from a barbarian origin;** and the movement which calls itself liberal is essentially national. If liberty were its object, its means would be the establishment of great independent authorities not derived from the State, and its model would be England. But its object is equality; and it seeks, like France in 1789, to cast out the elements of inequality which were introduced by the Teutonic race.

> **The Failure of Universal Suffrage on JSTOR**
>
> Toward the end of the middle ages we find the relations of kings and peoples the reverse of what they afterward became. **We find oppression divided and diffused in the persons of a multitude of**

feudal tyrants, and the masses looking to their sovereign as a protector. The feudal oppressor was both his enemy and theirs, and the progress of monarchical centralization was in the interest both of prince and peasant. **It was not until feudalism was prostrate that the masses ceased to bless their sovereign as a friend, and began to curse him as a tyrant.**

https://en.wikipedia.org/wiki/Constitution_of_3_May_1791#Features

By reducing the enfranchisement of the noble classes, this law introduced major changes to the electoral ordinance.[64]
Previously, all nobles had been eligible to vote in *sejmiks*, which *de facto* meant that many of the poorest, landless nobles – known as "clients" or "clientele" of local magnates – voted as the magnates bade them.[31][64]
Now right to vote was tied to a property qualification: one had to own or lease land and pay taxes, or be closely related to somebody who did, to vote.[65][87] 300,000 of 700,000 previously eligible nobles were thus disfranchised.[64]
...

"The worst possible news have arrived from Warsaw: the Polish king has become almost sovereign" was the reaction of one of Russia's chief foreign policy authors, Alexander Bezborodko, when he learned of the new constitution.[108]

https://archive.org/details/FoundationsOfNineteenthCenturygrundlagenDesNeunzehntenJahrhunderts/page/n227/mode/2up?view=theater

The Roman idea certainly still lived on, but it had concentrated itself or, so to speak, become merged in one person – the Emperor; **the privileges of the Romans and their summary powers had not disappeared from the world, they had all been delegated to a single man: that is the course of events from Augustus to Diocletian and Constantine.** The first Caesar had been satisfied with uniting in his own hands all the most important offices of State,* and that had been granted to him only for one definite object limited in respect of time, namely, to restore legal order in the civilised world (*restauratio orbis*); **within three centuries things had come to this, that a single individual was invested not only with all offices but with all the rights of all the citizens.** Just as in early times (at the time of the first successor to Augustus) the "majesty of the people" had become the "majesty" of one man, so gradually each and every power, each and every right passed over to him. Augustus had, like every other citizen, still given his vote in the Comitia; now there sits a monarch on the throne, whom one may only approach "reverentially" on one's knees, **and before him all men are alike, for all, from the foremost statesman to the lowest peasant, are his subjects.**

http://antitechnocrat.net/node/1430

There is, however, another enemy of Patriotism and Nationalism. It is equipped with power and wealth and a good chance of success in practical politics and it is but the disguise of cosmopolitanism. It is Imperialism, or as we would say, 'Globalism'. In Chesterton's opinion the Empire was neither for the benefit nor the glory of the English, it was for their exploitation. We had been put to work, to suffer, to bleed and to die, for the benefit of international banking and trade, that is, 'Globalism', and when we had served our purpose the assets would be stripped and lodged elsewhere. The price of such glory as we might enjoy from seeing the map painted red, was our impoverishment, our deculturation, our mongrelization, our destruction as a Nation. Chesterton presented this succinctly in 'The Flying Inn' (1904) **"Did you ever hear the great destiny of Empire? It is in four acts: Victory over barbarians. Employment of barbarians. Alliance with barbarians. Conquest by barbarians. That is the great destiny of Empire."**

https://archive.org/details/cu31924021569284/page/n163/mode/2up?view=theater

317. Possession Possesses.—**Only up to a certain point does possession make men feel freer and more independent; one step farther, and possession becomes lord, the possessor a slave.** The latter must sacrifice his time, his thoughts to the former, and feels himself compelled to an intercourse, nailed to a spot, incorporated with the State—perhaps quite in conflict with his real and essential needs.

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A1999.01.0168%3Abook%3D9%3Asection%3D578e

“But now suppose some god should catch up a man who has fifty or more slaves[1] and waft him with his wife and children away from the city and set him down with his other possessions and his slaves in a solitude where no freeman could come to his rescue. **What and how great would be his fear,[2] do you suppose, lest he and his wife and children be destroyed by the slaves?” “The greatest in the world,[3]” he said, “if you ask me.”** [579a] **“And would he not forthwith find it necessary to fawn upon some of the slaves and make them many promises and emancipate them, though nothing would be further from his wish[1]? And so he would turn out to be the flatterer of his own servants.”** “He would certainly have to,” he said, “or else perish.”

http://penelope.uchicago.edu/Thayer/E/Roman/Texts/Tacitus/Annals/15A*.html#ref29

21 1 "There was a day, indeed, when we sent not merely a praetor or a consul, but private citizens, to visit the provinces and report upon the loyalty of each; and nations awaited in trepidation the verdict of an individual. **But now we court foreigners; we flatter them; [colimus externos et adulamur] and, as at the nod of one or other among them, there is decreed a vote of thanks, so—with more alacrity—is decreed an impeachment.**

https://mondopolitico.com/library/meinkampf/v1c3.htm

The central idea of this new Habsburg, whose family had ceased to speak anything but Czech (the Archduke's wife, a former Czech countess, had been morganatically married to the Prince – she came from circles whose anti-German attitude was traditional), **was gradually to establish a Slavic state in Central Europe which for defense against Orthodox Russia should be placed on a strictly Catholic basis. Thus, as the Habsburgs had so often done before, religion was once again put into the service of a purely political idea,** and what was worse – at least from the German viewpoint – of a catastrophic idea.
...

But when after the great war the House of Habsburg began with desperate determination slowly but inexorably to exterminate the dangerous German element in the dual monarchy (the inner convictions of this element could not be held in doubt), for such would be the inevitable result of the Slavization policy – **the doomed people rose to a resistance such as modern German history had never seen.**

For the first time, men of national and patriotic mind became rebels.

Rebels, not against the nation and not against the state as such, but rebels against a kind of government which in their conviction would inevitably lead to the destruction of their own nationality.

For the first time in modern German history, traditional dynastic patriotism parted ways with the national love of fatherland and people.

The Pan-German movement in German-Austria in the nineties is to be praised for demonstrating in clear, unmistakable terms that a state authority is entitled to demand respect and protection only when it meets the interests of a people, or at least does not harm them.
...

In general it should not be forgotten that the highest aim of human existence is not the preservation of a state, let alone a government, but the preservation of the species.

And if the species itself is in danger of being oppressed or utterly eliminated, the question of legality is reduced to a subordinate role. Then, **even if the methods of the ruling power are alleged to be legal a thousand times over,** nonetheless the oppressed people's instinct of self-preservation remains the loftiest justification of their struggle with every weapon.

Only through recognition of this principle have wars of liberation against internal and external enslavement of nations on this earth come down to us in such majestic historical examples.

https://en.wikipedia.org/wiki/Blood_and_soil

Carl Schmitt argued that a people would develop laws appropriate to its "blood and soil" because authenticity required loyalty to the *Volk* over abstract universals.[15]
...

The program received far more ideological and propaganda support than concrete changes.[19] When Gottfried Feder tried to settle workers in villages about decentralized factories, generals and Junkers successfully opposed him.[20] Generals objected because it interfered with rearmament, and Junkers because it would prevent their exploiting their estates for the international market.[21] It would also require the breakup of Junker estates for independent farmers, which was not implemented.[7]

The *Reichserbhofgesetz*, the State Hereditary Farm Law of 1933, implemented this ideology, stating that its aim was to: "preserve the farming community as the blood-source of the German people" (*Das Bauerntum als Blutquelle des deutschen Volkes erhalten*).

https://archive.org/details/risefallofthirdr0000will_g4y3/page/354/mode/2up?view=theater

To carry it out Hitler appointed Walther Darré, one of the few party leaders who, though he subscribed to most of the Nazi myths, knew his field professionally and well. An outstanding

agricultural specialist with suitable academic training, he had served in the Agriculture Ministries of Prussia and the Reich.

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n73/mode/2up?view=theater

Als die Germanen das Römische Reich zertrümmert hatten, fanden sie in seinen Grenzen eine Bevölkerung vor, die seelisch vollkommen verfault war und unter der Herrschaft einer in Rom zusammengezogenen Geldmacht restlos entartete; in diesem Zivilisationssumpf hatte das Christentum eine zwar amtlich anerkannte Stellung inne, war aber weder innerlich noch äußerlich fähig, gegen die Fäulnis vorzugehen oder sie zu überwinden. **Bemerkenswert ist für uns die Tatsache, daß in diesem Römischen Reich eine restlose Vernichtung des Bauerntums bereits eingetreten war.** Es gab nur Großgrundbesitz mit Sklaven.
…

Da nun der germanische Bevölkerungsüberschuß im Osten nicht mehr untergebracht werden konnte, im Innern des Reiches gleichzeitig eine teilweise Umgestaltung der ehemals freien Bauern in Hörige unaufhaltsam um sich griff, gerieten beide Kräfte in eine gleichsinnige Richtung und drängten die Verhältnisse langsam aber sicher in ein Verhängnis hinein. **In den Bauernkriegen versuchte sich das alte Freiheitsbewußtsein der Germanen noch einmal gewaltsam Luft zu schaffen.** Das Ergebnis ist ja bekannt; hier muß aber auch die Tatsache betont werden, daß man diesen Bauernfriegen bisher noch viel zu wenig Beachtung geschenkt hat. Man könnte diese Bauernkriege des 16. Jahrhunderts—deren religiöser oder geistiger Beweggrund uns hier einmal nicht zu beschäftigen braucht—auch als warnendes Beispiel für das heutige Deutsche Volk, für das „Volk ohne Raum“ betrachten. **In Wirklichkeit ist diese Gefahr aber deshalb nicht vorhanden, weil wir in den *bäuerlichen Erbgesetzen des BGB*. eine Einrichtung getroffen haben, *die ganz selbsttätig jede Übervölkerung des Bauernstandes abdrosselt*.**[1] **Der germanische Bauernstand Deutschlands wird vielleicht in kurzer Zeit der Geschichte angehören.**
…

Daran trägt nicht etwa der Reichsfreiherr vom Stein die Schuld; erstens war der Gedanke der Bauernbefreiung ein uralter Lieblingsgedanke der Hohenzollern, und Stein führte nur aus, was die Hohenzollern längst erstrebten; zweitens stützte sich Stein einerseits auf Untersuchungen in der englischen Geschichte, andererseits auf sie Erfahrungen, die er als Kammerpräsident der Grafschaft Mark in Westfalen, mit den dortigen alten Gemeindefreiheiten der Bauern gemacht hatte. Aber seine Nachfolger, die die von ihm eingeleitete Entwicklung nicht folgerichtig zu Ende führten, sind die Auslöser der meisten Bauernvernichtungen im 19. Jahrhundert. **Herr der Lage blieben die Geldmächte.** Bald begann im Deutschen Reiche, wo immer die deutsche Zunge erklang, jene kaltschnäuzige Entwurzelung und Vernichtung uralter bodenständiger Bauerngeschlechter, **die eine fernere Zeit wohl als den schwärzesten Punkt unserer deutschen Geschichte betrachten wird.**
…

Deutschland hat durch seinen industriellen Aufschwung von 1871-1914 derartige Hekatomben von Bauerngeschlechtern geopfert, daß einem biologisch geschulten Menschen über diese auch noch als „Fortschritt“ gepriesene Selbstentleibung die Haare zu Berge stelen können.

So ist aus *wirtschaftlichen* Ursachen seit der Reichsgründung ein großer Hundertsatz **unseres besten nordischen Blutes von Lande fort und in die Unfruchtbarkeitsmaschine, genannt Stadt, hineingetrieben worden.**

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n91/mode/2up?view=theater

Der germanische Rechtsbegriff, *der vollkommen auf der verantwortungsbewußten Persönlichkeit aufbaut*, steht allerdings einem mechanisierten Rechtsbegriff, wie ihn jede reine Geldwirtschaft hervorbringt—die notwendigerweise jedes Persönlichkeitsbewußtsein entthront und den Menschen zur Sache herabdrückt—so gegensätzlich wie nur möglich gegenüber. Daher ließe sich der Verbacht aussprechen, daß die Geldherren in Rom weit weniger das Schwert der Germanen gefürchtet haben, als deren Sittlichkeitsbegriffe, die sich durch Geld nicht lenken ließen. Der einzelne germanische Söldner war ungefährlich, aber ein geschlossen innerhalb der Grenzen angesiedeltes Volk der Germanen konnte u. U. eine Quelle ständiger innerstaatlicher Unruhen werden.

Das Recht der Germanen ist auch tatsächlich merkwürdig. „Vom gemeinen Mann ging es aus, in seinem Bewußtsein und mehr noch in seinem Gefühl lebte es“ (v. Amira). Es ist durchaus geeignet, einen Geldmenschen, der nur in Zahlen und Sachen rechnet, entweder zum Hohne zu reizen—**sofern er die**

Macht besitzt, sich diesen Hohn leisten zu können—oder aber mit Grauen zu erfüllen, sofern nicht er sondern der Germane die Macht in den Händen hält. Der merkwürdigste Umstand am germanischen Recht ist nämlich die Einheit von Recht und Gott. Nach germanischer Auffassung lassen sich beide nicht trennen; *Gott ist selber Recht*. Das Recht ist dem Germanen einfach nur die Ausdrucksform seines gewachsenen Daseins. Daher gibt es auch—um ein Beispiel zu nennen—bei den Germanen keine Verjährung; **„Hundert Jahre Unrecht machen nicht eine Stunde Recht," sagt eine altdeutsche Rechtsauffassung. Das ist durchaus folgerichtig gedacht, weil jede Verjährung notwendigerweise eine menschliche Einwirkungsmöglichkeit auf das Recht vorausetzt.** Aus dem gleichen Grunde ist das Recht wohl auch nicht niedergeschrieben sondern nur *gewiesen* (Weistümer) worden; **auch das wäre folgerichtig, denn eine *lebendige* Sache kann man nur weisen, erklären, leiten, aber nicht schriftlich festlegen.**
…

Als die Germanen den römischen Staat kennen lernten, war er bereits nichts weiter als eine riesengroße Verwertungseinrichtung im Hinblick auf alle Gütererzeugungsstellen, die die damalige Welt kannte; **der damalige römische Staat hatte also im wesentlichen den modernen Gedanken der Weltwirtschaft bereits durchgeführt. Im diesem Staate bestand kein weiteres Gemeinschaftsgefühl unter den Bürgern, als das des gemeinsamen Nutzens;** wem es gelang, sich rücksichtslos nach oben in die reichen Schichten hineinzuarbeiten, der war eben ein gemachter Mann, und auf das „Wie" oder auf die Tränen derer, die durch seinen Aufstieg vernichtet wurden, kam es dabei gar nicht an.

Der *Germane* ging nun von einer grundsätzlich anderen Einstellung an den Staatsbegriff heran. *Der Germane kannte **die schrankenlose Ich-Freiheit der Einzelpersönlichkeit** überhaupt nicht*; er gliederte den *Freien* grundsätzlich in die *Gesamtheit der Freien* ein und *wertete* ihn auch nur im Hinblick auf das, *was er für die Gesamtheit wert war*.1
…

Hat uns der Engländer Froude in eindrucksvoller Weise den Grundgedanken im Unterschied der germanischen und ungermanischen Staatsauffassung klargemacht, so werden mir jetzt bei einem deutschen Juristen den gleichen Unterschied im Gegensatz vom römischen und germanischen Recht wiederfinden. Merk1 sagt z. B. darüber:

> „*Das römische Recht ist individualistisch, das deutsche Recht ist genossenschaftlich und sozial*. **Die Römer haben schon früh mit äußerster Folgerichtigkeit im Privatrecht die Einzelpersönlichkeit von allen natürlichen und sozialen Banden losgelöst und ganz auf sich selbst gestellt; der Zusammenhalt dieser atomisierten Einzelnen ist allein auf das Zwangsband eines allmächtigen Staates gegründet.**
> …
>
> Der Gedanke der Selbstherrlichkeit und unumschränkten Machtsfülle des Rechtsinhabers durchdringt das ganze römische Recht. **Möglichst schrankenlos soll der Herrschaftswille des Berechtigten schalten und walten, im öffentlichen Rechte der Wille des Staatsoberhauptes, im Privatrechte der Wille des Eigentümers und der anderen Inhaber subjectiver Rechte.** Diesem reinen einseitigen Rechte des Berechtigten, das von aller Verpflichtung und Gegenleistung losgelöst ist, pflegt das römische Recht die ebenso einseitige Pflicht anderer Personen gegenüberzustellen. **Hemmungen lagen allein in der Macht der Sitte und der öffentlichen Meinung, und diese Gegengewichte waren im allgemeinen wirksam, solange die Römer vom alten kernhaften Schlage lebten,** die durch die eiserne Zucht des Heeres hindurchgegangen und von Vaterlandsliebe, Achtung vor dem Althergebrachten und vom Geist der Ordnung und Gesetzlichkeit beseelt waren. In den Verfallzeiten des späteren Römerreichs, **wo diese sittlichen Kräfte geschwunden waren, mußte diese Freiheit in Zügellosigkeit und in schamlose Ausbeutung der wirtschaftlich schwächeren Volksschichten ausarten. Ebenso schädlich mußte dieser Mechanismus des römischen Rechtes bei seiner Übertragung auf Völker mit anderen Lebensauffassungen und Lebensgewohnheiten wirken.** In der Hand des wirtschaftlichen Liberalismus und des Kapitalismus der Neuzeit wurde er eine wuchtige Waffe zur Zertrümmerung der mittelalterlichen sozialen Gebundenheiten im bürgerlichen und Wirtschaftsrecht.
> …
>
> **Sozial war vor allem der Eigentumsbegriff des mittelalterlichen Rechts im Gegensatz zum individualistischen Eigentumsbegriff des Corpus Juris.** Das germanische Grundeigentum war mit weitgehenden Pflichten gegenüber der Allgemeinheit durchsetzt, insbesondere zugunsten der Familie, der Markgenossenschaft und des Staates gebunden. ***Der Grundbesitz konnte nicht wie im spätrömischen Recht wie eine Ware beliebig verschleudert und verschachert werden;*** *er bildete die Grundlage für die wirtschaftliche, gesellschaftliche und öffentlich-rechtliche Stellung einer Familie und sollte der Familie erhalten bleiben.* Der Eigentümer hatte daher auch keine freie Verfügung von Todes wegen, vielmehr bestanden am Grundbesitz unentziehbare Wartrechte der nächsten Blutserben. Der Grundbesitzer, der Handwerker sollen nach mittelalterlicher Auffassung ihre Stellung als Leiter ihres Unternehmens als eine Art *Amt im Dienste der Allgemeinheit betrachten*.

> Wegen der sittlichen und sozialen Schranken, die jeder Berechtigung im germanischen Recht gezogen sind, ist eine Rechtsausübung, die nur den Zweck verfolgt, einem anderen zu schaden (z. B. die Errichtung eines „Neidbaues“ nur um den Nachbarn die Aussicht zu versperren) als *Rechtsmißbrauch* im deutschen Recht von jeher untersagt. Entsprechendes Mißbrauchsverbot im BGB. § 226. **Anders grundsätzlich das römische Recht: *Qui iure suo utitur, neminem laedit*. Der Shylock-Standpunkt, der sich auf das formale Recht auch dort versteist, wo die Geltendmachung als unanständig und unsittlich erscheint, findet vor dem Richterstuhl des germanischen Rechts kein Gehör.**

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n135/mode/2up?view=theater

Der grundherrschaftliche Gedanke ist dort, wo er zu einer Auswertung der Hörigenarbeit wird, *nicht* altgermanisch, worüber wir uns oben ausführlich geäußert haben; und durch und durch ungermanisch wäre eine Arbeitseinrichtung zur Auswertung der bäuerlichen Arbeitskraft. **Das alles hat der germanische Adel erst in der Neuzeit gelernt,** als man den Begriff der Steuer—die im Mittelalter noch „Bitte“ hieß, weil sich der Grundherr von seinen Untertanen das notwendige Geld „erbitten“ mußte—verwendete (und mit Recht verwendete), um ein Staatsgebäude aufzubauen; **wenn dann der Absolutismus unter dem Einfluß von Frankreich den Begriff der Steuer entsittlichte, so ist das eine zeitgeschichtliche Krankheitserscheinung, die man keinesfalls auf das deutsche Mittelalter ober gar auf die Germanen übertragen darf.**2

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n173/mode/2up?view=theater

Damit stand Sparta am Wendepunkt seiner Geschichte. Denn von dem Augenblick an, wo das bäuerliche Anerbenrecht sich auf das Ein- oder Zweikindersystem stützt, bzw. sich aus wirtschaftlichen Gründen stützen muß, tritt sehr leicht Entartung ein; dies schon aus dem einfachen Grunde, weil die geringe Kinderzahl seine gesundsheitliche Ausmerze mehr gestattet und Erbe wird, wer ehen da ist, statt, wie das bei einer größeren Kinderzahl üblich ist und in Sparta nachweislich gebräuchlich war, der gesündeste und angesehenste Sohn.
…

Als dann aber ganz Hellas mit der Unterwerfung unter den asiatischen Großherren bedroht würde, begann die hellenische Vormachtstellung Spartas, der dieser Staat auf die Dauer biologisch nicht gemachten war. Notwendigerweise begannen jetzt auch Geld und Gold für die Spartaner ihre Bedeutung zu erhalten und wirften sich mit der Zeit geradezu verheerend aus. Das Verbot des Privatbesitzes an Gold und Silber führte unter den *veränderten* Verhältnissen auf Grund der weltpolitischen hellenischen Vormachtstellung Spartas nur dazu, unter den Spartanern den Wunsch und die Habgier danach zu steigern. Denn die Kriege fosteten Geld, und dieser Umstand brachte es dahin—ob sich auch einige Altspartaner mit Händen und Füßen dagegen wehrten—das Geld erst einmal für politische und militärische Zwecke in Sparta zuzulassen. **Nachdem sich Sparta aber einmal in seinen öffentlichen Angelegenheiten an Geld gewöhnt hatte, war der Schritt nicht mehr sehr weit, es auch für die eigene Bedürfnisbefriedigung zu wünschen.** Alle Spartaner galten schließlich für habsüchtig und bestechlich. Man prophezeite, daß Habsucht, nichts anderes, Sparta überwinden würde; die Ephoren und Geronten galten als bestechlich. Kurz und gut, **es bildete sich aus den ehemals bäuerlichen Spartiaten eine „Feudal-Plutokratie“, wie wir sie ähnlich im horigen Jahrhundert in England erlebt haben.**

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n185/mode/2up?view=theater

Nun tritt in der Geschichte aller indogermanischen Staaten ein Augenblick ein, der eine ganz entscheidende Wende in der bisherigen Entwicklung einleitet: Zahlungsmittel werden die Edelmetalle. Die Ursprungsquelle dieses Gedankens ist der Orient, wo seit urältesten geschichtlichen Zeiten Edelmetalle im Handel üblich waren. **Im Orient begann die Herrschaft des Geldes ihren Siegeszug um die Welt anzutreten.**
…

Nun ist es eine alte Erfahrung, daß der Handel dann immer am besten gedeiht, wenn die Beweglichkeit und Ungebundenheit der Waren weitestgehend durchgeführt ist und wenn dem Kaufmann—(wir sprechen allerdings hier besser nicht vom Kaufmann sondern vom Händler)1—für seine Person möglichst keine Bindungen und Einschränkungen auferlegt werden. **Aber diese Tatsache stieß im Altertum unweigerlich feindlich zusammen mit dem ganzen Gedanken des indogermanischen bodengebundenen Familienrechts.** Und weil nun der Handel sich auf Schritt und Tritt von diesem Familienrecht beengt fühlte, stellte er rein triebmäßig diesem Recht einen erbitterten Widerstand

entgegen und versuchte in einem zähen Kleinkrieg die Unterlagen dieses Rechts zu untergraben. **In diesem Kampfe ist der Handel bisher noch immer Sieger geblieben.**2

> 2. **Erst die Germanen haben gie Gegensätze zu überbrücken verstanden; seit Hardenberg und dem Liberalismus im 19. Jahrhundert ist der Handel allerdings wieder der unumschränkte Sieger.**

Die Abschnitte dieses Kampfes, der sich fast immer über einige Jahrhunderte hinzieht—**(in Griechenland z. B. vom 7. bis 3. Jahrhundert v. Chr.)**—, sind gesennzeichnet durch gewisse Erscheinungen, die sich mit fast gesetzmäßiger Regelmäßigkeit wiederholen. Die Überschriften der drei Hauptabchnitte seien hier genannt: *Verkündigung des Individualismus*, d. h. **Verherrlichung der nur sich selbst werantwortlichen und ausschließlich auf eigenen Füßen stehenden Persönlichkeit;** *Bauernbefreiung*, d. h. Aufhebung der Hörigkeit, eine Tat, die allerdings meistens gerecht ist, **weil die ursprünglich sozial sehr verantwortungsbewußte Grundherrschaft unter dem Druck der aufkommenden Geldherrschaft meistens in drückende Fronherrschaft ausartete und auch längst Bauern zu Hörigen gemacht hat, deren Vorfahren mit den Vorfahren der herrschenden Adelschicht als gleichberechtigte Eroberer ins Land kamen;** *Demokratie* mit ihrem Gefälle vom ständisch gebundenen Königtum bis zur schrankenlos herrschenden Plutokratie.
...

Man hob daher mit dem Anerbenrecht auch den Gedanken der bodengebundenen indogermanischen Familienverfassung auf. Damit fiel praktisch der Begriff der indogermanischen Familie in sich zusammen, und mit ihm verschwanden sehr bald und folgerichtigerweise alle jene *sittlichen* Werte, die aus der Quelle der indogermanischen Ehe gespeist wurden.
...

Jedenfalls ist dieser geschichtliche Zustand im Leben eines indogermanischen Staates derjenige Zeitabschnitt, der bei aller Scheinbaren kulturellen Höhe hoch schon den Keim der Fäulnis in Sich trägt und daher oft, trotz aller politischen Machtstellung des Staates, den grausig schnellen Absturz in das Dunkel der Geschichte bewirft.1

> 1. Man lasse sich durch die scheinbar anders verlaufene Entwicklung Roms nicht täuschen. **Unmittelbar nach den punischen Kriegen endigt die Geschichte eines von nordischen Geschlechtern geführten Roms, und es beginnt die Geschichte einer durchaus unnordisch aufgezogenen Plutokratie, die von Jahrzehnt zu Jahrzehnt das letzte nordische Blut in Rom immer mehr ausrottet,** um schließlich in der Gründung des Cäsarentums ein Mittel gefunden zu haben, welches selbst die verfaultesten Staatszustände vor einem Zusammenbruch zu bewahren vermochte; **aber mit einer indogermanischen Staatsauffassung hatte dieses von G. J. Cäsar geschaffene Cäsarentum schlechthin nichts mehr zu tun.**

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n277/mode/2up?view=theater

*Merk*1 sagt über die Germanen: „**In den von ihnen eroberten Ländern haben sie durch ihre Ansiedlungen und ihr Bodenrecht die Entvölkerung des platten Landes und das ungesunde Übergewicht der Städte beseitigt** und ein kräftiges Bauerntum wieder hergestellt. *In die durch die römische Staatsallmacht geknechtete Welt haben sie wieder die persönliche Freiheit gebracht.*“

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n285/mode/2up?view=theater

Staatspolitisch haben aber die Nomaden durch ihr Verwertungsbedürfnis der vorhandenen Kulturen und die Notwendigkeit, den Genuß dieser Kultur zu schützen, **etwas erfunden und ausgebildet, was dem nordischen Staatsgedanken, der auf Selbstverwaltung und Wahl der Führer beruht, ursprünglich gänzlich fremd war; es ist das ein fest angestelltes, nur der Staatsleitung verantwortliches Beamtentum.** Wir haben uns ja in Abschnitt I bereits ausführlich über die genialen innerstaatlichen Verwertungseinrichtungen der Nomaden ausgelassen. **Tatsache ist jedenfalls, daß die Germanen das echte Beamtentum erst durch Kaiser Friedrich II. kennen lernten. Dieser hatte es den Sarazenen abgesehen und es probeweise in Sizilien eingeführt.**1 In Sizilien bewährte sich dieser Brauch so glänzend, daß der Hochmeister des Deutschritter-Ordens und Vertraute des Kaisers, Hermann von Salza, den Grundplan dieses Verwaltungskörpers für seinen Orden übernahm. Dieser Umstand ist dann nicht zum wenigsten ein Hauptgrund für die Macht und die kolonisatorischen Erfolge des Ordens gewesen. ***Der Deutschritter-Orden in Preußen ist der erste germanische Staat auf deutschem Boden gewesen, der auf rein nomadischer Grundlage aufgebaut war.*** Der schließliche Sturz hängt z. T. damit zusammen, daß es der Orden später nicht verstand, seinen

ungermanischen Verwaltungskörper mit einer germanischen Selbstverwaltung zu verknüpfen; der Ordensstaat als solcher hat in dem Lande, wo er herrschte, niemals Wurzel zu schlagen vermocht; **und er verdankt es nur den von ihm angesiedelten Bauern, daß sein Werk dem Deutschtum nicht mehr verloren ging.** Erst der preußiche Staat hat versucht, für diese Fragen eine Lösung zu finden und zwar, indem er den nomadischen Gedanken der einheitlich geleiteten Regierungsgewalt mit dem altgermanischen, d. h. altnordischen Gedanken der Selbstverwaltung organisch zu verknüpfen suchte. Den Anfang dieses Versuchs darf man wohl mit König Friedrich Wilhelm I.1 annehmen.

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n305/mode/2up?view=theater

> Cato arbeitete übrigens mit seinen Knechten zusammen auf dem Acker und aß auch mit ihnen am selben Tische. Bezeichnenderweise sagt Plutarch weiterhin von ihm: „*Ein Mann hingegen, der nach alter Sitte mit eigenen Händen arbeitete*, ..., Ein solcher Mann war eine große Seltenheit, *weil schon damals der römische Staat seiner Größe wegen sich nicht bei der alten Reinheit der Sitten erhielt.*“ **Daraus geht zweierlei ganz klar hervor: erstens die alten Patrizier waren noch selbst arbeitende *Bauern*, also *Bauern von echtem Schrot und Korn*, wie wir heute sagen würden, und zweitens, die Patrizier geben das bäuerliche Arbeiten auf dem Felde erst auf, als ihre politischen Erfolge sie zu verwöhnen beginnen. Es ist mithin genau der gleiche Zustand, wie wir ihn heutigentags in *Südafrika, Australien, Vereinigte Staaten von Nord-Amerika* beobachten können,** wo der rastlose Sleiß nordischer Bauern das Land der Kultur erschließt und durch diesen Umstand die erschlossenen neuen Gebiete in den Bereich der Weltpolitik hineinzieht; **daraufhin gewöhnt sich das alte Bauerntum langsam an Herrentum, verliert im gleichen Maße seinen Zusammenhang mit Grund und Boden, und es ist dann nur eine Frage der Zeit bis wann die Entnordung vollendet ist.**

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n323/mode/2up?view=theater

Aber Cäsar wertete die Lage aus. Seine Boten leiteten unter den Kelten ein geschicktes Spiel ein, und schließlich baten die romfreundlichen Keltenparteien Cäsar um Hilfe gegen den Germanenkönig. Cäsar nahm die Bitte—wie man sich denken kann—sehr gnädig an und warf sich nunmehr Ariovist gegenüber als Erretter der Gallier vor germanischer Gewalt auf.1

> 1. Vergleiche hinken bekanntlich, aber hier wird man doch fast handgreiflich auf eine ähnliche Erscheinung im vergangenen Weltkriege hingelenkt, wo es unter dem rührseligen Schlagwort von der Not des vergewaltigten Belgiens durch die deutschen Barbaren, **der angelsächsische Welthandel so ausgezeichnet verstand, seine weltpolitischen Ziele zu verdecken.**

...

Gegen Ende des 19. Jahrhunderts gelang es dann schließlich den Engländern doch, das tapfere Bauernvolk in die Gewalt zu bekommen.1 Der Bauernstaat der Sueven unter Ariovist und der Bauernstaat der Holländer in Südafrika ähneln sind ganz zweifellos in ihrer Anhänglichkeit an die Scholle; was sehr natürlich ist, weil kein Bauer gerne die in den Grund und Boden hineingesteckte Arbeit leichtfertig aufgibt; **sie ähneln sich aber auch darin, daß sie gegenüber dem rein weltmachtpolitisch eingestellten Ziele ihres Gegners blind sind** und den Krieg erst aufnehmen, als ihnen gar nichts anderes übrig bleibt.

> 1. Übrigens: **Genau so wenig wie man den nordischen Patrizier Altroms für die weltmachtpolitische Einstellung Cäsars verantwortlich machen kann, genau so wenig kann man den nordischen Engländer für die weltmachtpolitische Einstellung seiner politiker im 19. Jahrhundert verantwortlich machen.** Es ist hier aber nicht der Ort, über diese Dinge zu reden.

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n331/mode/2up?view=theater

Sehr viel wichtiger ist aber eine andere Überlegung von *Jhering*. Er stellt zunächst einmal fest, **daß man im römischen Recht genau den Übergang vom altnordischen (arischen n. Jhering) Recht der Patrizier zum mechanischen Recht der späteren Zeit feststellen kann (Zwölftafel-Gesetze).** Dabei kommt er darauf zu sprechen, daß man deutlich zwei Wurzeln der Heeresverfassung aufzudecken vermag. „In meinen Augen begründet das Auftreten der Zahl in der hier geschildekten Funktion einen kulturhistorischen Wendepunkt, **sie bezeichnet die Erhebung von der organischen Gliederung des Volkes zur mechanischen, jene ist geworden, diese gemacht** ... Die lateinische Sprache kennt für Heer zwei Ausdrücke, von denen der eine: *exercitus* der neueren, der andere *classis* der *älteren* Zeit angehört. *Exercitus* ist sprachlich gedacht als sie aus der Burg (*ex arce*) ausbrechende Schar, die Burg

aber mit der sie umgebenden Staat stammt erst aus der Periode der Seßhaftigkeit. *Der Ausdruck classis führt uns sprachlich das durch mündliches Rufen* (*calare*) *entbotene Heer vor Augen*...1

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n395/mode/2up?view=theater

Die Patrizier sahen nach Jhering in der Ehe mit Plebejern eine Vermischung des edlen Blutes (Liv. IV, 1 *contaminare sanguinem*). „***Mit der Erteilung des connubium an die Plebejer durch die lex Canuleja hatte man die Axt an den patrizischen Geschlechterstaat gelegt,*** *die Raschheit, mit der sich fortan im öffentlichen Recht der Gegensatz ausgleicht, kommt im wesentlichen auf Rechnung der lex Canuleja.*“2 **In diesem kurzen Satz kennzeichnet Jhering mit dürren Worten die Gründe für den schließlichen Niedergang von Rom; obwohl er das gar nicht zu sagen beabsichtigt sondern nur ausdrücken will, daß sich dadurch der Übergang von der organischen zur mechanischen Rechtsauffassung erklären läßt.**

https://archive.org/details/DarreRichardDasBauerntumAlsLebensquellDerNordischenRasse1942500S.ScanFraktur_201711/page/n457/mode/2up?view=theater

> **Es ist im wesentlichen die leichtsinnige Schuld Hardenbergs gewesen, daß man die Zunftordnung *gedankenlos* aufhob, ohne zu berücksichtigen, welcher Schatz von kulturellen Werten damit ebenfalls über Bord geworfen wurde.** Mit flammendem Eifer, wenn auch leider vergeblich, trat der Freiherr vom Stein Hardenberg entgegen; auch er hielt zwar eine *Reform* des Zunftwesens für richtig, hatte aber auch klar erkannt, welche Nachteile in kultureller Hinsicht die Aufhebung der Zünfte mit sich bringen mußte; was galten ihm technische Fortschritte neben der sittlichen Entwicklung des Volkes, dem eigentlichen Zwecke des Staates.
>
> **Wir haben zwar heute auf dem Gebiete der Gewerbepolitik manches wieder gutgemacht, was ein übereifriger Liberalismus vor hundert Jahren zerstörte.** Aber an der Tatfache, daß die alte deutsche Zunftordnung es verstanden hatte, die gesunden Grundlagen des Bauerntums auch auf die Stadt zu übertragen und auf diese Weise der germanischen Eheform auch in der Stadt zu einer sittlichen Entfaltungsmöglichkeit zu verhelfen, sind wir die letzten hundert Jahre fast blind vorbeigegangen. **Und nun sitzen wir auf den Trümmern einer deutschen Familienkultur und wundern uns über die heute um sich greifende Entsittlichung des deutschen Volkes.**

...

Erst das Aufkommen der Klöster hat in dieses bäuerliche und adelige Landsknechtstum eine Bresche geschlagen, und zwar dadurch, daß man einen Stand schuf, der die nicht erbberechtigten Freien aufnehmen konnte, ohne daß die deswegen ihre Zugehörigkeit zum Stande der Freien aufzugeben brauchten. Im Grundsatz war der Gedanke ja schon vorher gegeben, indem der Priesterstand den Freien vorbehalten blieb. Aber es gab nicht so viele Priesterstellen, als daß mit ihnen allein die Frage zu lösen gewesen wäre; das gelang erst, als das Kloster aufkam und diese Einrichtung dem Germanen durch den Begriff des Gottesstreitertums verständlich wurde. **Das Kloster verdankt seine Entstehung ursprünglich einem ganz unnordischen Gedanken in Ägypten.** Aber seine kulturgeschichtliche Bedeutung für die Germanen liegt darin, daß es den nicht erbberechtigten Söhnen Germaniens—die sowieso nicht geheiratet hätten—eine Heimstätte bot und diesen sonst nur für den Degen geborenen Männern ein neues Betätigungsfeld verschaffte, nämlich das Gebiet der Wissenschaft. Sich auf dem Gebiet der Wissenschaft zu tummeln, war nunmehr eines Freien ebenso würdig wie im Heeresgefolge eines großen Herrn zu reiten; mancher Abt des deutschen Mittelalters, der mit dem Kopfe ebenso trefflich zu streiten verstand wie mit seinem Schwerte, wird unter diesen Gesichtspunkten verständlicher. Als die Zeit der Klöster sich dann erfüllt hatte, war die Bahn frei für *Dr. Martin Luther*.

Hoch heute ist es in England üblich, daß sich jüngere Söhne eines adeligen Geschlechtes dem geistlichen Stande widmen. Dieser Umstand hat in England genau so wenig zur Entnordung beigetragen, wie es die Klöster ursprünglich im Mittelalter getan haben. Ja, man kann sogar sagen, der englische Adel verdankt es nicht zum wenigsten diesem Brauch, daß er sich dem von ihm geführten Volke nie entfremdet hat. Auf diesem Gebiet hat der protestantische Adel Deutschlands zweifellos versagt, obgleich sein Verhalten aus dem Verlauf der Geschichte des deutschen Protestantismus verständlich wird.

...

Erst mit der allgemeinen Einführung der ländlichen Erbgesetze im BGB. hat das deutsche Volk zum erstenmal die Axt an die Wurzel seines Volkstums gelegt und damit—das kann wohl ruhig so gesagt werden—auch den Lebensnerv der Nordischen Rasse im deutschen Volkskörper zerschnitten.

Es dürfte übrigens auch ungeschichtlich sein, den Untergang des alten mittelalterlichen Adels auf eine Entnordung durch Kriege zurückzuführen. Der Vorgang dieser Entnordung hängt ebenfalls mit dem ländlichen Erbgesetz zusammen, nur—in umgefehrter Richtung. **An und für sich behielt der mittelalterliche Adel seine altnordischen ländlichen Erbgesetze, verfiel aber in den Fehler, den Grund und Boden nicht mehr als Ernährungsunterlage *einer* Eheschließung zu betrachten sondern begann in ihm ein Mittel zur Macht zu erblicken.** Damit war der Weg frei, um durch Zusammenlegung von Gütern, d. h. von Herdstellen, sich eine sog. Hausmacht zu schaffen. Diese Politik der Hausmacht, die das Haus Habsburg wie kein zweites zu meistern verstand, mußte notwendigerweise die Möglichkeiten zur Entzündung von Herdfeuern fortlaufend verringern. Dadurch schälte sich zwar immer deutlicher ein sog. Hochadel heraus, der aber in seinem Werden das Gesetz mitschleppte, den eigentlichen altnordischen Ausgangsstoff des ursprünglichen Adels fortdauernd zu vermindern. Am 9. November 1918 fand diese Entwicklung dann ihr Ende.

Zusammenfassend möchte der Verfasser noch einmal sagen, daß die heutige Ansicht von der Entnordung durch Kriege ganz offenbar am Kern der Frage vorbeigeht. **Bei *gesunden* Bodenrecht und *gesunden* Ehen hat der Nordischen Rasse noch niemals ein Krieg im *biologischen* Sinne geschadet.** Erst wenn eine Abkehr vom ländlichen Leben eintritt und die Ehe keine Aufgabe mehr an der Gesamtheit ist sondern zum Geschäft oder zum Privatvergnügen oder eine Angelegenheit der Hausmacht-Politik wird, greifen die Kriege „entnordend“ ein, weil unter solchen Anschauungen die Kinderzahl notwendigerweise nachläßt und nunmehr der vorher unmaßgebliche Hundertsatz an Gefallenen sich verheerend auswirfen muß; **auch in der Beziehung, daß die biologische Auslese unter den Hoferben nicht mehr genügend scharf sein kann, da die Auswahl immer kleiner wird.**
…

Sowie in einer nordischen Gemeinschaft die *Mitgift* aufkommt, und die Eheschließung nicht mehr eine biologische Zweckmäßigkeit ist sondern ein Geschäft im *geldlichen* Sinne wird, **ist es allerdings meistens sehr schnell mit der Reinerhaltung des Blutes und einer nordischen Kultur vorbei.** Die Gründe, die zu dem Schritt der Mitgiftjägerei führten, mögen in der Geschichte der nordischen Rasse nicht überall dieselben gewesen sein, aber *die Wirkung war in allen Fällen gleich*. Bereits 550 v. Ch. schildert *Theognis* diesen Vorgang sehr hübsch und treffend wie folgt:

> „Gilt’s Kurmes, Rinder oder Pferde ziehn,
> Dann Handeln wir vernunftgemäß und wählen
> Zu Nutz und Wehrung jedenfalls die Tiere
> Aus kerngesundem Stamm und fehlerlos.
> Doch Handelt sich’s bei uns um eine Ehe,
> Gibt stets der Preis den Ausschlag: nur um Gold
> Heiraten Männer, gibt man Töchter fort.
> Der Lump, der Tölpel, der im Golde schwimmt
> Kann mit dem ält’sten Stamm sein Kind vereinen.—
> So mengt sich alles, Edles und Gemeines!
> Wenn du daher in Sitten, Form und Geist
> Als ein entartet Mischgeschlecht uns findest
> Dann wundre Freund dich nicht! Der Grund ist klar
> Und müßig wär’s, die Folgen zu beklagen.“

https://archive.org/details/a-new-nobility-of-blood-and-soil-by-richard-walther-darre-1930/page/n49/mode/2up?view=theater

But after the defeat of Carthage, the internal laws of the Roman Empire changed. **The civil servants no longer felt themselves to be the agents of self-governance, but slowly and imperceptibly transformed under the influence of the moneyed people who were gaining more and more power in the state;** they became the actual masters and developed into an independent leadership. **The civil service, although still supplemented from the old Roman families, turned into the tool of the bankers.** This state of affairs only became apparent in the time of Caesar, especially after his assassination, when the people began to deify his person in the oriental sense. Such a process would have been unheard of earlier in the Roman Republic, and it proves the Roman people’s complete turning away from the old Roman way of thinking and their accustoming to an unconditional leadership. With this, the path was clearly marked out and Augustus consequently followed; he designed the Roman state as an institution of expediency structured from top to bottom, which was fundamentally superior to the rights of the individual and served to carry out the subjugation of the peoples according to expedient points of view, irrespective of their uniqueness or peculiarities. Through this system the Roman state was able to weld together the Mediterranean basin into a kind of economic unit. **At the same time, of course, the power of economic interests, which, through the influence of the bankers, was becoming more and more equal to that of the state, had priority over the interest of the personal freedom of individual citizens.** Its success was ultimately an outwardly more or less clearly delimited empire with astonishingly developed institutions of expediency with regard to its domination

and to the economy. **There is no doubt that the Roman Empire of the Caesars realized, in a certain sense, the supranational world economy that we are striving for again today,** for the Mediterranean basin was initially its own little world for the peoples living along the Mediterranean. **But this Roman Empire, as far as man is concerned, was built over the peoples! [Völkerbrei]**

This is a fine example—Rome's battles over Gaul prove it most clearly. **Rome needed Gaul's wealth and later needed Gaul as part of its economic zone from the Atlantic Ocean to the Orient. It was in the time of Augustus that this process was both initiated and completed, and we can clearly observe it historically. In carrying out his plan, Augustus resisted the tribal idiosyncrasies of the Gauls as well as other ethnic concerns.** It is revealing to note that Augustus then deliberately set about suppressing ethnic issues in Gaul through measures that would take us far too long to discuss in detail here. His attempts to bring the Germanic tribes into the same economic dependence as the Gauls in order to protect the eastern border of Gaul failed. When the Roman governor Varus, who had been trained in the Orient and had been transferred from there to Germania, also tried to impose a tribute plan on the Germanic tribes—as was common practice in the rest of the Roman Empire—the well-known uprising in 9 A.D. arose, which, with the battle in the Teutoburg Forest,61 put an end to such Roman efforts for centuries to come.

The late Roman empire was thus a fully constructed system, the external boundaries of which were, as far as possible, oriented towards the material laws of the economy and whose inner workings were also oriented towards this goal. **The human being played a secondary role. The laws of blood were either not taken into account at all or only to the extent that they did not disturb the state as such nor its activities.**

Nevertheless, **despite its disregard for human freedom and the human dignity of each individual,** this Roman Empire was built on the recognized inequality of the human race. The inequality was no longer driven by noble patrician dynasties that could be confident of their people's admiration because of their divine descent, but by property and economic wealth; **the idea of the hereditary inequality of human beings was thus transferred from blood to the ownership of property.**
…

Accordingly, it was in Gaul that the conflict between late Roman and Germanic law, and between the late Roman and Germanic political systems, came to a head and initiated a struggle that lasted through the millennia until it was conclusively decided by Napoleon I, who finally and conclusively imposed the late Roman administrative system.

We must keep in mind, however, that the Franks brought personal freedom to Gaul with their law and accustomed its people, which had completely degenerated and been enslaved in the mire of late Roman civilization, to freedom and human dignity again.62

> [62] Strictly speaking, the French Revolution of 1789 can be called a joke of world history in its justifications. Louis XIV had imposed absolute monarchy in France. H. von Moltke writes in *Die Westliche Grenzfrage* (*The Western Border Question*), **"This transformation of France under Louis XIV may justly be regarded as a Gallo-Roman reaction against the Germanic element which had hitherto still prevailed in France, as an annihilation of both the old Frankish popular liberties and the representation of the estates, and as a return to the former Roman despotism, such as what had been indigenous to Gaul for five hundred years from Caesar down to Clovis." The French people rose up against this despotism and simply demanded back the safeguards of the old Frankish, old Burgundian, and so on constitutions, i.e. the old Germanic institutions of the original assemblies, the army, and the imperial assembly.** But it is a great irony of world history that these demands of the French, certainly no longer a very Germanic people, had to be forced upon their still predominantly Germanic, i.e. blond and blue-eyed, nobility. Meanwhile the French revolutionary, who boasted of wanting to chase Germanism back into the forests of eastern France and who was not afraid to send a blond and blue-eyed man to the scaffold—even if he was not a nobleman, and who presented himself as the guardian and heir of Roman liberties, simultaneously demanded Germanic institutions from his Romanized nobility of Germanic blood. **With which things were indeed turned upside down in every respect!**

The land of a family is not a matter of the head of the household's ego, but part of the idea of the family itself, in the sense of a succession of dynasties. Thus the ego, including the ego of the head of the household, is always only one part of the family, as the family itself is the superior whole, and the head of the household is obligated to serve the land with regard to the family and its preservation. **The selfish possessiveness [ich-gieriges Besitzertum] of land is fundamentally alien to both the**

ancient Roman and the Germanic sense of justice, because every ego-related claim to land ownership necessarily presupposes the detachment of the ego from the idea of family.87
…

When Rome gained control of the economic nodes of Mediterranean trade following the defeat of Carthage, financial thinking began to prevail and the old patrician conception of life and the state was pushed aside. **This development began after the First Punic War and was basically completed by the end of the last one, although it was not until the time of Caesar that the final dividing line was drawn between the old Roman and the new Roman political systems.**
…

In the old patrician view of dynastic succession, a dynasty was, so to speak, a tree rooted in the ground. It is therefore more than natural that the land belonging to one dynasty was awarded undivided to the heir; **the ever-burning hearth fire, the monogamy, and the indivisible land ownership formed and remained a thoroughly living unity.** With the transformation of the idea of the succession of dynasties into the idea that the family represents a group of individuals with the father of the family at the head and as the center, the uprooting of the family was sealed, because it now remained indifferent as to where this group of family members resided.89 From then on, it was not much of a leap to the view that the head of the household could dispose of property independently of the family, and, hand in hand with the increasingly dissolving concept of the family, **a private law centered on the individual [das Ich] had to come into being. This individualist legal form was developed to perfection [Vollendung] in late Roman law.**

Such a development of Roman law from the original idea of family protection in the broadest sense to the unconditional affirmation of the individual led not only to a political system that regarded the people merely as a sum of individuals, but also completely shattered every idea of family. This development had a particular effect in two directions which concern us: first, marriage was no longer necessarily a matter concerning the family or the production of children, but became a purely I-and-thou affair, in which the production of children was left to the discretion of the individual; and secondly, land was now managed according to a purely individual-centric concept of property, **and it did not even occur to anyone to consider it in terms of the nutritional or economic basis of a family.** In other words, the moral connection between marriage and land ownership had been thoroughly torn apart.90

The Germanic tribes brought with them a concept of marriage that corresponded exactly to that of the patricians. Thus, just as ancient Roman and late Roman marriage law contradicted each other, so did late Roman and Germanic marriage law. **The Germanic peoples' ascendancy in and mastery over Western Europe following the Migration Period allowed Germanic law to initially become authoritative or, where it did not directly replace Roman law, indirectly influence it.** Naturally, Germanic law was also influenced by late Roman law in return.

The Germanic states established in Italy fell in line with late Roman legal ideas relatively quickly. This is particularly true of the Lombard Empire. **Even if Christianity certainly influenced this development, another circumstance also played a decisive role and is important for us to learn about—late Roman law particularly benefited trade.** Trade, however, thrives best in urban centers. The Germanic peoples, however, settled outside the cities, living in the countryside according to their own law. Thus, **the very un-Germanic institution of the city was relatively untouched by Germanic influence,** meaning that late Roman legal ideas were able to survive well in Roman cities.
…

It was the responsibility of Hardenberg, the Chancellor of Prussia, to decide on the German economic direction and it was he who opened the door to an un-German, purely individualist financial attitude. Hardenberg had a great opponent in this matter, Freiherr vom Stein. Few people today in Germany know of Freiherr vom Stein's struggle against Hardenberg, and even fewer have grasped the significance of this struggle. Our people have generally paid little attention to this clash, **even though Hardenberg marks the beginning of an economic chapter of our people that quite logically ends with Gustav Stresemann and would have gotten to that point much earlier had Bismarck had not delayed this development for decades.**

> https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Hardenberg,_Karl_August_von
>
> In 1782 he entered that of the duke of Brunswick, and as president of the board of domains **displayed a zeal for reform, in the manner approved by the enlightened despots of the century, that rendered him very unpopular with the orthodox clergy and the conservative estates.**
> …
>
> He continued amiable, charming and enlightened as ever; but the excesses which had been pardonable in a young diplomatist were a scandal in an elderly chancellor, **and could not but**

> **weaken his influence with so pious a *Landesvater* as Frederick William III.** To overcome the king's terror of Liberal experiments would have needed all the powers of an adviser at once wise and in character wholly trustworthy.

It was the greatness of Germanism that it derived its laws from its concept of God and from this belief placed life-promoting laws above the laws of the economy and the individual. In other words, blood and—as part of the idea of blood—soil stood above all individualist economic considerations. This basic attitude of the Germanic people towards the economy remained unbroken into the nineteenth century, and despite all the shocks to which it was subjected to over the course of history—often pushing it to the brink of ruin—the old conception triumphed again and again. **It was only in the nineteenth century that this pattern came to an end, and we could almost say that the much-praised BGB**93 **of 1900 was the key reason.**

> [93] Editor's note: *Bürgerliches Gesetzbuch* (BGB) or the German Civil Code is the central codification of German private law. The BGB regulates the legal relationships between private individuals and is thus distinct from public law.

https://archive.org/details/romanlawinmoder01shergoog/page/n361/mode/2up?view=theater

> **On the opening day of the 20th century the new Civil Code swept away the motley collection of state private laws throughout Germany, with the exception of a few express reservations in favor of state law dealing with matters of local importance, or the laws of the princely houses of Germany.** Germany, although a federated country of twenty-six states, has since 1900 been living under one system of private law. **By its uniform and codified law modern Germany now testifies to the fulfillment within her borders of the world mission of Roman law. The most lasting achievement of the German Empire was the completion of a uniform system of codified law for all Germany.**180 The German Civil Code is a very late 19th century republication of Roman law as adopted in Germany. It also embodies many rules of Germanic customary law, especially as to land rights. But without the Roman Corpus Juris181 as a key to unlock it, this modern law of Germany cannot be understood. In the German code of 1900 the Roman law element is predominatingly supreme.182
> …
>
> **The German Civil Code is one of the greatest and perhaps the best exposition of modern Roman law ever framed. It is thoroughly suited to our age. Its influence upon the world has only just begun.** The modern Japanese Civil Code of 1898 largely imitates the German, while the Swiss Civil Code of 1912 reveals marked traces of the same German influence.184 One thing is certain: no future Civil Code anywhere in the world should ever be drawn up without consulting the German, in which the codifiers have made such a judicious use of both native and Roman law materials. The national federal codes of modern Germany are also an object-lesson to refute the fallacious argument, that a federated country must cling to diversity of State law and can never attain to a national uniformity of private law without destroying the States themselves.

…

Liberalism, however, does not recognize the idea of blood, i.e. that the owner of land has—in addition to the enjoyment of his property—**a blood duty either in the old sense to his race [Geschlecht] or in the modern sense to his people. [Volke]** The ideological foundations of Liberalism in this question are essentially the same as those of Marxism. We could almost be tempted to say that **Liberalism and Marxism are two worldviews that have been devised in order to, in one way or another, deal a death blow to the German idea of blood and soil.** Thus, after Hardenberg opened the way for liberal economics in Germany, Liberalism, in cooperation with its twin brother Marxism, unleashed a fury against everything that—on the basis of the old German sense of justice—did not allow individual's unconditional freedom in the use of property. **Thus, late Roman economic law and late Roman idolatry of the individual, [Vergottung des Ichs] which even the age of absolutism could not fully impose on Germany, finally made their unconditional and unrestrained entry into Germany. It is no exaggeration to say that what Varus failed to impose on the Germanics almost two millennia ago was ushered into Germany during the nineteenth century and has been made a reality in the years after 1918.**

…

Or do we seriously believe that the German people could have ever overcome the damage of the Thirty Years' War if the agricultural system of that time had not been subject to policies that offered an incentive to entrepreneurs who wanted to try their hand at building something lasting? **We cannot imagine that with today's absurd [Drunter-und-Drüber] views on roots and soil-boundness (which have received a legal basis through the German Civil Code) that a German culture can be kept alive for more than half a century!**98

https://archive.org/details/a-new-nobility-of-blood-and-soil-by-richard-walther-darre-1930/page/n183/mode/2up?view=theater

This old German marriage law was the bulwark that protected valuable German humanity and kept sub-humanity out of the German social order by considerably limiting its possibilities for reproduction—

sometimes even making it impossible. **It must be emphatically pointed out that the present victory of "sub-humanity"** (which the American Lothrop Stoddard wrote about in his well-known work *The Revolt Against Civilization, the Menace of the Under Man*, which discussed a question being considered by today's geneticists, namely the root causes of the excessive growth of inferior and undesirable populations—i.e. human races that have an unfavorable influence on the German social order) **has only become a problem for the German people as a result of Hardenberg's decision about a hundred years ago to embark on a path that was bound to end in the current dismantling of all restrictions on marriage.** Read what Freiherr vom Stein, with a clear understanding of the causal connections, proclaimed to the German people regarding these insane measures: **it is convincing that our present condition is solely the consequence of having turned away from that time's German views on marriage, thus creating the subsoil upon which inferiority of all kinds could thrive.**

https://archive.org/details/a-new-nobility-of-blood-and-soil-by-richard-walther-darre-1930/page/n203/mode/2up?view=theater

The marriages of our ancestors were not **individualist [Ich-und-Du]** affairs as they are today. We cannot return to their conception today because we have become more **individualist (i.e. more selfish) [„individueller" d.h. ichsüchtiger]** and because we have taken away the domestic basis of our marriages and thus deprived the wife of a large part of her life's work in the sense of the old idea of marriage—**we have lost all this only since Hardenberg.**

https://archive.org/details/a-new-nobility-of-blood-and-soil-by-richard-walther-darre-1930/page/n229/mode/2up?view=theater

For the last one hundred years or so, we have removed marriage from any form of family-promoting legal protections and made it a purely I-and-thou affair. Yes, we have happily reached the point where we now regard marriage and childbearing to be two different concepts, a distinction largely protected by the law. We can even be as callous as to say that **marriage today is either merely an ecclesiastical concept or the legally sanctioned form of sexual satisfaction.**

https://archive.org/details/a-new-nobility-of-blood-and-soil-by-richard-walther-darre-1930/page/n251/mode/2up?view=theater

We explained in Chapter VII, Section 2 that **we cannot breed a race against an environment that does not suit it.** The race in and of itself does not determine the state's form—it can do so if certain conditions apply, such as among the Icelandic peasants—but it is not the case that this condition always applies. **For example, the entire structure and nature of the political system of the Roman Empire since Gaius Julius Caesar was thoroughly un-Nordic. In fact, it was so un-Nordic that even today's Germans still suffer from the contradictions between the Germanic and the late Roman political systems, which has neither been fully carried out [ausgetragenen] nor been examined through to the last detail. [bis zum letzten durchdachten]** Since the time of Caesar, Germanism had been penetrating the Roman Empire in ever-greater numbers and had attained increasingly higher ranks and honors, meaning that it would have been in a position to exert influence on the state. In fact, one of the very first governors of Gaul—a prisoner of war of Caesar and his house slave—was a Germanic, to whose influence, for example, the conquest of Germania under Tiberius can be attributed. Constantine once raised 40,000 Goths for military service in a single campaign. **According to a conservative estimate by Kauffmann in *Altertumskunde* (*Ancient History*), half of all senior officers in the Roman army were Germanic under Julian.** This alone, therefore, should have been enough Nordic blood to steer the development of the Roman state—which since Caesar had visibly taken an un-Nordic course—back into a Nordic direction. **The fact that this indeed did not happen, that the high percentage of Germanic peoples in the Roman state were not enough to stop the disintegration and decay of the declining Roman civilization (or even to renew it) proves quite clearly that the physical presence of the race alone is in no way sufficient to actually shape the state corresponding to it.** In this respect, things have deeper roots! In addition to the physical presence of the race, an understanding of its own kind of state and a desire for it must also exist in order for this state to come into being —in order to, as it were, prepare the seedbed upon which it can first develop.

The situation is somewhat different when the Nordic race is forced to adopt an alien form of government and is later allowed to administer this form of government independent of foreign influences. In this scenario, one can observe that the Nordic race tries to shape, or at least to administer, the alien form of government in a way that it suitable to its nature. **The end result is a state that may not, strictly speaking, be called Nordic, but rather can be classified as "Nordic-modified." Undoubtedly, a classic example of this remains Frederick the Great—he is an absolute monarch and is thus also the state. Such absolutism is as un-Nordic and thoroughly late Roman as can be,** see Chapter II, Section 1. Significantly, however, Frederick the Great managed his absolutist state with a Nordic sense of stewardship—he placed the state above himself and felt, as it were, only charged with

running the state responsibly. **Thus the non-Nordic concept of absolutism was changed, if not in form, then at least in meaning, to the Germanic-Nordic political system of a responsible (i.e. commissioned) leadership of the people** (see Chapter II, Section 1). One could demonstrate the same of the political systems of many rulers of the German Middle Ages, just as the behavior of the Ostrogoths as lords of Italy is particularly instructive in this respect. **Nordic man can clearly shape or at least administer a non-Nordic state, the prerequisite for this being that he is free of non-Nordic control. If he does not have this independence, the result will be nil,** as is demonstrated by the Goths in their capacity as administrators and officers of the Roman Empire before their conquest of Italy. Or alternatively—as German history shows—it results in a struggle that has lasted for millennia: **German history is, for the most part, nothing more than an attempt to force a non-Nordic political system onto Nordic man in order to control him by assimilating him into a non-Nordic condition—and, on the other hand, the continual rebellion of Nordic man against this.**

But these facts must not mislead us into believing that the political system is so much more significant than the concept of race that race can be disregarded altogether—that it is therefore enough to simply create a Nordic state and everything else will follow. This is the mistake that certain "nationalists" are making today! Certainly, a German state shaped in the Nordic sense and based on Germanic concepts would indirectly and, so to speak, automatically promote Nordic blood in the nation—but a prerequisite for this is that Nordic blood still exists in the first place for this purpose. If this is no longer the case, then even the most beautiful state structure is of no help. **It is therefore necessary to combat both the narrow-mindedness of a purely "nationalistic" point of view (i.e. one that only pays attention to the political system) and that of a purely racial point of view, which expects that all salvation will come from the physical existence of the race alone.** Instead, we must promote the idea that only from the interaction of both views can something which is beneficial and profitable for our people arise.

https://archive.org/details/TheMythOfTheTwentiethCentury_400/page/n359/mode/2up?view=theater

The victory of Roman Christianity signified the abandonment of the organic Germanic ideas of the king as a measuring rod of worldly action. We have, in its stead, the ethereal idea of emperor which was arrogated by the church as the legacy of ancient Rome. A thousand years passed until – beginning with Henry the Lion or Heinrich der Lowe, and continued by Brandenburg – the Nordic kingdom renewed itself while the Roman Emperorship declined in the swamp of the House of Habsburg. Admittedly, the Staufers were also self sufficient enough to declare their IMPERIVM as German and independent of Rome. **At the meeting at Besancon, for example, the Papal delegates, who described the IMPERIVM as a Papal endowment, were beaten half dead by the counts and dukes of Friedrich II. Nevertheless, this self consciousness was not built upon a doctrine firmly laid down in principle of the predominance of emperor over pope. Thus it was not a tradition or a perpetuated, type forming, force.**
…

After the collapse of absolute monarchy in 1789, Democratic principles struggled with the National idea. Separated from the start, and later bringing both movements into rigidity, **a new doctrine of power alien to the blood was formulated which reached its peak in Hegel. It was then taken over in renewed falsification by Karl Marx, who equated state with class rule.** Today, we confront the problem. The state has delivered itself and the people to the dishonourable forces of trade. It has appeared to the broad masses more and more as a soulless tool of violence. The views of Hegel concerning the absolutist state in itself became predominant during recent years in Germany, and not only in Germany. **The official moved more and more into a position of master, and forgot, thanks to the identical attitude of those ruling, that he was nothing other than a representative of the entire folk whose duty it is to fulfil the technical or political needs of the folk.** The state and the state official thus became separated from the organic body of the people, and appeared as a special mechanical apparatus toward the latter, in order to lay claim to control over life. Millions took a hostile attitude against this development, but since no opponent dared to appear openly in the national camp, those who were discontented moved to the side of international social democracy, although they inwardly really were not Marxists.
…

State and folk thus often confronted each other openly as enemies. From 1918 to 1933 they even appeared as deadly enemies. Our destiny will be shaped according to the manner in which this inner conflict is resolved.

> https://voxday.net/2020/10/21/the-french-fight-back/
>
> The lie of civnattery has got to die. *The state is not the nation!* There is literally no political philosophy, not even communism, that is more intrinsically statist than civic nationalism.

Today, the state is no longer a separated idol before which we are all supposed to lie in the dust. The state does not even have a purpose unless it acts to preserve the concept of folk. The state is only one means to do this. Church, law, art and science must do likewise. State forms change and state laws pass away, but the folkish concept remains. **It follows from this that the nation is the first and last consideration to which everything else is to be subordinated. And it also follows from this that there can be no state judges, only people's judges.** Unless this be true the entire legal foundation of life would alter. The only other possible result would be such degrading conditions as have been common during the last decade. One and the same state attorney had earlier to represent the Kaiser's state, then the Republican. An independent judge was likewise dependent upon one basic system. **Thus it is possible that, on the basis of Roman law, the state attorney as servant of the state in the name of the people hindered the folkish guiding of the people.** Abstract popular sovereignty of Democracy and the contemptuous words of Hegel – The people is that part of the state which does not know what it wants – have produced the same insubstantial scheme of so called state authority.
…

In 1871, the state began to make itself independent of the people; people which had actually first created it. Today, the people finally begins consciously to lay claim to the place rightfully befitting it.

The demand for freedom as well as the call for authority and type have almost everywhere been falsely posed and inorganically answered. Authority was demanded in Europe in the name of an abstract state principle or in the name of Liberal individualism and church universalism. **In each case the claim was laid that all races and peoples had to subordinate themselves to this god given authority and its forms.** The answer to this rigid dogma was the cry for unrestricted freedom – for anarchy. Rome and Jacobinism – in its old forms and in its later purest shaping in Babeuf and Lenin – actually condition one another inwardly.

https://research.calvin.edu/german-propaganda-archive/goeb31.htm

> Goebbels credited himself with a rhetorical masterpiece. His diary entry for 14 September 1940 notes: “My speech to the Czechs was a tremendous success. It entirely changed their outlook. Even I hadn’t expected that to happen.”

…

Our German Reich went through a similar process about a hundred years ago. It was splintered into larger and smaller entities, just as Europe is divided today. This collection of small states was possible as long as the transportation system was such that it took considerable time to travel from one small principality to the next. **The invention of the steam engine, however, rendered this situation untenable.**
…

I once needed twelve hours to travel from Berlin to Prague by train. Now I can fly in an hour. Technology has once again brought people closer together. It is certainly no accident that this technology has developed only recently. The population of Europe has grown, presenting Europe with entirely new problems in agriculture, the economy, finance, and the military. And the continents, too, have grown closer as a result of new technology. **Europeans are more and more realizing that our differences are only family squabbles when measured against the vast problems that the continents must solve.**

I am convinced that, just as we look back with some amusement on the narrow-minded conflicts between German provinces in the 1840’s and 1850’s, our posterity in fifty years will look back with similar amusement on what is going on today in Europe. They will see the “dramatic battles between nations” of small European states as family squabbles. I am convinced that in fifty years we will no longer think in terms of nations, but of continents, and that entirely different, and perhaps much larger, problems will concern Europe.
…

Do not tell me that the Czech people wants this or that. **I think I know something about leadership. A people thinks the way its intelligentsia teaches it to think.** It has the ideas of its intellectual leaders.
…

The average man does not see very far. **The task of the intelligentsia is to help him see further, to help him imagine things that will be.** The role of the intelligentsia is to open the way to coming events, not be blind servants of the present.

https://www.holocausthistoricalsociety.org.uk/contents/naziseasternempire/himmlersspeechatposen.html

I would like us to issue a motto for us, namely this, that for men and women of this Order, this racial community of the SS, **the word 'work' will be writ large; that no work done for Germany is shameful, be it with an axe or spade, or with the pen, whether in agriculture, in the home or factory, or whether with the sword or plough.**
…

Above all, we must keep people from saying, 'Servant girl, oh no, no German girl can do that, that's for foreigners.' We would end up like the ancient Romans, bringing over slave nationalities by whom we would be racially contaminated.

---

https://www.gutenberg.org/cache/epub/61161/pg61161-images.html#Page_162

I have called the right to entertain a *Comitatus*, or body of household retainers, a very jewel in the crown: it was so because it formed, in process of time, the foundation of all the extended powers which became the attributes of royalty, **and finally succeeded in establishing, upon the downfall of the old *dynasts* or nobles by birth, a new order of nobles by service,** whose root was in the crown itself.
…

Nor does it seem probable that a community would at once discover the infinite danger to themselves that lurks in such an institution: far more frequently must it have seemed matter of congratulation to the cultivator, that its existence spared him the necessity of leaving the plough and harrow to resist sudden incursions, or enforce measures of internal police; or that the strong castle with its band of ever-watchful defenders, existed as a garrison near the disputable boundary of the Mark.

The *Germania* of Tacitus supplies us with a detailed account of the institution of the Comitatus, which receives strong confirmation on every point from what we gather from other authentic sources. In his own words:—

> "Illustrious birth or the great services of their fathers give the rank of princes even to young men: they are associated with the rest who have already made proof of their greater powers. **Nor is there any shame in appearing among the comites[294].**
>
> 294. This very assertion proves that the position of the comes was, *in itself,* inferior to that of the freeman.

…

As the proper name for the freeman is ceorl, and for the born-noble eorl, so is the true word for the comes, or comrade, gesíð. **This is in close etymological connection with síð, a journey, and literally denotes one who accompanies another.**
…

The comes may indeed have become the possessor of land, even of very large tracts[310], by gift from his prince; but he could not be the possessor of a free Hide, and consequently bound to service in the general *fyrd*, or to suit in the folcmót: **he might have wealth, and rank and honour, be powerful and splendid, dignified and influential, but he could not be free:** and if even the freeman so far forgot the inherent dignity of his station as to carry himself (for his éðel I think he could not carry) into the service of the prince,—an individual man, although a prince, and not as yet the state, or the representative of the state,—can it be doubted that the remunerative service of the chief would outweigh the barren possession of the farmer, or that the festive board and adventurous life of the castle would soon supply excuses for neglecting the humbler duties of the popular court and judicature? **Even if the markmen razed him from their roll, and committed his éðel to a worthier holder, what should he care, whom the liberality of his conquering leader could endow with fifty times its worth; and whose total divorce from the vulgar community would probably be looked upon with no disfavour by him who had already marked that community for his prey?** Nor could those whom the gesíð in turn settled upon lands which were not within the general mark-jurisdiction, be free markmen, but must have stood towards him in somewhat the same relation as he stood to his own chief. Upon the plan of the larger household, the smaller would also be formed: the same or similar conditions of tenure would prevail; and the services of his dependants he was no doubt bound to hold at the disposal of his own lord, and to maintain for his advantage. **We have thus, even in the earliest times, the nucleus of a standing army, the means and instruments of aggrandizement both for the King and the praetorian cohorts themselves;** practised and delighting in battle, ever ready to join in expeditions which promised adventure, honour or plunder, feasted in time of peace, enriched in time of

war; **holding the bond that united them to their chief as more sacred or stringent than even that of blood[311], and consequently ready for his sake to turn their arms against the free settlers in the district,** whenever his caprice, his passion or his ambition called upon their services. In proportion as his power and dignity increased by their efforts and assistance, so their power and dignity increased; his rank and splendour were reflected upon all that surrounded him, **till at length it became not only more honourable to be the unfree chattel of a prince, than the poor free cultivator of the soil, but even security for possession and property could only be attained within the compass of their body.** As early as the period when the Frankish Law was compiled, we find the great advantage enjoyed by the Comes over the Free Salian or Ripuarian, in the large proportion borne by his wergyld, in comparison with that of the latter[312].

The advantage derived by the community from the presence and protection of an armed force such as the gesíðas constituted, must have gradually produced a disposition to secure their favour even at the expense of the free nobles and settlers: **and a Mark that wished to entrust its security and its interests to a powerful soldier, would probably soon acquiesce in his assuming a direction and leadership in their affairs,** hardly more consistent with their original liberty, than the influence which a modern nobleman may establish by watching, as it is called, over the interests of the Registration. Even the old nobles by blood, who gradually beheld themselves forced down into a station of comparative poverty and obscurity, must have early hastened to give in their adhesion to a new order of things which held out peculiar prospects of advantage to themselves; and thus, the communities deserted by their natural leaders, soon sunk into a very subordinate situation, became portions of larger unities under the protection, and ultimately the rule, of successful adventurers, and consented without a struggle to receive their comites into those offices of power and distinction which were once conferred by popular election.
…

In the strict theory of the comitatus, the gesíð could possess no property of his own; all that he acquired was his lord's, and even the liberalities of the lord himself were only *beneficia* or loans, not absolute gifts[318]: he had the usufruct only during life, the *dominium utile*: the *dominium directum* was in the lord, and at the death of the tenant it is obvious that the estate vested in the lord alone: **the gesíð could have no *ius testamenti*, as indeed he had no family: the lord stood to him in place of father, brother and son.**
…

The circumstances thus brought under review show clearly that the condition of the gesíð was unfree in itself; **that even the free by birth who entered into it, relinquished that most sacred inheritance, and reduced themselves to the rank of thanes, ministers or servants.** Certain rights and privileges grew up, no doubt, by custom, and the counts were probably not very long subject to the mere arbitrary will of the chief: they had the protection of others in a similar state of dependency to their own, and chances, such as they were, of subservience to the king's wishes: a bond of affection and interdependence surpassing that of blood, and replacing the mutual free guarantee of life and security, was formed between them; and they shared alike in the joys and sorrows, the successes and reverses of peace and war: **but with it all, and whatever their rank; they were in fact menials, housed within the walls, fed at the table, clothed at the expense of their chief;** dependent upon his bounty, his gratitude or forbearance, for their subsistence and position in life; bound to sacrifice that life itself in his service, **and, strictly considered, incapable of contracting marriage or sharing in the inestimable sanctities of a home.** They were his cupbearers, stewards, chamberlains and grooms; even as kings and electors were to the emperor, whom they had raised out of their own body. The real nature of their service appears even through the haze of splendour and dignity which gradually surround the intimate servants of royalty; **and as the chief might select his comites and instruments from what class he chose, it was the fate of these voluntary thanes, not unfrequently to be numbered in the same category with the unfree by birth, and thus, in their own persons, to witness the destruction of that essential principle of all Teutonic law, the distinction between the freeman and the serf[321].**

> 321. **"Libertini non multum supra servos sunt, raro aliquod momentum in domo, nunquam in civitate; exceptis duntaxat iis gentibus, quae regnantur: ibi enim et super ingenuos et super nobiles ascendunt: apud caeteros impares libertini libertatis argumentum sunt."** Tac. Germ. xxv.

>
> **What was the essential fault of these Lombard laws—indeed of all the Teutonic codes? This—that there was one law for the free man, another for the slave. Ecclesiastical dominion was necessary, to make one law for all classes, even though it were a law of common slavery. As the free had done to the slave, even so, and far worse, would the Roman clergy do to them.** The Albigense persecutors, burning sixty ladies in one day; Conrad of Marpurg scourging his own sovereign, St. Elizabeth; shaving the Count of Saiym's head; and

> burning noble ladies almost without trial; Sprenger and his compeers, offering up female hecatombs of the highest blood thoughout Germany; English bishops burning in Smithfield Anne Askew, the hapless court-beauty, and her fellow-courtier Mr. Lascelles, just as if they had been Essex or Berkshire peasants;—all these evildoers were welding the different classes of the European nations, by a community of suffering, into nations; into the belief that free and slave had one blood, one humanity, one conscience, one capacity of suffering; and at last, **one capacity of rebelling, and making common cause, high and low alike, against him who reigned in Italy under the 'Romani nominis umbram.'**

…

As the royal power steadily advanced by his assistance, and the old, national nobility of birth, as well as the old, landed freeman sunk into a lower rank, the gesíð found himself rising in power and consideration proportioned to that of his chief: **the offices which had passed from the election of the freemen to the gift of the crown[322], were now conferred upon him, and the ealdorman, duke, geréfa, judge, and even the bishop, were at length selected from the ranks of the comitatus.** Finally, the nobles by birth themselves became absorbed in the ever-widening whirlpool; day by day the freemen, deprived of their old national defences, wringing with difficulty a precarious subsistence from incessant labour, sullenly yielded to a yoke which they could not shake off, **and commended themselves (such was the phrase)** to the protection of a lord; till a complete change having thus been operated in the opinions of men, and consequently in every relation of society, **a new order of things was consummated, in which the honours and security of service became more anxiously desired than a needy and unsafe freedom;** and the alods being finally surrendered, to be taken back as *beneficia*, under mediate lords, the foundations of the royal, feudal system were securely laid on every side.

The EXCESSIVE VALUATION of the value of the equally good blood, of the PROUD SELF, made it impossible for a nobleman to obey somebody else, for a duke to remain loyal to another, for one to subordinate himself to another. Germanic men of the same blood never made it possible for their own leaders and rulers – who no doubt existed, from Widukind to Florian Geyer – to create a German state. In the final analysis empire after empire fell into ruin because of these faults – the empires of the Goths, Vandals, Burgundians, Alemans and others.

When Germans could not create a state based on Germanic spirit, OTHER GERMANS forced them with a mailed fist to accept a state based on foreign spirit – with bloodshed, tears and misery.

Almost all the great emigrations of nations have been and continue to be from the cold and barren region of Scythia, because from the population there being excessive, and the soil ill able to support them, they are forced to quit their home, many causes operating to drive them forth and none to keep them back. **And if, for the last five hundred years, it has not happened that any of these nations has actually overrun another country, there are various reasons to account for it.** First, the great clearance which that region made of its inhabitants during the decline of the Roman Empire, when more than thirty nations issued from it in succession; and next, **the circumstance that the countries of Germany and Hungary, whence also these nations came, are now so much improved that men can live there in comfort,** and consequently are not constrained to shift their habitations. Besides which, since these countries are occupied by a very warlike race, they serve as a sort of bulwark to keep back the neighbouring Scythians, who for this reason do not venture to attack them, nor attempt to force a passage. Nevertheless, movements on a great scale have oftentimes been begun by the Tartars, **and been at once withstood by the Hungarians and Poles, whose frequent boast it is, that but for them, Italy and the Church would more than once have felt the weight of the Tartar arms.**

4. **The great societies which are called "political" do not, as Hobbes supposed, spring forth ready armed, leaving to Power the subsequent task of establishing order in a crowd of individuals.** On the contrary, they are the result of the coalescence, whether by violence or by consent, of smaller and much more ancient societies which are called, in the case of the Indo-European peoples, clans.

…

The king's concern was only with murders in which the murderer and his victim belonged to two different groups. And even then his role was a pacificatory one. He did not punish an act at which the only people entitled to be angry were the dead man's clansmen. He strove to prevent the pursuit of

vengeance destroying the harmony between the groupings, and to that end exacted from the murderer's family such reparation as might satisfy the avengers.
…

The king is in consequence constrained to unceasing consultation with his peers, for they alone can supply him with the troops he needs. Must it not be a standing temptation to him to substitute for his mediatory authority an immediate one, to claim direct obedience from the members of the clan? **But in that case he poaches on the preserves of the Elders and comes into conflict with them. And by the same stroke of policy he becomes the ally of all those who seek to escape from the harsh rule of the patriarchate.**

To break the cadre of the clans is, therefore, of the first importance to kings. Their resistance is the reef on which kings are shipwrecked; but the Power which succeeds them, although but a mandatory of the aristocracy of the clans, carries on the work of breaking the clans, because that work is essential to the development of Power. **That is why the classifications of the people, attributed to Solon and Servius Tullius,° assume so capital an importance in Greek and Roman history. They mark the break-up of the natural groups, the members of which were now divided up into categories, to be in their individual capacities soldiers, taxpayers, and electors.**

Power's war with the cell of the clan is never over. It continues through all history. **With admirable perspicacity Maine† hung his exposition of the evolution of Roman law on the thread of the successive recoils of the *patria potestas*.** In the beginning the legislator did not have to concern himself at all with the son, the daughter, and the slave, for these fell within the exclusive jurisdiction of the father. **Step by step they all become subject to the law: the state had broken through into a world from which it was at first excluded, and had claimed as subject to its own jurisdiction those who had in former days been subjects of the father alone.**

https://www.gutenberg.org/cache/epub/10827/pg10827-images.html

But to make plain what I mean when I speak of *gentlemen*, I say that those are so to be styled who live in opulence and idleness on the revenues of their estates, without concerning themselves with the cultivation of these estates, or incurring any other fatigue for their support. **Such persons are very mischievous in every republic or country.** But even more mischievous are they who, besides the estates I have spoken of, are lords of strongholds and castles, and have vassals and retainers who render them obedience. **Of these two classes of men the kingdom of Naples, the country round Rome, Romagna, and Lombardy are full; and hence it happens that in these provinces no commonwealth or free form of government has ever existed; because men of this sort are the sworn foes to all free institutions.**
…

From what has been said, it follows, **that he who would found a commonwealth in a country wherein there are many gentlemen, cannot do so unless he first gets rid of them; and that he who would found a monarchy or princedom in a country wherein great equality prevails, will never succeed, unless he raise above the level of that equality many persons of a restless and ambitious temperament**, whom he must make gentlemen not in name merely but in reality, by conferring on them castles and lands, supplying them with riches, and providing them with retainers; **that with these gentlemen around him, and with their help, he may maintain his power, while they through him may gratify their ambition; all others being constrained to endure a yoke, which force and force alone imposes on them.**

https://www.academia.edu/16284517/Irishmen_Aristocrats_and_Other_White_Barbarians

We tend to forget that the primary objects of social discipline, regimentation, and repression in the sixteenth century were not women; nor were they Jews, Moors, or Anabaptists. Rather, the civilizing process under the Tudors attempted to control white upperclass men – precisely because white upperclass men had what those others did not: namely, guns, swords, retainers, horses, and a habit of using them when aggrieved.3

The most trenchant Tudor/Stuart critiques of aristocratic warrior society, however, do not discuss England but two other islands: Utopia and Ireland. Thomas More's low opinion of the armigerous nobility being well-known, I want to consider the socio-political ramifications of the two most important Irish tracts: Spenser's *A View of the Present State of Ireland* (1596) and Sir John Davies's *A Discovery of the True Causes Why Ireland Was Never Entirely Subdued* (1612).
…

Prior to the 1580s, Tudor histories do not include England's barbarian origins, preferring the more respectable national pedigree provided by Brutus's Trojan band and the offspring of Old Testament patriarchs. As late as Holinshed's 1577 *Chronicles*, the earliest inhabitants of

England (and Ireland) could be imagined as the highly civilized grandchildren of Noah, whose northward migrations had been recorded (and invented) by Giovanni Nanni, or the pseudo-Berosus; following Nanni, the *Chronicles* relate how one grandson, Bartolenus, settled Ireland, while another, the pious and learned Samothes, headed for England, where he built numerous towns and cities, leaving his great-grandson Druiyus to establish a college of Druid sages, who subsequently taught the Greek alphabet to the Athenians.8

But with the publication of Camden's *Britannia* in 1586, a radically different model of English prehistory replaces these legitimating myths. In Camden, no *kulturhelden* roam the British isles during the years following the Deluge. Instead of the *Chronicles*' devolutionary scheme, which portrays early British history as the gradual decline of an advanced civilization, *Britannia*'s opening chapters narrate British origins as the slow and bloody civilizing process that followed Roman colonization, which "chased away all savage barbarisme from the Britans minds... and reduced the naturall inhabitants of the Iland unto the society of civill life" (although at the cost of their native culture and liberty).9 For Camden, the early inhabitants of Britain – like all northern Europeans – were "uncivill," "rude," "most warlike, and exceedingly given to slaughter." The English and lowland Scots attained civility, Camden adds, because, unlike the Irish, they became subject to the "Roman yoke" – which leads Camden to the interesting generalization that "wheresoever the Romans were victours, they brought them whom they conquered, to civility: **neither verily in any place else throughout Europe was there any civility, learning, and elegance, but where they ruled.**"10
...

In Caesar, and even more sharply in Tacitus, **this grim picture of barbarian life is complicated by a grimmer realization that the barbarian alone remains free;** as Tacitus remarks of the Gauls, "a life of ease has made them unwarlike: their valour perished with their freedom."23 **The consequence of beating one's sword into a plowshare is slavery, not only because an indolent people is easily conquered but because civilized persons *prefer* comfortable subjection to the harsh freedom of the forests and bogs.**
...

The *Germania* ends with an account of the Fenni, a people "astonishingly savage and disgustingly poor," who survive on "wild herbs, dress in skins, and sleep on the ground." Yet, Tacitus remarks, "they count their lot happier than that of others who groan over field labour, sweat over house-building, or hazard their own and other men's fortunes in the hope of profit and the fear of loss [*spe metuque*]. Unafraid of anything that man or god can do to them, they have reached a state that few human beings can attain." **Free from hope and fear, the bestial Fenni attain Stoic *ataraxia*, while civilized men sweat and groan under their burdens.**
...

Fynes Moryson, secretary to the Lord Deputy of Ireland Charles Mountjoy from 1600 to 1606, similarly notes that it "may well be said of the Irish which Caesar in his Commentaries writes of the old Germans; like beasts they doe all things by force and Armes."27 Although Spenser, Davies, and Moryson recognize that these hostilities are sometimes directed against English colonial encroachments, they view political resistance as only one aspect of the incessant and pervasive violence of Ireland's barbarian society. Thus according to Davies, "As for oppression, extortion, and other trespasses, the weaker had never any remedy against the stronger: **whereby it came to pass that no man could enjoy his life, his wife, his lands or goods in safety if a mightier man than himself had an appetite to take the same from him.**"28

> 27. Moryson, 193. Portions of Moryson's *Itinerary* were published in 1617, but the chapters on Irish politics and customs, probably written between 1617 and 1620, remained in manuscript until 1903. **Moryson's observations frequently overlap those of Spenser and Davies, but he lays far greater stress on the dangers resulting from both Irish Catholicism and English political corruption.**

Irish society, Davies implies, is a warrior aristocracy, like that of the ancient northern European tribes. The tracts thus point out that the Hibernian nobility – both indigenous and Anglo-Irish – retain companies of fighting men loyal only to themselves, whereby they "exercise plain tyranny over the common people," using "husbandmen... as slaues."29 **These lords wield a nearly absolute power over their inferiors, compelling their sizeable body of dependents "to followe them into any action whatsoever."**30

The same aristocratic ethos has major socio-economic implications, especially since (in Spenser's words) **"all the Irishe almost, boste them selues to bee gentlemen... for yf he can deryve him self from the heade of a septe [clan], as most of them can... then he holdeth him self a gentleman." But, anyone who considers himself a gentleman, Spenser continues, "scorneth eftsoones to worke or vse any handy labor, which he sayth is the lyfe of a peazante or Churle, but thensforth eyther becometh a horseboy or a stocage to some kearne, envring him self to his weapon, and**

to his gentlemanly trade of stealinge."31 Davies and Moryson similarly remark upon the Irish identification of status with the sword, the former commenting that this "scorn to descend to husbandry or merchandise" lies behind a good deal of the poverty and violence of Irish society, since "these poor gentlemen... rather chose to live at home by theft, extortion, and coshering" than engage in farming or any other peaceful and productive vocation.32

> 32. Davies, 165-6; cf. Spenser, 1934, 35; Moryson, 196, 200, 234, 483. **I hesitate to discount this as Protestant propaganda since Roman Catholics made similar observations; for example, a sixteenth-century Jesuit missionary reported that the Irish "account it no shame or infamy to commit robberies, which they practice everywhere with exceeding cruelty... neither are they persuaded that either violence or rapine or manslaughter displeaseth God"** (quoted in Quinn, 1966, 46-47).

As a result, **none of the Irish "build any stone or brick house for his private habitation... Neither did any of them in all this time plant any gardens or orchards, enclose or improve their land, live together in settled villages or towns, nor made any provision for posterity," most of the native population instead leading a semi-nomadic existence, their time divided between herding cattle and fighting.**33
...

Barbarian Ireland, that is, does not only resemble ancient Britain; it resembles England at least up to the Tudor period, **it being, Spenser tellingly admits, "but even the other daye, since England grewe Civill."**40

Spenser and Davies underscore this point by insisting upon the similarities between Irish tribal society and Anglo-Irish feudalism. The "wild Irish" and the Anglo-Irish are both northern barbarians. **Thus the Anglo-Irish families, like the septs, engage in unending "private warrs one against another."**41 **Their soldiers use "all kynde of outragious disorder and villanye, both towardes thee poore men that victell and lodge them, and also to all the rest of the countrie about them, whom they abuse spoyle and afflicte, by all the meanes they can invent," while the Anglo-Irish nobleman, "loving the Irish tyranny... better than a just and lawful seigniory," makes "his will and comaundment a lawe vnto his owne vassall," whom he treats as "a very slave and villein."**42 Spenser thus concludes that "the chefest abuses which are now in that realme [Ireland], are growne from the Englishe, and the Englishe... are now much more lawlesse and lycencious, then the verie wilde Irishe."43

> 43. Spenser, 1934, 82; **Davies in fact argues that the Anglo-Irish settlers "uncivilized" the Irish by expropriating the open flatlands, thus driving the natives into the fens and woods** (136, 160). **Stanyhurst vehemently denies such accusations, claiming that the new English administrators and government officials slanderously blame the Anglo-Irish nobility for problems stemming from their own venality and incompetence** (6:5, 46-52, 67); **Stanyhurst, it should be noted, was himself Anglo-Irish.**

...

If the Tudor state gradually brought its restive nobility to heel during the late sixteenth century, **the aristocratic culture of violence that "flourished from the days of Beowulf to those of Sir Philip Sydney" had not yet lost its hold on men's imagination when Essex and his followers rode into London in 1601.** Elizabethan magnates still maintained considerable retinues of armed and liveried servants and, when requisite, mobilized their tenants to prosecute private quarrels. **Lawrence Stone thus recounts how in the 1570s, Lord Chandos, in a most Irish-like manner, mobilized "armed retainers with guns at the ready" to intimidate Crown officials, "protected servants of his who robbed men on the highway," rigged juries, and blackmailed the local peasantry.**47 As these accounts suggest, the Hibernian chieftain and the English nobility stand together in the ranks of the barbarian, just as the Irish rebel, praised by native bards because "his musicke was not the harpe nor layes of loue, but the cryes of people, and Clashinge of armor," bears an unmistakable resemblance to Hotspur, the quintessential English warrior aristocrat.48 **The Irish tracts, in other words, do not just concern Ireland but implicitly offer a drastic critique of the whole aristocratic culture of honor.**
...

For Spenser, that is, civilizing the barbarian requires the forcible imposition of an alien order; for Davies, who strongly condemns the refusal of the Anglo-Irish to grant common law privileges to the "mere Irish," the same project is reconfigured as extending the benefits of common law to the lower orders rather than forcing it down the Irish's throats.

Apart from this, however, Spenser's and Davies's proposals for civilizing Ireland are by and large identical. In particular, they both employ what does not seem anachronistic to term a "materialist" interpretation of culture as the offspring of political economy. Spenser argues repeatedly that one

cannot civilize a country by punishing barbarians for acts of barbarism; rather, to attain (or impose) civility requires a prior sweeping redistribution of power and property.52
...

In the Irish system, land belonged to the sept rather than to individuals, and hence was not heritable; moreover peasant tenures were generally very short – a couple of years or so – at which point the lord of the manor could either alter or terminate the lease.53 In place of these customs, Spenser and Davies uniformly advocate the introduction of private property, patrilineal inheritance, and heritable freehold tenures.54 The works specify two principal reasons for these changes. First, **the changes would sharply curtail the military power of the nobility (both Irish and Anglo-Irish), since if the country people had a *right* to their land they no longer risked eviction for refusing to follow their lord "into what action soever he will enter."**55 Private property in the Irish tracts is thus not viewed as a means to secure individual rights from the encroachments of the state – its function in the English constitutional struggles leading up to the Civil War – but as a way to protect both common people and commonwealth from the depredations and extortions of the nobility. **The Irish ruling classes do not observe "*Meum* and *tuum*," a Captain Nicholas Dawtrey wrote to the Queen in 1594, because "they will have all that their sword can command and depart [i.e., part] with nothing that the same sword can keep."**56 **In contrast, Spenser maintains, the English aristocracy no longer presents a serious threat to the commonwealth, since "the Noblemen how ever they should happen to be evill disposed haue noe commaund at all over the Commonaltye, though dwellinge vnder them, because euerie man standeth vpon him self."**57

> 57. Spenser, 1934, 190. Similarly, **Spenser argues that the Irish should be forced to abandon their tribal appellations (O'Brian, MacCarthy, and the like) and instead take agnatic surnames derived from an individual's "trade or facultie or... some qualitie [sic] of his bodye or mynde, or of the place where he dwelte," in order to instill a sense of personal identity independent of clan affiliation** (200-01).

Revamping traditional patterns of land ownership would also spark a georgic revolution; that is, it would shift the basis of the Irish economy from grazing to agriculture, thus creating a substantial body of prosperous yeoman farmers, each of whom would "bee drawen to build him self, some handsome habytacion... to dytch and inclose his ground, to manure and husband yt as good Farmers vse... And to all these other comodyties he shall in shorte tyme fynde a greater added that is his owne wealth and riches, encreased, and wounderfullie enlarged."58 The Irish tracts presuppose a direct relation between cultivating crops and people;59 **so Davies claims that if the Irish, having been "transplanted from the woods and mountains," were given arable land, "(like wild fruit trees) they might grow the milder, and bear the better and sweeter fruit."**60

> 59. This relation holds outside Ireland as well; Harrison thus notes that English, Welsh, and Scottish farmland has "euen now in these our daies growne to be much more fruitfull, than it hath beene in times past. The cause is for that our countriemen are growne to be more painefull, skilfull, and carefull through recompense of gaine... **[Previously] verie little other food and liuelihood was wont to be looked for (beside flesh) more than the soile of it selfe, and the cow gaue; the people in the meane time liuing idelie, dissolutelie, and by picking and stealing one from another. All which vices are now (for the most part) relinquished, so that each nation manureth hir owne with triple commodities to that it was before time**" (1.184)

Whereas semi-nomadic grazers have little real property and therefore little investment in peace, agriculture breeds civility since farmers, in contrast, are understandably reluctant to see the fruits of their bone-wearying toil destroyed overnight by marauding soldiers. **Because the Irish peasant, Spenser remarks, "hath noe such estate in any his holdinge, noe such buildinge vpon anye farme, noe such costes ymployed in fencinge and husbandringe the same" there is nothing to "withhold him from anye such wilfull course as his Lordes cause and his owne lewde disposition may carrie him vnto";** conversely, "husbandrye beinge the Nurse of thrifte and the daughter of Industrie... is most enemye to warr."61
...

Nor does the social regimentation and discipline entailed by this work ethic aim at stamping out folk festivities and other manifestations of the popular carnivalesque spirit; the Irish tracts do not attack the Hibernian equivalents of Maypoles and Church ales. On the contrary, they favor industry, both georgic and civic, as a way of eliminating the pinching lenten poverty afflicting the Irish commons, enabling the kingdom, Davies writes, to "merit the name of a 'commonwealth,' which at this time may properly be termed a 'common-misery.'"65 The goal, if not quite a perpetual carnival, has a distinctly festive aspect: **in the new Irish towns, the citizens will "liue plentifully vnder good gouernment, and... growe rich by trades and traffique... and happy in all aboundance," having exchanged "sorrow, famine, howling, and cursing... [for] ioy, iolitie, plentie."**66
...

To make the king's writ run in Ireland serves the same ends as the other proposed reforms: transferring power to the crown and commons (whose interests are presumed to coincide) at the expense of the nobility, so that peaceful subjects might work and prosper in safety, protected by royal justice from aristocratic exploitation.69 Richard Beacon thus recommends sending royal commissioners to Ireland, who "as iudges shall restraine and suppresse the ambition of the nobles, and shall carefully defende the people from oppressors... [Since] it is saide that a Monarchie governed popularlie is then secure and voide of perill: for in the multitude or people consisteth the strength and force of every kingdome."70 **The Anglo-Irish nobility had long refused to impose English law on the Irish because, Davies bitterly remarks, they feared that if the Irish became "free subjects," the crown would "ennoble some of them, and enfranchise all and make them amenable to the law, which would have abridged and cut off a great part of that greatness which they had promised unto themselves."**71 Instead, the Anglo-Irish classified the natives as unfree aliens, "so far out of the protection of the law as it was often adjudged no felony to kill a mere Irishman in the time of peace." Moreover, the Anglo-Irish prohibition against intermarriage with the native population makes it evident "that such as had the government of Ireland under the Crown of England did intend to make a perpetual separation and enmity between the English and the Irish, pretending, no doubt, that the English should in the end root out the Irish."72 **When in the early seventeenth century, English justices of assize began going on circuit through the Irish countryside, the common people first learned, Davies reports, "that they were free subjects to the kings of England, and not slaves and vassals to their pretended lords," with Moryson adding that "the inferiour Gentlemen and all the Common people, gladly imbraced this liberty from the yoke of the great lords."**73

Precisely because the law "doth reduce all the people... to the condition of subjects," the warrior nobility "doe speciallye rage at... the lawes them selues... as most repugnante to theire libertie and naturall fredome,"74 the characteristic mark of hard-core aristocrats – whether Brutus's sons, Germanic chieftains, or the Earls of Tyrone and Essex – being a deep-seated hostility to any authority viewed as liable to restrict their personal autonomy. Against this notion of freedom as the liberty of the strong man to do as he pleases, the Irish tracts claim that juridical subjection creates liberty, since a free person differs from a serf or slave in that the former is governed, not by the arbitrary will of a master, but by law.75 This claim, it should be noted, does not imply absolutist or imperialist propensities; rather, **from antiquity through the Renaissance, *constitutional* theorists, whether royalist or republican – Aristotle, Polybius, Aquinas, Hooker, Buchanan, Languet – see the rule of law as the key feature distinguishing legitimate government from despotism *because* law protects the weak from what one Elizabethan denominated "Irish rule": namely "a government as the mightiest do what they list against the inferiors."**76
...

The tracts thus presuppose the position familiar from Cicero's *De officiis* that civil society exists to protect the weak from the strong a function which they, like Cicero, associate with kingship and law.78 **In this sense Beacon, in a rather stunning fusion of the *Aeneid* and the Magnificat, contrasts the rapacious Irish nobility to the Roman colonial governors, who labored "nothing more then to humble and deiect the mightie & to protect and defend the feeble & weake, and deliver the people from oppressions."**79

> 78. "Mihi quidem... iustitiae fruendae causa videntur olim bene morati reges constituti. **Nam cum premeretur inops multitudo abiis, qui maiores opes habebant, ad unum aliquem confugiebant virtute praestantem...** Eademque constituendarum legum fuit causa, quae regum" (*De officiis* 2.12.41).

...

Significantly, both Spenser and Moryson propose that Irish society be refashioned according to the model of the Low Countries – the late Renaissance epitome of civic independence and bourgeois prosperity; **Moryson in fact recommends importing Flemings into Ireland as a pattern for the natives of "a Free people... vsed to liue of themselues... [and] not vsed to the absolute Commandes of lordes after the seruile manner of Ireland."**82
...

By shifting the classical focus on what civility means for the free and noble barbarian warrior to its implications for the peasantry, **the Irish tracts eliminate the moral ambiguities characteristic of the Roman narratives;** for this population, ruthlessly exploited by both tribal and feudal aristocracies, civility promises to bestow rather than destroy liberty.86 **From the perspective of the churl, civilization is not a matter of exchanging heroic self-sufficiency for servile constraint, but passing from feudal bondage to the status of a "free subject" with full legal rights and protection.**87
...

According to Plutarch, the early Romans were a savage and violent people. Faced with the task of ruling these "daring and warlike spirits," Numa thus embarked upon a series of reforms designed "above all things... to lead them to good order and quiet." **Therefore, Plutarch reports, he organized the state on "democratic" (that is, non-aristocratic) lines, with "goldsmiths and flute-players and shoemakers constituting his promiscuous, many-colored commonality"; divided the population into trade guilds designed to override tribal and ethnic allegiances;** and, by "turning people to husbandry," instilled in them "a relish for peace." The reforms bore the desired fruit: the "love of virtue and justice" and a "general longing for the sweets of peace and order, **and for life employed in the quiet tillage of the soil, bringing up of children, and worships [sic] of the gods.**"91

The Irish tracts have an obvious debt to this georgic and *gemeinschaftlich* version of the *pax Romana*, which, as Plutarch makes quite clear, represents the antithesis of Sparta's aristocratic warrior society.92

> 92. See, for example, Plutarch, 1:171. Yet, somewhat confusingly, in Spenser (as in Beacon) the critique of aristocratic violence also betrays the influence of Machiavelli's *Discourses*, which, despite their celebration of ancient military virtu, are unequivocally hostile towards "gentlemen" – those "who live idly upon the proceeds of their extensive possessions, without devoting themselves to agriculture or any other useful pursuit to gain a living." **The armigerous nobility in particular "are pernicious to any country... [and] everywhere enemies of all civil government." A country infested with such men, Machiavelli continues, can only achieve "any kind of order" by setting up a strong monarchy to control the aristocracy "with a royal hand, and with full and absolute powers." Thus the French have survived as a nation only because of their "determined constancy in repressing the ambition of the nobles"** (254-55, 402). **If, like Machiavelli, Spenser condones drastic measures to suppress internal enemies, like Machiavelli he also generally identifies these enemies with the first, not third, estate, pointing out that "all the rebellyons... in Ireland, are not begunn by the Common people but by the Lordes and Captaines"** (189-90).

While the old Gaelic institutions were in full vigour, no account of them was given by any observer, qualified to judge of them fairly. Had such an observer studied the character of the Highlanders, he would doubtless have found in it closely intermingled the good and the bad qualities of an uncivilised nation. **He would have found that the people had no love for their country or for their king; that they had no attachment to any commonwealth larger than the clan, or to any magistrate superior to the chief.**
...

He would have seen, wherever he turned, that dislike of steady industry, and that disposition to throw on the weaker sex the heaviest part of manual labour, which are characteristic of savages. He would have been struck by the spectacle of athletic men basking in the sun, angling for salmon, or taking aim at grouse, while their aged mothers, their pregnant wives, their tender daughters, were reaping the scanty harvest of oats. Nor did the women repine at their hard lot. In their view it was quite fit that a man, especially if he assumed the aristocratic title of Duinhe Wassel and adorned his bonnet with the eagle's feather, should take his ease, except when he was fighting, hunting, or marauding. To mention the name of such a man in connection with commerce or with any mechanical art was an insult. Agriculture was indeed less despised. Yet a highborn warrior was much more becomingly employed in plundering the land of others than in tilling his own.
...

This contemptuous loathing lasted till the year 1745, and was then for a moment succeeded by intense fear and rage. England, thoroughly alarmed, put forth her whole strength. The Highlands were subjugated rapidly, completely, and for ever.
...

A political and social revolution took place through the whole Celtic region. **The power of the chiefs was destroyed: the people were disarmed:** the use of the old national garb was interdicted: the old predatory habits were effectually broken; and scarcely had this change been accomplished when a strange reflux of public feeling began. Pity succeeded to aversion.
...

Scarcely had the chiefs been turned into mere landlords, when it became the fashion to draw invidious comparisons between the rapacity of the landlord and the indulgence of the chief.
...

The old tie, they said, had been parental: the new tie was purely commercial. What could be more lamentable than that the head of a tribe should eject, for a paltry arrear of rent, tenants who were

his own flesh and blood, tenants whose forefathers had often with their bodies covered his forefathers on the field of battle?
…

There was one inexhaustible source of discontents and disputes. **The feudal system had, some centuries before, been introduced into the hill country, but had neither destroyed the patriarchal system nor amalgamated completely with it. In general he who was lord in the Norman polity was also chief in the Celtic polity; and, when this was the case, there was no conflict. But, when the two characters were separated, all the willing and loyal obedience was reserved for the chief. The lord had only what he could get and hold by force.** If he was able, by the help of his own tribe, to keep in subjection tenants who were not of his own tribe, there was a tyranny of clan over clan, the most galling, perhaps, of all forms of tyranny.
…

As the individual Celt was easily turned into a soldier, so a tribe of Celts was easily turned into a battalion of soldiers. All that was necessary was that the military organization should be conformed to the patriarchal organization. The Chief must be Colonel: his uncle or his brother must be Major: the tacksmen, who formed what may be called the peerage of the little community, must be the Captains: the company of each Captain must consist of those peasants who lived on his land, and whose names, faces, connections, and characters, were perfectly known to him: the subaltern officers must be selected among the Duinhe Wassels, proud of the eagle's feather: the henchman was an excellent orderly: the hereditary piper and his sons formed the band: and the clan became at once a regiment.
…

But those very institutions which made a tribe of highlanders, all bearing the same name, and all subject to the same ruler, so formidable in battle, disqualified the nation for war on a large scale. Nothing was easier than to turn clans into efficient regiments; but nothing was more difficult than to combine these regiments in such a manner as to form an efficient army. From the shepherds and herdsmen who fought in the ranks up to the chiefs, all was harmony and order. Every man looked up to his immediate superior, and all looked up to the common head. **But with the chief this chain of subordination ended. He knew only how to govern, and had never learned to obey. Even to royal proclamations, even to Acts of Parliament, he was accustomed to yield obedience only when they were in perfect accordance with his own inclinations.** It was not to be expected that he would pay to any delegated authority a respect which he was in the habit of refusing to the supreme authority. He thought himself entitled to judge of the propriety of every order which he received. Of his brother chiefs, some were his enemies and some his rivals. It was hardly possible to keep him from affronting them, or to convince him that they were not affronting him. All his followers sympathized with all his animosities, considered his honour as their own, and were ready at his whistle to array themselves round him in arms against the commander in chief. **There was therefore very little chance that by any contrivance any five clans could be induced to cooperate heartily with one another during a long campaign.** The best chance, however, was when they were led by a Saxon. It is remarkable that none of the great actions performed by the Highlanders during our civil wars was performed under the command of a Highlander. Some writers have mentioned it as a proof of the extraordinary genius of Montrose and Dundee that those captains, though not themselves of Gaelic race or speech, should have been able to form and direct confederacies of Gaelic tribes. But in truth it was precisely because Montrose and Dundee were not Highlanders, that they were able to lead armies composed of Highland clans. Had Montrose been chief of the Camerons, the Macdonalds would never have submitted to his authority. Had Dundee been chief of Clanronald, he would never have been obeyed by Glengarry. **Haughty and punctilious men, who scarcely acknowledged the king to be their superior, would not have endured the superiority of a neighbour, an equal, a competitor.** They could far more easily bear the preeminence of a distinguished stranger, yet even to such a stranger they would allow only a very limited and a very precarious authority. To bring a chief before a court martial, to shoot him, to cashier him, to degrade him, to reprimand him publicly, was impossible. Macdonald of Keppoch or Maclean of Duart would have struck dead any officer who had demanded his sword, and told him to consider himself as under arrest; and hundreds of claymores would instantly have been drawn to protect the murderer. **All that was left to the commander under whom these potentates condescended to serve was to argue with them, to supplicate them, to flatter them, to bribe them;** and it was only during a short time that any human skill could preserve harmony by these means. For every chief thought himself entitled to peculiar observance; and it was therefore impossible to pay marked court to any one without disobliging the rest. **The general found himself merely the president of a congress of petty kings.** He was perpetually called upon to hear and to compose disputes about pedigrees, about precedence, about the division of spoil. His decision, be it what it might, must offend somebody. At any moment he might hear that his right wing had fired on his centre in pursuance of some quarrel two hundred years old, or that a whole battalion had marched back to its native glen, because another battalion had been put in the post of honour. **A Highland bard might easily have found in the history of the year 1689 subjects very similar to those with which the war of Troy furnished the great poets of antiquity.** One day Achilles is sullen, keeps his tent, and announces his

intention to depart with all his men. The next day Ajax is storming about the camp, and threatening to cut the throat of Ulysses.

In such a state of society as that which existed all over Europe during the middle ages, very slight checks sufficed to keep the sovereign in order. His means of corruption and intimidation were very scanty.
...

The army, now the most formidable instrument of the executive power, was then the most formidable check on that power. Resistance to an established government, in modern times so difficult and perilous an enterprise, was, in the fourteenth and fifteenth centuries, the simplest and easiest matter in the world. Indeed, it was far too simple and easy. An insurrection was got up then almost as easily as a petition is got up now. In a popular cause, or even in an unpopular cause favoured by a few great nobles, a force of ten thousand armed men was raised in a week. If the King were, like our Edward the Second and Richard the Second, generally odious, he could not procure a bow or halbert. He fell at once and without an effort.

>
> There can be little doubt that, if Charles had frankly made to the Short Parliament, which met in the spring of 1640, but one half of the concessions which he made, a few months later, to the Long Parliament, he would have lived and died a powerful King. **On the other hand, there can be no doubt whatever that, if he had refused to make any concession to the Long Parliament, and had resorted to arms in defence of the ship money and of the Star Chamber, he would have seen, in the hostile ranks, Hyde and Falkland side by side with Hollis and Hampden.** But, in truth, he would not have been able to resort to arms; for nor twenty Cavaliers would have joined his standard. It was to his large concessions alone that he owed the support of that great body of noblemen and gentlemen who fought so long and so gallantly in his cause.

...

There have always been monarchies in Asia, in which the royal authority has been tempered by fundamental laws, though no legislative body exists to watch over them. **The guarantee is the opinion of a community of which every individual is a soldier. Thus, the king of Cabul, as Mr. Elphinstone informs us, cannot augment the land revenue, or interfere with the jurisdiction of the ordinary tribunals.**

https://civilwartalk.com/threads/sherman-said-that-an-entire-class-of-southerners-had-to-be-killed.157237/

Upon receipt of a letter from Halleck, dated August 29, 1863, which brought up "the question of reconstruction in Louisiana, Mississippi, and Arkansas," Sherman replied "unofficially" as Halleck had suggested, so that he could express himself freely without being annoyed by the press.
...

[Sherman lists and describes four classes: **The large planters, the "smaller farmers, mechanics, merchants, and laborers", the Southern-residing Union adherents, and finally, "the young bloods of the South."** I have bolded one sentence.]

Fourth. The young bloods of the South: sons of planters, lawyers about towns, good billiard-players and sportsmen, men who never did work and never will. War suits them, and the rascals are brave, fine riders, bold to rashness, and dangerous subjects in every sense. They care not a sou for ******s, land, or any thing. They hate Yankees per se, and don't bother their brains about the past, present, or future. As long as they have good horses, plenty of forage, and an open country, they are happy. This is a larger class than most men suppose, and they are the most dangerous set of men that this war has turned loose upon the world. They are splendid riders, first-rate shots, and utterly reckless. Stewart, John Morgan, Forrest, and Jackson, are the types and leaders of this class. **These men must all be killed or employed by us before we can hope for peace.** They have no property or futures, and therefore cannot be influenced by any thing, except personal considerations.

According to Solonevich, **feudalism could be defined as “the splintering of state sovereignty among a mass of small, but in principle sovereign owners of property”.** Contrary to Marx, it had nothing to do with ‘productive relations’ and was far from being an advance on previous forms of social organisation.

"It is sufficient to remember the huge cultural and unusually high level of Roman 'production'. **Feudal Europe, poor, dirty and illiterate, by no means represented 'a more progressive form of productive relations' – in spite of Hegel, it was sheer regression. Feudalism does not originate in productive relations. It originates in the thirst for power beyond all dependence on production and distribution.** Feudalism is, so to speak, *the democratisation of power* [my italics – V.M.] – its transfer to all those who at the given moment in the given place have sufficient physical strength to defend their baronial rights – *Faustrecht*... Feudalism sometimes presupposes a juridical basis of power, but never a moral one.

"**The feudal lord does not rule 'in the name' of the nation, the people, the peasants, or whoever else there might be.** He rules only and exclusively in his own interests, which have been strengthened by such-and-such battles or parchments. **For the feudal lord the monarch is not the bearer of definite moral ideals or even of the practical interests of the people or nation, but only 'the first among equals', who has had the luck to be stronger than the rest…**

"The thirst for power is, of course, a property common to all humanity, and therefore the tendency to the development of feudalism will be to a greater or lesser degree characteristic of all countries and all peoples of the world. … **But if we discard trivialities, then we must say that Rome, for example, had no knowledge at all of feudal relations. There were landowners and there were senators, there were proconsuls and there were emperors, <u>but there were no barons. The sovereign power 'of the people and senate of Rome', engraved on the Roman eagles, remained the single indivisible source of all power</u> – even the power of the Roman emperors.** The civil wars of Rome bore no relation to the feudal wars of medieval Europe. Nor did Ancient Greece with its purely capitalist relations know feudalism. Yes, Greece was split up into a series of sovereign states, but, though tiny, these were nevertheless states – monarchies and republics, in principle having equal rights in relation to each other and by no means in relations of feudal submission or co-submission."[16]

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Coriolanus*.html#ref32

29 1 But after he had taken Bola, a city not more than twelve miles away from Rome, where he got much treasure and put almost all the adults to the sword; and after the Volscians even who had been ordered to remain in their cities grew impatient, and came trooping in arms to Marcius, declaring that he was the sole and only general whom they would recognize as their leader, then his name was great throughout all Italy, **and men thought with amazement how the valour of a single man, upon his changing sides, had effected such a marvellous turn in affairs.**

https://ccel.org/g/gibbon/decline/volume2/chap44.htm#abolition

The barbarous practice of wearing arms in the midst of peace, (182) **and the bloody maxims of honor, were unknown to the Romans;** and, during the two purest ages, from the establishment of equal freedom to the end of the Punic wars, the city was never disturbed by sedition, and rarely polluted with atrocious crimes.

> 182. *πρῶτοι δὲ Ἀθηναῖοι τόν τε σίδηρον κατέθεντο.* Thucydid. l. i. c. 6 **The historian who considers this circumstance as the test of civilization, would disdain the barbarism of a European court.**

https://books.google.fi/books?id=fj8oQ4lzteIC&lpg=PP1&hl=fi&pg=PA16#v=onepage&q&f=false

Ruthless competition for office and honour had also exacted their toll. **Since <u>the practice of duelling was not condoned among citizens in this aristocracy</u>, violence was liberated for language, and feuds were conducted through prosecution in the courts of law.**7 Signal mishaps in political life might consign a family or whole group to obscurity for a generation, or for ever.
…

In a single year (109) no fewer than four consulars suffered condemnation and exile.9 Five years later a lost battle in Gaul and the prosecution of Servilius Caepio (*cos.* 106) impaired and depressed an illustrious family of the patriciate.

https://archive.org/details/worshippingstate0000wike/page/84/mode/2up?view=theater

There were two important results in the dissolution of the empire: **(1) bishops often became the default source of legal-political order wherever the imperial order had been destroyed,**11 **and (2) with the imperial order gone, political order where it did exist was local – amounting to the rule by a duke or king of his personal *estate*,** on which he often endowed a church or monastery.12

...

As we look at this historical process, **we'll have a much better understanding of what went on if we substitute "estate" for "state," because after the collapse of imperial rule the political regimes in the West are defined by the rule of a person over his personal lands, that is, his *estates*.** (Even when their reigns were dressed in imperial language, Frankish or Germanic "emperors" really amounted to Frankish or Germanic kings ruling over their own territorial estates.)

> https://penelope.uchicago.edu/Thayer/E/Gazetteer/Places/Europe/Italy/_Texts/HODIHI/2d_edition/4/9*.html#ref15
>
> The two bishops journeyed together to Ravenna, and were received with all veneration by the King.
>
> **And here let us observe for a moment, that we have in this embassy an excellent illustration of the way in which barbaric conquest forced the Church onwards in the path of temporal dominion.** The edict against the adherents of Odovacar was a purely civil edict. Whether wise or foolish, it in no way specially concerned the Church, nor trenched upon ecclesiastical privilege. Neither was it, like the revenge wreaked by Theodosius on the citizens of Thessalonica, an outrage upon humanity, a gross and obvious breach of the law of God. It was a very harsh and ill-conceived measure, but it related to matters which were entirely within the domain of the civil governor; and as such, **we cannot imagine that either Ambrose or Eusebius would have felt himself entitled to remonstrate against it, nor that Theodosius or Constantine would have tolerated such an interference.** Now, however, that a Barbarian, instead of a Roman, sits in the seat of power, the moderating influence of the ecclesiastic in purely political matters is eagerly invoked by the governed, and not repelled by the governor.

https://oll.libertyfund.org/title/acton-the-history-of-freedom-and-other-essays#lf0030_label_022

If the Church had continued to buttress the thrones of the king whom it anointed, or if the struggle had terminated speedily in an undivided victory, all Europe would have sunk down under a Byzantine or Muscovite despotism. For the aim of both contending parties was absolute authority. But although liberty was not the end for which they strove, it was the means by which the temporal and the spiritual power called the nations to their aid. The towns of Italy and Germany won their franchises, France got her States-General, and England her Parliament out of the alternate phases of the contest; and as long as it lasted it prevented the rise of divine right. A disposition existed to regard the crown as an estate descending under the law of real property in the family that possessed it. But the authority of religion, and especially of the papacy, was thrown on the side that denied the indefeasible title of kings. **In France what was afterwards called the Gallican theory maintained that the reigning house was above the law, and that the sceptre was not to pass away from it as long as there should be princes of the royal blood of St. Louis.** But in other countries the oath of fidelity itself attested that it was conditional, and should be kept only during good behaviour; and it was in conformity with the public law to which all monarchs were held subject, that King John was declared a rebel against the barons, and that the men who raised Edward III. to the throne from which they had deposed his father invoked the maxim *Vox populi Vox Dei.*

And this doctrine of the divine right of the people to raise up and pull down princes, after obtaining the sanctions of religion, was made to stand on broader grounds, and was strong enough to resist both Church and king. In the struggle between the House of Bruce and the House of Plantagenet for the possession of Scotland and Ireland, the English claim was backed by the censures of Rome. But the Irish and the Scots refused it, and the address in which the Scottish Parliament informed the Pope of their resolution shows how firmly the popular doctrine had taken root. Speaking of Robert Bruce, they say: "**Divine Providence, the laws and customs of the country, which we will defend till death, and the choice of the people, have made him our king.** If he should ever betray his principles, and consent that we should be subjects of the English king, then we shall treat him as an enemy, as the subverter of our rights and his own, and shall elect another in his place. **We care not for glory or for wealth, but for that liberty which no true man will give up but with his life.**"

https://oll.libertyfund.org/title/pollock-the-genius-of-the-common-law#lf1381_label_016

Better even bad rules than a rule which is not of law. It was a great and a true word that Jhering spoke when he said: 'Form is the sworn foe of caprice, she is Freedom's twin sister.'1 The giants of the prime are stark and grim figures in our sight, yet their force cleared a way for the Gods through chaos, and without them the Gods would never have come to Valhalla. **But the guardians became tyrants when, in a community growing civilized, the judicial results of a semi-magical ritual ceased to be tolerable, and the so-called judgments of God were openly deemed unjust alike by men of war and by men of religion.** Their ways could not be mended; they must be broken, and a new body must be fashioned for the justice which in its old embodiment was too visibly blind even in the eyes of twelfth century suitors. **The masters who were no longer protectors but oppressors must be fought with and overthrown if the law were to be**

made an organ of living righteousness. Truly the spirit of our infant laws had need of a mighty champion. It was written of the Church that kings should be her nursing fathers. No less truly might it be said of the Common Law. **The king's overriding power, a power both to devise and to execute, was the only one strong enough for the work. Royal inquests, royal precepts and decisions, ingenuity of royal officers at least as eager to bring fees into the king's coffers and enhance the reputation of the king's court as to procure ease and satisfaction to suitors, were the means, not precisely of abolishing the inflexible and cumbrous old procedure – we had not formally begun to abolish anything – but of relegating it to an obscurity where it was speedily forgotten, and so completely forgotten too that professed antiquarian lawyers could, almost down to our own time, believe trial by jury to be immemorial.** Indeed, we should be speaking almost literal truth if we said that our lady the Common Law never had much trouble with the forms of archaic proof. By the time she had got to serious work they were hardly more dangerous than Giant Pagan.

https://www.gutenberg.org/cache/epub/2333/pg2333-images.html#link2H_4_0001

In every other part of Europe, a large and powerful privileged class trampled on the people, and defied the government. But, in the most flourishing parts of Italy, the feudal nobles were reduced to comparative insignificance. In some districts they took shelter under the protection of the powerful commonwealths which they were unable to oppose, and gradually sank into the mass of burghers. In other places, they possessed great influence; **but it was an influence widely different from that which was exercised by the aristocracy of any trans-Alpine kingdom. They were not petty princes, but eminent citizens. Instead of strengthening their fastnesses among the mountains, they embellished their palaces in the market-place.** The state of society in the Neapolitan dominions, and in some parts of the Ecclesiastical State, more nearly resembled that which existed in the great monarchies of Europe. But the Governments of Lombardy and Tuscany, through all their revolutions, preserved a different character.

https://archive.org/details/feudalgermany0000jame/page/282/mode/2up?view=theater

In the Emperor's eyes the consular colleges in the Lombard cities formed courts of first instance from which an appeal lay to the imperial tribunal. **Conrad III had never appeared in Italy, and during his reign the Lombard cities, from the point of view of the public law of Europe, had acquired a status as legitimate as customary law could give them.** Thus when Frederick Barbarossa came to the imperial throne a complete revolution in the political condition of North Italy had taken place. It would tax the ability of a modern historian better to describe this condition than did Otto of Freising. His account is as sound and fresh and clear today as when it was written:

> **Almost the whole country pertains to the cities, each of which forces the inhabitants of her territory to submit to her sway. One can hardly find, within a wide circuit, a man of rank or importance who does not recognize the authority of his city.** … They surpass all other cities of the world in riches and power; and the long-continued absence of their ruler across the Alps has further contributed to their independence. … Although they boast of living under law, they do not obey the law. … Among all these cities Milan has become the leading one. … The bishop of Asti and William, marquis of Montferrat, a noble and great man [are] almost the only princes in Italy who have kept themselves independent of the cities.1

>
> Governmental and aristocratic traditions seem to have stifled innovative urban institutions; **the inhabitants of Byzantine towns never developed the urban self-consciousness typical of medieval culture in the West. There was no distinction in Byzantine terminology between fortress (*kastron*) and town (*polis*), or between town and borough (*polichnion*),**134 **and there did not exist a special notion analogous to the *burgensis* of the West.**
>
> When rhetoric was revived in the eleventh and twelfth centuries, praise of the city (*polis*), a theme well known to Menander, the foremost rhetor of the third century A.D., was not practiced by the Byzantines. **Their epideictic attention was devoted to such traditional institutions as the imperial court and the patriarchate, and only after the fall of Constantinople in 1204 did *enkomia* of the *polis* begin to appear at all. Late Antique civic pride in one's *polis* never revived.**
> …
>
> To summarize: **while there was economic growth in provincial towns during the eleventh and twelfth centuries, this was not accompanied by political liberation.** Subjugated to the state, to the episcopate, and to the landed magnates, the urban populations did not become an independent, antifeudal political and cultural force.

https://www.gutenberg.org/cache/epub/20063/pg20063-images.html#p62

Diocletian, the second founder of the Empire, was the son of a slave; Justinian—an even greater name—was the nephew of a Macedonian peasant, who with a sheepskin bag containing a week's store of biscuit, his only property, tramped down from his native highlands to seek his fortune in the capital. Zeno, as we have seen, though perhaps better born than either Diocletian or Justinian, was only a little Isaurian chieftain. Thus the possibilities open to aspiring ambition were great in the Empire of the Caesars. **As any male citizen of the United States, born between the St. Lawrence and the Rio Grande, may one day be installed in the White House as President, so any "Roman" and orthodox inhabitant of the Empire, whether noble, citizen, or peasant, might flatter himself with the hope that he too should one day wear the purple of Diocletian, be saluted as Augustus, and see Prefects and Masters of the Soldiery prostrating themselves before "His Eternity." This was, in a sense, the better, the democratic side of the Roman monarchy.**
…

When we compare the polity of Rome or Constantinople, where a century was a long time for the duration of a dynasty, with the far simpler polities of the Teutonic tribes which invaded the Empire, almost all of whom had their royal houses, reaching back into and even beyond the dawn of national history, supposed to be sprung from the loins of the gods, and rendered illustrious by countless deeds of valour recorded in song or saga, **we see at once that in these ruder states we are in presence of a principle which the Empire knew not, but which Mediaeval Europe knew and glorified, the principle of *Loyalty*.** This principle, the same that bound Bayard to the Valois, and Montrose to the Stuart, has been, with all the follies and even crimes which it may have caused, an element of strength and cohesion in the states which have arisen on the ruins of the Roman Empire. **The self-respecting but loving loyalty, with which the Englishman of today cherishes the name of the descendant of Cerdic, of Alfred, and of Edward Plantagenet, who wields the sceptre of his country, is utterly unlike the slavish homage offered by the adoring courtiers of Byzantium to the pinchbeck divinity of Zeno Tarasicodissa.**

> Thinking as we do that the cause of the King was the cause of bigotry and tyranny, we yet cannot refrain from looking with complacency on the character of the honest old Cavaliers. We feel a national pride in comparing them with the instruments which the despots of other countries are compelled to employ, with the mutes who throng their antechambers, and the Janissaries who mount guard at their gates. **Our royalist countrymen were not heartless, dangling courtiers, bowing at every step, and simpering at every word. They were not mere machines for destruction, dressed up in uniforms, caned into skill, intoxicated into valour, defending without love, destroying without hatred.** There was a freedom in their subserviency, a nobleness in their very degradation. The sentiment of individual independence was strong within them.

https://publicorthodoxy.org/2018/03/26/byzantine-origins-of-gun-control/

Justinian's *Novella 85* strictly forbade the sale of weapons to citizens. Only small knives and domestic axes were exempted from the regulation. The ancient Romans had previously forbidden the possession of weapons by citizens within urban areas, but the preface to *Novella 85* highlights an explicitly Christian orientation in the formulation of the new and more comprehensive law.

Novella 85 begins: "Calling upon the great God and Jesus Christ, our Savior, and invoking His aid, we strive to keep our subjects, whom God has given to us to govern, from all damage and harm, and prohibit fights, which, undertaken through thoughtlessness, end in slaughter, and bring double penalty —that which the combatants bring upon themselves and that which the law visits upon them for their madness."

> http://www.uwyo.edu/lawlib/blume-justinian/ajc-edition-2/novels/81-100/novel%2085_replacement.pdf
>
> **c. 4. *In order to make it clear what arms are prohibited by us to be made by all private and other persons except those enrolled in the imperial armories, and which are prohibited to be sold to private persons, we also are pleased to indicate them. We forbid all private persons to make and sell: bows, arrows, broad, two-edged swords (spathas), swords carried on the hips, cuirasses, pikes, lances made in any form or shape, javelins called monocontia by the Isaurians and the missiles called zibynoi, also shields and helmets. We permit no one to make these arms except those who are enrolled in the imperial armories. We permit only small knives to be made by and sold to private persons, which cannot be readily used in war.***

Put simply, Justinian believes that it is his God-appointed responsibility to protect the welfare of citizens. He further believes that he can best ensure the welfare of citizens by criminalizing the sale of weapons to citizens. ***Novella 85*** **remained in effect for the final 900 years of the Byzantine empire.**
…

But authoritarianism offers only a partial explanation. Given the explicit invocation of Christian faith in *Novella 85*, we should also consider how Justinian's law might reflect Christian ethical norms at the time. While our surviving theological sources do not directly ask or answer a question about the moral suitability of an armed citizenry, they do have plenty to say about the moral injury that occurs in the taking of another life. **Believing that it would lead to spiritual healing, St. Basil famously prescribed that soldiers who had killed in the line of duty should not receive Eucharist for three years. For his part, St. Ambrose rejected out-of-hand the possibility that a Christian citizen might kill another in self-defense: "I do not think that a Christian, a just and a wise man, should save his own life by the death of another; just as when he meets with an armed assailant he cannot return his blows, because in defending his own life he would compromise his love for his neighbor."** (Ambrose, *De Officiis*, 3).
…

Many Orthodox across the globe look nostalgically to an authoritarian Byzantium or Tsarist Russia precisely because they offered a political space where Christian teaching could be enshrined in legislation. **Perhaps there is no greater example than Justinian's *Novella 6*, which decreed that the decisions of Church councils possessed the weight of imperial law. What often goes unnoticed is that this relationship was reciprocal, meaning that all imperial law had canonical bearing for Orthodox Christians living within the empire. The most famous interpreters of Canon law in later centuries of Byzantium made little distinction between laws that originated from Church councils and laws that originated from the government.** In other words, Justinian's *Novella 85* would have been interpreted by Church officials in Byzantium as a canonical regulation for all Christians.

The taking of Thessalonica [in 904 AD] affords a sad lesson of the inefficiency of central governments, which deny the use of arms to the people, to defend the wealthy and unfortified cities of an extensive empire. The tendency of a court to expend the revenues of the state on the pageantry of power, on palaces, churches, and *fêtes* in the capital, without bestowing a thought on the destruction of a village or the loss of a parish, reveals to us one of the paths by which despotic power invariably tends to degrade the mass of human civilisation.

In Egypt and in Syria the Arabs, fresh from the desert, easily overturned, amid shouts of *Lo Ellah il Allah!* the pallid resemblances of Graeco-Roman municipalities. In the other provinces of the Byzantine Empire they still cumbered the ground with the spectacle of their decay until the close of the ninth century, **when Leo VI, surnamed the Philosopher, removed from the theory of the constitution both the Senate of the Empire and the Curiae of the towns. Of the latter he said, 'The ancient laws passed as to the Curiae and Decurions impose on the Decurions intolerable burdens, and confer on the Curiae the right to nominate certain magistrates, and to govern the cities by their own authority. Now that civil affairs have taken another form, and that all things depend entirely on the care and government of the Imperial Majesty, these laws wander, so to speak, vainly and without object, around the soil of legality. We therefore abolish them by the present decree.'**58

In the West, the agony of the Municipia had been shorter, and the remembrance of the days of their prosperity and usefulness was therefore less easily effaced. It would be an interesting task, but one outside of our present field, to show how, **under the barbarian kings, aided in many cases by the influence of the Church, the Curiae rose again,** as it were, from the tomb, until, in the twelfth, thirteenth, and fourteenth centuries, local self-government, as set forth in the Italian *Commune*, reached, perhaps, the noblest elevation at which the world has seen, or is likely to see it.

https://books.google.gr/books?id=qlU37xo9LeUC&lpg=PP1&hl=fi&pg=PA60#v=onepage&q&f=false

Unquestionably, medieval lordship, *seigneurie* – involving a dependent peasantry and the principal forms of medieval rent (rent in cash, in kind, and by *corvée*) – did exist in Byzantium. Even the exploitation of the so-called free peasant on state lands was associated with the seigneurial system. **But this *seigneurie* cannot be equated with "feudalism" as the term has been used historiographically to describe Western society.** The specific structure, involving links of personal obligation both vertical and horizontal, that characterizes the medieval West, and particularly its ruling class, is found only in an

embryonic state in Byzantium. Similarly the characteristic ties binding together people of the same social layer in a feudal society are underdeveloped in the empire. Nevertheless, certain social and economic features emerged in Byzantium that resembled feudal links.

During the eleventh and twelfth centuries there did exist large retinues owing allegiance to great magnates.149 **Such retinues perhaps represented the reaction of threatened populations to the feebleness of the state's defensive apparatus;** groups may have formed around local dynasts in an attempt to protect themselves. **But the relationship between a lord and the local peasantry never became formal vassalage.**150
…

Although from the tenth century on, a landed, hereditary nobility began to arise, it was never fully established; vertical mobility remained characteristic of Byzantine society through the eleventh century.153 During that century, the aristocracy was divided into two major groups according to military and civil functions. **The military aristocracy originated primarily in the frontier regions: Cappadocia, Armenia and Syria in the east, Bulgaria and Macedonia in the northwest.** Even when settled in Constantinople and embedded in the imperial hierarchy, these aristocrats preserved connections with their homelands. There they possessed estates (*oikoi* or *proasteia*) or even palaces and small fortresses to which they could retire in case of imperial disfavor. Not coincidentally, the military aristocrats of the eleventh century often drew their family names from the sites where their estates were located: the Botaneiates of Botana, for example, of the Dokeianoi of Dokeia, or the Dalassenoi of Dalassa.
…

Romanos III Argyros was drowned in a bathhouse in 1034, but Michael IV gained both Romanos's wife and his throne; Constantine Dalassenos failed in his expectations once more. He was indignant, especially since his rival was, as Constantine put it, "a vulgar and worthless [literally, "three-penny"] man" (Skyl. 393.34-35), an arrogant, aristocratic criticism, though one with some foundation – **Michael came from a family of usurers and money-changers, not warriors and governors.**
…

In the meantime, however, an imperial functionary had uncovered a subversive plot in Antioch, the seat of the Dalassenoi's power. Eleven rich and noble men were arrested identified as Dalassenos's supporters; Dalassenos was seized and banished on this pretext. When friends and members of his family protested, they were exiled or imprisoned and their property was confiscated. **It is clear from such episodes that despite their considerable power, landed aristocrats were restricted in their independence; they were not autonomous barons but imperial functionaries who could be dismissed, exiled, or dispossessed at any time.** This certainly led, in Ahrweiler's terms, to the "Constantinopolitization" of the Byzantine aristocracy, with its tight bonds with the capital and imperial court.155 **Probably only toward the end of the twelfth century was there formed a substantial stratum of provincial aristocracy that, while not tied to imperial service, nevertheless received the highest imperial titles.**
…

In contrast to the military aristocracy, the civil nobility originated primarily from Constantinople, Greece, the Aegean islands, or the coastal cities of Asia Minor. Some of these families had practiced urban trades and crafts; their patronyms, which are sometimes derived from the profession (e.g., Saponai, "soapmakers"; Phournatarioi, "bakers") or from Constantinopolitan quarters (e.g., Akropolitai, Blachernitai, Makrembolitai) testified to their past.
…

At least thirty eunuchs are known to have occupied important posts within the state and ecclesiastical organization between the death of Basil II (1025) and the beginning of the reign of Alexios I (1081).159
…

It is not clear why eunuchs were so important in the Byzantine administration. Were they more reliable because eunuchs were not allowed to ascend the imperial throne? But they could, as John Orphanotrophos showed, acquire the throne for their brothers or nephews. Were they less arrogant because of their castration? But there are numerous testimonies to the haughty behavior and impudent aspirations of eunuchs. **Or was perhaps the prominence of castrates in Byzantium a symbol of the civil nature of power, an emblematic denial of the aristocratic principle of blood and lineage? It is worth noting that the eunuch became prominent in hagiography:** angels appeared as youths or eunuchs clad in white robes before the eyes of mortals; in pious visions eunuchs accompanied the Virgin. **For whatever reason, eunuchs were important both in myth and reality in the tenth and eleventh centuries.**

> **Nothing is so cruel as a man raised from lowly station to prosperity;** he strikes everything, for he fears everything; he vents his rage on all, that all may deem he has the power. No beast so fearful as the rage of a slave let loose on free-born backs; their groans are familiar to him, and he cannot be sparing of punishment that he himself has undergone; remembering his own master he hates the man he lashes. **Being a eunuch also he is moved by no natural affection and has no care for family or children.**

> For such a system to work, it needed operatives completely at the beck and call of superiors. **The conservatives at Trent were quite frank about this. They actually said that without celibacy the pope would be nothing more than the Bishop of Rome. In brief, the papal system would collapse without the unqualified allegiance of the clergy;** celibacy alone could guarantee that sort of allegiance. Celibacy, on Trent's own admission, was not and never was primarily a matter of chastity but of *control*.

https://books.google.gr/books?id=qlU37xo9LeUC&lpg=PP1&hl=fi&pg=PA103#v=onepage&q&f=false

With the shift in the structure of society toward the extended family, lineage became increasingly important in determining an individual's status and power. **The use of patronymics was an external sign of this new concern. Althought patronymics occasionally appear in the sources from the late ninth century, they become commonplace only after 1000.** Patronymics did not consistently indicate patrilinear sequence. A man could assume his mother's name or that of his mother's mother, as well as that of his father. **The widespread adoption of patronymics, in any case, corresponds with the emergent ties between the individual and the extended family. The glories and honors of one generation began to be assumed by another.**

Similarly, interest in genealogy grew. The status of the individual became increasingly tied to the historic position of his forebears. Constantine Manasses' eulogy of Nikephoros Comnenus, grandson of the *caesar* Nikephoros Bryennios, a veritable apotheosis of nobility, included an elaborate genealogy.70 The writer was not content to simply to allude to the aristocratic ancestry of the deceased, but rather insisted that his hero was descended from kings. **These kings were not the sons of impious gods like the wretched Pelops and Kekrops, but in fact scions of two noble families, the Comneni and the Doukai, who, in mixing their heroic blood, created a house renowned for its intelligence, power, and martial capacity.** This fetish for lineage is rejected by Michael Italikos, who mocked his contemporaries' preoccupation with genealogical investigations (Mich. Ital. 148.18-24), and by Euthymios Tornikes, who censured those whose conceit was based solely on high birth.71 **While the military aristocracy was proud of its fabricated genealogies, the civil nobility used patronymics to extol its own moral virtues, names such as Eugenianoi ("of noble birth") and Eirenikoi ("peace lovers").**
…

By contrasting the attitudes of writers from the earlier and later parts of the period under consideration, one can trace the evolution of nobility in Byzantium. The traditional neglect of the aristocracy characterizing Agapetos and the *Strategikon* of Maurikios75 continued into the eleventh century. **For instance, Kekaumenos considered nobility in terms of moral excellence rather than a quality**

of blood or of family origins. He tended to contrast the common fellow not to an aristocrat, but rather to a well-to-do, high-ranking official. But there were signs of change at the same time.

> 75. *Das Strategikon des Maurikios*, ed. G.T. Dennis (Vienna, 1981), 70.36, required of the general only piety and justice; aristocratic origins were not mentioned.

…

Psellos consistently identified nobility with virtue and talent, though he implicitly recognized the value of good breeding.76 He was indignant that people of inferior backgrounds could worm their way into power and censured the excessive vertical mobility of his society. **He stressed that the nobility in the flourishing states of antiquity were distinguished from men whose origins were obscure. "In our state," he complained, "this excellent practice has been contemptuously abandoned, and nobility counts for nothing." In Byzantium, he continued, many administrators were ex-slaves bought from barbarians; the high offices of state were entrusted not to men of the stamp of Perikles or Themistokles, but to worthless rascals like Spartacus** (Ps. *Chron*. 2:35, no. 134.14-17). Apparently Psellos felt an aristocratic presence was needed in society: he was confused by the social openness of Byzantium. While Psellos was somewhat ambiguous in his appreciation of the nobility, for his contemporary Attaleiates aristocratic birth was an unquestionable value. In contrast to Psellos, Attaleiates assumed that noble ancestry implied virtue, at least of a military nature:77 he feigned a distinguished genealogy for his hero, Nikephoros Botaneiates, relating him not only to the Phokas family of the tenth century, but even to the Roman Fabii, who were noble both in blood and in action. **For all his praise of nobility, it should be noted that Attaleiates was himself of simple origin and of civil occupation; he was not writing to aggrandize his own class, but rather reflecting in his work a significant ideological shift.**

…

A concern with the military aristocracy is even more evident in the *Memoirs* of Nikephoros Bryennios. **In his presentation, history develops not as a result of actions of emperors in relation to their adversaries and functionaries, but rather as the outcome of aristocratic rivalries among the great families – the Doukai, Comneni, and Bryennioi.** Bryennios's nobles were primarily military figures; their activities were consistently described as "valiant," "courageous," and "glorious." They were esteemed even by their adversaries: Alexios Comnenus, for instance, admired the strength and height of the usurper Nikephoros Bryennios (the author's grandfathers or father), and Comnenus's victory was the greater for being won from a strong, brave general, who possessed the soul of a hero (Bryen. 281.10-14). Further, Bryennios wrote respectfully of a number of noblemen, including Argyros ("noble and wealthy"), George Palaeologus ("valiant"), Alexios Charon ("reasonable, strong, and courageous"), and John Tarchaneiotes ("an experienced warrior").79 In contrast, eunuchs and servitors were despised: Nikephoritzes was "wretched"; John Protovestiarios was "swaggering and cowardly." The work of Nikephoros Bryennios is probably the most aristocratically biased Byzantine history of this period: it presented the noble warrior in a fully generalized and idealized form. The *caesar* Bryennios, himself a great seigneur, was, in all, the ideologue of the Comnenian military aristocracy.

…

Military competitions and tourneys were introduced, partially under Western influence, just at this time. **An attempt by Nikephoros Phokas to conduct a military competition at the end of the tenth century created panic in Constantinople** (Skyl. 276.94-96). In contrast, Byzantine noblemen and even emperors in the twelfth century readily participated in tourneys with Crusader knights, occasionally even suffering severe wounds.82

…

When the Comneni, members of the Byzantine military aristocracy, took possession of the throne, they typified the new imperial virtues. **The traditional conception of the emperor (*basileus*) originated with Agapetos in the sixth century and with Emperor Justin II's speech to his successor Tiberios in 574,** which was preserved independently by Theophylaktos Simokatta and several other contemporary authors; Simokatta's version was eventually revised by such chroniclers as Theophanes in the ninth century and Zonaras in the twelfth.87 The main tenets of this concept were further developed in the ninth and tenth centuries, when there appeared three works all connected in one way or another with Basil I – the *Hortatory Chapters* attributed to Basil himself, the funeral speech dedicated to Basil and his wife by their son Leo VI, and Basil's biography written by his grandson Constantine Porphyrogenitus. All these writings stressed the Christian principles of imperial power: the emperor was believed to be chosen by God; he obtained divine succor by means of his love and imitation of God. The list of imperial virtues depended heavily upon classical ethics and included righteousness, philanthropy, generosity, chastity, love of truth, and intelligence. **Neither martial deeds nor noble origins were included among the essential qualities. Quite the contrary, the *Hortatory Chapters* eulogized the emperor not as a warrior but as a peacemaker** (*PG* 107.XLV B) **and commanded, "Do not brag about the nobility of the body, nor be scornful of humbleness; neither honor beauty nor turn aside from ugliness, but look at the beauty of the soul and be loving of the soul"** (XXV B-C). **Further, it admonished, "Do not respect and admit those who are noble by dint of their**

body, but those who are dear by dint of their spirit." The author explained that horses' nobility consisted in magnificent stature, dogs' in their hunting abilities, while human nobility was determined by the virtues of the soul (LII A-B). **Leo VI preferred not to discuss his father's origins; he touched on them only so that he not be accused of ignorance. He mentioned the semi-official, quite legendary account of Basil's descent from the Armenian Arsacids and the Persian Artaxerxes, but he put the greatest emphasis on the personal virtues of his hero, not on his family. The humble man, he said, was embellished by his deeds, whereas the nobleman of necessity had to assume glory from his ancestry.**88 **In Constantine Porphyrogenitus's biography, his grandfather's personal military achievements were never mentioned;** rather, he vaguely confirmed that Basil extended the frontiers of the empire through his labor, his manliness, and his lofty spirit (Theoph. Cont. 265.5-7) and most warmly described Basil's successful administration of the state, not his command on the battlefield. The only military episode depicted in any detail was the crossing of the Euphrates, when the emperor carried a load three times heavier than that of the ordinary soldier (269.1-15). Constantine, too, spoke of Basil's Arsacid ancestry, albeit late in the narrative, but otherwise ignored the topic of noble origins.
…

For Kekaumenos the four essential qualities of the ruler were fortitude, justice, chastity, and reason, but with some qualifications. **Fortitude referred not to military courage, but to spiritual perseverance.** Nor were fortitude and reason considered absolute virtues, since they could be put to evil use.

Military attributes, previously associated exclusively with Nikephoros Phokas, began to reappear at the end of the eleventh century in the writings of historians and publicists. Attaleiates dedicated his historical work to the praise of Nikephoros Botaneiates. Besides the traditional imperial virtues, Attaleiates gave Nikephoros two new ones: noble birth and military prowess.
…

Somewhat later than Attaleiates, Theophylaktos Hephaistos, the future Bulgarian archbishop, wrote a didactic work addressed to his pupil Constantine Doukas, the presumptive heir to Alexios I's throne. This author, too, required in his good emperor both military and traditional moral virtues: **"Do not think that the servants of Ares, lionlike men, will bring you a crown of gold and a cloak of purple unless they see you donned in armor and directing the battle."**90
…

The Late Roman custom of proclaiming an emperor by raising him on a shield was probably revived around the middle of the eleventh century. **This ritual, a mark of the bond between a ruler and his army, seems to have been common in late antiquity, from the fourth to sixth centuries. After Phokas's usurpation of 602, however, it disappeared.**93 The fact that Constantine Porphyrogenitus in the middle of the tenth century mentioned this ceremony as a Khazar tradition94 incidates that it had fallen into disuse in Byzantium. Revival of the custom is first clearly indicated in Psellos's writing. According to Psellos, the rebellious Bulgars in 1040 proclaimed Peter Deljan ruler by raising him on a shield (Ps. *Chron.* 1:77, no. 40.21-22). In a more thoroughly Byzantine milieu, the usurper Leo Tornikes was raised on a shield in 1047 (2:18, no. 104.4-5). In the twelfth century the description of the ruler raised on the shield even appeared as a part of a Byzantine romance, *Rodanthe and Dosikles* by Prodromos (chap. 5, v. 109-11).95 Akropolites in the thirteenth century treated Theodore Laskaris's elevation on a shield as a commonplace.96 It is not clear, however, when between the middle of the eleventh and middle of the thirteenth century this ritual became customary.

https://books.google.gr/books?id=qlU37xo9LeUC&lpg=PP1&hl=fi&pg=PA69#v=onepage&q&f=false

The mid-eleventh century witnessed the full realization of traditional Byzantine vertical mobility; during that period an attempt was made to draw urban, principally Constantinopolitan, elements into state government.162 Attaleiates' evidence concerning the myriads of senators receiving rewards during the reign of Nikephoros II suggests that senatorial ranks were then swollen with foreigners and merchants living in Constantinople (Attal. 275.12-19). At the end of the eleventh and in the twelfth century, dramatic changes took place. The highest military elite was consolidated in a closed body of powerful families connected by intermarriage and forming a "clan" around the ruling Comnenian dynasty. **The higher military administrative functions were monopolized by the Comnenian clan, while the families of the military aristocracy who were not included in this clan either disappeared or entered the ranks of the civil nobility** (Ex. 6).
…

In the eleventh century there was no unbridgeable gap between the military and civil elites. Some families of the civil aristocracy performed military functions. Intermarriage between the two groups was common. After the Comnenian clan was established, the situation changed: marriage between members of the Comnenian dynasty and the bureaucratic families was discouraged; **in general, the senators, i.e., the civil elite, were regarded as socially inferior.** The consolidation of a narrow ruling stratum

(landowners and military commanders) excluded from power both the eunuchs and the foreign mercenaries. As mentioned above, about thirty eunuchs appear in the sources for the years between 1025 and 1081; many of them occupied high administrative positons. The number of eunuchs at Alexios I's court was still considerable; twelve are mentioned in the sources. Only one of them, however, Leo Nikerites, *strategos* and *doux* of several districts, belonged to the highest echelon of the Byzantine elite. In addition, Eustratios Garidas was patriarch, and two men, Eusthatios Kyminanos and Symeon, were grand *droungarioi*. **Garidas and Symeon, notably, were active only in the earliest years of the reign of Alexios. Alexios's other eunuchs were servants, doctors, and the like, with no political power. And in the reigns of John II and Manuel I (i.e., the years 1118-80) only five eunuchs are found in the sources, none of whom possessed a military command – they were church hierarchs, courtiers, and princes' teachers.**

The consolidation of Comnenian power also led to the exclusion of foreigners. The Comneni were regarded by contemporaries as being benevolent toward the Latins (Ex. 7). **Even Latin writers such as William of Tyre or Robert of Auxerre eulogized Manuel for his esteem of the Latins, whom he is said to have promoted to important positions** (*PL* 201.857D; *MGH* SS 26:246). Prosopographical evidence, however, does not support this view: surprisingly, Latin generals do not seem to have held high military positions in significant numbers. **There was no one in those years comparable to Hervé or Roussel in the eleventh century.** Except for some hellenized families such as the Rogers and Petraliphas, Latins at the Byzantine court served as diplomats or theologians rather than as military commanders. **Turks played a greater role in the armies of John II and Manuel I, but even they were not mercenaries, but rather immigrants.**

The consolidation of the semi-feudal aristocracy at the end of the eleventh and in the twelfth century had political and social significance. The military and landed aristocracy was conscious of its privileged position and its hereditary superiority. Initially formed around the Comnenian house, it acted as a centripetal force that contributed to the temporary strengthening of the state. **But in vain; the military nobility was demolished under Andronikos I.** At the end of the twelfth century, the influence of the civil aristocracy, which was connected with the upper layers of the merchant and craft classes and with the intellectuals of Constantinople, again increased.

> https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Andronicus_I
>
> Andronicus, now (1183) sole emperor, married Agnes, widow of Alexius II., a child eleven years of age. His short reign was characterized by strong and wise measures. He resolved to suppress many abuses, but, above all things, to check feudalism and limit the power of the nobles. **The people, who felt the severity of his laws, at the same time acknowledged their justice, and found themselves protected from the rapacity of their superiors. The aristocrats, however, were infuriated against him, and summoned to their aid William of Sicily.** This prince landed in Epirus with a strong force, and marched as far as Thessalonica, which he took and destroyed; but he was shortly afterwards defeated, and compelled to return to Sicily. **Andronicus seems then to have resolved to exterminate the aristocracy, and his plans were nearly crowned with success.**

https://books.google.gr/books?id=qlU37xo9LeUC&lpg=PP1&hl=fi&pg=PA59#v=onepage&q&f=false

In 1157, an agreement was concluded between Manuel I and Baldwin III of Jerusalem: Manuel agreed to marry his niece Theodora to Baldwin, offering a dowry of 100,000 golden *hyperpera* – one pound of gold consisted of 72 *hyperpera* – as well as gifts worth 30,000 *hyperpera* and 10,000 more for wedding expenses. Theodora received as her dower from Baldwin not gold or precious stones but the stronghold of Acre and all its territory.140 **The agreement of 1157 thus clearly reveals the differences between two distinct economic systems – in Byzantium wealth was measured in bullion, while in the Latin world property was still the measure of prosperity.**

There was considerably more direct state exploitation of the primary producer in Byzantium than in the contemporary West. Even though the extent of the *dominium directum*, the right of the sate over all the territory within its boundaries, is controversial, it seems likely that in the eleventh and twelfth centuries most Byzantine peasants paid taxes in gold and in kind to the state, in addition to fulfilling various services.141 Private estates, though certainly increasing in size and number, were still not the rule. Accordingly, the notion of freedom was radically different in Byzantium from that in the West or from that what it had been in antiquity. **The Roman concept of freedom as the opposite of slavery was still preserved in juridical manuals, such as that of the eleventh-century judge Attaleiates, but it had lost its practical significance. Similarly the Western concept of freedom as a positive quality – the possession of landed wealth and independent jurisdiction – was also inoperative in Byzantium.** The same Attaleiates denied the Roman definition of freedom in his *History*. **Those who were genuinely free, he stated, were not those who obtained liberty with a gold ring and a box on the ear (referring to the ancient ritual of manumission), but those who were safe from fear**

of taxes (Attal. 284.6-9). In the taxpaying society of Byzantium, real freedom was the freedom from levies.

http://www.historytoday.com/alexander-kazhdan/byzantium-emperors-new-clothes

To sum up, Byzantium was an atomistic society with the family as its cornerstone. **The man was primarily the member of the family and not of the municipium (as he was in Greco Roman antiquity) or community or guild (as he was to be in the medieval West). Formal wedding ceremonies, prohibition of divorce, abolition of concubinage; all these contrasted with the 'free' late Roman family. Lineage played an insignificant role and vertical (hierarchical) links remained practically unknown.** Small family-like monasteries were common, and family-orientated terminology permeated both political and ecclesiastical relations.

The aristocratic principle was underdeveloped. This does not mean that all the emperor's subjects were equal in rights and wealth, even though western observers kept repeating disparagingly that they were. In the tenth century, for instance, the German ambassador Liutprand asserted that all the participants in the imperial procession in Constantinople wore shabby and frayed costumes. **The principle of inequality in Byzantium differed from that of the West; the Byzantines created a meritocracy based not on the individual's 'blood' or origin but on his place in the bureaucratic machine. A system which, while less stable than nobility in the West, enabled more vertical mobility. This does not mean that they were less arrogant, but it does mean that, while less restricted by tradition, they were less defiant of the emperor's omnipotence.**

The imperial power was both feeble and strong. It was strong since the emperor, in theory, was not restricted by law; he was the law itself. He combined in his hands legislative, administrative and judicial power, was the supreme army commander and claimed control of ideology. But he was poorly protected against schemes and plots, and half of all the Byzantine emperors ended their rule as victims of violence. **Feeble as individuals (certainly some emperors had a strong personality) they were omnipotent as symbols of government; the emperors themselves might be criticised, but the principle of unlimited monarchical power was never questioned.**

In practice, of course, everything was more complex, and many an emperor met social and religious resistance, even blunt bureaucratic intransigence. **However, we can call the Byzantine empire a totalitarian state. And it was the only totalitarian state of the European Middle Ages.**
...

The problem is intensified by Byzantine ideological duplicity. A striking example is the fate of Roman law in Byzantium, the Roman law summarised and codified by Justinian I during the last stage of the late Roman empire. It was never abolished, although some attempts to make it simpler were made. **Byzantine legal text-books adhered to Roman law, repeating, time and again, formulations that were in disaccord with reality.** For instance, the official law-book of the ninth century, the *Basilika*, described administrative institutions that existed during the sixth century and had ceased to exist by the ninth. Furthermore, the agrarian terminology of the *Basilika*, translated from Latin into Greek, applied to no Byzantine reality, and often made no sense whatever. **Whereas Roman law reflected the principles of the legal state, protecting individual rights and private ownership, the Byzantine empire did not give any legal protection to its subjects. Emperors could execute any citizen without trial and could confiscate any land without argument. Texts of the tenth century state that any land on which the emperor had put his foot could be taken from its owner.** As more private documents have been published in recent decades, we can see more clearly that the Byzantine law of things and law of obligations deviated from Roman norms and that Byzantine tribunals acted on principles distinct from the Roman; **but the words often remained the same, and private ownership of land was repeatedly affirmed in legal text-books.**

> https://books.google.gr/books?id=qlU37xo9LeUC&lpg=PP1&hl=fi&pg=PA17#v=onepage&q&f=false
>
> Further, in the tenth century the Byzantine state proclaimed its supreme right over all the lands of the empire. Leo VI in his Novel 114 asserted that property throughout the Byzantine Empire (*pan akineton*) was *hypodemosios*, that is, literally “put under the treasury” or “due to taxation.” Did Leo consider *pan akineton* to be in some sense state property, or simply taxable property? **He clarified his position further by stating that private property was allowed to individuals who fulfilled state “burdens.”** Basil II in the Novel of 996 affirmed that the claims of the exchequer could not be denied through reference to *praescriptio longis temporis*: **the emperor had the right to reclaim all lands that had at any time belonged to the state, even if they had been in private hands since the time of Augustus** (Zepos, *Jus* 3:315.20-23). Whether or not the notion of the *dominium directum* could be applied to the Byzantine concept of state ownership of land is controversial. Two important points, however, are evident: the Byzantine

> state possessed rights to most of the taxes on the population, and the state could confiscate estates of any magnate, whether lay or ecclesiastical.

https://books.google.fi/books?id=9-8fIBVgCQYC&lpg=PP1&hl=fi&pg=PA417#v=onepage&q&f=false

If the Norman Kingdom of Sicily, which was the leading kingdom of Europe in the twelfth century, had had a future comparable to that of the Norman Kingdom of England, the political and legal institutions of that were created in twelfth-century Sicily would be as much studied and as widely known today as those of twelfth-century England. **For the Kingdom of Sicily constituted the first modern territorial state in the West, with the first modern Western system of royal law.**
...

The history of Sicily shows, on the contrary, that it was possible for a highly developed system of royal law, which penetrated the country from top to bottom, to coexist with the despotic power of the ruler. There are striking similarities between the systems of royal law in England and in Sicily in the twelfth century: in both, the monarchy established links with the nation as a whole, and, by constructing a legal system that reached down to all the people, succeeded in confining the special interests of the feudal aristocracy. **Yet in England, as Mitteis has said, "the royal law always found its limit in the legal sense of the community."**14 **In southern Italy there had never been a strong tradition of tribal (clan) and regional customary law such had existed in Germanic and Frankish Europe.** Perhaps the weakness of the legal sense of the community led its rulers to excesses; perhaps their claim of unlimited authority weakened still further that legal sense. **A simpler though not unrelated explanation is that in England, as in all other countries of the West except Sicily, the Church of Rome was strong enough to limit substantially both the power and the authority of the monarchy.**
...

Born in December 1095, Roger was nine years old when his father, the Great Count Roger I, died in 1105. His mother, Adelaide, a north Italian, the Great Count's third wife, ruled as regent, **relying principally on Sicilian ministers of Greek and Arab extraction.**
...

Both during the regency and in the first decades of his own reign there were frequent baronial revolts. **Roger was a determined and successful but unenthusiastic warrior. He had not been trained in feudal virtues and values. He had been trained, rather, for absolute power of the kind wielded formerly by the Roman emperors of Byzantium and contemporaneously by the Sultan of Egypt.**
...

Roger's achievement, which was embodied in the Assizes of Ariano (1140) was closely related to his personality and character, and especially to the combination of his Norman, Byzantine and possibly Arab qualities. **Max Hoffman has rightly called Roger the "first modern Prince," who "founded the first absolute monarchy of Western Europe."**16 But he did more than that. He founded the first modern system of royal law.
...

In contrast to the Germanic kings of an earlier time, who were judges but not legislators, the Norman rulers of the twelfth century and thereafter considered it part of the office of the king to make new laws. Roger II declared that the king is a "maker of laws" (*conditor legum*). Indeed, Roger promulgated the first modern code of royal law in the history of the West, the Assizes of Ariano.

https://en.wikipedia.org/wiki/Frederick_II,_Holy_Roman_Emperor

Historian Donald Detwiler wrote:

> A man of extraordinary culture, energy, and ability – **called by a contemporary chronicler *stupor mundi* (the wonder of the world), by Nietzsche the first European, and by many historians the first modern ruler – Frederick established in Sicily and southern Italy something very much like a modern, centrally governed kingdom with an efficient bureaucracy.**[7]

...

In the Kingdom of Sicily, he built on the reform of the laws begun at the Assizes of Ariano in 1140 by his grandfather Roger II. His initiative in this direction was visible as early as the Assizes of Capua (1220, issued soon after his coronation in Rome) but came to fruition in his promulgation of the Constitutions of Melfi (1231, also known as *Liber Augustalis*), a collection of laws for his realm that was remarkable for its time and was a source of inspiration for a long time after. **It made the Kingdom of Sicily an absolutist monarchy; it also set a precedent for the primacy of written law.** With relatively small modifications, the *Liber Augustalis* remained the basis of Sicilian law until 1819.
...

Modern medievalists no longer accept the notion, sponsored by the popes, of Frederick as an anti-Christian. They argue that Frederick understood himself as a Christian monarch in the sense of a Byzantine emperor, thus as God's "viceroy" on earth.[8]

https://archive.org/details/the-schutzstaffel-as-an-anti-bolshevist-combat-organization/page/n9/mode/2up?view=theater

The State of Frederick II in Sicily

This knightly order participated in the creation of the FIRST MODERN STATE, BASED ON PRINCIPLES OF GOVERNMENT ADMINISTRATION and authoritarian obedience, that was founded by Frederick II in Sicily. Filled with this knowledge, the order was transplanted to the German East by the politically wise priest-nobleman Hermann von Salza in the first half of the 13 century. There it founded the order's German state in the east so well known to you.

The Teutonic Order's State in East Prussia

For the first time it was then easy to INTRODUCE OBEDIENCE INTO GERMAN TERRITORY. In addition to the absolute rule of the Christian religion came the fact that knights of the racially best German blood – men from the noblest clans and proven in combat – formed a ruling class over folks and mixed-bloods racially not equal to our folk. The values of achievement and personality stood next to obedience to the church.

The Prussian Army

From this EAST PRUSSIA, that was taken over by the Electors of Brandenburg as the Kings of Prussia, the PRINCIPLES OF ORGANIZATION of administration, of cleanliness and above all of unconditional obedience were adopted by Prussia. The PRUSSIAN ARMY with its mercenaries became inside Germany the FIRST GREAT SCHOOL OF ABSOLUTE DISCIPLINE.

https://archive.org/details/fredericktheseco000027mbp/page/310/mode/2up?view=theater

People have often praised Frederick for his disregard of position and parentage in his choice of officials. His appointment of town-bred lawyers and his reinforcement of official cadres by outsiders seem to support this view. **He was actuated not so much by freedom from snobbery as by a love of playing the oriental despot, who can take his scullion of to-day for his Grand Wazir of to-morrow**—a trait which is quite in character.

https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n169/mode/2up?view=theater

It is this necessity to divide and thus to defeat the particular hostile combination confronting him which made Machiavelli surpass Livy and devise an entirely new strategy of spiritual warfare.190 But his hope for the success of his teaching rests on **the certainty that one of the two parties of which the Christian republic consists**191 **will be attracted by his proposals. One may describe that party provisionally as the Ghibellines, as men who would have gone with Frederick the Second of Hohenstaufen. More precisely that party consists of those who "esteem the fatherland more than the soul"** or who, driven and perhaps blinded by passion for the liberty of their fatherland, **are more attached to their earthly fatherland than to the heavenly fatherland, or who are lukewarm Christians. They are people "of little faith," i.e., of little Christian faith** who, impatient of alleged or true abuses of ecclesiastical authority, do not hesitate to attack ecclesiastical authority with more than masculine courage but become afraid once they realize the ultimate consequence of their action.192

> 191. Savonarola *Prediche sopra Ezechiele* XXXIII: ***la Chiesa ha el corpo misto di buoni e di cattivi.***

https://www.revilo-oliver.com/rpo/RPO_NewChrist/chap13.htm

I have often thought that the Mithraic cult, in the form in which we know it, would have particularly appealed to the Parthian aristocracy, whose special devotion to Mithras is attested by their use of such common names as Mithridates. They were officially Zoroastrians and maintained Magi at their courts to keep the sacred fires alight and provide holiness when needed, but they were so negligent in their observation of the Zoroastrian proprieties that the Zoroastrians of the Sassanid period regarded them as little better than infidels. They, like the Mithraists of whom we know, had so little godliness that they never felt a yen to persecute and kill *ad maiorem gloriam Dei*. **So marked was this lack of zeal among the Parthian aristocracy that Professor Tarn remarks that "one gathers the impression that they thought all religions useful, none material; what mattered to a man was his horse, his bow, and his own right arm."**

https://archive.org/details/rogersicilyandn00curtgoog/page/n523/mode/2up?view=theater

The Law-book of Frederick, the "Constitutions of the Realm of Sicily," was the work of this constitutional lawyer; published at Melfi in 1231 it proclaimed, as the Assises of Ariano proclaimed, the principles by which the King intended to govern. **The Constitutions are the declaration of an Absolutism unknown to the West since the days of the Roman Empire—Caesar is to be the one source and guardian of law, all statutes, and customs adverse to the new Constitutions are to be quashed—the laws and edicts of the Norman kings the predecessors of Frederick are revived in full force and crowned with an Absolutism greater even than theirs.**
...

Frederick's success was completer than Roger the Second's as his means and his opportunities were greater. The nobles were the ancient foe, the standing enemies of the Crown and the source of its ultimate downfall. For thirty years at least they had to bow their necks to the yoke. **They were deprived of criminal jurisdiction, forbidden to carry on private war on pain of capital penalties,** such privileges as they had obtained since the death of William II. were carefully scrutinised, **they were forbidden to carry weapons or erect castles, all but the highest feudatories were brought under the jurisdiction of the Master Justiciars,** whose office no prelate, count, baron, or knight might exercise. The strong hand was also fastened upon the Church; a mortmain act checked the acquisition of vassal-lands by ecclesiastics, **the Church courts were forbidden to exercise jurisdiction over laymen,** the property of vacant sees was put into the hands of royal baillis. The cities and towns of the kingdom had during the interregnum recovered powers which they had not enjoyed since the days of the Apulian dukes, and Frederick himself had thought it politic early in his reign to grant privileges to several of them. But at Melfi in 1231 another note was sounded: henceforth no town might set up podesta, rector, or consul on pain of being laid waste. Naples, Amalfi, Salerno were henceforth to have no judges save the King's judges, Gaēta lost her consuls, the royal policy strove to bring all law-appeals from the towns to the Curia. The *boni homines* who survived in the communes of Southern Italy were now chosen by the King or local noble, these town-councils were presided over by the royal bailli. **A foe of the communes, Frederick was yet a friend of the lower orders; personal slavery was forbidden on the royal domains, the lords were forbidden to ill-treat the peasants, and an edict forbade the cattle of the poor to be seized for debt.**
...

The all-prominent figure in the government of the realm is now that of the Grand Justiciar, the "Mirror of Justice"; these officials, aided by judges of the Imperial Court or *Magna Curia*, sitting for the mainland at Capua, supervise all justice and control the under-justiciars; at certain periods they go on assise throughout the kingdom; **paid by the treasury and drawn from the middle classes, they represent the very spirit of the anti-feudal and anti-communal administration.**

O Felix Asia! Frederick II, the empire of Nicaea and the «Caesaropapism» (researchgate.net)

Six letters (three in Latin, three in Greek) are extant from Frederick II to John Vatatzes who had become his son-in-law (probably in 1241/1242) and with whom he shared an increasing hatred of the Pope. Despite his position of real superiority and his insistence thereon, reinforced by family ties, **Frederick expresses his admiration of the submission of the Church hierarchy to the political power in the tiny empire of Nicaea.**

---

http://www.historytoday.com/alexander-kazhdan/byzantium-emperors-new-clothes

In fact Kievan temporal society absorbed very little of Byzantium: their weaponry came from the West, their glass producers followed western, not Byzantine recipes, **their political structure was as distanced from the Byzantine one as possible. Political marriages of high rank between the two countries were almost unknown.** Kievan Rus as a state did not travel the path the Byzantines had worn.

Only in the fifteenth century when Russian grand princes began to build up their centralised monarchy did they discover their Byzantine ancestry; Russia did not inherit Byzantine totalitarianism but used the model for their political ends.

https://archive.org/details/iconaxeinterpret00bill/page/60/mode/2up?view=theater

In the civil sphere there were no permanent administrative chanceries (even of the crude *prikaz* variety) until the early sixteenth century.39 In the ecclesiastical sphere, the lack of any clear diocesan structure or episcopal hierarchy made it difficult for leading prelates to provide an effective substitute for political authority during the long period of political division. Nor was there even a clear line of precedence among the monasteries. **In contrast to the medieval West, where compendia of Roman law were waiting to be discovered and where the Moslem invader brought the texts of Aristotle with him, distant Muscovy had almost no exposure to the political and legal teachings of classical antiquity. At best they read some version of Plato's arguments for the closed rule of a philosopher-king** – but only to fortify their conclusion that a good and holy leader was necessary, never as an exercise in Socratic method.
...

Ivan's legislative council of 1549-50 – which provided some precedent for later parliamentary "councils of the land" (*zemskie sobory*) – was conceived as a religious gathering.60 The Church code enacted in 1551 known as the hundred chapters was designed only to "confirm former tradition," and prescribed rules for everything from icon painting to shaving and drinking. Every day of the calendar was covered **and almost every saint depicted in the 27,000 large pages of the encyclopedia of holy readings, *Cheti Mnei*.**61 Every aspect of domestic activity was ritualized with semi-monastic rules of conduct in the "Household Book" (*Domostroy*). Even the *oprichnina* was bound together with the vows, rules, and dress of a monastic order.

The consequence of this radical monasticization of society was the virtual elimination of secular culture in the course of the sixteenth century. Whereas Russia had previously reproduced a substantial number of secular tales and fables – drawn both from Byzantium and the West through the Southern and Western Slavs respectively – **"there did not appear in Russian literature of the sixteenth century a single work of belles lettres similar to those already known in the fifteenth. … There cannot be found in Russian manuscripts of the sixteenth even those literary works which were known in fifteenth century Russia and were subsequently widely disseminated in the seventeenth."**62 **The chronicles and the newly embellished genealogies, hagiographies, military tales, and polemics of the age were purged of "useless stories."** Nil Sorsky, no less than Joseph of Volokolamsk, favored this form of censorship; and the "hundred chapters" of 1551 extended these prohibitions on secular culture to music and art as well.

https://www.revolutionarydemocracy.org/rdv3n2/ivant.htm

Stalin. More or less? I am also a little familiar with history. You have shown the *oprichnina* incorrectly. **The *oprichnina* was the army of the king. It was different from the feudal army which could remove its banner and leave the battleground at any moment – the regular army, the progressive army was formed.** You have shown this *oprichnina* to be like the Ku-Klux-Klan.
…

Tsar Ivan was a great and a wise ruler, and if he is compared with Ludwig XI (you have read about Ludwig XI who prepared absolutism for Ludwig XIV), then Ivan the Terrible is in the tenth heaven. The wisdom of Ivan the Terrible is reflected by the following: he looked at things from the national point of view and did not allow foreigners into his country, he barricaded the country from the entry of foreign influence. By showing Ivan the Terrible in this manner you have committed a deviation and a mistake. **Peter Ist was also a great ruler, but he was extremely liberal towards foreigners, he opened the gate wide to them and allowed foreign influence into the country and permitted the Germanisation of Russia. Catherine allowed it even more. And further.** Was the court of Alexander I really a Russian court? Was the Court of Nicolaus I a Russian court? No, they were German courts. **The most outstanding contribution of Ivan the Terrible was that he was the first to introduce the government monopoly of external trade. Ivan the Terrible was the first and Lenin was the second.**
…

One of the mistakes of Ivan the Terrible was that he did not completely finish off the five big feudal families. If he had destroyed these five families then there would not have been the Time of Troubles. If Ivan the Terrible executed someone then he repented and prayed for a long time. God disturbed him on these matters... It was necessary to be decisive.

https://en.wikisource.org/wiki/Ivan_the_Terrible/Part_3/Chapter_2

The Russian people not only submitted to Ivan—it admired, applauded, loved him. Of all the crowd of comrades about him, it has retained two names and two faces only: one of these figures is that of a *parvenu*, the other that of an executioner—Nikita Romanovitch Zakharine and Maliouta-Skouratov.
…

If Ivan, when he fought against the boïars, was not defending the fundamental principles of Russian life—the absolute power, Orthodoxy, nationality—as some writers have asserted, he was certainly protecting the integrity of the common fatherland after a more general fashion. **Kourbski, as we have seen, was no less orthodox and no less Russian than the most fanatical of his peasants, and devotion to the absolute power can hardly, at that period at all events, be taken to be a feature in the popular psychology of a country in which the memory of the ancient *viétchié* had not entirely died out.** But when Kourbski and his likes entered into secret intercourse with Poland they were betraying their Sovereign and their country. They were conspiring with the foreigner, **and treason in every form, dogging Ivan's steps, crushed twenty times over in its own blood, and perpetually raising its head afresh, is the *leitmotiv* of all the poems which take the Terrible for their hero.**

https://archive.org/details/iconaxeinterpret00bill/page/114/mode/2up?view=theater

Under Alexis Mikhailovich and his son Peter the Great, Russia in effect adopted the aesthetic and philosophic culture of Poland even while rejecting its Catholic faith, and the administrative and technological culture of Sweden and Holland without either the Lutheran or the Calvinist form of Protestantism.

https://archive.org/details/iconaxeinterpret00bill/page/144/mode/2up?view=theater

The atmosphere was charged with expectation that 1666-7 was to bring portentous new events. The expectations were justified, for 1667, **the first year of the expected reign of the Antichrist,** was in many ways the beginning of a new order in Russia.

The Great Change

THE DECISIVE TURNING POINT in the religious crisis of seventeenth-century Russia was the church council of 1667, which excommunicated the fundamentalists en bloc. It was, superficially, a victory for Nikon, because the council upheld the central authority of the hierarchy and all of Nikon's reforms except his "our God" form of address in the Lord's prayer and his elimination of a dual blessing of the waters on Epiphany. Moreover, the ecclesiastical administration was greatly enlarged by the addition of twenty new dioceses to the already existing fourteen, and by the addition of four metropolitans, five archbishops, and nine bishops to the hierarchy.70

Yet defeat for the fundamentalists did not mean victory for the theocrats. **On the contrary, the council devoted most of its attention to the final deposition and exile of Nikon. Its main result was to establish the clear subordination of church to state by flooding the church bureaucracy with new priests who were, in effect, state appointed.** One new Ukrainian metropolitan admitted with remarkable candor in sentencing Avvakum that "we have to justify the Tsar, and that is why we stand for these innovations – in order to please him."71 Joachim, the new patriarch, was blunt in addressing the Tsar: **"Sovereign, I know neither the old nor the new faith, but whatever the Sovereign orders I am prepared to follow and obey in all respects."**72

A cosmopolitan, primarily Ukrainian and western Russian hierarchy was replacing the older Great Russian Church administration, just as Muscovy, having wrested from Poland key sections of these regions, was rapidly being transformed into a multi-national empire. The ideal of an organic religious civilization – whether fundamentalist or theocratic in structure – was becoming as anachronistic as the ill-defined economic and administrative procedures of patriarchal rule.

The defenders of the Muscovite ideal of an organic, religious civilization were being confronted in their own land with a sovereign secular state similar to those of Western Europe. **The year 1667 accelerated this trend through the formal transfer of Kiev from long years of Polish overlordship to Muscovite control and the promulgation of a new decree to insure national control over all foreign trade.**73 The process of freeing autocratic authority from any effective restraint by local or conciliar bodies had already been accomplished in the early years of Alexis' reign by the crushing of town revolts and the abolition of the *zemsky sobors*.
…

Ligarides' tangled history is so full of deceit and intrigue that it is hard to ascribe anything but opportunistic motives for him. He had passionately defended Greek ways in Rumania, where he had gone in the late forties to set up a Greek school at Jassy **and help produce a Rumanian edition of the basic Byzantine digest of canon law.**
…

Whereas the fundamentalists particularly hated Rome and the Poles, Nikon appears to have been more fearful of Protestantism and the Swedes. **He opposed the war against Poland of 1653 and the rebaptism of Catholics.** Some of his assistants in the correction of books were former Uniats from White Russia and the Ukraine; **and the decision of the council in 1667 to confirm his abolition of the requirement of 1620 for rebaptising Catholics was one of the many concessions to these non-Great Russian priests.**
…

[Nikon] called Nikita Odoevsky, the principal author of the Law Code of 1649 and leading apologist for the subordination of church to state, "a new Luther."117

The multiple ironies as well as the confessional confusions of the age are demonstrated by the fact that the principal collaborator of this "new Luther" in the trial of Nikon was Ligarides, a former Vatican agent wearing the robes of an Orthodox metropolitan. It seems only fitting that this erstwhile Grecophile from distant Gaza ended up destroying Nikon's Greek revival and posing as the defender of Muscovite tradition. **Ligarides summoned up the distinctively Russian symbol of the icon screen as the model for an ordered hierarchical society to challenge Nikon's concept of a symphony of powers between civil and ecclesiastical authority. Recognizing the patriarch as in any way equal to the Tsar would, Ligarides warned, place two icons in the center of the *chin*, where only the "Christ enthroned" is traditionally found; and man "cannot serve two masters … pray through two icons."**118
…

The conflict between Nikon and Avvakum was not a theological debate, but a death struggle between two towering frontiersmen in a world of one truth. **Only after they had destroyed one another did Russia become a safe place for Ligarides' doctrine of state service and many, shifting truths.**
…

In contrast to the fiery martyrdom of the archpriest, the dethroned patriarch died peacefully on his way back to Moscow in 1681 with a partial pardon from the imperial court. **Nonetheless, Nikon used prophetic terminology similar to that of Avvakum in denouncing the principal author of the resolutions of the Church council as a "precursor of the Antichrist." He saw in the new "Babylonian captivity" of the Russian Church to state authority a worse bondage than the Mongol yoke.**131
…

The Russian Church after 1667 tended to borrow secular ideas rather than spiritual ideals from each of the old positions. The official Church became neither a prophetic community as the fundamentalists had wished nor a self-governing sacramental institution as the theocrats had desired. From the fundamentalists modern Russia took not fervid piety so much as xenophobic fanaticism; from the theocrats, not so much Christian rule as ecclesiastical discipline.

https://archive.org/details/iconaxeinterpret00bill/page/182/mode/2up?view=theater

The official court *apologia* for Peter's rule, *The Justice of the Monarch's Will*, echoed the pessimistic, secular arguments of Hobbes about the practical need of a debased humanity for absolute monarchy. Its author, Feofan Prokopovich, was the first in a long line Russian churchmen willing to serve as "an ideologist of state power using Christianity as its instrument."46
…

The historical importance of the Old Believers in the development of Russian culture is out of all proportion to the relative smallness of their numbers. By effectively seceding from the political and intellectual life of the empire, this important nucleus of the Great Russian merchant community helped turn the main centers of Russian life over to foreigners and to the Westernized service nobility.
…

Thus, **whereas the development of an entrepreneurial bourgeoisie in the late medieval West tended to encourage the growth of rationalism in twelfth-century Paris and of sceptical humanism fifteenth-century Florence and Rotterdam,** the emergent merchant class of early modern Russia played no such role. In reality, no Russian bourgeoisie analogous to that of the West survived the transformations wrought by Alexis and Peter. **Shorn of their ancient privileges and immunities after the urban riots of the mid-seventeenth century, the entrepreneurial leaders of Old Muscovy had only two choices. They could melt into the medium and upper level of officialdom of the new state along with various foreign and mercenary elements.** Or they could cling to their former ways and ideals by moving on to newly opening areas of the empire and blending their xenophobic complaints with those of other dispossessed elements. **One could choose bureaucracy or *raskol*,**75 the "homeless cosmopolitanism" of the new urban centers or the narrow chauvinism of the Russian interior.

https://archive.org/details/orthodoxeasternc00fort/page/276/mode/2up?view=theater

It is again the old Byzantine idea of making the Church follow the vagaries of civil politics, that we saw to be the root of the claims of the See of Constantinople, and indeed the original root of the great schism. Only the idea is turned against the very see that had grown and flourished on it. **And that see finds the national and political idea much less sympathetic now that she stands to lose by it.**

The principle of the independent Church in the independent State finds no favour in the Phanar. The Patriarchs worked so hard and grovelled so low in the old days for the sake of getting a big Patriarchate, naturally they do not like losing it piece by piece, as they have done throughout the 19th century. **The process is nearly always the same. As soon as the first National Assembly, or House of Deputies, or whatever it may be, of the new State meets, it passes a law that the national Orthodox Church of the land acknowledges no Head but Christ; it then forms a Holy Synod on the Russian model, giving all possible authority over the Church to the civil government ("no Head but Christ" always means this), and lastly sends a note to the Patriarch to inform him that he has ceased to reign in the land in question.** Of course the Patriarch is furious, generally begins by excommunicating the new schismatics in a mass, but eventually has to accept things (Russia makes him do so as a rule), and, swallowing his pride, he receives the Holy Synod as his "Sister in Christ." Only in the quite specially bitter case of the Bulgarian Church has he hitherto refused, and the Bulgars are still excommunicate. But here, too, he will have to give in at last.

Naturally the Phanar hates the national idea; in 1872 it held a synod to declare that *Philetism*1 (the love of one's race in ecclesiastical matters) is the latest and most poisonous heresy. But it is a most astonishing case of poetic justice. It was on the strength of this very national idea that centuries ago the Patriarch waxed strong and rebelled against his over-lord, the Pope. **Now he sees his own children, having learned it from him, also wax strong on it and rebel against him. And so**

he finds Philetism to be a deadly heresy. Poor Patriarch! in his glory he was only a very feeble imitation of the Pope, and now he is fixed between two theories, and either way he loses. Shall he denounce Philetism, stand out for the old rights of the hierarchy and of the chief sees, preach unity and ancient councils? Alas! his see is not even an Apostolic one; he would have to go down below Alexandria and Antioch. Every one knows which is the first see in Christendom, and every one knows that unity means returning to the obedience of that see. Or shall he, taking up a cry that seems to come more naturally from Constantinople, talk of equality and national Churches, national rights and no aggression, no Head, in short, but Christ? But, then, what shall he say to the Bulgars? **Of course what he wants is just enough national idea to disobey the Pope and not enough for the Bulgars to disobey him.**

https://penelope.uchicago.edu/Thayer/E/Gazetteer/Places/Europe/Italy/_Texts/HODIHI/2d_edition/5/23*.html#ref38

Justinian had undoubtedly gathered all the laurels that could reward such a petty and ignoble contest. **He, the amateur theologian, after a struggle as long as the siege of Troy, had imposed his definition of the right faith on all the four Christian patriarchates,** and had bound those who believe in the infallibility of General Councils to accept it henceforward as an essential article of the Christian creed that the soul of Theodore of Mopsuestia suffers eternal torment.
…

Travelling as [Vigilius] did at least four times from one point to the diametrically opposite point of the theological compass,39 he deeply injured the credit of the Roman See, which now passed through half a century of obscurity til the arising of the first and greatest Gregory. He must certainly be held to have been an unsuccessful general of the forces of the Papacy, but there is no proof that he was a coward, and his censors have perhaps hardly enough considered whether at his particular point in the campaign success was possible. For six years he had to dwell at the seat of the rival Patriarch, daily beholding the majesty of the Emperor and begirt by evidences of his power. **To resist the commands of this omnipotent Caesar, from a modest dwelling within a mile or two of his palace, was a task which required much more hardihood than merely hurling spiritual thunderbolts from the Lateran or the Vatican at some unseen and unknown Frederick or Henry on the other side of the Alps.**

https://penelope.uchicago.edu/Thayer/E/Gazetteer/Places/Europe/Italy/_Texts/HODIHI/2d_edition/7/9*.html

That visit of the Emperor may be considered to have been the lowest point of the humiliation both of the Bishop and the City of Rome. Vigilius and Martin had been indeed dragged away from their episcopal palace and their loyal flock, and had suffered indignities and hardships in the city by the Bosphorus; **but it was surely a lower depth of degradation to stand by, as Vitalian must needs do in trembling submission, with a smile of feigned welcome on his lips,** while Constans the heretic, the author of the *Type* against which the Lateran Synod had indignantly protested, alternated his visits to the basilicas with the spoliation of the monuments of Rome.
…

The day was passing away in which it was possible for the Eastern Caesar to send a policeman to arrest the Pope and drag him off to a Byzantine prison. We shall see one Exarch after another attempt this invidious duty in obedience to his master's mandate, and one after another will fall back disheartened before the manifestations of the popular will, which in the end will take the shape of an armed and organised National Guard.

---

https://en.wikipedia.org/wiki/Rise_of_the_Ottoman_Empire#Government

The early Ottoman state's expansion was fueled by the military activity of frontier warriors (Turkish: *gazi*), of whom the Ottoman ruler was initially merely *primus inter pares*. Much of the state's centralization was carried out in opposition to these frontier warriors, who resented Ottoman efforts to control them.
…

Of particular importance for Ottoman success was their ability to keep the empire intact from generation to generation. **While other Turkic groups frequently divided their realms between the sons of a deceased ruler, the Ottomans consistently kept the empire united under a single heir.**[32]

The process of centralization is closely connected with an influx of Muslim scholars from Central Anatolia, where a more urban and bureaucratic Turkish civilization had developed under the Seljuks of Rum. Particularly influential was the Çandarlı family, which supplied several Grand Viziers to the early Ottomans and influenced their institutional development. Some time after 1376, Kara Halil, the head of the

Çandarlı family, encouraged Murad I to institute a tax of one-fifth on slaves taken in war, known as the *pençik*. This gave the Ottoman rulers a source of manpower from which they could construct a new personal army, known as the Janissaries (*yeniçeri*).
…

Of great symbolic importance for Ottoman centralization was the practice whereby Ottoman rulers would customarily stand upon hearing the sound of martial music, indicating their willingness to participate in *gaza*. **Shortly after the Conquest of Constantinople in 1453, Mehmed II discontinued this practice, indicating that the Ottoman ruler was no longer a simple frontier warrior, but the sovereign of an empire.[36] The empire's capital was shifted from Edirne, the city symbolically connected with the frontier warrior ethos of *gaza*, to Constantinople,** a city with deeply imperial connotations due to its long history as the capital of the Byzantine Empire.

https://en.wikipedia.org/wiki/Pierre_Belon

Belon was born in 1517 at the hamlet of Souletière near Cérans-Foulletourte.[2] **Nothing is known about his descent.**
…

With the recommendation of Duprat, he became an apothecary to Cardinal François de Tournon. Under this patronage, he was able to undertake extensive scientific voyages. **Starting in December 1546, he travelled through Greece, Crete, Asia Minor, Egypt, Arabia and Palestine, and returned to France in 1549.** A full account of his *Observations* on this journey, with illustrations, was published in Paris, 1553.

https://books.google.fi/books?id=HXy0DQAAQBAJ&lpg=PP1&hl=fi&pg=PA17#v=onepage&q&f=false

“In this country,” explains Belon, “there is no point in claiming to be noble,” *il ne sert de rien en ce pays là de s’avouer estre Gentilhomme.*” This is because there is nothing like a hereditary nobility in Turkish society, he discovers.55 **In a sense, all Turks are social equals since all of them are equally the Sultan’s slaves.**
…

Having made his point about the profound difference between the Turkish and European élites, Belon proceeds to theoretical considerations: **“Since various societies have defined nobility in different ways,”** some, like the French, maintaining that it was a genetically inherent quality, others, like the Turks, viewing it as an administrative position in no way transmissible to one’s heirs, it would seem to follow that **“nobility is whatever one wishes it to be.”**56
…

Obviously inclined to embrace the natural equality of human beings as axiomatic, Belon relishes the egalitarian customs of the Turks, customs which, in his view, are closer to Nature than are the customs of Europeans.
…

These *façons de faire* clearly meet with Belon’s approval, in part because of his philosophical convictions and, perhaps, in part also because of his own modest origins. The customs of the Turks appear to him as far more rational than those of his own countrymen. **He goes out to make the Turks seem like noble savages whose natural simplicity has only recently given way to more civilized behavior through their contact with educated Jews of western origin.**58

https://archive.org/details/11ShahakJewishHistoryJewishReligion/page/69/mode/2up?view=theater

As is well known, the Ottoman regime was based initially on the almost complete exclusion of the Turks themselves (not to mention other Muslims by birth) from positions of political power and from the most important part of the army, the Janissary corps, both of which were manned by the sultan’s Christian-born slaves, abducted in childhood and educated in special schools. **Until the end of the 16th century no free-born Turk could become a Janissary or hold any important government office.** In such a regime, the role of the Jews in their sphere was quite analogous to that of the Janissaries in theirs. **Thus the position of the Jews was best under a regime which was politically most dissociated from the peoples it ruled.** With the admission of the Turks themselves (as well as some other Muslim peoples, such as the Albanians) to the ruling class of the Ottoman empire, the position of the Jews declines. However, this decline was not very sharp, because of the continuing arbitrariness and non-national character of the Ottoman regime.

https://quod.lib.umich.edu/e/eebo/A32922.0001.001?rgn=main;view=fulltext

The Great *Turk,* that he may prevent the latter of these Mischiefs, putting by all such as are bottom’d only upon Others Nobility, takes notice of such onely as are Eminent for some worth of their own: **Neither doth he suffer any son to succeed in the Estate, or Goods of his Father by Right of Inheritance; but he is to receive**

the same at his hands, as a reward of his Service, if so be he deserve it. But in case he do not, he must then serve him either in some Ignoble Art, or else in some inferiour Office in his Wars.

The Former of these Inconveniences any King of Spain may prevent, if he but confer these rewards upon such onely, as are deserving Persons; **but the Remedy of the Second, which is practised by the Turks cannot be made use of among Christians.**

https://books.google.fi/books?id=KKMuTmW98DEC&hl=fi&pg=PA128#v=onepage&q&f=false

Having formerly entred into discourse of the several great Officers of State, **it will be necessary to declare what care the *Turks* take to preserve the body of their Empire free of Faction and Rebellion;** for there being many Provinces in the *Sultan*'s Gift, which are remote, rich and powerfull, and so administer temptation to the Governours to throw off the yoke of their dependence, and make themselves and their Posterity absolute; great care is taken to prevent this mischief by several Arts, **none of which hath been more effectual amongst the *Turks*, nor more sedulously practised, than the destruction of an ancient Nobility; and admitting no Accession to Offices of Riches, but onely in the direct Ottoman Line, as my Lord *Verulam* says, *Essay* 14. *A Monarchy where there is no Nobility at all, is ever pure and absolute Tyranny, as that of the Turks*;** *for Nobility attempers Sovereignty, and draws the people somewhat aside from the Line Royal.*
...

And this is the reason the *Turks* value not their great Men when taken by the Enemy; for not otherwise looking on them than on ordinary Soldiers, they exchange them not with Commanders and persons of Quality on the Christians; **for the favour of the *Sultan* makes the *Pashaw*, and not the noble Bloud or Vertues; so that the *Pashaw* imprisoned losing the influence of his Sovereign's protection and greatness, loses that also which rendered him noble and considerable above other persons.**

https://books.google.fi/books?id=mt6lu0MtKCUC&lpg=PP1&hl=fi&pg=PA19#v=onepage&q&f=false

As to civil dissensions, in all monarchies **(but that of Turkey, where these three court maxims take place contrary to all Christianity: first, as soon as the monarch has a son, all his brothers and nephews are killed so that there be no competitor; secondly, he destroys the nobility and makes that no man can be heir of his father's goods; thirdly, he weakens all conquered provinces to an impossibility of revolt – *Atque ubi solitudinem faciunt pacem appellant*45)** the court factions have been far more pernicious than popular tumults in commonwealths.

https://books.google.fi/books?id=3jiGsoP_ExgC&lpg=PP1&hl=fi&pg=PR50#v=onepage&q&f=false

To be sure, one can indeed hope that a God-reflecting monarch will be neither as murderous as Saul or Herod nor as feeble as Pilate; **for one of Bossuet's great points is that monarchs must be absolute but not arbitrary. Unquestionable sovereignty must unquestionably be regular, lawful, respectful of property and personal rights –** and not degenerate into the *gouvernement à l'Ottomane* which was soon to be described in the final pages of Montesquieu's *Lettres persanes*.

> There is among men a kind of government which is called arbitrary, **but which is not found among us in well-ordered states.** Four attributes accompany these kinds of government.
>
> Firstly: subject peoples are born slaves, that is to say truly serfs; and among them there are no free persons.
>
> Secondly: **no one possesses private property: all the sources of wealth belong to the prince, and there is no right of inheritance, even from father to son.**
>
> Thirdly: the prince has the right to dispose as he wishes, not only the goods, but also the lives of his subjects, as one would do with slaves.
>
> And finally, in the fourth place, there is no law but his will.137

Declining to ask whether arbitrary power is "permissible or illicit," Bossuet contents himself with noticing that "there are nations and great empires which are content with it; **and it is not for us to awaken doubts in them about the form of their government.**" Nonetheless such power is "barbarous and odious," and is "quite far from our own *moeurs*," so that in France "there is no arbitrary government."138

https://archive.org/details/asurveyturkishe00etongoog/page/458/mode/2up?view=theater

Can Russia, in all its extended provinces, when every foreign contact will be poison; when every breath, except from the frozen ocean, will be full of miasma, escape the contagion? **None will escape but the elder brethren of Jacobinism, the Turks, whose equally monstrous, though less dangerous**

tyranny, has for so many centuries insulted mankind, trodden underfoot the laws of nations, and blasphemed Christianity; who, unprovoked, attacked, conquered and slaughtered nations without number, murdered their sovereigns and spilt every drop of royal blood, massacred their priests at the altar, extirpated nobility, plundered the opulent, and bound the wretched remains of the people in fetters of perpetual and hereditary slavery. **They alone, till the reign of Jacobinism had made property a crime, the violation of property a legal resource of government, and the lives and possessions of men the right of tyranny; they alone had hitherto confounded the hereditary ranks among mankind;** had depressed genius, learning, and the Christian religion, and governed their barbarous empire by slaves and assassins. **Like the Jacobins, they taught Christian children to fight against their fathers and their father's God;* they too hold it lawful to murder prisoners in cold blood, they too possess a claim to every country in the universe, and a sacred right to subject all people to their law; they too hold all other sovereigns as usurpers, and dethroning them as the highest merit.** But still the Turks have a religion, and though it permits them numberless enormities to their own sect, and all enormities to others, they acknowledge a God, and many moral duties. Not the contagion of their doctrine was to be feared, but their cruel sword, which once threatened the conquest of the universe, and the extinction of all virtue, dignity, and science in the world; **yet was not this first monster so tremendous, in the insolence of his power, as an enemy, as is this second monster, in the insolence of his successes, as a brother.**

https://archive.org/details/historypersiafr00malcgoog/page/152/mode/2up?view=theater

> 1. I visited the court of Sulimân Pâchâ in A.D. 1800, and was struck by the simplicity and manliness of his character. **This chief, like most of those who enjoy a high station in the Turkish territories, had been a slave; but no unpleasant feelings seemed associated with the recollection of his former condition.** After he had introduced me to some of his chief officers, he called up a person, and said, "This, Captain Malcolm, is the son of my first master. He treated me with the greatest kindness. I try to repay the obligation by considering his son as my own child!"

https://archive.org/details/turkeyanditsdes04macfgoog/page/n26/mode/2up?view=theater

He replied that the Turks had lost their fanaticism; that he had many great friends among the Turkish Pashas of the new school, who, as was well known, had no religion at all; that the Grand Vizier, Reschid Pasha, was his friend, and the Minister for Foreign Affairs likewise, and that they were no more Mussulmans than he was, and cared no more for Mahomet and the Koran than he did. **"Besides," said he, "the Vizier is all for *amalgamation*—amalgamation of races as well as of religions." [Of this amalgamation scheme I had heard something before, and I was soon assured, at Constantinople, that it was the *one idea* of Reschid Pasha.]**

https://archive.org/details/turkeyanditsdes04macfgoog/page/106/mode/2up?view=theater

Whole rows of Turkish houses most pleasantly situated on the sides and ridges of hills, overlooking the Sea of Marmora and the Asiatic coast, and being in my time – though only of wood – rather stately edifices, had entirely disappeared in some parts, and were decaying and (to appearance) deserted in others. **The class of Osmanlees that occupied them has been obliterated.** Men of old families living on their revenue from hereditary estates are scarcely to be found anywhere in the Empire; and the higher class of Oulema, who derived large incomes from the endowments of the mosques, are nearly all sunk into poverty since the Government has taken those endowments and vakoofs into its own hands. **Sultan Mahmoud was a great leveller; he both dreaded and hated men of hereditary rank and property; and his son and successor, Sultan Abdul Medjid, whose ministers and advisers have, with very few exceptions, been raised from the very lowest grades, has carried out the levelling operation to such an extent that it may now be said there are no men of note or mark left, except such as are in the immediate service of Government, and occupy its highest posts;** for, while the chief Ministers and leading Pashas are enormously paid—paid far more than any of our Ministers in England—all the rest of the employés, civil or military, are but poorly recompensed. **The lovers of dead levels ought to go to Turkey. Verily, two reforming Sultans have democratised the land more than revolutionists have democratised France.**

https://archive.org/details/macedoniaitsrace00braiuoft/page/n47/mode/2up?view=theater

The feeling beneath this absolute rule of ascendancy is difficult to define. It is not the sense of racial superiority which we ourselves feel in India. **Certainly we should never place a native Mohamedan officer over white troops. [1906] But the Turks will give a military commission to a negro without the slightest sense that white Mohamedans are thereby degraded.**

https://archive.org/details/macedoniaitsrace00braiuoft/page/234/mode/2up?view=theater

And yet they remain a race apart from the Turks and profoundly hostile to them. There is no community of blood between them, and even in their mosques the barrier between East and West divides them. **For the Albanian is essentially a European—a European of the Middle Ages. Alone of all races in Turkey, he**

has an hereditary aristocracy and a feudal system. Islam, among Eastern peoples, is everywhere a leveller. It obliterates birth and race. A labourer may rise to be a Pasha, and it is no rare sight to see a negro in officer's uniform commanding white troops. But the Albanians have kept their pride of birth. The Ghegs are organised in clans, which obey none but their hereditary chiefs. **Even among the much more civilised Tosks of the South, wealth and rank count for little, and the poorest and youngest *bey* of an old family will claim precedence in public over the most venerable *nouveau riche*.** The marriage customs of the Turks make no account of social distinctions. A Turk will marry some Georgian or Circassian slave. **The Albanians who became Moslems have remained strict monogamists.**1 They never marry outside their own race and their own rank. A marriage with a wealthy Greek woman or an Albanian girl of new family is held to be a *mésalliance*. **The mixing of blood which has resulted in the virtual extinction of the old Turkish stock in Stamboul is utterly unknown in Albania, and the primitive structure of society has remained un-modified by the conquest.**

https://archive.org/details/orthodoxeasternc00fort/page/236/mode/2up?view=theater

Religion to the Moslem is the only thing that matters at all. **Islam is the perfect example of a theocratic democracy, governed of course, like most democracies, by an irresponsible tyrant.** Neither race nor language nor colour makes any difference.1 All True Believers are equal and any one of them may rise to any position: **the world of the Arabian Nights, in which barbers become Great Wazirs and pastry-cooks marry Sultans' daughters really exists (or did exist until the invasion of Western manners quite in our own time [1907]) round the Bosphorus.** All Islam are brothers.

http://beautifulislam.net/articles/kamal_ataturk.htm

Turkey – Emil Lengyel, 1941, p. 134

Kemal cared nothing about Allah; he was interested in himself and in Turkey. He hated Allah and made him responsible for Turkey's misfortune. It was Allah's tyrannical rule that paralyzed the hands of the Turk. **But he knew that Allah was real to the Turkish peasant, while nationalism meant nothing to him. He decided, therefore, to draft Allah into his service as the publicity director of his national cause. Through Allah's aid his people must cease to be Mohammedans and become Turks. Then, after Allah had served Kemal's purpose, he could discard him.**

https://biblehub.com/kjv/genesis/11.htm

1 **And the whole earth was of one language, and of one speech.** 2 **And it came to pass, as they journeyed from the east, that they found a plain in the land of Shinar; and they dwelt there.** 3 **And they said one to another, Go to, let us make brick, and burn them throughly. And they had brick for stone, and slime had they for morter.** 4 **And they said, Go to, let us build us a city and a tower, whose top may reach unto heaven; and let us make us a name, lest we be scattered abroad upon the face of the whole earth.** 5 **And the LORD came down to see the city and the tower, which the children of men builded.** 6 **And the LORD said, Behold, the people is one, and they have all one language; and this they begin to do: and now nothing will be restrained from them, which they have imagined to do.** 7 **Go to, let us go down, and there confound their language, that they may not understand one another's speech.** 8 **So the LORD scattered them abroad from thence upon the face of all the earth: and they left off to build the city.** 9 **Therefore is the name of it called Babel; because the LORD did there confound the language of all the earth: and from thence did the LORD scatter them abroad upon the face of all the earth.**

http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_155

The epoch of small states and royal households in Mesopotamia (the twenty-fifth and twenty-fourth centuries B.C.) was followed by a period of fierce warfare which ended in the conquest of Mesopotamia by the Akkadian king Sargon, who subjugated the ensi of the other cities. **It was about this time, apparently, that the idea of a "world empire" first arose, something which later inspired Cyrus, Alexander and Caesar.** Sargon's state was truly huge in comparison with the small city-states of the preceding epoch. It extended from the Persian Gulf to the Mediterranean.
...

In the twenty-second century, Mesopotamia was again united under Utuchegal, the ruler of the city of Uruk, who took the title "King of the Four Lands of the World." After his death, a new dynasty was established by King Ur-Nammu; this is referred to as the third dynasty of Ur. **Mesopotamia, Elam and Assyria came under its rule in the twenty-second and twenty-first centuries. It was a centralized state with a single economy managed by an imperial bureaucracy.**

The king headed the state as an absolute sovereign. He was surrounded by a bureaucracy of "king's men" or "slaves to the king," among whom the highest post belonged to the "great emissary." (66: pp. 256, 259, 262) **In this epoch, we no longer encounter a nobility aware of its genealogy and tracing its roots to a deity.**

> https://archive.org/details/romanandteutonas003327mbp/page/n99/mode/2up?view=theater
>
> They, like all other German tribes, were ruled over by two royal races, sons of Woden and the Asas. The Ostrogoth race was the Amalungs—the 'heavenly,' or 'spotless' race; the Visigoth race was the Balthungs—the 'bold' or 'valiant' race; **and from these two families, and from a few others, but all believed to be lineally descended from Woden, and now much intermixed, are derived all the old royal families of Europe, that of the House of Brunswick among the rest.**
>
> https://books.google.fi/books?id=HkKwSZr3t00C&lpg=PP1&pg=PA13#v=onepage&q&f=false
>
> **It seems that no king by the late seventh century could do without the status that descent from Woden entailed.** The East Saxons never claimed Woden, but kept *Seaxneat* ('companion of Saxons') as their founder. Because the East Saxons began to lose their jurisdiction to neighboring kingdoms even before the Anglo-Saxon conversion was complete in the second half of the seventh century, Seaxneat's name for them was perhaps a token of independence.32 **In all other Anglo-Saxon kingdoms of which records have survived, Woden is claimed as a royal ancestor.**

The top element in the state consisted of bureaucrats, administrators, royal war chiefs, priests, all living on government allowances. **The governing body itself did not reflect the former city-states. The ensi, although retaining their title, were merged with the royal officials;** they were appointed by the king, sometimes only for a limited period, and were shunted about from one town to another. Their primary duty was to manage the royal estates and perform administrative, judicial and religious functions. **Temples began to lose their economic independence and came under the protection of the king.** (65: pp. 247, 250)

Production was centralized to the same degree as the administration of the country. Former ensial estates entered into the state economy as subordinate units. Parties of workers, in cases of necessity, were shifted from one town to another. Numerous records have been preserved concerning the distribution of allowances to such newly arrived parties (from Lagash to Ur, from Ur to Uruk, etc.) (65: pp. 248, 264) **All lines of authority came together in the capital, Ur.**

> https://en.wikipedia.org/wiki/Enmerkar
>
> The historian David Rohl has claimed parallels between Enmerkar, builder of Uruk, and Nimrod, ruler of biblical Erech (Uruk), who, according to some extra-biblical legends, was supposedly the architect of the Tower of Babel. One parallel Rohl has noted is between the epithet "the Hunter", applied to Nimrod, and the suffix *-kaı* at the end of Enmerkar's name, which means "hunter". Rohl has also argued that Eridu near Ur is the original site of the city of Babel and that the incomplete ziggurat found there is none other than the Biblical tower itself.[11]

https://etcsl.orinst.ox.ac.uk/cgi-bin/etcsl.cgi?text=t.2.1.7#

315-322. Gudea rose -- it was sleep; he shuddered -- it was a dream. Accepting Ninĝirsu's words, he went to perform extispicy on a white kid. He performed it on the kid and his omen was favourable. Ninĝirsu's intention became as clear as daylight to Gudea.

323-329. He is wise, and able too to realise things. The ruler gave instructions to his city as to one man. The land of Lagaš became of one accord for him, like children of one mother. **He opened manacles, removed fetters; established ……, rejected legal complaints, and locked up (?) those guilty of capital offences (instead of executing them).**

330-344. **He undid the tongue of the goad and the whip, replacing them with wool from lamb-bearing sheep. No mother shouted at her child. No child answered its mother back. No slave who …… was hit on the head by his master, no misbehaving slave girl was slapped on the face by her mistress.** Nobody could make the ruler building the E-ninnu, Gudea, let fall a chance utterance. The ruler cleansed the city, he let purifying fire loose over it. He expelled the persons ritually unclean, unpleasant to look at, and …… from the city.
…

1211-1223. He had everything function as it should in his city. Gudea had built the E-ninnu, made its powers perfect. He brought butter and cream into its dairy and provided its …… with bread (?). **He had debts remitted and made all hands clear. When his master entered the house, for seven days**

the slave woman was allowed to became equal to her mistress and the slave was allowed to walk side by side with his master. But the ritually unclean ones could sleep only at the border of his city. He silenced the evil-speaking tongue and locked up evil.

1224-1231. He paid attention to the justice of Nanše and Ninĝirsu. **He provided protection for the orphan against the rich, and provided protection for the widow against the powerful. He had the daughter become the heir in the families without a son.** A day of justice dawned for him. He set his foot on the neck of evil ones and malcontents.

But the fatal time is now approaching, in which Arimanius, who by means of this brings plagues and famines upon the earth, must of necessity be himself utterly extinguished and destroyed; **at which time, the earth being made plain and level, there will be one life and one society of mankind, made all happy and of one speech.**

https://books.google.fi/books?id=2eglCwAAQBAJ&lpg=PP1&hl=fi&pg=PR23#v=onepage&q&f=false

The relatively frequent abdications, as well as other evidence such as the role Zal and Rostam play as kingmakers after the murder of the king Nozar, are further evidence of the eastern origin of the stories that make up the legendary part of the poem. Two traditions of kingship exist simultaneously in the work. **One is that espoused by the Sasanians, through whom Ferdowsi must have received his sources; this is in essence the ancient Middle-Eastern notion of kingship, one that ties kingship to religion and to the sanction of God, that elevates the king to a quasi-divine position as God's representative on earth, and which derives from the pre-Iranian Babylonian dynasties. The other derives from "the practice of the steppe" and involves the acclamation of the king by his peers, the notion that the king can always be replaced if he becomes incompetent (or too old to rule efficiently), and that he rules by virtue of his abilities and the consent of the nobility in general.** The poem's "abdications" would seem largely to derive from this latter tradition, though in keeping with his practice elsewhere Ferdowsi frequently rewrites the topos as a problem of personal ethical choice. (**There is a certain irony in the fact that of the two traditions of kingship it is the Eastern, less absolutist, one that seems to be authentically Iranian and the Western absolutist one that is ultimately Babylonian and non-Iranian;** though due to the Achaemenids' espousal of the Babylonian tradition, and its adoption by subsequent Iranian dynasties, especially the Sasanians, it is this tradition that has come to be seen as essentially Iranian.)
...

As with the Achaemenids, the historical record of the Parthians, who ruled Iran from the third century B.C.E. until the third century C.E., **is largely absent from [the *Shahnameh*]; this is almost certainly due to the success of the Sasanians in deliberately obliterating the memory of the dynasty they replaced.**

https://www.garynorth.com/MosesAndPharaoh.pdf

There are several kinds of chronological documents, including the actual monuments. "The chronological value of these various sources of information is, however, in every case slight. **The great defect of these monuments is their incompleteness. The Egyptians had no era. They drew out no chronological schemes. They cared for nothing but to know how long each incarnate god, human or bovine, had condescended to tarry on the earth.** They recorded carefully the length of the life of each Apis bull, and the length of the reign of each king; but they neglected to take note of the intervals between one Apis bull and another, and omitted to distinguish the sole reign of a monarch from his joint reign with others."8
...

Bertrand Russell, the British socialist philosopher and mathematician, saw clearly the dilemma of socialism: to produce rising per capita wealth, low-productivity socialism requires zero population growth. **Socialism also still requires the imposition of harsh penalties against rival populations that continue to grow, just as it did in ancient Egypt.** "Socialism, especially international socialism, is only possible as a stable system if the population is stationary or nearly so. A slow increase might be coped with by improvements in agricultural methods, **but a rapid increase must in the end reduce the whole population to penury, and would be almost certain to cause wars.** In view of the fact that the population of France has become stationary, and the birth rate has declined enormously among other white nations, it may be hoped that the white population of the world will soon cease to increase. The Asiatic races will be longer, and the negroes still longer, before their birth-rate falls sufficiently to make their numbers stable without the help of war and pestilence. **But it is to be hoped that the religious prejudices which have hitherto hampered the spread of birth control will die out, and that within (say) two hundred years the whole world will learn not to be unduly prolific.** Until that happens, the benefits aimed at by socialism can only be partially realized, **and the less prolific races will have to defend themselves against the more prolific by methods which are disgusting even if they are necessary. In the meantime, therefore, our socialistic aspirations have to be confined to the white races, perhaps with the inclusion of the Japanese and Chinese at no distant date.**"19

> 19. Bertrand Russell, *The Prospects of Industrial Civilization* (2nd ed.; London: George Allen & Unwin, 1959), p. 273. **First edition: 1923. He did not change his views enough to warrant a revision of this passage.**

...

By Joseph's day, the pharaohs no longer built pyramids. **The total centralization of the Pyramid Age had disintegrated.** Nevertheless, the theology of the continuity of being was still basic to Egyptian theology, and the lure of centralized power in the person of the Pharaoh was still ready to find its political expression. Although it is true that Joseph had bought all the land of Egypt, excepting only the land belonging to the priests (Gen. 47:20-22), in the name of the Pharaoh (Sesostris I), the visible and institutional manifestation of that implicit centralization (public works pyramids) did not take place until a century later. **When Sesostris III abolished the prerogatives of the regional princes, simultaneously placing the Hebrews in bondage, he thereby asserted the sovereignty of *theocratic monophysitism*,** with the Pharaoh as the link between heaven and earth.

...

Max Weber, the influential German historian-sociologist, devoted the last fifteen years of his life to a series of studies on the West's tendency to rationalize and bureaucratize itself. In 1909, he wrote: "To this day there has never existed a bureaucracy which could compare with that of Egypt."19 Lewis Mumford, who has specialized in the history of architecture, concluded that nothing short of total bureaucratization would have enabled Egypt to construct its pyramids. More than this: it required the creation of a social machine. **Egypt became the first *megamachine*, to use Mumford's terminology.**20

...

The only major change, late in Egyptian history, long after the Exodus, was an extension of the process of divinization to the common man, so that he, too, might become Osiris after his death, as the pharaohs had before him.27

...

What kind of society was early dynastic Egypt, the Egypt of the Pyramid Age? Mumford's words ring true: "Bureaucratic regimentation was in fact part of the larger regimentation of life, introduced by this power-centered culture. **Nothing emerges more clearly from the Pyramid texts themselves, with their wearisome repetitions of formulae, than a colossal capacity for enduring monotony: a capacity that anticipates the universal boredom achieved in our own day.** Even the poetry of both early Egypt and Babylonia reveal this iterative hypnosis: the same words, in the same order, with no gain in meaning, repeated a dozen times—or a hundred times. **This verbal compulsiveness is the psychical side of the systematic compulsion that brought the labor machine into existence.** Only those who were sufficiently docile to endure this regimen at every stage from command to execution could become an effective unit in the human machine."47

...

"He was a lonely being, this god-king of Egypt," writes Wilson. "All by himself he stood between humans and gods. Texts and scenes emphasize his solitary responsibility. The temple scenes show him as the only priest in ceremonies with the gods. A hymn to a god states: 'There is no one else that knows thee except thy son, (the king), whom thou causest to understand thy plans and power.' It was the king who built temples and cities, who won battles, who made laws, who collected taxes, or who provided the bounty for the tombs of his nobles."5 **Egypt possessed the necessary theology for a consistent socialist commonwealth, but this theology was wrong, as the Egyptians learned in the year of the Exodus.**

>
> Man, in short, is not God; capitalism recognizes this fact, and it tries to regulate production and distribution as efficiently as possible, given the basic limitation on mankind. Mises puts it very nicely: **"That Socialism would be immediately practicable if an omnipotent and omniscient Deity**

were personally to descend to take in hand the government of human affairs, is incontestable."123

https://archive.org/details/B-001-015-424/page/n113/mode/2up?view=theater

If, therefore, the king offers to the mass of his subjects a god for all, he is conferring on them an immense favour. The modern critic who thinks that the rulers of Egypt imposed on their humiliated subjects the cult of a god who was more or less themselves, is quite wrong. What happened was, on the contrary, that, basing themselves on the sentiments of their time, **they gave the mass a newfound right and dignity, by including them with the nobles in a common cult.**19

https://archive.org/details/B-001-015-424/page/n199/mode/2up?view=theater

What, then, will an egalitarian society, in which the high command no longer resembles an excited crowd, look like? The Ancient Egyptian Empire, which Jacques Pirenne has strikingly depicted, may give us some idea.13

> **In an individualist society in which no family or social group exists, every public duty is performed exclusively by the State.** First among them is that of assuring external security. To guarantee it the State disposes of an up-to-date military organization, which is distinct from the civil authorities and of which the king is the supreme head. The army is divided into tactical units which are placed under the command of regular officers; it is equipped, victualled and supplied by a commissariat service; the fleet, composed of large ships, is built in the shipyards of the State; the frontier forts are built by the military labour corps. In addition, the army is formed out of recruits; **and the only security the Nation knows is that which it gets itself by supporting the burden of military service imposed on it by the State.**
>
> Internal peace is assured by the judicial body, which holds pride of place among all the administrative bodies. All justice emanates from the king, in whose name the various courts of first instance and appeal pronounce their judgments. The litigants may, it is true, resort to arbitration, which, however, derives all validity and authority from the assurance that the State will execute its awards.
>
> The social life, whose external and internal security is assured by the army and the judicial body respectively, rests on the service of the civil departments, which give to each and preserve for each his place in Society, **of the land-survey, which is the foundation of all property rights,** and of the registry of documents, which, by transcribing all conveyances and contracts, can assure at need respect for the pledged word and guarantee to each the free disposal of his own goods and rights.
>
> The economic life largely depends on the service of the inland waterways. The ever more powerful State is ever more lavishly housed by the public works administration. The coordination of the various departments is the work of the chancery.
>
> The offices of all these various services are spread over the country; in all parts of it officials of all grades write minutes on papyrus rolls, which are then collected and filed in the State archives.
>
> **In this way the administration makes itself not only the foundation but the very condition of existence in this individualist society;** that society owes life itself to the supremacy of a State which guards, but, for that very reason, encroaches further and further.
>
> And so, in the act of developing, the administration fastens closer and closer the grip of the State and multiplies incessantly the number and importance of its services and officials.
>
> All these functions must be paid for. The State, it is true, possesses vast estates with enormous revenues. But the charges which it has to meet grow unceasingly. Not only does the administration itself cost more and more, but the growing authority of the State increases continually the prestige of the king, who, now canonized not only into a god but into the god of gods, surrounds himself with a Court the measure of whose luxury calls for an ever more numerous retinue of priests, courtiers, employees and servants. **Thus the requirements of the State come to exceed by far the revenues of its estates. Recourse is then had to taxation.**
>
> The civil departments, the land-survey, the registry of documents, thanks to which each single Egyptian is secured in his property and in his rights, have the further effect of giving the State a very good idea of what each possesses and of levying taxation on it accordingly. The administration of the finances and the taxation service then assumes an importance second to none, **for, if Egyptian Society, from the third to the fifth dynasty, is viable only by reason of its competent and complicated administrative machine, that machine itself lives only**

> **on the strength of the taxation yield.** So that the fiscal weapon is seen as an essential feature of the Egyptian Empire under the fourth dynasty.
>
> **All Egyptians are equal before the Law,** but this equality of theirs levels them all into an equal subservience to a more and more omnipotent State as represented in the king.

7. There we see where the development of the state leads. **The social hierarchy is in ruins;** the individual members are like peas shelled from their pods and form a numerical whole composed of equal elements. The state is the beginning and end of organization; it must apply itself to the task with the highest degree of authority and attention to detail. But is that to say that there are now no longer any privileged persons? There are indeed; but as regards the state they are no longer privileged as men preceding its authority. They hold their privileges in and from the state.

> **The *cultus* of the king, established as it was to assure the supremacy of the sovereign and to exalt him far above those ancient local cults to which in former times the territorial nobility had owed its power and its prestige,** undoubtedly played a large part in destroying this ancient nobility; simultaneously, however, it brought to birth in the heart of the services of the Crown a new and non-hereditary nobility which, though owing everything to the king, was bound little by little to raise up against his authority a new social force of considerable strength.13

Bureaucratic omnipotence tends naturally to convert the holders of key positions in the vast administrative machine into a new variety of notables and nobles. **So it happened in the later Roman Empire. The aristocratic families had been ground to powder by taxation. Those, on the other hand, often the freedmen of subject races, who occupied strategic positions in the wealth-absorbing machine, got from it immense fortunes not unmixed with personal regard.** On this subject Rostovtzev says:

> The reforms of Diocletian and Constantine, by implementing a policy of systematic spoliation to the profit of the State, made all productive activity impossible. **The reason is not that there were no more large fortunes: on the contrary, their build-up was made easier. But the foundation of their build-up was now no longer creative energy, or the discovery and bringing into use of new sources of wealth, or the improvement and development of husbandry, industry and commerce.** It was, on the contrary, the *cunning exploitation of a privileged position in the State*, used to despoil people and State alike. The officials, great and small, got rich by way of fraud and corruption.14

We may be sure that this new race of barons will try to make their own the offices which bring them such advantages and to assure their transmission to their descendants. It will be the feudal system over again.15

Conqueror though it is of the aristocracy which took shape in society, the state will in the end be dismembered by the statocracy which it itself has borne. **The beneficiaries of the state leave it, taking with them a veritable dowry of wealth and authority, leaving the state impoverished and powerless.** Then it becomes the turn of the state to break down these new social molecules, containing as they do the human energies which it needs. And so the process of the state’s expansion starts all over again.

Such is the spectacle which history presents to us. Now we see an aggressive state pulling down what other authorities have built up, **now we see an omnipotent and distended state bursting like a ripe spore and releasing from its midst a new feudalism which robs it of its substance.**

http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_164

The officials who governed separate regions were not its rulers in the feudal sense. Although they usually came from the "aristocracy" by birth, and their official title was not infrequently passed from father to son, nevertheless the position of an official was determined not by his birthright but by the king's grace--in other words, by the given official's position in the bureaucratic hierarchy. No one possessed the automatic right to rule by birth. Service began usually in the lower ranks, and a successful official moved from one province to another frequently, without acquiring stable connections anywhere. On official seals, the name of an official was never indicated--only his position and the pharaoh's name. **Inscriptions found in tombs make no reference to the social origin of the deceased or even to his father's name (except in the case of princes of the blood).** An official's career and material welfare depended entirely on the state as personified by the pharaoh, who could even grant immortality (by allowing construction of a tomb near his own burial place). **As Meyer says: "Egypt by the time of Mena [creator of a united state comprising Upper and Lower Egypt] was not an aristocratic state but a bureaucratic state."** (72: p. 156) Furthermore: "The Ancient Kingdom

is an extreme example of a centralized absolute monarchy ruled by a bureaucracy that depended only on the royal court and was educated in state schools for the training of officials." (72: p. 193)
…

Despite the fact that almost the entire population was to a great extent directly dependent on the state, the society of the time cannot be called either a slave system, as in classical antiquity, or a feudal system. Written records contain numerous terms indicating dependence on the state--i.e., people sent to compulsory work or war prisoners used in building and other state works. **However, not one of these terms can be interpreted as slave under the personal control of another individual and employed in economic activity.**

https://archive.org/details/in.ernet.dli.2015.55010/page/n637/mode/2up?view=theater

The Ptolemies accepted this system, and extended it by appropriating the great tracts which, under previous dynasties, had belonged to the Egyptian nobles or priests. A great bureaucracy of governmental overseers, supported by armed guards, managed all Egypt as a vast state farm.[7] Nearly every peasant in Egypt was told by these officials what soil to till and what crops to grow; his labor and his animals could at any time be requisitioned by the state for mining, building, hunting, and the making of canals or roads; his harvest was gauged by state measurers, registered by the scribes, threshed on the royal threshing floor, and conveyed by a living chain of fellahs into the granaries of the king.[8] **There were exceptions to the system: the Ptolemies allowed the farmer to own his house and garden; they resigned the cities to private property; and they gave a right of leasehold to soldiers whose services were rewarded with land.** But this leasehold was usually confined to areas which the owner agreed to devote to vineyards, orchards, or olive groves; it excluded the power of bequest, **and might at any time be canceled by the king.**

https://archive.org/details/in.ernet.dli.2015.231118/page/n549/mode/2up?view=theater

EGYPT should have been the happiest of lands, for not only was the earth freely nourished by the Nile, **but the country was the most self-sufficient in the whole Mediterranean basin—rich in cereals and fruits, cutting three crops a year, unexcelled in its industries, exporting to a hundred nations, and seldom disturbed by foreign or civil war. And yet—perhaps for these reasons—"The Egyptians," Josephus notes, "appear never in all their history to have enjoyed one day of freedom."**[1] Their wealth tempted, their semitropical lassitude suffered, one despot or conqueror after another through fifty centuries.

Rome classed Egypt not as a province but as the property of the emperor, and ruled it through a prefect responsible only to him. Native Greek officials administered the three divisions—Lower, Middle, and Upper Egypt, and the thirty-six "nomes" or counties; and the official language remained Greek. **No attempt was made to urbanize the population, for Egypt's imperial function was to be the granary of Rome. Large tracts of land were taken from the priests and turned over to Roman or Alexandrian capitalists to be worked as latifundia by fellaheen accustomed to merciless exploitation. The state capitalism of the Ptolemies was continued in reduced form.** Every step in the agricultural process was planned and controlled by the state: proliferating bureaucrats determined what crops should be sown and in what quantities, annually allotted the requisite seed, received the product into government warehouses (*thesauroi,* treasuries), exported Rome's quota, took out taxes in kind, and sold the rest to the market. Corn and flax were state monopolies from seed to sale; so, at least in the Fayum, was the production of bricks; perfumes, and sesame oil.[2] **Private enterprise was permitted in other fields, but under ubiquitous regulation.** All mineral resources were owned by the state, and the quarrying of marble and precious stones was a governmental privilege.
…

Slaves outside of domestic service were few in Egypt, since "free" workers were paid only a notch above nudity and starvation.

https://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_133

1. Incas--the ruling class, descendants of a tribe that in the past had conquered an ancient state near Lake Titicaca. **Various authors refer to them as aristocracy, the elite, the bureaucracy.** From this class came the administrators, the army officer corps, priests and scholars--and of course, the absolute ruler of the country, the Inca. **This class was hereditary, but chiefs of conquered tribes and even soldiers distinguished in war might occasionally enter it.**
…

There was a special category of women--the so-called elect. **Each year, officials were sent to all sections of the country to select girls eight or nine years old. These were called the "elect." They were brought up in special houses (called "convents" in some Spanish accounts).** Every year during a special celebration, those who had reached thirteen years of age were sent to the capital, where the Inca himself divided them into three categories. Some, called Solar Maidens, were returned to the "convent," where they were to engage in activities associated with the worship of the gods of sun, moon and stars. They had to observe chastity, although the Inca could give them to his circle as

concubines or take them for himself. Girls from the second group were distributed by the Inca as wives or concubines. A gift of this kind from the Inca was regarded as a high distinction. Finally, a third group was intended for the human sacrifices that took place regularly, but on a particularly large scale at the coronation of a new Inca. The law provided for the punishment of parents who showed their grief when their daughters were chosen for the "elect." (57: pp. 161-162)

Apart from the "elect," all unmarried women were also at the disposal of the Incas, but not as private property; rather, they were allotted to them by government officials for use as concubines and servants. **The oppressed status of women in the Inca state is particularly notable against the background of the neighboring Indian tribes, where women enjoyed much independence and authority.** (57: p. 159)
...

The workers in the bureaucracy were trained in schools that only children of the Incas were permitted to attend. (The law forbade education for the lower levels of the population.) Teaching was performed by the *amautas* or "scholars." Their duties included the writing of history in two versions: **one, objective records in the form of quipu, which were preserved in the capital and intended only for special authorized officials,** and the other in the form of hymns to be narrated to the people at festivals. If a dignitary was deemed unworthy, his name was removed from the "festival" history. (56: pp. 75-76, 78)
...

The complete subjugation of life to the prescriptions of the law and to officialdom led to extraordinary standardization: identical clothing, identical houses, identical roads. Repetition of the same descriptive details is characteristic of the old Spanish accounts. The capital city, built of identical houses made of identical block stone and divided into identical blocks, undoubtedly created the impression of a prison town. (56: p. 117)

As a result of this spirit of standardization, anything the least bit different was looked upon as dangerous and hostile, whether it was the birth of twins or the discovery of a strangely shaped rock. Such things were believed to be a manifestation of evil forces hostile to society. Events were to show that the fear of unplanned phenomena was quite justified: the huge empire proved powerless against less than two hundred Spaniards. Neither their firearms nor their horses (animals unknown to the Indians) can explain this extraordinary turn of events. The same difference in armaments was after all involved in the subjugation of the Zulus, but they were able to mount a long and successful resistance to large detachments of English forces. The reason for the collapse of the Inca empire must apparently be sought elsewhere--in the complete atrophy of individual initiative, in the ingrained habit of acting only at the direction of officials, in the spirit of stagnation and apathy. **Ondegardo, a Spanish judge who served in Peru in the sixteenth century, noted a similar phenomenon. In his books, he constantly laments the complete regimentation of life and the removal of all personal stimuli which led to a weakening of and, sometimes, the complete destruction of family relationships. Grown children, for instance, often refused to take care of their parents.** (56: p. 127) **Baudin, a French student of Latin American history, sees in many traits of the contemporary Indians the aftermath of Inca rule--indifference to the fate of the state, lack of initiative, apathy.** (56: pp. 124-125)

http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_189

All economic relationships were based on the assumption that the state, in the person of the king, was the proprietor of all sources of income. Any use of these sources was to be redeemed by deliveries to the state or by performance of obligatory work. **Labor conscription by the state was considered just as natural as universal military conscription is today.** Laborers were organized into detachments and armies (often under the command of officers) and were set to work on tremendous construction projects. They worked state fields, repaired, dug and cleaned irrigation and navigation systems, built roads, bridges, city walls, palaces and temples, pyramids and other tombs. They were used in transporting the goods of the state. **Sometimes such duties were imposed on conquered peoples, and, as Heichelheim believes, it was precisely this that gave rise to the whole system of duties--i.e., the state began to take the exploitation of conquered peoples as a model in the treatment of its own subjects.** (90: p. 176)

Most land either belonged to the state or was controlled by it. Temple lands were usually under the control of the state officials who directed work on them. The peasants got tools, seeds and cattle from the state and were often told exactly what to sow. They were obliged to work the state and temple fields on a set schedule. **The bulk of the agricultural population depended to a large degree on the state, but in most cases the peasants were neither slaves nor private chattel. I.J. Gelb (69) applies the term "serfs" to them--i.e., "attached" and "protected peasants."** He writes: "The productive labor population of Mesopotamia and the ancient East in general, in Mycenaean and Homeric Greece, later in Sparta and on Crete, in Thessalia and in other parts of Greece (with the exception of Athens), as well as in India, China, etc., is the basic work force employed either all the time or part of

the time on the public lands of the state, of the temple or of the large landowners, who as a rule acted simultaneously as state officials. **This work *force* was half independent.**" (69: p. 83)

Slaves in the majority of cases were house servants. In connection with the classical East, Meyer says: "It is hardly possible that slavery... played a basic role in the economy." (91: p. 190, quoted in 89)

https://en.wikipedia.org/wiki/Indica_(Megasthenes)#Historical_reliability

Megasthenes states that there were no slaves in India, but the *Arthashastra* attests to the existence of slavery in contemporary India;[38] Strabo also counters Megasthenes's claim based on a report from Onesicritus. Historian Shireen Moosvi theorizes that slaves were outcastes, and were not considered members of the society at all.[39] **According to historian Romila Thapar, the lack of sharp distinction between slaves and others in the Indian society (unlike the Greek society) may have confused Megasthenes: Indians did not use large-scale slavery as a means of production, and slaves in India could buy back their freedom or be released by their master.** [40]

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA68#v=onepage&q&f=false

Scattered textual evidence indicates that sales of human beings appeared in the Chinese Warring States period simultaneously with the private ownership of land.201 Slavery as an institution and slaves as a group with distinctive customary or legal status appeared in early imperial times and persisted. Slaves originated mostly from state prison, debt bondage, and the sale of children during famine. **Together they constituted less than 1 percent of the total population in the Han Dynasty.**202
...

Only five slave-based societies are known in the whole of world history. Two are ancient: classical Athens and many other Greek cities (but not Sparta): and Roman Italy, Gaul, and Spain (but not all parts of Rome's empire). Three are modern: the antebellum southern United States, the Spanish Caribbean, and Portuguese Brazil. **In each of the five, the slave population at its peak exceeded 30 percent of the total population.**204

A paradox leaps from the short list. Athens and the United States are showcase democracies and champions of freedom. The Roman Republic, although not fully democratic, also advocated liberty. **"How is it that we hear the loudest yelps for liberty among the drivers of negroes?" asked a witness of modern slavery.**205 The puzzle began in antiquity, as a scholar remarks: **"The cities in which individual freedom reached its highest expression – most obviously Athens – were cities in which chattel slavery flourished."**206 Is it coincidental that the world's first democracy and first slave-based society are identical and emerged simultaneously with the articulation of the concept of political freedom?

The paradox leads to a related question: Why did traditional China lack a robust concept of political freedom? This is usually explained in terms of its stratified and deferential social structure. The explanation carries much truth, but a counterexample reveals its incompleteness. As a modern historian points out, "Roman society was sharply stratified. Divisions of status underlay all social and political life: division between the free man and the slave; the citizen and the non-citizen; the senator and the equestrian; the patrician and the plebeian. This point deserves great emphasis. All Romans knew their place."207 Yet the Romans extolled liberty. Could the social-stratification explanation possibly be supplemented by what was absent in China but conspicuous in Rome and its liberal predecessor Athens – *massive* slavery as an institution vital to the economy and salient in society?
...

Instead of the slave/free man dichotomy in the West, the Chinese traditionally lumped slaves with base people, *jianmin*, in contrast to whom common folks are called good people, *liangmin*. A few slaves attract scant social attention. A historical sociologist explains, "Only when slaves became the main dependent labor force was the concept of personal freedom first articulated (in ancient Greece), and words were then created or adapted to express that idea. It is literally impossible to translate the word 'freedom' directly into Babylonian or classical Chinese."208 **Babylon and China were not slave-based societies.**

Rome was the largest of the five slave-based societies.209 A prominent part of its laws concerned slaves. **When talking tools became essential to the economy, they stimulated conceptualization and intellectual reflection, especially the notion of their antithesis, freedom.**210 Classical scholars explain: **"The very idea and valuation of freedom was generated by the existence and growth of slavery."**211 "In Rome, as in Greece, freedom is primarily the legal status opposed to slavery."212

https://books.google.fi/books?id=Zymp_kM33ZcC&lpg=PP1&hl=fi&pg=PA24#v=onepage&q&f=false

Aeschylus was not the first to suggest that men who submitted to the rule of a king were slaves,59 and he was by no means the last. Herodotus picked up the refrain – and in Aristotle's day, the great minds of the age were disputing whether the subjects of the Great King were obsequious by nature, by education, or because of the climate.60
...

Persia's monarch governed his vast empire as a household; for this reason, where the king spoke of *manā badaka* ("my subject or vassal"), his Greek scribe – lacking a vocabulary for

feudal relations – employed the term *doûlos*. The great magnates of the royal house were not women; they were not children; and so they could only be slaves.62

https://quod.lib.umich.edu/e/eebo/A52748.0001.001?rgn=main;view=fulltext

Had they but once tasted the sweets of *Peace* and *Liberty* both together, **they would soon be of the opinion of * *Herodotus* and *Demosthenes*, that there is no difference between *King* and *Tyrant*,** and become as zealous as the antient *Romans* were in defence of their *Freedom.*

https://oll.libertyfund.org/title/fletcher-selected-discourses-and-speeches#lf0427_head_009

With what face can we oppose the tyranny of princes, and recommend such opposition as the highest virtue, if we make ourselves tyrants over the greatest part of mankind? Can any man, from whom such a thing has once escaped, ever offer to speak for liberty? But they must pardon me if I tell them, that I regard not names, but things; and that the misapplication of names has confounded everything. **We are told there is not a slave in France; that when a slave sets his foot upon French ground, he becomes immediately free:** and I say, that there is not a freeman in France, because the king takes away any part of any man's property at his pleasure; and that, let him do what he will to any man, there is no remedy. **The Turks tell us, there are no slaves among them, except Jews, Moors, or Christians;** and who is there that knows not, they are all slaves to the grand Seignior, and have no remedy against his will?
…

The condition of such a servant is to be esteemed free; **because in the most essential things he is only subject to the laws, and not to the will of his master, who can neither take away his life, mutilate, torture, or restrain him from the comforts of wife and children:** but on the other hand, for the service he does, is obliged to ease him of the inconveniences of marriage, by providing for him, his wife, and children, clothes, food, and lodging: and the condition of a bashaw, or great lord, under arbitrary government **(who for the sake, and from a necessity of what they call government, has joined to the quality of a slave the office of a tyrant, and imagines himself a man of quality, if not a little prince, by such pre-eminence)** is altogether slavish; since he is under the protection of no law, no not so much as to his life, or the honour of his wife and children; and is subjected to stronger temptations than any man, of being a slave to men in St. Paul's sense, which is a worse sort of slavery than any I have yet mentioned.

https://en.wikisource.org/wiki/The_Spirit_of_Laws_(1758)/Book_XV#347

THE multitude of slaves has different effects in different governments. **It is no grievance in a despotic state,** where the political slavery of the whole body takes away the sense of civil slavery. Those who are called freemen, in reality are little more so than they who do not come within that class; and as the latter, in quality of eunuchs, freedmen, or slaves, have generally the management of all affairs, the condition of a freeman and that of a slave are very nearly allied. **This makes it therefore almost a matter of indifference whether in such states the slaves be few or numerous.**

But in moderate states, it is a point of the highest importance, that there should not be a great number of slaves. The political liberty of those states, adds to the value of civil liberty; and he who is deprived of the latter, is also deprived of the former. **He sees the happiness of a society, of which he is not so much as a member; he sees the security of others fenced by laws, himself without any protection.** He sees his master has a soul, that can enlarge itself; while his own is constrained to submit to a continual depression. **Nothing more assimilates a man to a beast, than living among freemen, himself a slave.**

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n275/mode/2up?view=theater

Had it been objected, **that it was precisely among those nations who carried their ideas of Equality, Liberty, and Sovereignty to the greatest lengths, that the greatest number of slaves were to be found,** [Rousseau] would have contented himself with answering, "Such, it is true, was the situation of Sparta.—**But as to you, people of the present day, you have no slaves, *but are yourselves enslaved*.—You purchase their Liberty at the expence of your own.** Forbear then to exult in a presence which discovers, in my opinion, more of indolence than of humanity."32

https://www.marxists.org/archive/marx/works/1845/holy-family/ch06_3_b.htm

In the same way *civil society* as a whole is this war against one another of all individuals, who are no longer isolated from one another by anything but their *individuality*, and the universal unrestrained movement of the elementary forces of life freed from the fetters of privilege. The

> contradiction between the *democratic representative state* and *civil society* is the completion of the *classic* contradiction between public *commonweal* and *slavery*. **In the modern world each person is *at the same time* a member of slave society and of the public commonweal. Precisely the *slavery of civil society is in appearance* the greatest *freedom* because it is in appearance the fully developed independence of the individual, who considers as his *own* freedom the uncurbed movement, no longer bound by a common bond or by man, of the estranged elements of his life, such as property, industry, religion, etc., whereas actually this is his fully developed slavery and inhumanity.** *Law* has here taken the place of *privilege*.

https://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_190

The king's household was the basic economic force in the country. **Weber describes this structure as the king's *oikos,* underlining the fact that the entire state was ruled from one center as the estate of a single master. In Egypt, the name Pharaoh ("big house") corresponds literally to the word *oikos.* Heichelheim asserts that the state controlled about 90 percent of the whole economy.** He writes:

> "The kings of the ancient Orient were economically the center points from which the greater part of the capital investment and the economic life of the empires radiated. From here only capital surplus which had been amassed by the people could be reinvested or distributed, for productive purposes, among individuals or to whole groups of people. **Scholars have attempted, and not without some justification, to describe the system of government of the ancient Orient as a patriarchal socialism.**" (90: pp. 169-170)

...

Heichelheim points to similar parallels:

> **For scholars who have studied this development in detail, it is no secret that the planned economy and the collectivism of our modern Age of Machines has returned subconsciously to ancient Oriental conditions wherever we try to abolish or to modify the individualistic and libertarian forms of society which have been characteristic for the Iron Age of the last three glorious millennia.** Instead our turbulent twentieth century shows a tendency to link together our own traditional state organization, society, economic and spiritual life with the rudiments of ancient Oriental collectivist forms of organization as they have survived subconsciously in the life and customs of many modern nations. ... **The modern great powers are closer in analogy to the great empires of the cuprolithic and bronze ages than is generally realized, or to similar later forms of rule which developed from ancient Oriental foundations either directly or indirectly. Whenever our century shows some attempt to achieve not personal liberty but widespread control it has strong affinities to the planned city life of the kings of Mesopotamia and Asia Minor, the rule of the pharaohs in Egypt, the early Chinese emperors. ... The spiritual ties which the nineteenth century had with. ... Israel, Greece and Rome are more often replaced, to a greater degree than we know, by a return to ancient Oriental foundations.** (90: pp. 99-100)

For a thousand years, China was administered by Mandarins. These bureaucrats swore loyalty to the emperor. Then they were granted enormous control over the entire society. **From the days of the Pharaohs until the twentieth century, the Mandarin class was the world's most powerful bureaucracy.**

To enter the ranks of the Mandarin class, a young man had to pass a rigorous written examination. The examination covered Chinese classical poetry. What did a knowledge of Chinese poetry have to do with ruling a vast empire? Directly, very little. Indirectly, a great deal.

A student needed five things to pass the exam: (1) advanced literacy; (2) enough leisure to study for the exam; (3) a very high IQ; (4) a teacher; (5) the ability to endure intense boredom for many years under a nearly absolute master.

The teacher was a man who had failed to pass the exam.

Had he passed, he would not have become a teacher.

This system, or something very close to it, has very nearly conquered America.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PR22#v=onepage&q&f=false

The literati-officialdom, a prominent feature of the Dragon, was one of the most long-lived conservative political elites in world history. Its success depended much on the institutional architecture designed by Legalists: a centralized monarchy with bureaucratic administration, another characteristic of imperial China. Nevertheless, literati-officials vilified Legalist rule by law and subverted the bureaucracy's operational principles of efficiency and impersonal regulation by a culture of moralization and personal connection, *guanxi*. **The result partly explains the curious bipolar images projected by the Chinese state.** Focusing on institution building, a Western scholar remarks with emphasis, **"there is good reason for paying closer attention to China than to Greece and Rome in studying the rise of the state, since China alone created a *modern* state." Focusing on government culture, other Western scholars find a weak notion of state: "China is a civilization pretending to be a nation-state."**28

https://uselesstree.typepad.com/useless_tree/2005/11/confucianism_on.html

I participate in a listserv of people who follow Chinese politics and, **in debating the extent to which China has ever really lived up to Confucian political ideals, one of the posts used this term, *rubiao, fali* – "Confucianism on the surface, Legalism within."** It struck me as an excellent term for understanding the role of Confucianism in traditional China, as well as summarizing the politics of post-Mao reform.

As I have turned, in recent years, to reading the Chinese classics, I have been struck by the strong demand, in Mencius in particular, for political leaders to be held publicly accountable for their actions. It is not quite a call for modern electoral democracy – that mechanism of public accountability was simply too alien to the ancient Chinese political milieu. But it is certainly a proto-democratic expectation that leaders should not contradict the interests of the people at large: taxes should be low; the administration of justice should be fair; war should not be pursued offensively or pre-emptively (are you listening Mr. Bush?); and public welfare should be the leading concern of the state.

But this worldview has always been limited in China, at least since the Qin dynasty, by the countervailing Legalist perspective that political leaders must, first and foremost, concentrate on what needs to be done to maintain power. "Traditional" China is famous for strict laws and severe punishments, a la Legalism. **This is written into the language: "kill one to warn a hundred;" "kill the rooster to scare the monkey," etc.** It is that tradition that carries on, though in somewhat modified form, in the politically micro-managed society of Singapore. And it is that tradition that underwrites the lack of justice in the PRC legal system: where the law is understood to be a tool used by the state to control society, not as a bulwark of the individual against the state.

Yet in "traditional" China there was a hesitation to simply say "we are Legalist;" perhaps because of Legalism's explicit acceptance of coercive power to preserve the prerogatives of the ruler. Confucianism provides a much more humane (that is its main goal, after all) and reasonable rationale for politics and power. **And that was the genius of the Han dynasty: invoke Confucianism as state ideology, while maintaining much of the political infrastructure of the Legalist Qin dynasty. Say that you rule by Confucian principles, while always holding on to the Legalist club to repress potential challengers.**

Even Voltaire himself acknowledged that; and when he pointed to the Chinese as the most prosperous nation upon earth, ascribed their prosperity uniformly to their virtue. We now know that he was wrong in fact: for we have discovered that Chinese civilization is one not of peace and plenty, but of anarchy and wretchedness. But that fact only goes to corroborate the belief, which (strange juxtaposition!) was common to Voltaire and the old Hebrew Prophets at whom he scoffed, namely, that virtue is wealth, and vice is ruin**. For we have found that these Chinese, the ruling classes of them at least, are an especially unrighteous people; rotting upon the rotting remnants of the wisdom and virtue of their forefathers, which now live only on their lips in flowery maxims about justice and mercy and truth, as a cloak for practical hypocrisy and villany;** and we have discovered also, as a patent fact, just what the Hebrew Prophets would have foretold us—that the miseries and horrors which are now destroying the Chinese Empire, are the direct and organic results of the moral profligacy of its inhabitants.

Many a man whose journal records the most excellent maxims for the conduct of his life, has been a torment to his family and friends. Many a public company, with admirably-framed Articles of Association, has chosen the pleasant road to an early bankruptcy. **Many an Oriental state has**

proclaimed, and is proclaiming at the present day, the most excellent principles of government, not one of which it ever dreams of reducing into practice.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA101#v=onepage&q&f=false

The notion of *tianming*, the mandate of heaven, which the Zhou invented for its attack on Shang, authorizes no holy war.144 **It is based on the allegation that Shang lost the mandate because it mistreated the people.** Furthermore, it comes with a warning against future misgovernment: "The mandate of heaven is not constant."145

http://www.chinaandrome.org/English/essays/religion.htm

Most religious rituals were familial and private matters for the Chinese, whose ancestor worship was more intense than that of the Romans. As to the relation between religion and universal rule, the Chinese were less certain. The notion of *tianming* □□, the mandate of heaven, appeared almost a millennium before empire. **Tian or Heaven was originally anthropomorphic, although more aloof than the Roman sky-god Jupiter.** Surveying four quarters of the world for the welfare of the people and deciding that the clan of Shang had misgoverned, Tian withdrew its *ming* or mandate from Shang and bestowed it on the clan of Zhou. **The story appears often in the *Poetry* and *Documents*, the two most ancient and venerated texts. In distinction to usual winner's propaganda, it is often accompanied by admonitions:**

> The mandate is not easy to maintain.
> Do not bring on your own destruction.
> Promulgate brightly your virtue and fame,
> Remember the verdict Tian passed on the Shang.[8]

"The mandate of heaven is not constant." **The warning to derelict rulers did not diminish when Tian morphed into the impersonal heaven *tian* that functioned "without sound or smell" and expressed its will mainly through the people:** "*Tian* hears and sees through the people's audition and sight; *tian* rewards and reprimands through the people's incentive and castigation."[9] The depersonalized *tian* has four meanings: sky, fate, nature, and the primordial cosmic principle. **In all senses related to the supreme, it retains the inclusiveness and impartiality symbolized by the heavenly vault.**[10]

https://en.wikipedia.org/wiki/Mandate_of_Heaven

Dynasties such as the Han and Ming dynasties were founded by men of common origins, but they were seen as having succeeded because they had gained the Mandate of Heaven. The concept is in some ways similar to the European concept of the divine right of kings; however, unlike the European concept, it does not confer an unconditional right to rule**. Intrinsic to the concept of the Mandate of Heaven was the right of rebellion against an unjust ruler.** The Mandate of Heaven was often invoked by philosophers and scholars in China as a way to curtail the abuse of power by the ruler, in a system that had few other checks. **Chinese historians interpreted a successful revolt as evidence that Heaven had withdrawn its mandate from the ruler.** Throughout Chinese history, times of poverty and natural disasters were often taken as signs that heaven considered the incumbent ruler unjust and thus in need of replacement.

The concept of the Mandate of Heaven was first used to support the rule of the kings of the Zhou dynasty (1046-256 BCE), and legitimize their overthrow of the earlier Shang dynasty (1600-1069 BCE).

https://en.wikipedia.org/wiki/Shangdi#Zhou_dynasty

The Duke of Zhou justified his clan's usurpation through the concept of the Mandate of Heaven, which proposed that the protection of Shangdi was not connected to their clan membership but by their just governance. Shangdi was not just a tribal but instead an unambiguously good moral force, exercising its power according to exacting standards.[12] It could thus be lost and even "inherited" by a new dynasty, provided they upheld the proper rituals.

Nonetheless, the connection of many rituals with the Shang clan meant that Shang nobles continued to rule several locations (despite their rebellions) and to serve as court advisors and priests. The Duke of Zhou even created an entire ceremonial city along strict cosmological principals to house the Shang aristocracy and the nine tripods representing Huaxia sovereignty; the Shang were then charged with maintaining the *Rites of Zhou*. Likewise, **the Shang's lesser houses, the *shi* knightly class, developed directly into the learned Confucian gentry and scholars who advised the Zhou rulers on courtly etiquette and ceremony.**[13]

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA12#v=onepage&q&f=false

A Western historian wrote of the Zhou: "they were conspicuous for their ability to plan far ahead, and for their discipline, even before their conquest of the Shang. They had two virtues that the early Romans held in high esteem: *gravitas* (gravity) and *constantia* (constancy)."37 The preconquest Zhou had an adult male population of 60,000 to 70,000, as indicated the scale of excavated settlements. Texts report their army of conquest comprising about 300 war chariots, 3,000 armored warriors, and 45,000 auxiliaries assembled from hundreds

of ethnically diverse tribes.38 **China was sparsely populated then, but even so, the Zhou were a small minority.** To rule the vast territory they conquered the Zhou fanned out to maximize their power. The Zhou king invested hereditary lords, the great majority of them whom were relatives. He assigned warrior followers to them, sent them to build cities at remote strategic locations, allowed them significant sovereignty in their cities, and demanded certain political and military obligations in return. **Unlike Greek colonies that stemmed from population pressure and severed political ties with the mother city, the Zhou colonies were political and strategic in design.** Hundreds of widely scattered Zhou cities constituted a loose political federation under the king, a "screen of defense for Zhou."39 **Their functions resembled the colonies that Rome planted in Italy, the "chains of bastions" that tied its peoples together.**40 Originally garrisons, they took root as civilian institutions and spread the Huaxia ways of life in the ensuing peace.41

Three centuries of dominance and relative tranquility bred refinement and complacency. Then, in 771 BCE, a great drought scorched the Wei Valley where the Zhou capital sat. Court corruption prevented effective famine relief. Marauding Rong compounded the people's sorrows. The Zhou king was killed in an incursion. His heir, together with great lords in the area, fled east to the Central Plain, never to return. **During the royal evacuation, the general from peripheral Qin distinguished himself and was invested as a lord, who alone dared to remain behind in Zhou's original base.**42 By decades of arduous fighting and administration, Qin made itself "the hegemon among the western Rong."43 The Rong's vitality and resources, tamed and absorbed, would help Qin's empire-building enterprise.

The Zhou court moved to Luo on the Yellow River, where it languished until Qin finished it in 249 BCE. **Tradition names the years 722 to 479 BCE after the *Spring and Autumn Annals*, China's first systematic history, written by Confucius toward the end of the period.** The subsequent Warring States period ended with Qin's unification of China in 221 BCE.
…

As the Spring and Autumn period dawned, the military colonies that Zhou planted in its early days had grown into hundreds of sovereign city-states, although their rulers retained the title of lord. Wey, Lu, and other states centrally located in the heartland, originally most advanced and prestigious, had stagnated for want of room to expand. Four fringe states – Qi, Jin, Chu and Qin – rose to hegemonic powers by developing their hinterlands and incorporating neighborhood pastoralists (Map 4). In terms of the seigniorial house, only Jin was certifiably Huaxia, but its lords too married pastoral women. Lord Wen, who first brought it to hegemony, had a Di mother and appointed many Di to high ministries.44
…

From the day of the Zhou conquest, political dominance did not blind military colonists to the diverse traditions of subject peoples. Officials from various cities traveled the countryside to collect songs and sayings, which conveyed information about native minds and local elites. Many such "country airs" survive in the *Odes*, the oldest Chinese literature. Singing less of sackers of cities than tillers of fields and seekers of mates, it offers a glimpse into the variegated customs of the vast land. Besides out-marriage, **the Zhou principle was "to improve education but not to change traditions, to regiment government but not to change what are appropriate to local situations."**52 Implementations of the policy varied, as did results. The first lord of Qi spent five months simplifying Zhou rituals to suit local customs. Qi grew rich and powerful because people flocked to it, attracted by its straightforward rule. The first lord of neighboring Lu took three years to mold local conventions according to complicated Zhou rituals. Lu became the citadel of Zhou culture and the home of Confucianism.53

The Zhou aristocratic culture – rich in rituals, poetry, music, and moral norms – was a cohesive force among Huaxia states and a magnet to non-Huaxia elites. Early Zhou bronze and ceramic vessels of similar design appear in archeological sites more than 1,000 kilometers apart. Regional artifacts show cultural convergence during the following centuries, although it was mainly confined to the upper crust of society.54 The peoples of Wu and Yue man Man Yi who blackened their teeth, painted their faces, and tattooed their bodies. The ruling classes, like that of Chu, admired Huaxia refinement. **Their efforts to develop their realms and enhance their own prestige simultaneously inculcated some Huaxia ways among their peoples, just as the municipal aristocrats of Italy led the Hellenization of Italians.**55 Yet the acculturation did not penetrate deep; much diversity persisted among the lower classes. Furthermore, rulers of various states were also eager to maintain regional identity that bolstered the loyalty of their subjects.
…

The acknowledgment of related lineages, fictive or not, fashioned a sense of affinity between peoples. Thus the lords of Wu gained acceptance into the Huaxia circle as descendants of an alleged minor branch of the Zhou lineage.62 Similar practice occurred in the Western world. A prominent example was the alleged Roman ancestry of the Trojan Aeneas, through whom Rome was adopted into the Greek culture.63
…

To evict old elites and inject new settlers were favorite policies of Chinese conquerors. When Chu annexed states in the more advanced areas, it routinely sent their aristocrats to the deep south, where natives were heterogeneous and economies backward. After Qin took over Sichuan, home to the Shu, "elder of the Rong and Di," it promptly infused 10,000 households and concluded covenants with natives to smooth conflicts with immigrants. **Geographical isolation made Sichuan an ideal place for the dangerous and undesirable. Tens of thousands of political exiles landed there, as did aristocrats and elites from the lands that Qin conquered.** Some carried a little money that survived their dislodgement, others nothing except their knowledge, skill, and leadership. **The influx "makes us prosperous and our land plentiful," Shu locals said.**93 Yet their distinctive culture submerged.94
…

The unifying efforts of the First Emperor of Qin went further. **After Qin annexed six rival states to create China's first imperial dynasty, it registered all inhabitants in individual households of equal status. Thus treated, the eastern Yi peoples quickly blended into the general population. More important, Qin abolished local**

aristocracies, leveled all barriers of travel and trade, proclaimed uniform codes of law, and standardized measure, coinage, and the Chinese script.97

The Han-Chinese spoke many dialects but shared a common written language, and theirs was “the country of caps and belts.” Native tongues of Italy gradually disappeared. Italians sharing the Latin language inhabited “the domain of toga-wearers.”98

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA48#v=onepage&q&f=false

Wey’s political structure was typical of the states that grew from the Zhou’s military colonization four centuries earlier. A state comprised three major groups of people: the aristocracy with the lord at its top, the *guoren* or city people, and the *yeren* or field people. **The aristocrats and *guoren*, the descendants of the original conquerors and colonists, mostly lived in the city and its immediate environs. The *yeren* were natives who inhabited the outlying countryside.**104

The non-aristocrats mostly engaged in communal farming, but the *guoren* organized their communities according to kinship, the *yeren* according to domicile.

> http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_171
>
> **The French Sinologist Maspero believes that marriage in the true sense existed only for the aristocracy, for which it had the effect of sustaining the religious cult. Common folk did not establish clans and the family did not have a religious character.** Marriage was denoted by different terms for the aristocracy and the peasantry; Maspero translates the former term as "marriage" and the latter as "union." (77: p. 117)

In the “well-field” arrangement, members of a community collectively worked the lord’s demesne. Besides farming, they were obliged to perform corvée labor and submit textile and other goods. For their own subsistence, individual households got allotments of farmland, rotated periodically to give everyone equal access to good and poor fields.105

The *guoren* and *yeren* resembled the common Roman citizens and the conquered subjects. **The field people were excluded from military service and politics. The city people constituted the army reserve.** They paid a military tax but did not provide individual armament as the Roman legionary did; aristocratic houses maintained the equipment for chariot warfare. **When not called up, *guoren* mainly farmed, but among them were also artisans, traders, and *shi*, who served as stewards, clerks, and place guards.**106

The *guoren* as a group derived considerable power from military service **and lineage cohesion.** They could conclude covenants with the lord independently of aristocratic ministers, with whom they sometimes disagreed. In aristocratic faction fights, the voices of the *guoren* could be stabilizing, although far less effective than Roman elections stabilizing aristocratic competition. There was no institutionalized forum or consultation channel akin to the Roman assemblies. **If a lord chose to ignore them, the *guoren* could only resort to violence. They had deposed many lords and killed many high ministers. Their potential for rebellion or desertion might deter rulers from outrageous transgressions, but at the cost of creating social havoc.**107

Late Bronze Age aristocrats held the bulk of power and justified their prerogatives by long pedigrees and traditions. **Three intertwined principles underwrote their political organization: *zongfa* or lineage rule, *shiguan* or hereditary ministry, and *fengjian* or feudalistic parceled sovereignty.**
…

Zhou’s *zongfa* was based on patrilineal genealogy. **The head of the principal lineage passed his position as the clan’s patriarch to the eldest son from his principal wife.** His other sons established secondary lineages. They were subordinate to the principal lineage but, as founders, they became heads of their respective lineages and passed their positions to their eldest sons, while their younger sons established tertiary lineages under their authority. The lineages maintained ancestral temples and burial grounds, sponsored schools and ceremonies, and provided hardship relief. The *zongfa* system cemented large kindred groups. **Its rigid rules and power hierarchy would decay, but its custom of networking relatives would persist in relaxed forms as a major social bond for millennia.**108

Fengjian was the political basis of the early Zhou’s military colonization. **In feudalistic parceling of sovereignty, the Zhou king reigned over all under heaven, but actually ruled a limited royal domain.** Extra territories he split into parcels, which he apportioned as fiefs to various lords. Within his fief, the lord was suzerain with juridical, fiscal, and military power. His relation with the king changed over time. **The strong kings of early Zhou demanded certain services and appointed ministers for the lord’s fiefs. By the Spring and Autumn period, the king had lost all ability to interfere, and the lords become sovereigns except the title.** A lord organized his state as the king did, albeit on a smaller scale. He directly governed a seigniorial domain and apportioned the remaining territories to his vassals, who acquired titles and managed their own fiefs autonomously. The notion of landlord was undifferentiated from that of lord. The lord exacted corvée labor from his subjects, who worked his demesne in the well-field arrangement.109

In Zhou’s feudalistic organization, the lords were mostly sons and relatives from secondary lineages of the royal clan. Similarly, tertiary lineages constituted the bulk of vassals. The lineage system and parceled sovereignty worked hand-in-glove. ***Qinqin*, the love of relatives, was the chief political virtue.** Politics based on familial and personal bonds would become a major component in Confucianism.110

State ministers administered the king’s royal domain or the lord’s seignorial domain. State ministries were usually hereditary, and the top ones usually claimed by lords to the king or vassals to the lord. Most minister-vassals were

relatives, whom the lord found difficult to dismiss without being attacked for vitiating *qinqin*.111 **A minister-vassal attended to both affairs of his lord (*gong*) and affairs of his own fief (*si*). These were the original meanings of the words *gong* and *si*, now understood as meaning "public" and "private."**112

An ancient text described the feudalistic hierarchy of Zhou government: "The son of heaven founds the state (*guo*). The many lords establish families (*jia*). Ministers set up side houses. Officials start minor lineages. The *shi* have dependent relatives."113 *Guo* and *jia* originally had similar organizations and functions, differing only in their status and size. **While texts on the early Zhou referred to the king's state and the lord's family, those on the Spring and Autumn period referred to the lord's state and the minister's family. *Guojia*, the modern Chinese term for the state, is literally "state-family."**
…

The feudalistic aristocracy hollowed out, its power gravitating toward the monarch above and the common people below. The old lord of Jin was the big brother among aristocrats. The new lords of Zhao, Wei, and Hann were embryonic monarchs keen on centralizing power. **Recognizing aristocratic threats from their own adventures, the usurpers tried to kick away the ladder behind them.** Parceling of annexed authority and hereditary ministries were too dangerous. Instead, they experimented with direct rule through salaried offices.
…

In 513 BCE, twenty-three years after Zichan in the state of Zheng published the first code of law in China, Jin followed suit and inscribed its penal code on an iron cauldron.121 **This was the first mention of an iron implement in reliable texts.** The temporal proximity of the two firsts was probably not coincidental.
…

As individual households became more confident in producing surpluses to save for hard times, communal farms unraveled. Demesne fields lay in waste. State extraction by corvée labor failing, Lu initiated the land tax in 594 BCE. It diffused to other states as household farms mushroomed on lands previously too difficult to cultivate. **The city people's political leverage dissipated. Their communities and lineages decayed. Their charioteering skills approached obsolescence. Infantry increasingly dominated warfare and the field people could fill the ranks equally well. Gradually, *guoren* and *yeren* merged into a single class of commoners.**
…

China's population grew, passing the 10 million mark in the Warring States period.124
…

We have met the *shi* at the bottom of the feudalistic aristocracy and the top of the city people, serving as petty officers. Aristocratic lineages ideally educated their members. The multiplication of lineages piled up excess descendants at the bottom, as did poverty and loss in power struggles. Efforts saved by elevated farming productivity allowed some commoners the leisure for learning.

> https://plato.stanford.edu/entries/chinese-legalism/#HisCon
>
> Crises and bloodshed aside, the Warring States period was also an age rife with opportunities for intellectually active individuals. It was an exceptionally dynamic period, marked by novel departures and profound changes in all walks of life. **Politically, the loose aristocratic entities of the Springs-and-Autumns period were replaced by centralized and bureaucratized territorial states** (Lewis 1999). **Economically, the introduction of iron utensils** (Wagner 1993) **revolutionized agriculture, allowing higher yields, prompting the development of wastelands, and bringing about demographic growth, as well as accelerating urbanization and commercialization of the economy.** Militarily, new technologies, such as the crossbow, as well as new forms of military organization, brought about the replacement of aristocratic chariot-led armies by mass infantry armies staffed by peasant conscripts, resulting in a radical increase in warfare's scale and complexity (Lewis 1999). **And socially, the hereditary aristocracy that dominated the Zhou world during much of the Bronze Age (ca. 1500-400 BCE) was eclipsed by a much broader stratum of *shi* □ (sometimes translated as "men of service"), who owed their position primarily to their abilities rather than their pedigree** (Pines 2013c).
> …
>
> During the aristocratic Springs-and-Autumns period, the overwhelming majority of officials were scions of hereditary ministerial lineages; only exceptionally could outsiders join the government. **This situation changed by the fifth century BCE, as aristocratic lineages were largely eliminated in internecine struggles and members of lower nobility—the so-called "men of service," *shi* □—could advance up the ladder of officialdom.** It was then that the new meritocratic discourse of "elevating the worthy" (*shang xian* □□) proliferated and upward social mobility became legitimate (Pines 2013c). Yet who were the "worthy" and how to determine one's worth was a matter of considerable uncertainty and confusion.

…

In the sociopolitical upheaval, where aristocrats and commoners met became a conduit of social mobility. From it emerged the transformed *shi*, self-conscious and ambitious. **Because of feudalistic segmentation of loyalty, the *shi*, who was rather low on the hierarchy, owed no duty to his native state and could freely serve an enemy state. To kings, foreign officers were often more insightful and less threatening than native aristocrats.** The movement of *shi* among various states spread novel ideas and political innovations. They supplied the brainpower for state building.125

“The four peoples, *shi*, farmer, artisan, and merchant, are the state’s foundation stones.”126 This text, probably written in the Warring States period, was the first articulation of a social division. Set alongside Aristotle’s four chief divisions of the masses – farmers, mechanics, shopkeepers, and day laborers127 – we see three major occupations ranked in the same order. The day laborer may be universal, but the *shi* was not. **Educated citizens abounded in Greece, but they did not constitute a politically significant class as they did in China.** Born of the decaying aristocracy, the *shi* as a group never severed its unbilical cord to political power. Diverse and intellectually vibrant in its early days, the *shi* would mature into the monocultural and doctrinal *shidafu*, the literati-officials, the signature ruling elite of imperial China.128

https://www.marxists.org/subject/china/peking-review/1975/PR1975-16a.htm

> Originally, the doctrines of Confucius and Mencius were the ideology of the declining slave-owning class of old China. When the feudal landlord class became conservative and reactionary after taking over rule from the slave-owning class, it adopted the doctrines of Confucius and Mencius to save itself and changed them into the ideology of the landlord class. Compromising with the landlord class, the weak bourgeoisie of China took over and turned these doctrines into reactionary ideological weapons to defend their own political and economic interests. **The concepts of bourgeois right, from the ideas of private ownership and hierarchy to attitudes towards physical labour and mental labour and so on in China, can all without exception trace their roots to the doctrines of Confucius and Mencius.**

The preeminent *shi*, Confucius, was an impoverished aristocrat who threw open the door of education by welcoming any student who paid tuition. He styled himself not as an originator but as a transmitter of tradition, especially the Zhou tradition, whose moral underpinning he brought into relief. Acceptable ruling-class customs, interpreted in ethical terms, receive a fresh life rooted in daily practices, especially in family life. **The *junzi*, originally meaning the son of the ruler, gradually changes to a superior man, noble in character but not necessarily in birth, clinging to aristocratic values even while slipping in rank and power.** Appealing to people’s empathy and moral intuition, Confucius expounds the supreme virtue of *ren*, benevolence, which his followers supplement with *yi*, righteousness.
…

The procrastinating Qin had lost much territory to the reformed Wei and Hann. Knowing that Qin must respond to geopolitical pressure that forced other states to improve, Lord Xiao called for ideas and attracted Shang Yang from Wei. With the lord’s backing, **Shang initiated in 356 BCE a series of political and socioeconomic reforms that turned Qin from a straggler to the top dog.**131

Shang Yang was the most successful of a long line of reformers stretching back through Wu Qi of Chu and and Li Kui of Wei to Zichan of Zheng. Further back was Guan Zhong (Guanzi), who helped Lord Huan of Qi to hegemony. After Shang came Hann Fei and Li Si, who contributed to Qin’s unification of China.
…

Shang Yang shared the fate of Wu Qi in aristocratic backlash. **Each was immediately killed upon the death of the lord who backed his reforms and vilified as a mean if not wicked character.** Entrenched Chu aristocrats rolled back many of Wu’s reforms. The aristocracy was weaker in Qin. Shang was torn to pieces, but his centralizing policies survived to make Qin the winner and, more important, to seed the institutional architecture of imperial China.

https://www.gutenberg.org/cache/epub/11952/pg11952-images.html#link2HCH4

> After the death of Philip the Handsome, the opposition made head more extensively and effectually; and it produced two results: ten ordinances of Louis the Quarreller for redressing the grievances of the feudal aristocracy, for one; and, for the other, the trial and condemnation of Enguerrand de Marigny **“coadjutor and rector of the kingdom” under Philip the Handsome.**

https://archive.org/details/catilineclodiust00beesuoft/page/144/mode/2up?view=theater

> * The career and fate of Sejanus strikingly resemble those of a much better man, Thomas Cromwell. Both had incurred the savage hatred of the class into which and above which they had raised themselves. **When Tiberius and Henry VIII. saw cause to distrust their ministers they had only to abandon them to the nobles, who rushed on them like a pack of hounds.**

When Shang died in 338 BCE, Mengzi, an eloquent third-generation disciple of Confucius, was intensifying his political activity in the east. Three decades of solicitation in various states won him fame, wealth, and a high ministry in Qi, but no rejoinder to the charge of retiring without achievements that actually benefited the people. **Lifelong experience and accusations of impracticality did not temper his conviction of being the only man capable of restoring order to the world.**133 His bitterness at his lack of success was comforted posthumously, since he is honored as the sage second only to Confucius.

https://archive.org/details/sectarianismreli01groo/page/10/mode/2up?view=theater

> It was Mencius, however, born about 372 b.C., nearly a century after the death of Confucius, who first by both word and example laid upon all future ages the duty of persecuting heresy. Indeed,

we read in the Classic which bears his name, that he violently attacked all heretics, and two men in particular had to bear the outbursts of his fury: **Yang Chu, a preacher of epicureanism of the worst kind; and Mih Tih, advocate of universal philanthropy to be practised even at the expense of one's parents, and also of simplicity in the funeral rites.** To wage war against their doctrines, which evidently had made alarming progress in his time, was the chief aim and object of the sage. Listen how he hurls the shafts of his indignation against them: "If their doctrines be not stopped, those of Confucius cannot possibly come to the front; the people will be led into error by that heretical language, and benevolence and righteousness will find the way blocked; **then, as a consequence, man, imitating the beasts, will devour man, the one tear the other to pieces.**" So hideous are the consequences of heresy! "I am alarmed by these matters," our sage goes on to say in the same breath; "distressed about the doctrines of the Sages of the past, I oppose Yang and Mih, and drive away heretical (*yin*) doctrines, in order that no preachers of heresies (*sié*) may do their work. Do such men work on people's minds, they do harm to their business; if they influence their business, they harm the government. **Should the Sages rise again, they would not alter these my words.** … It is also my desire to render the minds of men orthodox (*ching*), and thus to make an end of heretical (*sié*) doctrines; I wish to raise an obstacle against criticism, and thus to banish heretical (*yin*) talk; – in this manner I carry on the work of the three Sages. Should I do so from a desire to criticise? No, I cannot do otherwise. **He who can oppose Yang and Mih is a disciple of the Sages.**"1

Mencius then is the classical sage who tells us, categorically, what we are to understand by heresy: this is in fact everything that diverges from the teachings of the sages, and more particularly of three among them, who have been identified by commentators and scholars of all times as Yü the Great, abovementioned; Cheu-kung, "the prince of Cheu," brother and right hand man of the founder of the Cheu dynasty (12th cent. b.C.), who is the principal author of the *Yih* and of other classical writings; and lastly Confucius.

https://archive.org/details/sectarianismreli01groo/page/148/mode/2up?view=theater

The clause, apparently eighty years old, granting pardon to renegades who betray their co-religionists, we must not too readily take for a fruit of generosity. Besides being a mean enticement to betray, it is probably a classical concession extorted by the holy Mencius. According to the writings ascribed to him, this second Confucius said: "**They who run away from Mih cannot do otherwise than take refuge with Yang (comp. p. 11), and on running away from the latter, they must needs have recourse to Confucianism.** They who do this, must be received with open arms, and there the matter must rest. They who after that still controvert Yang and Mih, act like one who, when catching a loose pig, still pursues and calls it when it is already in its sty."1

…

Mengzi talks much about winning the hearts of the people. The people are heterogeneous, especially in stratified and hierarchical societies such as China and Rome. Thus one has to be careful about the meanings of "the people" in political writings. For instance, **analyses of the constitutional writings of Polybius and Cicero have revealed that "the people" who shared power with aristocratic senators and magistrates were often only the equestrians and perhaps rich proprietors who could afford the full panoply of heavy infantry.**137 Similarly, in reading modern writings on Mengzi's government "for the people," it is well to ask: for what people foremost?

Mengzi writes, **"Those who apply their mind to govern others; those who apply their brawn are governed. Those who govern live on provisions produced by others; the governed supply the provisions. This is the righteous principle of all under heaven."**138

…

Aristocratic power was declining, but still formidable. **Devoted to the Way of ancient kings, Confucians tried to reinvigorate the aristocracy and aspired to join it.** Confucius often equated the superior man with the aristocrat. Reinforcement of hereditary ministry was a central plank of Mengzi's "benevolent policy." **He also urged plush patronage of superior men, who nudged close to aristocrats with an arrogant posture.**140

While Mengzi pitied the starving people of his time, he everywhere took gold and gifts from aristocrats. His retinue of tens of carriages and hundreds of followers lived off one lord after another, inciting students' scruples about extravagance without contribution or official responsibility.141 It had been common knowledge that the proliferation of consumers of tax revenue was a reason for the people's poverty. **Joining Daoists and Mohists, Legalists deprecated special privileges and unproductive big talkers as "lice" who leeched off peasants and weakened the state.**

…

Confucians justify elitist privilege by the doctrine of rule by men: **With superior men in ruling positions radiating their personal virtues, world order would be attained effortlessly in one great leap forward.**144 **Confucius likens superior men to the wind and the people to grass: "swayed by the wind, grass necessarily bends."**145 The most potent superior man is of course the king. **Confucians constructed stories about exemplary sage kings in the Three Eras and prehistoric times: Yao and Shun of the third millennia BCE.** References to them fill political discourses.

...

Mengzi reiterates: "The Way of Yao and Shun is nothing more than filial piety and brotherly love." "The love of relatives is benevolence. Deference to seniors is righteousness." "Everyone loves his relatives and obeys his seniors and the world is well ordered."150 After becoming king, Shun executed enemies but made his evil brother lord. Mengzi dismisses a student's protest of unfairness by praising the sage king's brotherliness. Fealty, filial piety, and other personal virtues dominate. Substantive political considerations hardly venture beyond the web of unequal personal relations.151 **For those seeking concern for justice and the public good, disappointment waits everywhere in *Mengzi*.**

The Confucian political world is mostly confined to the personal plane as depicted in Figure 2.2a. This condition may have seemed natural to feudalistic aristocrats in their tiny, family-like states. However, political and socioeconomic realities had changed radically by Mengzi's time, a fact Mengzi and his disciples stubbornly ignored over the millennia. **States and populations had surged tenfold in size, and the expansion would continue. Rulers and ministers have to tend to the welfare of millions of strangers. Can principles such as loving relatives keep them from falling into nepotism and cronyism?**

They cannot, Legalists argue. Perhaps a sage king can manage, but sages are rare and hypocrites aplenty. A good and stable government must supplement personal virtue by institutions that function properly even under mediocre kings. It must rule according to the law.152 While the rule by men relies on the inscrutable virtues of elites, the rule by law relies on the law's publicity, fairness, understandability to the common people, and trustworthiness.153 **With these novel concepts, Legalists introduced in Chinese thinking a new dimension, the social and political dimension. In their writings, the meaning of *gong* turns from the lord to the public.**154
...

Legalist rule *by* law fails to consider legislative procedure and falls short of the rule *of* law as constitutionalism. Nevertheless, it contains the embryonic ideas of the state existing beyond all its constituents and institutional restraints on the ruler. **Why these ideas died in embryo is an important question in Chinese history that deserves far more attention than it gets.**

Equality under the law was a revolutionary idea, as Hann Fei asserts: "Under the law, clever violators can find no pretext. Criminal penalties do not excuse high ministers. Rewards do not exclude commoners."157 Shang Yang did not spare even the crown prince for wrongdoing. Aristocrats and superior men, accustomed to immunity from punishment, denounced the law's impartiality and impersonality as callous and destabilizing. It cut into their prerogatives and self-styled superiority in many ways. **Shang Yang refused to revere the enigmatic sayings of superior men and insists that the common people are capable of understanding the law.** Thus he demands that the laws be clear and accessible to them and that the state institute jurists as teachers. Knowing what to avoid, the people would behave themselves. Knowing that the people know the law, the elite would not dare to abuse them.158 Excavated documents reveal how Qin officials explained the laws by case examples and answers to questions.159 **The law empowers the people. Confucius sensed its threat in his revulsion against Jin's first publication of law: When people can appeal to the law, they would be less deferential to aristocrats.**

>
> **De Escadón writes that the corregidors and alcaldes reported to one of the Fathers every morning to get their decisions approved and to receive instructions as to the work order of the day. "This was accomplished as in a good family, where the father tells everyone what he must do for the day."** (61: p. 148) "The limited intelligence of the Indians compelled the missionaries to take care of all affairs and to guide them in secular as well as in spiritual matters," as the Jesuit Charlevoix (in *History of Paraguay)* quotes his contemporary Antonio de Ulloa. **There were no laws--only the decisions made by the Fathers.**

...

Confucians and Legalists both bow to kings, but the former revere the person of the monarch, the latter promote the institution of monarchy. Legalists argue that the king's authority emanates not from his person but from his *shi*, the throne's supreme position in a generally respected political institution, which structures the delegation of authority to various offices.163 **Nowadays we all know that to assault a police officer is a serious crime, not because the officer is blue-blooded but because he holds institutional authority, so the offence is not only against his person but also against the institution of justice. At that time, however, the novelty and abstractness of institutional ideas made them difficult to grasp, especially amid the loud denunciations of aristocrats.**

Political authority in the feudalistic regime was fused with family relations. Legalist reformers toiled to tease them apart to build a political institution based on rational principles. To maximize cooperation and minimize the chance of power scrambles and duty evasion, they established offices with definite authority and responsibility, a defined position in the chain of command, and specific rank, compensation, and criteria of advancement for its occupants: all characteristics of what moderns call a bureaucracy.164
...

The government should monitor behaviors to prevent officers from abusing their authority. That is why modern police departments institute an internal-affairs section. Legalists were aware of this need. "The sagacious ruler supervises his officers, not the people," writes Hann Fei. The supervisory techniques are *shu*. "The techniques are to appoint an officer suitable for job of the office and demand performance according to the responsibility of his title."165 As they developed, many supervisory techniques were formalized and integrated into government regulations. **Not surprisingly, supervision exasperated aristocrats and superior men, who found accountability insulting to their claimed virtue.**166

http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_173

In order to transform his people into clay in his hands, the ruler is advised to renounce love of man, of justice and of the people--**qualities that the author categorizes collectively as virtue. These qualities should not be assumed among the people either; they must be ruled like a collection of potential criminals with an appeal made only to fear and selfish advantage. "If the state is governed by virtuous methods, large numbers of criminals are sure to appear."** (84: p. 156) "In a state where the depraved are treated as if they were virtuous, sedition is inevitable. In a state where the virtuous are treated as if they were depraved, order shall reign and the state surely shall be powerful." (84: p. 163)
…

The ruler "should issue a law on mutual surveillance; he should issue a decree that the people ought to correct each other." (84: p. 214) **"Regardless of whether the informer is of the nobility or of low origin, he inherits fully the nobility, the fields and the salary of the senior official whose misconduct he reports to the ruler."** (84: p. 207)
…

The author pictures this entire system as a more profound and significant form of humanity, a path toward the dying away of punishment, execution and denunciation, **almost a withering away of the state--through its maximum increase in strength. "If punishment be made severe and a system of mutual responsibility for crime is established, people will not dare to expose themselves to the force of law. And when people begin to fear the results, the very necessity of punishment will disappear."** (84: p. 207) "Therefore, if by war, war can be abolished, then even war is permissible; if by murder, murder can be abolished, then even murder is permissible; if by punishment, punishment can be abolished, then even harsh punishment is permissible." (84: p. 210) **"Such is my method of returning to virtue, by the path of capital punishment and reconciliation of justice and violence."** (84: p. 179)

>
> Many people say, "Oh, the Finns are an honest people". Yes sir. **Do you know why they're so honest? Not because they've got simply fantastic moral inclinations, but because they had laws for 300 years, that anybody who stole one Finnish mark should have his hand hacked off.** And that was so painful and so distressing that the whole people, as a result of such measures and such education, gradually became honest.
>
> *Sohrab Ahmari on X*: **As I've said, when legal coercion works its educative effects, the people won't even remember that a week earlier they held the contrary opinion. They'll somehow convince themselves that they were always walking in the path now illumined by the law.**

What is the social structure that Shang Yang proposes to achieve by these means? He singles out two concerns for the sake of which other human interests should be suppressed and to which everything should be subordinated: **agriculture and war. He ascribes such exclusive importance to these entities that he introduces a special term to define them, translated as "concentration on the One Thing" or "unification."** The whole future of the country depends upon this factor: "The country that achieves unification, be it for one year, will be powerful for ten years; the state that achieves unification for ten years will be powerful for a hundred years; the state that achieves unification for a hundred years will be powerful for a thousand years and will achieve dominion under-the-heavens." (84: p. 154)
…

The implementation of these principles, however, is prevented by a force which the book deals with at length. To denote this force Shang Yang uses a term that is translated as "parasites" or (literally) "lice." Sometimes six parasites are enumerated, sometimes eight, in still other instances ten. **These are the *Shih Ching* and the *Shu Ching (The Book of Songs* and *The Book of History,* the sources of artistic and historical education), music, virtue, veneration of old customs, love of mankind, selflessness, eloquence, wit, etc. Elsewhere, knowledge, talent and learning are added.** What seems to be meant is culture in its broadest understanding and involving a certain level of ethical and moral demands.

> **Fire and water and earth and air, they say, all exist by nature and chance, and none of them by art;** and by means of these, which are wholly inanimate, the bodies which come next—those, namely, of the earth, sun, moon and stars—have been brought into existence. It

is by chance all these elements move, by the interplay of their respective forces, and according as they meet together and combine fittingly,—hot with cold, dry with moist, [889c] soft with hard, and all such necessary mixtures as result from the chance combination of these opposites,—in this way and by those means they have brought into being the whole Heaven and all that is in the Heaven, and all animals, too, and plants—after that all the seasons had arisen from these elements; **and all this, as they assert, not owing to reason, nor to any god or art, but owing, as we have said, to nature and chance.**[1] **As a later product of these, art comes later; and it, being mortal itself and of mortal birth, begets later playthings** [889d] **which share but little in truth, being images of a sort akin to the arts themselves—images such as painting begets, and music, and the arts which accompany these. Those arts which really produce something serious are such as share their effect with nature,—like medicine, agriculture, and gymnastic. Politics too, as they say, shares to a small extent in nature, but mostly in art; and in like manner all legislation which is** [889e] **based on untrue assumptions is due, not to nature, but to art.**

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA134#v=onepage&q&f=false

In Book 10 of the *Laws*, the Athenian Stranger gives a succinct and telescoped summary of this pre-Socratic ontology of primordialism (what the Gorgias fragment terms “the arguments of the cosmologists”).
…

The arts are “mortal” and “paltry” because they are short-lived fabrications of man in contrast with the primordial motions of nature. **Certain arts like “music” (tragic and lyric poetry) are utterly paltry.** (This judgment probably reflects the claim of Gorgias and other rhetoricians to have replaced the role of the old poets in shaping opinion.) **Some arts, however, like medicine, farming, and gymnastic, are relatively “serious” because they share their power “in common” with the life forces of nature.** We can tap into the potency of nature through agriculture and through the care of the body. **The realm of convention, by contrast, is utterly artificial and opposed to nature, even more so than the arts.** *Nomos* adjures us to be pious, just, to seek peace and respect the lives and property of others. The natural man’s passions will impel him to strive spontaneously for “victory” over others, “by force” if need be, shattering the artificial dictates of conventional morality and equality. Echoing Callicles’ speech in the *Gorgias* extolling the natual master, the pre-Socratics’ and Sophists’ view as summarized in the *Laws* stresses that, for a real man to accept these dictates is to live like “a slave.” It may be just and noble by convention to treat others as equals, but it is just and noble by nature (another echo of Callicles) to tyrannize over others whenever one can. **Finally, the whole subject matter of statecraft and legislation is held to be purely by art, and therefore entirely unnatural – except for a “small part” of the art of ruling which is in “partnership with nature” like the other “serious” arts of medicine, gymnastic, and farming. That “small part” is in my view the art of rhetoric, which for the Sophists is tantamount to everything meaningful about statecraft,** a point I will enlarge on subsequently.

https://en.wikipedia.org/wiki/Burning_of_books_and_burying_of_scholars#Punishment_of_the_scholars

> Chancellor Li Si Said: "I, your servant, propose that all historians' records other than those of Qin's be burned. **With the exception of the academics whose duty includes possessing books,** if anyone under heaven has copies of the ***Shi Jing*** [Classic of Poetry], the ***Shujing*** [Classic of History], or the writings of the hundred schools of philosophy, they shall deliver them (the books) to the governor or the commandant for burning. **Anyone who dares to discuss the *Shi Jing* or the *Classic of History* shall be publicly executed. Anyone who uses history to criticize the present shall have his family executed.** Any official who sees the violations but fails to report them is equally guilty. Anyone who has failed to burn the books after thirty days of this announcement shall be subjected to tattooing and be sent to build the Great Wall. **The books that have exemption are those on medicine, divination, agriculture, and forestry.** Those who have interest in laws shall instead study from officials."[a]—*Shiji* Chapter 6. "The Basic Annals of the First Emperor of Qin" thirty-fourth year (213 BC)

https://books.google.fi/books?id=ow5EY_upzRkC&lpg=PR1&hl=fi&pg=PA192#v=onepage&q&f=false

As we saw earlier, already in the Western Han a number of authors were crafting a very different image of Han Fei as an enemy of traditional morality and its source, the Five Classics. **Unlike Mencius and Xunzi, Han Fei was also associated with texts like “the Five Vermin” that attacked the core dogma of the emerging imperial ideology,** i.e., that the cultivation of virtue by rulers, his ministers, and the people was The Way to achieve good order (*zhi* 治). The view that “following Han Fei’s *shui* [is tantamount to] despising the way of emperors and kings,” to quote Dong Zhongshu, soon overshadowed

> the moral reading of “The Difficulties of Persuasion” and even turned this widely read text into a symbol of its author’s immorality. **With the establishment of the Five Classics, Han Fei’s role in the Chinese tradition came to resemble that of the Greek sophists in the Western tradition, those rhetorically adept thinkers whose supposed opposition to objective standards of right and wrong made them the perennial others of true “philosophy.”**57

http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_179

Plato, for instance, sought a ruler who would organize a state in the spirit of his teaching. **Plato's attempts ended when the Syracuse tyrant Dionysius, upon whom he had set his hopes, sold him into slavery. Shang Yang, however, found his ruler and had the opportunity to realize his ideals.** The prince of the state of Ch'in made him first minister and Shang Yang succeeded in carrying out a number of reforms. Here is what is known of Shang Yang's legislation:

1. Farmers ("those engaged in the essential thing") were freed from obligatory service.

2. Those discovered engaging in "nonessential" activities were turned into slaves.

3. Ranks of nobility were obtainable only through military service. High positions in the government could be given only to those who had already earned the rank of nobility. Those without rank were forbidden to display luxuries. **(In this way, the ruling class was transformed from a hereditary aristocracy into officials dependent on the favor of their superiors and the monarch.)**

4. The state was divided into provinces ruled by state officials.

5. Large families were split up, and grown sons were forbidden to live with their fathers. (This measure is seen as an attempt to destroy the village community.)

6. **Fields were marked off with boundary lines.** A number of historians see in this the destruction of community and the subordination of the peasantry directly to officials; others view it as indicative of the freedom to buy and sell land. (The spirit of Shang Yang's book would seem to render the latter interpretation quite unlikely.)

7. Capital punishment was introduced for the theft of a horse or an ox.

8. Every five households were united into a unit of shared responsibility and linked to another five. If one member of the group of ten households committed a crime, the others were to report him--otherwise they were to be cut in half. The informer was to be rewarded in the same manner as one who had killed an enemy.

These laws met with great resistance, but Shang Yang managed to cope with the opposition. Individuals expressing their discontent were removed to the frontier regions. Danger struck from quite a different quarter. His patron died and the heir to the kingdom, who hated Shang Yang, executed him along with his entire family. **But Shang Yang's reforms were left in effect and led, as he had asserted, to the achievement of hegemony under-the-heavens by the Ch'in kingdom. In the third century B.C., China was united in the highly centralized Ch'in empire in which the ideas of Shang Yang were implemented even more consistently and on a greater scale.**

> https://books.google.fi/books?id=gSwrDwAAQBAJ&lpg=PP1&hl=fi&pg=PA295#v=onepage&q&f=false
>
> His decrees “smashed the obsolete political structure in the state of Ch’in” and were “his indelible merits in history.” **Those who considered his conduct a little savage should remember the words of Engels: “Without violence, without unrelenting harsh means, nothing in history would succeed.”** In consequence, the reactionaries had ordered him to be torn apart by chariots, and “he died a martyr at his post, laying down his life in the cause of reform.”
>
> **He had proved, the *Red Flag* emphasized in another article, that “it was possible for a backward state to advance by leaps and bounds and become a developed one, provided it moved with the tide of history and firmly adhered to the Legalist Line.”** Shan Yang, Hsun Tzu (“Men are born evil”), and Han Fei (who united the principles of “law,” “power,” and “technique") were all hailed as teachers who **“reflected the progressive nature of a new vigorous class bent on carrying out social changes”** and had “stood in the van of the tide in their day.”

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA61#v=onepage&q&f=false

Xunzi, a Confucian master whose students included Hann Fei and Li Si, attends to reality and tries to bridge the gap. **However, he is excluded from orthodox Confucianism, which exalts idealistic Mengzi.**169 On Mengzi’s ideas the following brief comparison with legalists will focus.

https://books.google.fi/books?id=v65aBAAAQBAJ&lpg=PP1&hl=fi&pg=PA130#v=onepage&q&f=false

I reply: "This Way of which I speak is not what the Daoists and Buddhists refer to as the Way. Instead, this Way was transmitted by Yao to Shun; it was transmitted by Shun to Yu; it was transmitted by Yu to Tang; it was transmitted by Tang to Wen, Wu and the Duke of Zhou. Wen, Wu and the Duke of Zhou transmitted it to Kongzi. It was transmitted by Kongzi to Mengzi. **When Mengzi died, it did not succeed in being transmitted. Xunzi and Yang Xiong grasped parts of it but not its essence; they spoke of it but not in detail.**12 **Up to the Duke of Zhou, [these sages] were rulers.** Hence, their actions were put into effect. **After the Duke of Zhou, they were ministers.** Hence, they offered more developed explanations.

https://plato.stanford.edu/entries/xunzi/

Xunzi □□ (third century BCE) was a Confucian philosopher, **sometimes reckoned as the third of the three great classical Confucians (after Confucius and Mencius).** For most of imperial Chinese history, however, Xunzi was a *bête noire* **who was typically cited as an example of a Confucian who went astray by rejecting Mencian convictions.**
…

Famously, Mencius argued that the *xing* of human beings is good (*shan* □), by which he meant that all human beings *have the capacity to become* good, even though, in reality, not all people are good, because they fail to exert themselves sufficiently—or even take the obligation seriously.

In *Xunzi*, "Human Nature is Evil" is framed as an argument with Mencius (who was probably long dead), and takes the view that the *xing* of human beings is the very opposite of *shan*, namely *e*. **The basic meaning of *e* is close to "detestable" (as a transitive verb, *wu* □ means "to hate"); the translation "evil" is acceptable only with the understanding that something like an Augustinian conception of evil is not intended. (Some scholars opt for "bad", another standard antonym of "good" in English.)** But in prosecuting this position, Xunzi uses *xing* in a fundamentally different sense: "What is so by birth is called *xing*" (*Xunzi* 22.1b).[3] Thus *xing* refers to the basic faculties, capacities, and desires that we have from birth, which cannot be called "good" because following the impulses of our *xing*, without reflecting on them and moderating them, will lead us to act harmfully (Hutton 2000; Tang 2016: 51).

In effect, both Xunzi and Mencius argued that human beings all have the capacity to become good, even though some people develop this capacity and others do not (Graham 1989: 250; Shun 1997: 222-31). The main differences, only recently appreciated, are that they were not operating with the same implicit definitions of *xing*, and Xunzi's recommendations for moral self-cultivation—that is, how to overcome one's inherently detestable nature—were more complex than Mencius's, as we shall see. **Because of Mencius's subsequent prestige, it was commonly supposed that Xunzi's definition of *xing* was heterodox, if not deliberately subversive. But a collection of Confucian manuscripts recently excavated from a tomb near the modern town of Guodian □□ and dated to ca. 300 BCE suggests that it may have been *Mencius's* usage of *xing*, not Xunzi's, which was considered eccentric in ancient times.**[4] The Guodian text called *The* Xing *Emerges from the Endowment* (*Xing zi ming chu* □□□□) defines *xing* in a manner very similar to Xunzi: the set of inborn characteristics shared by all members of a species (Goldin 2005: 38).

Fixating on the title "Human Nature Is Evil" (which may or may not derive from Xunzi himself) can lead to an elision of **the second half of the chapter's credo: "what is good [in people] is their artifice"** (*qi shan zhe wei ye* □□□□□). "Artifice" (*wei*)[5] refers to all the traits and habits that we acquire through our own conscious actions. And if we achieve any goodness, it must be because of our artifice: whereas

> **obeying one's *xing* and following one's emotions must result in contention and robbery** … the transformation [brought about by] the methods of a teacher and the Way of ritual and morality will result in deference and courtesy, in accordance with refinement and principles, and return to order. (*Xunzi* 23.1a)

…

In some passages, Xunzi attributes, in a manner superficially reminiscent of Hobbes or Rousseau, the genesis of the rituals to the sages' recognition that unbridled competition produces a globally unsustainable situation:

> **If people follow their desires, then boundaries cannot contain them and objects cannot satisfy them. Thus the Former Kings restrained them and established for them ritual and morality in order to divide them [into classes].** (*Xunzi* 4.12; cf. 19.1a)

…

First, **Xunzi elsewhere explicitly denies that an arbitrarily chosen set of rituals would be effective.** Rather, the rituals of the sage kings are legitimate because they accord with "that which

makes humans human" (*ren zhi suoyi wei ren zhe* □□□□□□□); by implication, any competing ritual code would necessarily fail.
…

Xunzi's immediate purpose in this section was to counter the Mohist view that music is wasteful. **Xunzi counters that by focusing exclusively on the material costs, Mo Di □□ (d. ca. 390 BCE) and his followers failed to recognize the psychological utility of music as an instrument of moral suasion** (Cook 1997: 21-24; Graham 1989: 259-61).

> When music is centered and balanced, the people are harmonious and not dissipated. When music is stern and grave, the people are uniform and not disorderly. When the people are harmonious and uniform, the army is firm and the citadels secure; enemy states dare not invade. (*Xunzi* 20.2)

…

Xunzi even extends this theory of "human portents" to contend that religious ceremonies have no numinous effect; we carry them out merely for their inherent beauty and the social cohesion that they promote.[8]

> If the sacrifice for rain [is performed], and it rains, what of it? I say: It is nothing. Even if there had been no sacrifice, it would have rained. … **Thus the noble man takes [these ceremonies] to be embellishment, but the populace takes them to be spiritual. To take them as embellishment is auspicious; to take them as spiritual is inauspicious.** (*Xunzi* 17.8)

8. **In this connection, he is often compared to Émile Durkheim** (1858-1917), e.g., by Radcliffe-Brown 1952: 157-60 and Campany 1992. For objections, see Goldin 1999: 64-65 and Robson 2014: 140.

…

At[12] the end of his life, Xunzi was the leading teacher and philosopher in the Chinese world. Among his former students were some of the most influential men in politics, including Han Fei □□ (d. 233 BCE), Li Si □□ (d. 208 BCE), and Zhang Cang □□ (ca. 250–151 BCE), as well as transmitters of several leading redactions of canonical texts, including Fuqiu Bo □□□ and perhaps Mao Heng □□ (Goldin 1999: xii).
…

Dong Zhongshu is reported to have written a paean to Xunzi (now lost), and writers of late antiquity, such as Wang Chong □□ (27-ca. 100 CE) and Ban Gu □□ (32-92 CE), still took him seriously as a philosopher. But thereafter, Xunzi's star began to set. In later centuries, the two tirelessly repeated clichés about Xunzi were that he propagated the anti-Mencian doctrine that human nature is evil, and that, by serving as Li Si's and Han Fei's teacher, he furthered the cause of Legalism (*fajia* □□) and thus subverted high-minded principles. Ji Kang □□ (223-262), for example, obliquely identified Xunzi as the chief architect of everything that Ji and his group disdained: artificial ritualism, counterfeit erudition, and an oppressive network of laws that serve only to interfere with the innocuous enjoyment of life (Goldin 2007: 140-42).

By the Tang □ dynasty, even literati who admired Xunzi—such as Han Yu □□ (768-824)—were careful to add that his works contain grave mistakes (Kong Fan 1997: 281; Liu Youming 2006: 48-50). In the Song □, there were still some voices that praised him, but the opinion with the greatest long-term consequences was that of Zhu Xi □□ (1130-1200), who declared that Xunzi's philosophy resembled those of non-Confucians such as Shen Buhai □□□ (fl. 354-340 BCE) and Shang Yang □□ (d. 338 BCE), and that he was indirectly responsible for the notorious disasters of the Qin dynasty (Kong Fan 1997: 291-95). For the rest of imperial history, Xunzi was rejected by the cultural mainstream;[13] **into the twentieth century, he was criticized by intellectuals such as Kang Youwei □□□ (1858–1927), Tan Sitong □ □□ (1865-1898), and Liang Qichao □□□ (1873-1929) as the progenitor of the Confucian scriptural legacy, which, in their view, had derailed the original Confucian mission and plunged China into a cycle of authoritarianism and corruption that lasted more than two thousand years.**

Today the tide has reversed almost completely. Xunzi is one of the most popular philosophers throughout East Asia, and has been the subject of a large number of books published over the past two decades. From a twenty-first-century perspective, this revival of interest in Xunzi is not hard to explain: **his body of work has always been one of the best preserved, and with the commonplace scholastic objections to his philosophy having lost most of their cogency,** it is only to be expected that philosophical readers should be attracted to his creative but rigorous arguments. In this sense one could say that Xunzi has finally been restored, more than two millennia after his death, to his erstwhile position as *zui wei lao shi*.

Being certain about the potency of virtuous intentions, Confucians pay little attention to problems of realization. **Confucius dismisses questions on agriculture as fit only for the petty man: "The superior man is no instrument."**170 Along this vein, Confucians disdain instrumental reason and technical knowledge, including law,

economics, and management.171 **Economics invariably leads one to consider utility, efficiency, interest, cost, and benefit, which aristocrats snub. Confucius says, "The superior man considers righteousness; the inferior man, utility."**172 **Mengzi elevates anti-utility into an influential moral doctrine and brands utility chasers as robbers.**173

Mengzi gained audience with King Hui of Wei. The king asked, "How do you propose to benefit our state?" Mengzi replied: **"Why does your majesty attend to benefits? All that matters is benevolence and righteousness."** The king was interested in the beneficial consequence expected of Mengzi's proposal. Without any evidence for it, Mengzi attributed a selfish intention to him, sneered at his famine relief as merely a lesser evil, and proceeded to "rectify the ruler's heart" by lecturing on benevolent motivation.174 We will see how such airy moral denunciations hamstrung utilitarian officers toiling to achieve something constructive in difficult situations.

The opposition between righteousness and utility was only one manifestation of Mengzi's idealism that polarized complex matters into simplistic good and evil and declared war between them. Another set kingship against hegemony.175 ***Ba*, like the Greek *hēgemōn*, originally meant an eminent leader,** as we saw in section 1.4. **Athens changed its behavior after the Persian War; therefore other Greeks changed the epiphet, using *polis tyrannos* instead of *hēgemōn*.**176 In contrast, Mengzi degraded *ba* to a despicable tyrant basing not on actual behavior but on an intolerant ideology. **The leadership of Lord Huan of Qi and other hegemons had won applause from many, Confucius included.** Mengzi dismissed them as beneath discussion simply because they fell short of the ideal king's perfect benevolence.177

Mengzi advocated heavy punishments for "robbers of the people," generals, diplomats, and officers who led land reclamation and distribution.178 How to maintain national security in the age of warring states? He answered with the mantra "The benevolent ruler is invincible."179 His benevolent policy called for rejuvenating the well-field system, but never considered the realistic problem of how to obtain the land needed for poor families. The difficulty that bedeviled the Gracchi brothers in Rome was also present in China. **In contrast to the Gracchi who took the responsibility of addressing the land problem, Mengzi made it almost impossible by opposing both infringement on great houses and development of new land, which was effortful.**180

Mengzi's "robbers" were Legalists, statesmen aiming at *fuguo qiangbing*, to enrich the state and strengthen the army. **Superior men ignorant of economics and disdainful of production interpreted this as impoverishment of the people, because they imagined the ruler and the people fighting over a pie of fixed size.**181 Those who considered production knew that good policies can create a win-win outcome by enlarging the pie to be divided. To grow the economy, Legalist reformers organized people for water-works and other projects that put land under cultivation. To maximize land and labor productivity, Qin, Wei, Zhao, and other states systematically distributed standard plots to individual households. The land distribution programs helped independent family farms to their feet and became a model for several imperial dynasties.182

Because of its equal treatment of households, the Legalist land distribution program is often confused with Mengzi's well-field system. Actually, it replaced the well-field by a new socioeconomic organization. **Dong Zhongshu, leading Confucian scholar of the early Han Dynasty, remarked, "Qin adopted Shang Yang's law, abandoned the Way of ancient kings, abolished the well-field, and allowed people to buy and sell land."**183 **He rightly located the innovation as alienable private landed property, although wrongly blamed it all on Shang.** The ideas of sovereignty, right of land usage, and ownership of land were on the verge of differentiation in the Spring and Autumn period. Lands changed hands, but justifications for the claims and transactions were murky and inconsistent. Land ownership, which depends on legal definitions of location, occupation, income, transaction, and disposal, is peculiarly complex, even today. Legalist laws and and distribution programs provided clearer formulation and state backing of it. **Landed property right, absent under the well-field system, greatly stimulated the economy.** Dong's hostility to it, surprising to us, reflected the anti-utility ideology.

Another difference is the form of government taxation. **Corvée levy in the well-field system set the interests of the peasant and the lord against each other. The result was apparent in contemporary reports of peasants working sluggishly on the lord's field in order to save their energy for their individual plots.**184 **No wonder Mengzi was eager to purge the people's mind of self-interest and indoctrinate them with righteousness: "No one who is righteous puts the ruler's matters second."** Because of his low estimate of petty folks, however, his benevolent ideal ensured that no one "dared" attend to his own affairs before finishing the lord's business.185 Instead of futile brainwashing, Legalist policies changed the rules so that while peasants tended their own interests, they simultaneously suited the state's purpose.
…

According to Sima Qian, whose *Records of the Historian* initiated the tradition of *Standard Histories*, a decade after Shang started reforms, taxes were fair, families prospered, and the common people rejoiced. However, most aristocrats seethed.188

Qin alone among the Chinese states integrated farming and armed service. The Romans blamed Carthage's defeat on its preference to trade over conquest. Each conquered the civilization to its east but submitted to its cultural superiority. Most influential high ministers on Qin came from the east.
…

Carthage and Chu, the toughest enemies of Rome and Qin respectively, were themselves marcher powers.8 **A successful power at the border between high civilization and high barbarism leverages the vitality of the latter by the knowledge of the former.**
…

Qi and Qin, at the eastern and western ends of the Chinese world, revealed the diversity within a rather homogeneous culture. Agriculture was the economic base in all states. Unlike Qin's single-mindedness, however, **Qi on the eastern seaboard also encouraged commerce, fishing, and the salt industry.** Contrary to the simplicity of Qin's capital Xianyang, Qi's Linzi, with a population of about 70,000 households, flaunted expensive lifestyles. Adjacent to Lu, the bastion of Zhou tradition and Confucianism, Qi shared the enthusiasm for high culture. Its kings built a Palace of Learning at Jixia, sponsored thousands of students, granted posh stipends to seventy-six masters, and built them big houses.24
…

Qin's 316 BCE strategic decision disclosed its grasp of balancing power. A minister urged attacking Hann because it was the gateway to Zhou, and by capturing Zhou's emblems of power and controlling the son of heaven, Qin would gain the prestige to command the whole world. **Yet the opposition prevailed: "To assault the son of heaven would incur notoriety, not advantage. It brings the name of injustice. It is dangerous to attack what the world is unwilling to see endangered."**30 Qin did lust after Zhou's emblems, but it left Zhou alone until 255 BCE and refrained from destroying Hann or any other major state even longer. **It understood the necessity to avoid galvanizing opponents. Swallowing peripheral states such as Shu was fair game; so was robbing major states of some land and population. To extinguish a great power, however, would inflame the fear and loathing of other great powers.**
…

In Qin's carefully prepared campaign, the six states fell like leaves in a gale. United China began in 221 BCE.37

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA116#v=onepage&q&f=false

We think of empire as a large territorial state under a unified government. **To the Romans, however, empire meant power foremost. *The imperium populi Romani* meant the domination of the Romans over the peoples, with or without annexing their territories.** Not until the mid-first century BCE did a clear territorial connotation appear and *imperium Romanum* begin to assume the familiar meaning of the Roman Empire.2 It was then badly governed. Government necessitated numerous officers in provincial administrations. **Unlike Chinese states that allowed in talented commoners, the Roman aristocracy jealously guarded the ruling circle and the ambition if its individual members. Instead of draining the circle for provincial governors and risking the danger that individual governors would become too powerful, it preferred to use cronies, collaborators, and private contractors to do the exploitative work.** Driven only by self-enrichment and lacking government oversight, these predators were usually harsher on the subject people and less efficient for the state, but they were good enough for the senatorial aristocracy. Farsighted statesmen such as Pompey and Caesar realized that the situation was unsustainable but offered no viable alternative. Not until Augustus did the Romans find a way to enjoy the fruits of victory in a lasting imperial monarchy, but at the heavy price of sacrificing their republican spirit.3

The classic verb for Qin's actions on other states is *canshi*, literally "to munch like a silkworm." A caterpillar devours a leaf not by swallowing but by relentess shaving. Swallowing implies a notion of the whole; shaving does not. Domination and encroachment seemed to be the major concern of Qin and its fellow warring states. People tired of incessant wars harked nostalgically back at the early Zhou, when concord prevailed under a strong feudalistic king. **Anticipation for a unified imperial China was scarce.**4 **It was conspicuously absent in *Lü's Annals* under the eponym of Qin's premier Lü Buwei, published one year before the future First Emperor reached adulthood and began to rule.** The new political vision crystallized in the young king's court. In the time span that Caesar conquered Gaul, Qin swallowed six rivals whose combined population more than quintupled its own. The First Emperor destroyed not only entrenched kingdoms, but also the traditional regime type by abolishing the feudalistic aristocracy. **Reaping the experience of more than a century of Legalist reforms, he instituted a centralized monarchy with bureaucratic apparatuses regulated by law. This vision was so revolutionary that he had to burn books to suppress aristocratic reactionaries.**
…

Ying Zheng, the future First Emperor, was born in Zhao amid intense hostility toward Qin. His father was a neglected Qin prince serving as hostage to Zhao. **The merchant Lü Buwei saw in the prince an exotic commodity and, with much gold and political shrewdness, caused him to be inserted into Qin's line of royal succession. The investment paid off handsomely. Lü became premier when the prince became king. To this premiership was added regency when King Zheng inherited the throne at age twelve.**55

During King Zheng's minority, state matters were controlled by Lü, the queen dowager, and her consort Lao Ai. They did not survive the first encounter with the king when he reached adulthood and began his rule in 238 BCE. The queen dowager was dismissed and Lao executed on conspiracy charges. Lü, in forced retirement, drank poison for fear of further recrimination. **Within two years, King Zheng had secured for Qin the internal solidity indispensable for external expansion.**56

Lü and Lao were both aliens. So were most of Lü's numerous clients. Then it was discovered that Zheng Guo, who masterminded a grand waterworks project, was a Hann agent charged with diverting Qin's resources from pressuring Hann. **Urged by native aristocrats, King Zheng expelled all aliens, among whom was Li Si, originally a petty clerk from Chu. However, he rescinded the edict upon reading Li's memorial on the rationale of garnering talents from all under heaven.** Recalled, Li became his ablest minister, and he was far from the only foreigner who contributed to Qin's final success. **Li argued that Qin had the capacity "to unite the whole world under one government."** In the court of the young king emerged a resolve not to squander the historic opportunity.57

The annexation of Hann in 230 BCE was Qin's equivalent of crossing the Rubicon. The old system was left behind. Henceforth a new grand strategy reigned supreme: China was to be united. Fighting was fierce, but Qin's diplomatic preparations and lightning attacks preempted attempts at coalition when it extinguished Wei, Chu, Yan, Zhao, and Qi between 225 and 221 BCE.58

Peace and stability were the major achievements that the First Emperor claimed: “The kings of six states captured, all under heaven is united. Conflicts and calamities terminated, arms are laid forever to rest.”59 **He had the weapons of the former six states destroyed, fortifications and city walls everywhere levelled, and barricades in mountain defiles removed. Even Han literati usually eager to disparage Qin admitted, “The masses rejoiced at relief from the hardship of warfare.”**60
…

The Chinese speak many dialects, some mutually incomprehensible and susceptible to evolving into distinct languages, as Latin evolved into the Romance languages. **Binding the dialects and cementing the nation is the common written script, a celebrated legacy of Qin.** Before unification, several scripts coexisted, similar but with significant variations. Li Si and others worked hard to promote a standard script convenient for writing. Also standardized were administrative and penal laws, weights and measures, coinage and metal currencies, and the gauge of vehicles that could henceforth run in the same ruts. **Such standardization “seems conventional today, and it requires a leap of imagination to realize what innovations they were in the third century B.C. Many of these advances did not appear in Europe until the French Revolution, over two millennia later,”** writes a Western historian.63

No military operation was on official record for six years after unification, although scattered actions might have lingered in the mountains. The First Emperor inspected the northern region in 215 BCE. Afterward he ordered Meng Tian, whe had been guarding the frontier, to mobilize troops and drive nomads out of the area south of the long wall built by Zhao. **A year later, Qin established three new provinces in the south and consolidated them with forced colonization. Thus it expanded to cover roughly the core territory of imperial China** (Map 9).64

Massive building projects filled the last three years of the First Emperor’s reign. The long walls built by various warring states to fortify their northern frontiers were repaired and extended. A straight road connected the frontier to Xianyang. **Chinese roads were made of stamped earth, easier to build than Roman roads paved with cut stones but requiring greater diligence for maintenance.** More profligate were contructions near Xianyang, whch allegedly employed 700,000 convicts. The new Ebang palace with its gigantic mausoleum reached its final stage.65 The extravagance of these buildings is undoubted, but they have perished, so we are unable to compare them with the “city of marble” that Augustus left in Rome.

The emperor made five extensive tours of the country to visit the troops and pacify distant peoples, as he announced in the six stone inscriptions erected on sacred mountains that he ascended. **Inspection of local conditions resulted in directives such as breaching enbankments designed to flood enemy territories in the previously war-torn heartland.** As the duty of the supreme ruler demanded, he offered sacrifices to heaven and earth. He also enjoyed the sea and went whale hunting.66

During his fifth tour in 210 BCE, the First Emperor died. **Loath to mention death in the prime of life, he did not designate an heir until, gravely ill,** he wrote a sealed letter to his elder son Fusu, who was with Meng Tian. The letter was in the charge of the imperial secretary Zhao Gao, a eunuch who was a confidant of his youngest son, Huhai. Zhao somehow secured premier Li Si’s quiescence as he altered the letter, ordered Fusu and Meng to commit suicide, and erected Huhai as Ershi, the Second Emperor. Li would pay for his treachery.67
…

The Second Emperor’s three-year reign surpassed the combined malice of Emperor Claudius, manipulated by freedmen, and Emperor Nero, who fiddled while Rome burned. A puppet of Zhao Gao, he wantonly stepped up the excesses of the First Emperor and perpetrated a bloodbath of royal kin and high ministers.

Ten months into his reign, heavy rains held 900 conscripts heading for the northern frontier at Dazexiang in former Chu territory. They had no way to report for duty on time. The officers in charge expected punishment for being late. Chen Sheng, a locally selected section chief, conferred with another, Wu Guang: **“Escape or revolt, we risk death. It is death anyway; why not die for a kingdom?”** After psychological manipulation, the pair killed the Qin officers and swayed the conscrips by a grim picture of garrison.68 In the words of early Han scholar Jia Yi, Chen “stepped from the common rank, rose among centurions, led poor wearied soldiers in the hundreds, and revolted against Qin. They cut trees to make weapons and raised flags on utility poles. All under heaven gathered like clouds and reverberated like echoes.”69 Attraching followers on the way, they seized the provincial capital from which Chu previously ruled. There Chen declared himself king and dispatched lieutenant Zhou Wen to attack Xianyang. **Thus began the first large-scale rebellion in the history of imperial China.**

News of rebellions reached the Qin capital quickly, but no one dared to suggest deploying troops for suppression after the Second Emperor penalized messengers who told the truth. Finally, when Zhou Wen’s troops walked through the unguarded mountain passes, he agreed to reprieve and arm the convicts working on the royal mausoleum. Led by Zhang Yan, the hastily assembled army smashed the approaching rebels and proceeded to rout Chen’s main army, already intoxicated by power and weakened by internal conflicts. **The victories were too late for Qin. Former royal houses and elites had reasserted themselves, and opportunists mushroomed in the eastern countries. They killed many Qin governors and declared allegiance to Chen.** Qin garrisons, if present, were ineffective. Xiang Yu took over Huiqi Province in the Yangzi Delta, and Liu Bang the Pei County to its north. **While the rebels strengthened, Qin’s army of ex-convicts received meager reinforcement from its supposedly mighty war machine.** Zhang surrendered at Julu, defeated by Xiang’s small army of soldiers who showed their determination by sinking their boats after crossing the Yellow River, smashing all cooking utensils, and carrying only three days’ rations. While Xiang engaged the Qin force, Liu reached Xianyang with little opposition and received Qin’s surrender in 206 BCE, but it would be years before he could defeat Xiang and become Gaodì, the founding emperor of the Han Dynasty.70
…

Qi, Chu, and other states that Qin annexed had eight centuries of history, each with its peculiar and sophisticated culture. Qiren or Churen (*ren* means “man” or “people”) sounded as natural as “Englishman” or

“Frenchman” does to us. Their native dialects were probably mutually incomprehensible. Look at a political map and imagine that, within several years, eastern Asia had changed from a patchwork of color, as in Western Europe today, into a single color, and then you may appreciate what Qin had done. **Of course the Qiren or Churen hated the old enemy turned new master, to whom many had lost loved ones in previous wars.** In the rebels’ efforts to win popular support, Chen Sheng invoked the memory of a Chu hero who died defending the homeland, and Xiang Yu erected a king from the former Chu royal house, to whom Liu Bang also pledge allegiance.74 Their actions revealed the hearts of people lying with their old kings. **The main target of their uprising was not a brutal ruler but a foreign occupier. That explains why lands of the old Qin state remained quiet.**
…

Far more surprising than the outbreak of revolt is Qin’s failure to quash it. I reject the received view that blames the failure on tyranny; Qin would have done much more to suppress the revolt if the government were as brutal as alleged. **The aftershocks of conquest aside, little evidence points to deteriorating material conditions for the masses. I will argue that those most aggrieved were the political elites who lost privileges in Qin’s abolition of the feudalistic aristocracy and resented legal supervision of officers.** Qin’s failure to mollify the elites, including those working in its government, intensified the peril of imperial overreach and rapid demobilization. **Later, the literati fabricated stories about Qin brutality, blamed Qin’s demise on its abandonment of the Way of ancient kings that favoured aristocrats,** and deployed Confucian ethics to warn emperors against following Qin in putting the law above elitist privileges.

>
> The execrations of nineteen centuries lie piled on the grave of the successor of the Gracchi and the forerunner of Caesar. **It is not good to make a literary man your enemy.**
>
> Catiline and Cicero were not merely political opponents. **The natures of the two men were thoroughly antipathetic. Cicero thought that society existed for the glory of clever writers and eloquent speakers.** The strength of character and prudence which make the practical statesman were in his eyes very vulgar qualities. He shrank with dislike and fear from a resolute man. **He reverenced constitutional forms as framed in the interest of talkers. His idea of good government was a state of things where talkers should always have full swing, and be listened to with respect, while rough practical men should humbly do their bidding.**

…

Equality under the law aside, Qin discouraged large households and distributed land to nuclear families. Financial independence boosted the dignity of young couples, so that sons showed pride in lending tools to their fathers and daughters dared to argue with their mothers-in-law. Han Confucians condemned such behaviours as beastly immoral.79 However, Legalists did not set to destroy filial piety as charged. Primary sources recorded Qin laws that granted special treatments to sick and elderly persons. One law stipulated the state’s refusal to accept accusation of parents by their offspring, thus leaving certain authority to the head of family.80 Other excavated documents taught honesty, uprightness, diligence, and other traditional virtues. *Lü’s Annals*, a broadminded anthology not lacking criticism of the government, was publicly posted in Xianyang’s marketplace. The First Emperor instituted the office of Erudites of scholars, including Confucians, and listened to them before making his own decisions.81

Sima Qian observed that as soon as Qin fell, some Erudites spread lies about it.82 Western historians warn readers that Han writers, “because they are so often marked by evident anti-Qin bias, should be approached only with extreme caution.”83 **Vilification of Qin served the interest of Han, rebels eager to justify themselves and prevent others from following their rebellious example.** The *Book of Han* records many cases of Han literati “borrowing Qin as an analogy,” ascribing to it whatever they thought bad, and using its dire fate as an object lesson to push their own agenda.84 **Qin became identified with evil, just as Yao, Shun, and the Three Eras were identified with virtue.** In either case, the ascriptions mix history with fiction. One politician told contradictory stories when advocating different policies.85 Where scholarship meant quoting each other, repetition generated a false air of truth. **A modern researcher outside the echo chamber observes that “the archaeological and textual evidence exposes these criticisms as self-serving Han propaganda with little relation to Qin policy or its failure.”**86
…

Ban’s lengthy Annals of Gaodì details his fiscal measures and efforts to win hearts. **Conspicuously absent is any mention of general tax reduction, which would be the most benevolent and popular act worth trumpeting. Historians concur that the Han generally adopted Qin institutions.**91 Dong Zhongshu, the leading Confucian scholar of early Han, specifically asserted continuity in tax rates.92 The most cogent evidence comes from excavated bamboo trips: documents interred about 217 BCE, four years into the Qin Dynasty, and fragments of the Han law published about 187 BCE, fifteen years into the Han. Fragments of “land laws” indicate that both dynasties collected the land tax in the form of grain and fodder. Both stipulated the same amount for the latter, and in the same words.93 If the same applied to grain, then the Han’s initial land tax rate of one-fifteenth was inherited from the Qin Dynasty. For comparison, Lu collected one-fifth in taxes at the time of Confucius, and Mengzi’s ideal demanded one-ninth.94
…

Considering various factors in Appendix 3, I estimate that long-wall construction under the First Emperor required roughly 238,000 man-years of labor. If this is correct, then Meng Tian’s 300,000 troops could have accomplished the mission in one year and then been discharged. It would explain why they were never mentioned in 209 BCE when the government desperately needed troops to suppress rebels. **Those condemning Qin for unremitting militarism fail to answer a crucial empirical question: Where was the Qin army in time of dire need?**

In sum, if we look past propaganda at available facts, Qin's tax and levy were not harsh by contemporary standards. **However, that obtained only for ordinary people. For those in the powerful and previously privileged class, conditions worsened.** Many warring states built long walls, but only Qin's wall building inspired horrible stories.
...

Venerated ministers led by the premier advocated the Way of ancient kings, in which territories of the former six states would be divided into subordinate territories ruled by kings chosen from the emperor's sons. **Li Si alone objected. Pointing to the endless fighting among descendants of relatives enfeoffed by the Zhou, he argued that long-term peace and stability required the emperor to rule the whole country directly. The First Emperor agreed: "To re-establish feudatories would be to encourage the use of arms."**101

In 213 BCE, eight years after the abolition of feudalistic aristocracy, Chunyu Yue, an Erudite from former Qi, urged restoring the Zhou model: "**Your majesty possesses all under heaven, but your sons and brothers are mere commoners. … I have never heard of any undertaking that endures without imitating antiquity."** The emperor, as usual, referred the matter to court discussion. **Li Si argued that times had changed, so why should the emperor imitate the Zhou? To stop bigots from using the authority of books to mislead the people, he proposed limiting the access of most books to official scholars.** The First Emperor ordered many books burned, except the copies at the imperial library. His purpose was mainly political, to protect the new institutions of centralized government and pacify conquered peoples. Spared were books on medicine, agriculture, and other practical topics.102 **The prime targets were histories of the former six states, followed by the *Odes* and *Documents*, the authority for the Zhou model. The books of "a hundred masters" suffered little damage.** Intellectual creativity continued. Many classical texts attributed to pre-imperial masters, including *The Mean*, were actually written during the Qin and early Han dynasties.103

http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_183

> The emperor's chief counselor proposed the form of the decree. In his letter he wrote: "**At present, Your Majesty has performed great deeds whose glory will spread through ten thousand generations. This, of course, cannot be understood by foolish scholars. ... At present, when You the Emperor have united the country, separated black from white and established unity, they honor their science and associate with people who disapprove of laws and directives. When they learn of an edict they discuss it in accordance with their scholarly principles.** When they enter the palace they disapprove in their souls; when they come out again they engage in open discussion. ... And if this is not forbidden, then the condition of the ruler at the top will become worse, and at the bottom the parties will gain strength. It would be useful to forbid it." (81: pp. 150-152)

One year after the book burning came "the massacre of Confucians," although not all victims fit the name. Many literati made huge fortunes by pitching ideas of the supernatural to the First Emperor. Among them, Lu and Hou promised the elixir of immortality. Unable to deliver and fearing the law for fraud, the pair fled and denounced the emperor as a tyrant unworthy of it. The enraged emperor ordered an investigation. Literati incriminated each other. The emperor executed almost 500, ignoring Fusu's warning: "The world is newly pacified. The allegiance of distant peoples is not yet solidified. The literati all follow Confucian teachings. Your majesty punishes them according to the law. I fear it may cause instability."104 Fusu was prescient. Three years later, many Confucians, including a direct descendant of Confucius, hastened to join Chen Sheng's rebellion.105 **Contrary to the subsequent propaganda, the First Emperor did not intend to root out Confucians. The massacre was limited.** Erudites continued to attend court. One, Shusun Tong, a Confucian master with more than 100 students, misrepresented intelligence to ingratiate himself with the Second Emperor, then deserted, served one warlord after another, and finally landed a plush post by designing court rituals for the Han Dynasty.106

https://archive.org/details/in.ernet.dli.2015.41741/page/n449/mode/2up?view=theater

> The great parties of the Gracchan age had long become retinues—Cæsarians and Pompeians—and finally there only remained on the one side the formless omnipotence, the plain brutal "fact," the Cæsar—**or whoever managed to get the Cæsar under his influence**—and on the other side the handful of narrow ideologues who concealed dissatisfaction under philosophy and thenceforward sought to advance their ideals by conspiracy. **What these Stoics were in Rome, the Confucians were in China**—and, seen thus, the episode of the "Burning of the Books," decreed by the Chinese Augustus in 212, begins to be intelligible through the reproach of immense vandalism that the minds of later literates fastened upon it. **But, after all, these Stoic enthusiasts for an ideal that had become impossible had killed Cæsar,**5 to the Divus-cult they opposed a Cato- and Brutus-cult, the philosophers in the Senate (which by then was only a noble club) never wearied of lamenting the downfall of "freedom" and fomenting conspiracies such as Piso's in 65. Had this been the state of things at Nero's death, it would have been Sulla over again; and that is why Nero put to death the Stoic Thrasea Pætus, why Vespasian executed Helvidius Priscus, and why copies of the history of Cremutius Cordus, which lauded Brutus as the last of the Romans, were collected and burnt in Rome. **These were acts of defensive State necessity *vis-à-vis* blind ideology—acts such as those we know of Cromwell and Robespierre—and it was in exactly the same position that the Chinese Cæsars found themselves *vis-à-vis* the school of Confucius, which had formerly worked out their ideal of a state-constitution and now had no notion of enduring the actuality. This great Burning of the Books was nothing but the destruction of one part of the politico-philosophical literature and the abolition of propaganda and secret organizations.**1 This defensive lasted in both Imperia for a century, and then

even reminiscences of party-political passions faded out and the two philosophies became the ruling world-outlook of the Imperial age in its maturity.2

2. **Tacitus, even, failed to understand.** He hated these first Cæsars, because they defended themselves by every imaginable means against a stealthy opposition—in *his own* circles—**an opposition that from Trajan's time no longer existed.**

Book burning responded to the subversive agitation to reinstate the feudalistic aristocracy. Swindling lit the fuse for the massacre. However, the two events are often rolled together as Qin's gravest crime. They exposed deep-rooted tensions. Most apparent was the struggle between the two parties of officers, as Lu and Hou reproached the emperor: **"He trusts only law officers and works closely with them. The seventy Erudites he only appoints but does not heed."**107 Underlying this power struggle was an ideological conflict of lasting impact. "The Faults of Qin," an essay by Jia Yi, was widely quoted and influential.108 **Its gist was summarized by a Confucian historian in late imperial China: "Qin enshrined the law, sidelined benevolence and righteousness, so that the rebellion of a few commoners led to a landslide in the world."**109
…

The love of relatives was the crux of the feudalistic power structure. Confucians, who advocated benevolent governments, added a moral halo that turned the love of relatives into the crux of benevolence and hence a universal political doctrine. Confucius regarded good government as an extension of filial piety and brotherliness. **To set an example, the sagacious ruler should "elevate his relatives to high positions, grant posh provisions, and share their desires."**110 Mengzi similarly preached, "The love of relatives is the substance of benevolence." As an exemplar, **he argued that the sage king Shun must have enfeoffed his wicked brother: "Being the son of heaven but allowing his brother to be a mere commoner, how can that be love?"**111 Chunyu Yue used almost identical words in attacking the Qin institution. The ruler's exemplary effect was paramount in Confucian rule by men. By making his relatives mere commoners, the First Emperor set a bad example that deserved denunciations of "malevolence" and "ingratitude," staples in anti-Qin propaganda.112

More ponderous than morality was the self-interest of political elites. For the ruler to split land and enfeoff lords was the hope of the ruling circle. Aristocratic titles were the common desire of rebels: many promptly declared themselves kings and lords.113 **Enmity to Qin's centralized government oozed from the words carved on a meteorite that fell ten years after unification: "The First Emperor dies and the land is parceled."**14 Learning the lesson, the Han Dynasty started by reinstituting feudatories.
…

A modern scholar summarizes the condition of Zhou as depicted in the classics: "awe of ruthless power is more evident than the virtue of leniency and generosity."120 **As far as the common people were concerned, the trope of benevolent Zhou and cruel Qin was a blatant double standard.**

It was another matter with the privileged elites. Sentimental talk of bloody punishment hid the elite's chief grievance, which was not penalties per se but the law that stipulated them: specifically, legal impartiality. Early Han historian Sima Tan expressed the elitist assessment: **"Legalists make no distinction between relatives and strangers, aristocrats and lowly people. They apply the law uniformly to all, ignoring the love of relatives and deference to high statuses. This can serve temporary expediency, but should not be adopted in the long term."**121 **Fairness and equality under the law were to the literati not virtues but necessary evils akin to war, perhaps useful in conquests, but to be discarded in peacetime in order to maintain harmony within the ruling circle. "Punishment does not reach up to ministers" was the Zhou tradition.** Against it Qin insisted, "Criminal penalties do not excuse high ministers."122 Jia Yi compared the two, praised Zhou's heartfelt indulgence for cementing the ruling circle, and blamed callous legal equality for Qin's quick demise. In Jia's view, privileges ensured the loyalty of ministers, and stability of rule depended on aligning with the powerful. By putting impartial law above elitist prerogative, Qin imperiled the ruler's vital asset, a friendly ruling class.123

Holding officers accountable for fair adjudication protected the common people. However, to sentence crooked officials to long-wall building was, Jia Yi's simile, **to try to stop a rat from stealing from a precious vessel by throwing a stone at it.** The stone endangered the vessel – that is, the throne.
…

Qin had ignored Mengzi's tenet: "Government is not difficult, do not antagonize the great houses." **"If the ruler regards ministers as dust and grass seed, then ministers regard the ruler as bandit and foe."**125

https://plato.stanford.edu/entries/chinese-legalism

The first to use the term *fa jia* was Sima Qian's father, Sima Tan □□□ (d. 110 BCE). In an essay on the "essence of the six schools of thought," **Sima Tan notices that *fa jia* are "strict and have little kindness," and "do not distinguish between kin and stranger, nor differentiate between noble and base: everything is determined by the standard (or law, *fa*)."** Sima Tan criticized the Legalists' approach as "a one-time policy that could not be constantly applied," but also hailed the *fa jia* for "honoring rulers and derogating subjects, and clearly distinguishing offices so that no one can overstep [his responsibilities]" (*Shiji* 130:3289-3291; for translations cf. Smith 2003: 141; Goldin 2011: 89).
…

The first and best-known argument in favor of dispensing with the past models is presented in the first chapter of the *Book of Lord Shang*. Shang Yang is cited saying: **"there is no single way to order the generation; to benefit the state, one need not imitate antiquity"** (*Shang jun shu* 1:4; *Book of Lord Shang 1.4*).
…

For instance, Shang Yang depicts social evolution from primeval promiscuous life to an incipient stratified society and then to a fully mature state with laws, regulations, officials, and the power of coercion (*Shang jun shu* 7:51-53; *Book of Lord Shang* 7.1). **At the earlier stages of human history, the people could be constrained by moral suasion; yet this was simply because that was the age of relative abundance: "Formerly… the people cut trees and slaughtered animals [for food]; the people were few, whereas trees and animals plenty. … Men plowed to obtain food, women wove to obtain clothing; [the ruler] used neither punishments nor regulations, but there was order"** (*Shang jun shu* 18:107; *Book of Lord Shang* 18.1). **Han Fei echoes Shang Yang: in the remote past "the people were few whereas goods were plenty; hence people did not compete"** (*Han Feizi* 49:443). Now, this age of primeval morality has gone forever. Both thinkers emphasize the devastating impact of demographic growth on human mores. **"Nowadays, five children are not considered too many, and each child also has five children; the grandfather is still alive, and he already has twenty-five grandchildren. Therefore, the people are plenty whereas commodities and goods are few; people work laboriously, but provisions are scanty; hence the people compete"** (*Han Feizi* 49:443). Under these new circumstances, moral norms are no longer relevant; contention is the rule, and it can be quelled only through coercion.

The evolutionary view of history and especially the emphasis that economic conditions can alter moral values, distinguish the Legalists critically from proponents of alternative models of state formation (Pines 2013a). The Legalists imply that everything is changeable: as socioeconomic conditions change, human behavior changes as well; and this in turn requires adaptation of political institutions. Shang Yang summarizes:

> **When the affairs of the world change, one should implement a different Way. … Therefore, it is said: "When the people are ignorant, one can become monarch through knowledge; when the generation is knowledgeable, one can become monarch through force"** (*Shang jun shu* 7:53; *Book of Lord Shang* 7.1-7.2).

The last phrase represents the rationale behind Shang Yang's model of state formation. If radical restructuring of society was legitimate in the past, so it is in the present. In the current situation, when the people are "knowledgeable," a powerful state, which is able to coerce its subjects, is the only viable solution. **The *Book of Lord Shang* (but not *Han Feizi*) allowed for the possibility that in the future the need for excessive reliance on coercion would end and a milder, morality-driven political structure would evolve,** but these utopian digressions are of minor importance in the text (Pines 2013a).
…

That "the people follow after benefit as water flows downward" (*Shang jun shu* 23:131; *Book of Lord Shang* 23.2) is a given: the task is to allow the people to satisfy their desire for glory and riches in a way that will accord with, rather than contradict, the state's needs. Shang Yang explains how to attain this:

> wherever the name (repute) and benefit meet, the people will go in this direction. … **Farming is what the people consider bitter; war is what the people consider dangerous. Yet they brave what they consider bitter and perform what they consider dangerous because of the calculation [of a name and benefit].** … When benefits come from land, the people exhaust their strength; when the name comes from war, the people are ready to die (*Shang jun shu* 6:45-46; *Book of Lord Shang* 6.4-6.5).

…

The Legalists' view of the people as covetous and selfish was not exceptional to this intellectual current: it was shared, among others, by as significant a Confucian thinker as Xunzi □□ (ca. 310-230 BCE) and is evident in many other texts (Sato 2013). **Yet in marked distinction from Xunzi and from other Confucian thinkers, the Legalists dismissed the possibility that the elite—rulers and ministers alike—would be able to overcome their selfishness.**
…

For thinkers from the entire spectrum of Confucian thought, it was axiomatic that the government should be staffed by morally upright "noble men" who would serve out of commitment to the ruler above and the people below. For the Legalists, it was equally axiomatic that this cannot be the case. Shen Dao explains:

> Among the people, everybody acts for himself. If you [try to] alter them and cause them to act for you, then there will be none whom you can attain and employ. … In circumstances where people are not able to act in their own interests, those above will not employ them. Employ the people for their own [interests], do not employ them for your sake: then there will be none whom you cannot make use of (*Shenzi,* 24-25; Harris 2016: 112).

Shen Dao dismisses the possibility that the ministers will be driven by moral commitment; on the contrary, such exceptional individuals should not be employed at all. This sentiment recurs in *Han Feizi*, a text that expresses with utmost clarity its belief that every member of the elite—like any member of society—pursues his own interests (cf. Goldin 2005: 58-65; 2013). **Morally upright officials do exist, but these are exceptional individuals: "one cannot find even a dozen upright and trustworthy men of service (*shi* □), while the officials within the boundaries are counted in hundreds. If one cannot employ but upright and trustworthy men of service, then there will be not enough people to fill in the offices"** (*Han Feizi* 49: 451).

…

Eventually, harsh punishments will eliminate the very need for punishments:

> To prevent wrongdoing and stop transgressions, nothing is better than making punishments heavy. When punishments are heavy and [criminals] are inevitably captured, then the people dare not try [to break the law]. Hence, there are no penalized people in the state. **When there are no penalized people in the state, it is said, then: "Clarifying punishments [means] no executions."** (*Shang jun shu* 17:101; *Shang jun shu* 17.3)

Due to above pronouncements, Shang Yang gained notoriety as an advocate of oppression; but actually his attitude toward the people is much more balanced than is often imagined. The *Book of Lord Shang* frequently speaks of "loving/caring for the people" (*ai min* □□) and "benefiting the people" (*li min* □□), echoing other contemporaneous texts which proclaimed the people's well-being as the ultimate goal of policy-making (Pines 2009: 201-203).
…

The system of 20 (initially fewer) "ranks of merit" introduced by Shang Yang was one of the most daring acts of social engineering in human history. This system became the cornerstone of social life in Qin. The lowest ranks were distributed for military achievements, particularly decapitating enemy soldiers, or could be purchased in exchange for extra grain yields; successful rank-holders could be incorporated into the military or civilian administration and thereafter be promoted up the social ladder. Each rank granted its holder economic, social, and legal privileges; and since the ranks were not fully inheritable, the system generated considerable social mobility (see details in Loewe 1960 and 2010; Pines et al. 2014: 24-26; Pines 2016b). The new system attempted to unify the social, economic, and political hierarchy under the government's control, which in turn required the elimination of alternative avenues of enhancing one's socioeconomic and political status. This latter concern is strongly pronounced throughout the *Book of Lord Shang*:

> The means whereby the sovereign encourages the people are offices and ranks; the means by which the state prospers are agriculture and warfare. **Today the people seek offices and ranks, yet they are attainable not through agriculture and warfare but through crafty words and empty ways: this is called to exhaust the people.** (*Shang jun shu* 3:20; *Book of Lord Shang* 3.1).

The text insists repeatedly that the only way to make agriculture and warfare attractive is to prevent any alternative route toward enrichment and empowerment. **It specifies that "those who do not work but eat, who do not fight but attain glory, who have no rank but are respected, who have no emolument but are rich, who have no office but lead—"these are called 'villains'"** (*Shang jun shu* 18:111; *Book of Lord Shang* 18.6). Any group which tries to bypass engagement in agriculture and warfare—be these merchants who amass riches without tilling or talkative intellectuals who seek promotion without contributing to the state economically or militarily—should be suppressed or at least squeezed out of profits.
…

Shen Dao further warns the ruler that if he decides on promotions and demotions on the basis of his personal impression, this will cause inflated expectations or excessive resentment among his servants:

> When the ruler abandons the standard (*fa* □) and relies on himself to govern, then punishments and rewards, recruitment and demotion all arise out of the ruler's heart. If this is the case, then even if rewards are appropriate, the expectations are insatiable; even if the punishments are appropriate, lenience is sought ceaselessly. **If the ruler abandons the standard and relies on his heart to decide upon the degree [of awards and punishments], <u>then identical merits will be rewarded differently, and identical crimes will be punished differently.</u> It is from this that resentment arises.** (*Shenzi*, 52; Harris 2016: 120)

…

Despite their pronounced belief in monarchic form of rule, **most thinkers of the Warring States period insisted that the monarch would never succeed without a worthy aide.** Their common desideratum was attaining harmonious relations between the ministers and the rulers; not coincidentally, the common simile of these relations was that of friends, i.e. of equals. Some thinkers were even more assertive in their interpretation of a worthy minister as the ruler's de facto superior, a teacher and not just a friend (Pines 2009: 163-172). **One of the most radical manifestations of this pro-ministerial mindset of the Warring States era was the idea of abdication, according to which a good ruler may consider yielding the throne to his meritorious aide** (Allan 2016; Pines 2005). **For Legalists, in contrast, this very idea proved that the pro-ministerial discourse of their rivals was usurpation in disguise.** Ministers should never be trusted: they are neither the ruler's friends, nor his teachers, but his bitter foes and plotters, who should be checked and controlled rather than cherished and empowered.
…

The very fact that **<u>the monarch—unlike his officials—owed his position to pedigree alone</u>** meant that this position would more often than not be occupied by a mediocrity. Multiple historical examples scattered throughout *Han Feizi*

unequivocally demonstrate how devastating the ruler's ineptitude could be (Graziani 2015). The intrinsic contradiction between an institutionally infallible and humanly erring sovereign is the major source of tension in the *Han Feizi* (Pines 2013b).

Thinkers of different ideological inclinations shared the sober realization that a sovereign may be a mediocrity; **yet for them this problem was easily resolvable. Insofar as the ruler would be prudent enough to entrust everyday affairs to a meritorious aide, he would be able to continue enjoying absolute prestige, while practical matters would be decided by worthy ministers** (see, e.g., *Xunzi* 11:223-224; Hutton 2014: 112-113). **For Han Fei, though, this solution is unacceptable. Time and again he warns the ruler that nobody can be trusted:** the ruler's wife, his beloved concubine, his eldest son and heir—all hope for his premature death because this may secure their position. Threats come also from the ruler's brothers and cousins, from uncles and bedfellows, from dwarfs and clowns who entertain him, from dancers in his court; and, of course from the talkative "men-of-service" (*shi*) who conspire with foreign powers to imperil his state. Every single person around the throne should be suspected; and minimal negligence can cost a ruler his life and his power. **And the most dangerous foes are precisely those whom other thinkers considered the ruler's friends and teachers, namely his closest aides, his ministers.** Han Fei compares them to hungry tigers ready to devour the sovereign whenever the opportunity arrives:

> The Yellow Emperor said: "A hundred battles a day are fought between the superior and his underlings." The underlings conceal their private [interests], trying to test their superior; the superior employs norms and measures to restrict the underlings. **Hence when norms and measures are established, they are the sovereign's treasure; when the cliques and cabals are formed, they are the minister's treasure. If the minister does not murder his ruler, it is because the cliques and cabals are not formed.** (*Han Feizi* 8:51)

This is an amazing saying: the minister is, by his nature, deceitful and murderous, and his failure to eliminate the sovereign is simply a sign of insufficient preparations, not of unwillingness to do so. The ministers' threat to the monarch is inherent in their position, and it can be defused only through proper implementation of methods and techniques of rule.

Han Fei's repeated anti-ministerial philippics perplex the reader. **It is somewhat ironic that a thinker who actively sought employment in the rulers' courts presented his own stratum as intrinsically malicious.** As many traditional and modern scholars noticed, Han Fei's personal tragedy—he was slandered at the court of Qin, imprisoned and reportedly forced to commit suicide before being able to present his views to the King of Qin—was a by-product of the very atmosphere of the ruler-minister mistrust that the thinker himself generated.
…

Han Fei leaves his rivals no illusions: intellectuals can pursue their ideas only insofar as they are part of the state-ordained system of power, otherwise their ideas will be "cut off." Elsewhere, he concludes:

> Accordingly, **in the country of an enlightened ruler there are no texts written in books and on bamboo strips, but the law is the teaching; there are no "speeches" of the former kings, but officials are the teachers; there is no private wielding of swords, but beheading [enemies] is valor.** (*Han Feizi* 49:452)

Han Fei's suggestion to eliminate "texts written in books and on bamboo strips" and to turn officials into teachers **was implemented by his fellow student and nemesis, Li Si, soon after the imperial unification of 221 BCE.** In 213 BCE, after heated court debates, Li Si launched a comprehensive assault on "private learning," which he identified as intellectually divisive and politically subversive. He then suggested eliminating copies of the canonical books of *Poems* and *Documents*, as well as *Speeches of the Hundred Schools* [of thought] from private collections, leaving copies only in the possession of the court erudites (*bo shi* □□). **Li Si concluded his proposal by echoing Han Fei's views: "And those who want to study laws and ordinances, let them take an official as a teacher!"** (*Shiji* 87:2546; Watson 1993: 185).

Li Si's assault on private learning is often misinterpreted as the victory of "Legalist" over "Confucian" ideology, but this is wrong. Confucianism as such was not targeted; actually, it prospered among the court erudites (Kern 2000: 188-191). What mattered to Li Si—as to Han Fei—was not doctrinal unity as such, but the imposition of the state control over intellectual life, as in all other spheres of social activity. **Intellectuals were not persecuted because of the content of their ideas; but they were required either to enter government service or to quit their pursuits.** Eventually, Li Si's biblioclasm backfired. It caused not only considerable resentment in the short term, but, more ominously, brought about immense dislike of Qin—and of Legalism—among the overwhelming majority of the imperial literati for millennia to come (Pines 2014a).
…

The Qin dynasty (221-207 BCE), which was designed to rule for "myriad generations" (*Shiji* 6:236), collapsed shortly after the founder's death, brought down by a popular rebellion of unprecedented scope and ferocity. This swift collapse—which took place just a few years after Li Si's infamous biblioclasm—shaped the image of Qin for millennia to come. The dynasty was no longer a success story, but rather that of miserable failure; and the ideas which guided its policymakers were discredited as well. **Already in the first generations after the Qin, consensus was reached: its collapse was due to excessive activism, abnormal assertiveness of**

its administrative apparatus, over-reliance on penalties, senseless expansionism, and debilitating mistrust between the emperors and their entourage (Jia Yi □□ [200-168 BCE] as cited in *Shiji* 6:276-284; *Xin yu* 4: 62). All these policies could be meaningfully attributed to the Legalists, whose intellectual legacy was as a result discredited. **At best it was reduced to Sima Tan's assessment: "a one-time policy that could not be constantly applied."**

The diminishing appeal of Legalism became fully visible under the reign of Emperor Wu of the Han (r. 141-87 BCE). Although the Emperor himself adopted assertive domestic and foreign policies largely patterned after the Qin dynasty, he considered it prudent to distance himself from the Qin and Legalism, and to endorse—however superficially—Confucianism. It was during his reign that first proposals were made to ban the followers of Shang Yang, Shen Buhai, and Han Fei from holding office. Although in the short term these proposals had limited consequences (Shang Yang's legacy was still openly defended by the government representative during the court debates in 81 BCE), **in the long term the attitude toward Legalists changed. Few scholars studied their writings; even fewer were courageous enough to endorse their legacy openly.** Much like Qin itself (for which see Pines 2014a), Legalism henceforth became a negative label, associated with the policies immensely opposed by the majority of imperial literati: excessive harshness, oppression, terror at court, imperial hubris, and the like. Self-identification as a follower of Shang Yang or Han Fei became a rarity, if not an impossibility.

In imperial times, the position of Legalism was somewhat paradoxical. **On the one hand, its ideas remained highly influential, especially in the realm of administrative practice, but also with regard to the policies of the enrichment and empowerment of the state, as well as in some legal practices.** On certain occasions, some of the leading imperial reformers—from Zhuge Liang □□□ (181-234) to Su Chuo □□ (498-546), from Wang Anshi □□□ (1021-1086) to Zhang Juzheng □□□ (1525-1582)—could openly acknowledge their indebtedness to the Legalist ways of reinvigorating the government apparatus and restoring the state's economic and military prowess. **On the other hand, most political reformers and activists remained closet Legalists at best.** For the vast majority of the literati, Shang Yang, Han Fei, and their like were negative examples; hence, most of the texts associated with the Legalist school ceased circulating, and only a very few merited commentaries.
…

The endorsement of Legalism peaked under Mao Zedong □□□ (1893-1976). **Mao's intellectual activism started, incidentally, with a high-school essay written in praise of Shang Yang** (Schram 1992-2004, Vol. 1: 5-6), **and his positive view of Shang Yang and of the Qin dynasty strengthened as time passed.** In the last years of Mao's life, under the infamous "anti-Confucian" campaign, Legalism was openly endorsed and hailed as "progressive" intellectual current both in its outlook and its historical role (Li Yu-ning 1977); attempts were even made to position it as a direct predecessor of Mao Zedong's Thought (see, e.g., Liu Zehua 2012).

http://robertlstephens.com/essays/shafarevich/001SocialistPhenomenon.html#pagestart_184

And back in 1958, at the second plenary meeting of the Central Committee of the Chinese Communist Party (Eighth Congress), Mao Tse-tung said of Emperor Ch'in Shih Huang:

> He issued an order that read: **"The kin of him who for the sake of antiquity rejects the present will be eradicated to the third generation."** If you adhere to antiquity and do not recognize the new, all your family will be slaughtered. Ch'in Shih Huang buried only 460 Confucians alive. However, he has a long way to go to catch up with us. During the purge, we did away with several tens of thousands of people. We acted like ten Ch'in Shih Huangs. I assert that we are better than Ch'in Shih Huang. He buried alive 460 people, and we, 46,000--one hundred times more. Indeed, to kill, then to dig a grave and bury someone--this also means to bury alive. We are abused and called Ch'in Shih Huangs and usurpers. **We accept this and consider that we have still done little in this respect--much more can be done.**

https://books.google.fi/books?id=XUk4DwAAQBAJ&lpg=PP1&hl=fi&pg=PT145#v=onepage&q&f=false

Chairman Mao has pointed out: "In past history, **before they won state power and for some time afterward, the slave-owning class, the feudal landlord class, and the bourgeoisie were vigorous, revolutionary and progressive; they were real tigers.** But with the lapse of time, because their opposites – the slave class, the peasant class and the proletariat – grew in strength step by step, struggled against them, and became more and more formidable, these ruling classes changed step by step into the reverse, changed into reactionaries, changed into backward people, changed into paper tigers. And eventually they were overthrown, or will be overthrown, by the people." **The fact that the landlord-class rulers changed from revering the Legalist school and opposing the Confucian school to revering the Confucian school and opposing the Legalist school corresponded to the course of historical transformation in which landlord class, as Chairman Mao has pointed out, changed from revolutionary to reactionary and from advanced to backward.**

The Ch'in dynasty was the first dynasty founded by the landlord class in Chinese history. **Soon after this exploiting class seized political power, its class contradictions with the peasants sharpened.**

Led by Ch'en Sheng and Wu Kuang, the first great peasant uprising in China's history finally broke out and overthrew the rule of the Ch'in dynasty, promoted the progress of history and demonstrated the tremendous strength of the oppressed and the exploited in creating history. Precisely as Liu Tsung-yüan (8) pointed out in "Essay on Feudalism": **Ch'in's fall "should be attributed to people's hatred and not to the system of commanderies and prefectures."**

In the course of the founding of the Han dynasty there were also debates between those who upheld feudalism, which was progressive at the time, and those who preached going back to slavery. A Confucian scholar advised Liu Pang to adopt the system of installing hereditary nobles to rule their domains and even made ready the seals for the noble ranks. But under the persuasion of his counselor Chang Liang, Liu Pang finally came round to realizing that retrogression was a dead end. **He cursed this Confucian scholar in anger, saying: "You childish Confucianist! You almost spoiled my endeavors!"**

The Ch'in dynasty's system was followed by the Han dynasty. By the time of Emperor Wu of the Han dynasty, the rebellion of Wu, Ch'u and five other states (9) had been crushed, **and the crucial moment of a restoration of the slave system had passed.**

> 9) Having founded the Han dynasty, **Liu Pang abolished all the princes of other families while successively conferring the title of king on the sons of his own family.** These semi-independent kingdoms later became increasingly powerful. The most powerful seven states, including Wu and Ch'u, joined forces to stage a rebellion in 154 B.C. These states were abolished after the rebellion was put down.

"Qin lets slip its deer, and the world joins in a hunt" has become a Chinese adage for grand-scale political opportunism and the consequent chaotic carnage, the recurrence of which we will see at least twice in this book. The hunters had heterogeneous social backgrounds. Chen Sheng, once a hired farm hand, was the humblest, but he was literate and politically informed. **Liu Bang, village sheriff turned brigand chief, was a step up the social ladder.** Closer to the upper end of the spectrum, the Xiang family had produced generations of top Chu generals. Such pre-imperial elites constituted the bulk of warlords after Chen's uprising. **Descendants of the six former royal houses all reclaimed kingship.**127

Xiang Yu was the strongest of warlords after Qin's demise. **Reverting to the Zhou model, he divided the country into nineteen autonomous kingdoms that formed a confederation under himself as hegemonic king of Chu.** Liu Bang was accorded the kingship of Han, but quickly subdued other kings to take over Qin's old home. Thus he secured a superior economic base for the five-year struggle between Chu and Han.

The struggle between Xiang and Liu somehow resembled that between Antony and Octavian. Like Antony, Xiang was a better general and more steeped in the aristocratic tradition. Like Antony, he was initially stronger, dominated the wealthier eastern region, had opportunities to eliminate his archrival but could not bring himself to it.128 Liu was a "rogue" fond of snatching caps from literati and pissing into them; Octavian "a young thug who was reputedly capable of tearing out a man's eyes with his bare hands."129 These upstarts were more comfortable in tapping the rigorous energy and fresh thinking of lower classes. As Octavian gained advantages by controlling Italy, Liu established himself in the former Qin state.
…

A historian of Rome remarks, **"In the Revolution the power of the old governing class was broken, its composition transformed. Italy and the non-political orders in society triumphed over Rome and the Roman aristocracy.**"141 A similar transformation occurred around the time of Qin and early Han. **Chinese historians are struck by the millennium-old regime of hereditary ministers yielding to "a regime of homespun-clothed generals and premiers at the beginning of Han."**142 *Buyi*, denoting homespun cloth devoid of silk or embroidery, is the term for commoners in classical Chinese. It had intellectual as well as social significance at the dawn of imperial China, when the stair of advancement was accessible to people with diverse learning and abilities, unlike in later times when it was limited to Confucians narrowly versed in embroidered literature.143
…

While a village sheriff, Liu Bang married Lü from a local family. Liu later had more wives, but none could replace Lü, who participated in decision making and became effective ruler after Gaodì's death.144 While a triumvir juggling for power, **Octavian divorced the wife who bore him his only offspring to marry Livia,** who by birth and first marriage belonged to the Livii and Claudii, two of the most venerable Roman families. The marriage won him much aristocratic support, and Livia was increasingly involved in imperial politics.145 Lü and Livia were among the most powerful imperial women.
…

Learning the lessons of their predecessors, Augustus and Gaodì were more willing to bargain with the old establishments. Augustus paid lip service to republican institutions and Gaodì enfeoffed feudalistic kings.
…

Gross dissimulations eased the transitions to imperial peace. Augustus ostensibly preserved the form of a republic but radically subverted its function in his absolute monarchy. **The Han Dynasty loudly condemned Qin but quietly adopted most of its centralist institutions.** Did false consciousness come with a price?
…

Vespasian dated his reign from the time of his acclamation by the troops, six months before the enactment of a law that legitimized the emperor's absolute power. **The backdating of the law to accommodate the fact effectively annulled even the formal need for senatorial consultation.**39
…

However, **modern historians uncovered remarkable continuity in power and policy from Domitian to Trajan, akin to that from the Qin to the Han Dynasties:** "Trajan's rule was no less and perhaps more autocratic than that espoused by the detested Domitian, and some of the procedures and programmes Trajan assiduously pursued, and brought to fruition, were not noticeably different from those initiated by his predecessors."47 **Trajan benefited from the dirty work of Domitian, who decimated recalcitrant opponents.** Leniency toward corruption and tact in dealing with senators also helped.
…

Ten months before he defeated Xiang Yu in the battle of Gaixia in 202 BCE, Liu Bang received a letter from Hann Xin, who reported victory over the king of Qi and requested the title of effective king for himself to administer the acquired territory. **Liu was about to let loose a tirade but changed his words upon a little kick from his counselor.** Hann got the title of real king and ample incentives to fight against Xiang. He also got a surprise immediately after the victory. Liu barged into his camp and relieved him of military command.67

Hann was one of seven kings who urged the title of emperor on Liu Bang. Unlike him, the other kings had independent power bases and could have sided with Xiang. **Liu secured their alliance by the promise of sharing sovereignty in the feudalistic way. None expected all seven to be executed or exiled for treason during Gaodì's seven-year reign.** Hann, whose generalship had been indispensable to Liu's success, was the first but not the last to be falsely accused. **His remark has become a Chinese idiom: "When the hare is dead, the hound is boiled. When the birds are eliminated, good bows are buried."**68

Gaodì was spared the blame of malevolent ingratitude that rained on the First Emperor who did not slaughter supporters after success. The Han emperor reverted to the Way of ancient kings. Instead of allowing his sons and brother to remain mere commoners, he enfeoffed them to replace the slain meritorious kings. **Ten kingdoms, each with significant fiscal, personnel, and military autonomy, ruled over about two-thirds of the country in the populous east, where the six former warring states had been located.** The kingdoms were subordinate to the imperial government, which ruled the territory of the old Qin state directly through provinces. The arrangement consolidated the dynasty of the Liu family.69

The vassal kings maximized native advantages and revived regional economies. Some helped to suppress a coup in the imperial center. **These early achievements proved not the superiority of the feudalistic way, however, but only the wisdom of shedding an invidious habit gradually to avoid painful withdrawal symptoms. As society recovered from the devastations of civil war, the increasingly restive kings became destabilizing.** Ominous signs presaged a rerun of warring states, as the First Emperor and Li Si had warned. It did not happen. Qin bequeathed political insight and a precedent. Early Han officers of diverse learning and real-life experience were pragmatic and open-minded. **The Legalist Chao Cuo urged reducing the feudatories while the central government still held the edge. Jingdì, the fifth emperor, listened. Seven powerful kings rebelled at the edict of 154 BCE. They were quashed within three months, although not before Chao Cuo was executed for vitiating the love among imperial relatives.**70 **The central government, having grown in confidence and administrative capacity, directly controlled ever-expanding territories.** Feudalistic aristocrats resisted, but their last great conspiracy in 122 BCE failed to get off the ground. A century after the first unification under Qin in 221 BCE, provinces directly under a centralized bureaucratic government again covered almost the whole realm.71

Tending to the craving for calm in a society traumatized by civil war, **the first five reigns of the Han Dynasty adopted *wuwei* or a hands-off stance, a mixture of Daoist and Legalist ideas asserting that the people would be happy and well behaved if the ruler sets simple and strict regulations; then live and let live.** Excavated documents of the Qin and early Han Dynasties confirm the traditional view that Xiao He, the first Han premier, adopted most of Qin's legal codes. **His successor Cao Can embraced the Daoist stance of refraining from active involvement.** A folk song expressed contemporary appraisal: "Xiao He made laws as plain as a straight line. Cao Can followed and adhered without deviation. Rules pure and tranquil united the people in peace."72

> https://www.johnderbyshire.com/Reviews/Religion/daodejing.html
>
> "Weakening the People," for example, sounds dreadful to modern man—to "we, the people"—but is a fair extension of the meaning of *rou*, one of the key terms in *Tao Tê Ching*, which can mean "meek," "gentle" or "restrained" as well as "weak**." It is as if, starting from the proposition that "the meek shall inherit the earth," one were to argue that a state under a strong central leader, whose people were kept meek and submissive, could conquer a mighty empire.** Which, in fact, is what the *Book of Lord Shang* does argue, and what in fact happened!
> …
>
> In opposition to Confucius's yearning for traditional hierarchies and to the more meritocratic schemes of post-Confucian thinkers like Mo Tzŭ, **Han Fei Tzŭ proposed a state organized around a system of laws so all-embracing and correct that it required no elites at all to administer, nor even a very active monarch—*wu-wei* enthroned; or, to recast it in terms of a somewhat later thinker, the state withered away.**

…

Wudì acceded in 140 BCE at age fifteen and ruled until 87 BCE. **Were he a Western emperor, he would be called "the Great," but the Chinese were ambivalent about his accomplishments.** His offensive against the nomadic Xiongnu led to imperial expansion beyond the Pamir and diplomacy as far as Parthia. **To find quality officers, he regularized channels of recruitment to give the small men all across the country a standardized route to advancement.** Attracted to aristocratic culture and the aura of sage-kings, he made Confucianism the state ideology.
…

Confucians enjoyed prestige and patronage in the feudatories. **However, except as masters of ceremony, they held few offices in the early Han government toiling to get concrete socioeconomic results.** As the ruling circle became increasingly comfortable and complacent, the masters of aristocratic culture climbed up the political ladder, first by "adorning laws and policies with literature and the Canons," then by advocating the restoration of ancient ways. They flattered the emperor by images of the sage king and bombarded rival ideas with moral rhetoric. **Daoism was dismissed as fit only for servants.** Legalists were condemned for poisoning the world's morality and posing the gravest danger to stability.80 Urged by Dong Zhongshu and other Confucians, Wudì closed the government recruitment channel to scholars of other persuasions and established an imperial academy devoted exclusively to the Confucian Canons. Wudì's "dismissal of the hundred schools and enshrinement of Confucianism" has been hailed as his most benevolent achievement by some, deplored alongside the First Emperor's book burning by others.81 **Anyway, it is his most influential legacy. It ended the age of intellectual vitality and inaugurated Confucian literati-officials as the imperial ruling elite.**

Confucians triumphed over Legalists, but not completely. **The centralized and bureaucratized institutions that Legalists designed had passed the trial by fire to become the lasting architecture of imperial China.**
…

Those abiding by Confucius's teaching that "the superior man is no instrument" employed pragmatic subordinates to get things done. The rational and utilitarian thinking of Legalists was forced underground but not extinguished.83 Denounced in Confucian moralizations through millennia, it received little credit from traditional interpretations.84 Many modern historians have another view. Penetrating rhetoric and analyzing effective policies, many find Legalist substance beneath Confucian varnish: **"Such economic policies, for example, as the 'ever-normal granary,' various government monopolies of salt, iron, and other products, all probably owe as much or more to Legalism than they do to early Confucianism. Recent study shows that the same way even be true of what has traditionally been thought to be peculiar Confucian institution: the civil service examination system used in imperial times to recruit government personnel on the basis of intellect rather than birth.**"85 Perhaps the imperial civil service examination is a miniature reflection of the government: **The open, fair and meritocratic recruitment process is Legalist: its exclusive examination content that limits "merit" to mastery of the Four Books and Five Canons, Confucian.**

The ascent of Confucians was neither quick nor easy. Early Han officers were capable and farsighted. Wendì preferred Legalist ideas **and deemed sophisticated rituals irrelevant to government.** Jindì did not appoint Confucians.86 The achievements of their reigns, reputed to be among the best in Chinese history, disprove the Confucian pretention that canonical learning is necessary for moderation, low taxation, and good governance. Wudì himself was renowned for employing all kinds of talent, which he needed for solving pressing problems.87 Despite the preferential treatment, the bookish literati had a difficult time elbowing out officers with practical acumen, administrative experience, and moral rectitude in actions. Xuandì insisted on balancing Legalist and Confucian ideas. **Only in the reign of his heir Yuandì did Confucians succeed in dominating the bureaucracy.**
…

"Competing for profit with the people," the opening salvo on current policies from the literati at the conference, was a standard accusatory slogan of Han Confucians.94 It sounded righteous, but only in its vagueness. One of its victims would be the policy of the ever-normal granary, designed to smooth grain price fluctuation, a major cause of economic insecurity for the masses. The policy called for the government to buy grain at above market prices during bumper crops, store it in local granaries, and sell it at below market prices during poor harvests, thus helping both farmers and consumers. **The ever-normal granary proved a great success and would flourish in later dynasties, but it lasted only eleven years in the Han under Xuandì. Moralists ignored its social benefits and convinced Yuandì that the policy was unrighteous because the government thereby competed for profit with the people.**95 The people whose profit they protected were grain speculators and big landlords capable of stocking grain. The common folks whose distress in famines they portrayed in tearful words, their action hurt.
…

The imagined perfect world of antiquity is the major premise of literati idealism. Instead of respecting history, however, it reveals dogmatic disrespect for historical facts. The most reliable textual sources on the ancient history of China, the *Odes* and *Documents*, depict an ancient world with much oppression and cruelty.99 **When critics refer to a bloody war account of the Zhou's conquest, Mengzi says it must be false, because the Zhou king, being benevolent and thus invincible, must have won without resistance. "To believe wholly in the *Documents* is worse than to have no *Documents*."**100 Exegetes who tear the sentence out of context and rave at its "critical thinking" confuse two traits.
…

As crown prince, Yuandì deemed the impartial regulations harsh and proposed employing Confucians instead. Xuandì rebuked him: **"The Han statecraft should be a blend of the kingly way and the hegemonic way, how can it rely purely on virtue and imitation of the Zhou?"**106

Yuandì discarded the hegemonic way and relied purely on virtue. **From his reign onward, almost all Han premiers were Confucians, and high offices became uncomfortable to anyone lacking literary refinement. The ruling elite of imperial China finally came of age.** Like the ruling class of many other regimes, literati-officials derived wealth, polished leisure, and social prestige from their hold on government privileges. Literati clans formed marriage alliances and increased their socioeconomic power. To this was added the moral authority of an exclusive ideology.

Elevating Confucius to a "king without crown," literati-officials constituted the core of a status group, which some modern scholars call the cultural or ideological aristocracy of imperial China.107
…

Frequent infighting among literati-officials caused irresolution even in matters of their core competence and concern. Take, for example, the rituals for imperial ancestral temples, which employed some 12,000 musicians and masters of ceremony, four times as many guards, and countless laborers to tend sacrificial animals. Successive factions in power all implemented their own ideal. Changes back and forth caused enormous waste.108 The gain in ideal and rhetoric failed to compensate for the loss in competence and substance. **Ban Gu lamented, "Xuandì's achievements were ruined."** Yuandì agreed with contemporary critics: "most officials are not up to their jobs."198 His reign marked the beginning of the Han's long decline.110

Concentration of land and economic inequality intensified. The poor in desperation sold themselves or their children. **The swelling ranks of slaves aroused much concern, although their proportion in the population was minuscule compared to that in Roman Italy.** Yuandì's loving indulgence of relatives and high officials encouraged abuses, made worse by his ineffective successors. **In four reigns that lasted from 48 BCE to 5 CE, controlling power resided with affine families, which were related to the imperial house by marriage.** Perhaps this was a logical conclusion of politics dominated by family ethics. Even if the love of relatives excluded in-laws, filial piety sanctified the authority of the empress dowager. Logic is of little concern in the exegetical mindset, however. Literati-officials blamed affine families and saw the mandate of heaven shifting. **Calls went up for emperors to emulate the ancient sage kings Yao and Shun, who practiced *chanrang*, abdication in favor of someone worthy.** Many supported the eminent litterateur Wang Mang.111

https://en.wikipedia.org/wiki/Wang_Mang#Regency_and_building_of_a_personality_cult

Wang Mang, having thus consolidated his power, began to further build up his personality cult, encouraging others to submit false prophecies in which he was mentioned as the second coming of Ji Dan, the Duke of Zhou and the regent for King Cheng of Zhou, or other great mythical personalities. **He also began a regime of modifying the governmental structure to recall the governments of the Zhou Dynasty and the even more ancient Shang Dynasty.**
…

In 1 CE, **after bribing the distant Yueshang tribes (probably in modern southern Vietnam) to submit offerings of an**
albino pheasant (considered a rare sign of divine favour), Wang Mang was successful in having his followers persuade Grand Empress Dowager Wang to create him the Duke of Anhan (□□□). **This was despite the Han nobility system not including dukes and no duke had ever been created in Han history up to that point.** This action gave Wang Mang a title parallel to that of the Duke of Zhou.
…

To further bolster his claims, Wang also created a false genealogy, declaring himself a descendant of the Yellow Emperor, a legendary emperor revered in Chinese culture.[9]
…

So he decided to finally seize the throne and start a new dynasty. In the winter of 8 CE, after receiving a false prophecy written by a criminal named Ai Zhang (□□) which pretended to be a divine decree from Emperor Gaozu (Liu Bang) stating that the throne should be given to Wang, and that Grand Empress Dowager Wang should follow this divine will, Wang issued a decree accepting the position of emperor, establishing the Xin dynasty.

https://digitalcommons.unl.edu/cgi/viewcontent.cgi?article=1131&context=chinabeatarchive

Ban Gu tells us that in 4 CE, almost half a million people—in an empire with 60 million far flung and mostly illiterate people—petitioned the throne to grant him high honors, which he refused.

Wang Mang took the throne in very troubled times, marked particularly by the increasing concentration of land-ownership, and an increase in the number of landless people who were enslaved. Seeking solutions, **he was inspired by what were called the Old Texts—writings in an ancient script that had been found about 150 years before, during renovations at Confucius's ancestral home. If genuine—as Wang Mang believed them to be—these texts were significantly older than the other Confucian classics; among other things, they described the institutions of an era of perfect government under the ancient Duke of Zhou, Confucius' hero. Taking those institutions as a goal to strive towards (while acknowledging that perfect recovery was unlikely), Wang Mang tried to "reinstate" a system where public land would be distributed to families in equal and inalienable squares; he also banned slavery (except for people condemned to be slaves of the state as a punishment for crimes).**
…

Meanwhile, lest the land and slavery measures make him seem a committed "progressive"—in fact, the twentieth century scholar and diplomat Hu Shi (1891-1962) called him China's "first socialist"—**he also made a large number of government offices that had previously been appointed by merit**

hereditary, because he believed that that, too, conformed to the early Zhou golden age described in the Old Texts.
…

As if all this wasn't enough, Wang Mang had the bad luck to preside over atrocious weather, including punishing droughts in some places (including the capital area) and massive rains that led to huge breaks in the Yellow River dikes. It seems, in fact, that this is what undid him—peasant rebellions broke out in precisely the places that flood refugees had moved to en masse.
…

His biography in the canonical *History of the Han Dynasty* treats him as a boundlessly ambitious master villain—it acknowledges that he was popular for quite some time, but attributes this entirely to patronage he dispensed, and to virtuous gestures that were completely hypocritical. This remained the majority view throughout the imperial period. On the other hand, Hu Shi was not alone, though he was unusually fulsome—in seeing him as a visionary reformer who failed only because he was far ahead of this time, and one of the greatest statesmen in Chinese history. (And this is not a case of a modern radical looking for a forebear to praise—Hu Shi himself was firmly convinced that twentieth century China needed gradual, not radical, change, and threw in his lot, despite a number of qualms, with the Nationalists against the Communists.)

But what none of these commentators called him is what recent Western historians have insisted on calling him: a committed Confucian. For centuries it has been his departures from traditional policies—whether damned as cynical and dangerous or praised as humane and innovative—that have been salient. **By contrast recent scholarship, both pro and con, emphasizes how he justified almost everything he did in terms of classical texts, insisted on trying to return to the world that those texts described, and made far fewer compromises with the institutions that had evolved since Confucius' time than the rest of his contemporaries.** (Despite Wang Mang's fall, the Old Texts he championed became canonical thereafter, and remained central parts of Chinese intellectual life—if not literal blueprints for policy-making, until Qing scholars proved that they were hundreds of years newer than they claimed to be. By persuading generations of scholars that they had greater access to the classical age than they could otherwise have claimed, this shift had an enormous influence—but one I wouldn't dare try to specify.)

http://www.thephora.net/forum/forum/the-academy/history/69695-china-s-influence-on-the-european-age-of-enlightenment?p=1679114#post1679114

Perhaps the thing which was of most important historical note was that he introduced the world's first fiat money (currency whose only value lies in that the government decreed it to be of value). Many of these plans were never successfully put in place. **Without mass communication, there was no way that peasants knew that land had been re-distributed to them by the emperor. The aristocrats were the in-between point between the emperor and the peasantry,** and they were not at all happy with Wang Mang's reforms, because land was the primary validator of their power. His idea of fiat money was premature, as there was no system of credit money to begin with, and merchants refused to use his currency.

https://www.smithsonianmag.com/history/emperor-wang-mang-chinas-first-socialist-2402977/?no-ist=

October 7, 23 A.D. The imperial Chinese army, 420,000 strong, has been utterly defeated. Nine "Tiger Generals," sent to lead a corps of 10,000 elite soldiers, have been swept aside as rebel forces close in. The last available troops—convicts released from the local jails—have fled. Three days ago, rebels breached the defenses of China's great capital, Chang'an; now, after some bloody fighting, they are scaling the walls of the emperor's private compound.

Deep within his Endless Palace, Emperor Wang Mang waits for death. **For 20 years, ever since he first contemplated the overthrow of the dissolute remnants of the the Han Dynasty, the usurper Wang had driven himself to keep to an inhuman schedule, working through the night and sleeping at his desk as he labored to transform China.** When the rebellion against him gained strength, however, Wang appeared to give up. He retreated to his palace and summoned magicians with whom he passed his time testing spells; he began to assign strange, mystical titles to his army commanders: "The Colonel Holding a Great Axe to Chop Down Withered Wood" was one.

Such excesses seemed out of character for Wang, a Confucian scholar and renowned ascetic. The numismatist Rob Tye, who has made a study of the emperor's reign, believes that he succumbed to despair. **"Frankly, my own assessment is that he was high on drugs for most of the period," Tye writes.** "Knowing all was lost, he chose to escape reality, seeking a few last weeks of pleasure."
…

Wang Mang may be the most controversial of China's hundred or more emperors. Born into one of his country's oldest noble families in about 45 B.C., he was celebrated first as a scholar, then as an

ascetic and finally as regent for a succession of young and short-lived emperors. Finally, in 9 A.D., with the death (many believe the murder) of the last of these infant rulers, Wang seized the throne for himself.
…

The 14 years of Wang Mang's reign can be divided into two parts: eight years of dramatic reform followed by six of escalating rebellion. The first period witnessed attempts to overhaul the entire system of imperial government, though whether the emperor intended to return China to the days of the semi-legendary Zhou Dynasty, which had ruled China before the Han, or introduce radical new policies of his own, remains hotly disputed. The second period witnessed the upheaval known as the Red Eyebrow Rebellion (an attempt by desperate and essentially conservative peasants to reverse some of Wang's riskier reforms), the resurgence of the Han **and the deaths of an estimated 25 million people—perhaps half the total Chinese population at that time.**
…

More recently, however, Wang Mang has undergone a startling reappraisal. **This process can be dated to 1928 and the publication of a study by Hu Shih, a renowned scholar who was then the Chinese ambassador to the United States.** In Hu's view, it was the Han Dynasty that most richly deserved condemnation, for having produced "a long line of degenerate scions." Wang Mang, on the other hand, lived simply, thought deeply and was "the first man to win the empire without an armed revolution." **Moreover, Wang then nationalized his empire's land, distributed it equally to his subjects, cut land taxes from 50 percent to 10, and was, all in all, "frankly communistic"—a remark Hu intended as a compliment.**
…

It is said he invented an early form of social security payments, collecting taxes from the wealthy to make loans to the traditionally uncreditworthy poor. **He certainly introduced the "six controls"—government monopolies on key products such as iron and salt that Hu Shih saw as a form of "state socialism"—and was responsible for a policy known as the Five Equalizations, an elaborate attempt to damp down fluctuations in prices. Even Wang's harshest modern critics agree that his ban on the sale of cultivated land was an attempt to save desperate farmers from the temptation to sell up during times of famine; instead, his state provided disaster relief. Later the emperor imposed a ruinous tax upon slave owners. It is equally possible to interpret this tax as either an attempt to make slaveholding impossible or as a naked grab for money.**
…

Wang Mang's land reforms, meanwhile, appear even more consciously revolutionary. **"The strong," Wang wrote, "possess lands by the thousands of *mu*, while the weak have nowhere to place a needle."** His solution was to nationalize all land, confiscating the estates of all those who possessed more than 100 acres, and to distribute it to those who actually farmed it. Under this, the so-called *ching* system, each family received about five acres and paid the state tax in the form of 10 percent of all the food they grew.
…

Moreover, few of the emperor's most apparently socialist policies remained in force in the face of widespread protest and rebellion. **"In the abolition of slavery and the restriction of land holdings," Dubs writes, "Wang Mang undoubtedly hit upon a measure that would have benefited society, but these reforms were rescinded within two years."**

For Dubs, the usurper's policies have mundane origins. None, he argues, was truly revolutionary, or even original to Wang. **Even the celebrated land reforms were the product of a Confucian tradition, "said to have been universal in Zhou times"—and were little more than "the dream of idealistic scholars," since the five-acre parcels handed out to peasant families were too small to make practical farms.** (According to the contemporary imperial historian Ban Gu, 10 or 15 acres was the minimum needed to support a family.)

Others argue that the emperor really did have radical ideas. Tye joins Hu Shih in preferring this interpretation, commenting on the "astonishing breadth" of Wang Mang's program, from "a national bank offering fair rates of interest to all" and a merit-based pay structure for bureaucrats to "strikingly pragmatic" taxes—**among them what amounted to the world's first income tax. For Tye, the monetary expert, Wang's fiscal reforms were intended to impoverish wealthy nobles and merchants, who were the only people in the empire to possess substantial quantities of gold.** His bronze coins, in this interpretation, released the less-privileged (who owed money) from the curse of debt, while having practically no effect on a peasantry who lived by barter.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA174#v=onepage&q&f=false

In the kaleidoscopic struggle of affine families, the Wang family, anchored on Yuandì's empress and long-lived widow, held its own. **Becoming regent in 1 BCE, Wang Mang built a granary in the capital for the poor and expanded the imperial academy to more than 10,000 students. His popularity was greatest among the literati, whose ideals he exemplified, but not confined to them; 487,572 persons around the country petitioned to honor him in 5 CE.** Four years later, Wang Mang ascended to the throne as the first and last emperor of the Xin Dynasty. **His rise and fall marked the climax of Han Confucian idealism and exposed its vacuity.**112

Rebellions from the Liu house were suppressed easily. Almost all officials accepted the new dynasty, as did most literati clans. **The mandate of heaven had shifted – until Wang Mang tried to justify the change by enacting many benevolent policies.** The sale of slaves was prohibited. An edict excoriated magnates for land encroachment, capped land possession, and ordered families that exceeded the cap to distribute the surplus to poor relatives and neighbors in the manner of well-fields.113

The literati got what they ardently advocated, but discovered a consequence that would have been obvious had they paid attention to reality. The first Han literati premiers had bought or encroached on large tracts of land.114 In their wake, literati clans amassed wealth, bought slaves, infiltrated the upper echelon of society, and grew into powerful local magnates. They themselves were a significant part of the social problem. Their self-interest would be hurt by Wang's implementation of their ideal policy.115 **A true moral choice confronted them.**

Their reaction was unambiguous. Literati turned warlords, setting a precedent for history. Extensive research on historical sources reveals that those who took up arms against Wang Mang were mainly literati clans and powerful families. **Significantly, before the implementation of Wang's policies on land distribution and slave-sale prohibition, these clans mostly supported him.** After the implementation, literati clans and powerful families everywhere rose in armed rebellions. Why? After digging into the evolution of literati clans, the researcher answers, **"Although Wang Mang courted literati-officials, he also cracked down on moguls who abused the small people. This conflicted with the interests of the majority of the powerful literati clans."**116

Talk of interests was beneath political intellectuals, who deftly changed their righteous rhetoric. Instead of denouncing inequality, they condemned usurpation. **Under the virtue of fealty, the mandate of heaven snapped back to the Han. Abdication as an alternative to hereditary power was discredited forever. Historians discern a great change in Chinese political culture that occurred between the two Han Dynasties. In the Former Han, most debates on government attended to social problems and criticized social policies. Such critique died out in the Latter Han. Henceforth gross economic inequality and the magnates' oppression of the poor became accepted norms.**117

Wang pushed a spate of reforms to revive the Way of ancient kings. They collapsed. Heaven itself frowned. The Yellow River broke its bank and, in 11 CE, made one of its nine great course changes that earned it the epiphet of "China's sorrow." Government relief efforts were woefully inadequate. Hungry refugees and displaced peasants merged into large but loosely organized forces. Rebellious elites and literati clans jumped in to reap advantages. By 23, the Xin Dynasty was over, its fourteen years a brief interlude in the Han.118

Writing early in the Latter Han, founded by a rebel, Ban Gu started the mainstream judgment of Wang Mang's reform as the ploy of an arch-hypocrite.119 **Other historians see hypocrisy on the other side. Wang's major measures had been previously proposed by Mengzi and Han literati-officials whom his detractors admired.**120

https://warpweftandway.com/teaching-yang-zhu/

Emerson makes the following reconstruction of the Yangist position: the Yangists were for private life over public life, the family over the court, **and highlighted the weakness of the Confucians, who had this hybrid system of clan loyalty and public life that was dangerous and untenable.** Some choice bits:

> *... **the court and the clan are two entirely different social groups, in both their constitution and their function, and the more Chinese culture expanded, the more fictional the pseudokinship bonds became**–for example, between the Eastern Chou and the semibarbarous states of Ch'in and Ch'u... To begin, it has to be shown how the Confucian attempt to model the state on the family was plausible at all. (539)*
>
> *... **the Confucian project amounts to an attempt to extend segmentary clan organization over an entire nation. But even on a smaller scale such systems are notoriously susceptible to fission, and at a certain indeterminate kinship distance, relatives are normally enemies.** (547)*

https://books.google.com.sv/books?id=wwE1KcgZZBMC&lpg=PP1&pg=PA220#v=onepage&q&f=false

With laughter, Sha Monk said, "O Elder Brother! As the proverb says,

> ***Three years not showing at the door,***
> ***A relative is one no more.***

> You were parted from him for five, perhaps six hundred years; you haven't even drunk a cup of wine with him, nor have you exchanged invitations or seasonal gifts. How could he possibly think of himself as your relative?"

https://www.gutenberg.org/cache/epub/2333/pg2333-images.html#link2H_4_0001

> To be butchered on the smoking ruins of their city, to be dragged in chains to a slave-market, to see one child torn from them to dig in the quarries of Sicily, and another to guard the harems of Persepolis, these were the frequent and probable consequences of national calamities. **Hence, among the Greeks, patriotism became a governing principle, or rather an ungovernable passion.** Their legislators and their philosophers took it for granted, that, in providing for the strength and greatness of the State, they sufficiently provided for the happiness of the people. **The writers of the Roman Empire lived under despots, into whose dominion a hundred nations were melted down, and whose gardens would have covered the little commonwealths of Phlius and Platæa. Yet they continued to employ the same language, and to cant about the duty of sacrificing everything to a country to which they owed nothing.**

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA176#v=onepage&q&f=false

Guangwudì, who won the post-Xin civil war to found the Latter Han Dynasty, claimed descent from a surplus son of Jingdì, although six generations had eroded royal privileges. He and many associates were wealthy landlords versed in the Confucian Canons, as were many rivals whom he crushed.124 Learning and moralization did not prevent their fighting from pulverizing the people. **Household registration plummeted by two-thirds and for centuries failed to regain the Former Han level.**125

Guangwudì repealed many pedantic edicts of Wang Mang with fanfare. On socially beneficial issues, he continued Wang's policies halfheartedly. The civil war eased his task by creating room for reconstruction. **Some lands laid waste by chaotic violence were distributed to the poor or rented to the needy. Many slaves were freed and debt bondages annulled.** Further progress stalled, however. The social force that resisted Wang's agrarian reforms had not diminished but grown. Landlords capitalized on their merit in founding the new dynasty and forced Guangwudì to abandon a resurvey of farmland for fair tax assessment.126 **Despite economic progress, taxable land in the Latter Han never exceeded 90 percent of that registered at the end of the Former Han.** Graced by imperial benevolence, the elites evaded taxes and grew richer.127 Inequality spiraled. In the contests between the state and landed wealth and between rhetorical ideal and self-interest, the second of each pair won.

Farsightedness seemed not to be Guangwudì's strength. Intending to secure his dynasty, he transferred much authority from the bureaucracy to the palace, but it create havoc when his weak progeny failed to control the imperial household. Foreign defense was another example. **His abolition of military training to cut expenditures ruined the fighting capacity of the militia. Provincial governors and local magnates who hired volunteer soldiers eventually developed into warlords who tore apart the empire.**
…

The literati ethos of Latter Han was outstanding, rivaled only by that of the Song Dynasty, when neo-Confucianism emerged. Guangwudì extolled the integrity of officials who had refused to serve Wang Mang and rewarded them with high offices, thus training officers to devote themselves to the imperial family instead of to the state or the common good. Seeking personal connections became the overriding concern of officials. Ministers who appointed junior officers regarded this action as a personal favor for which the appointees were morally obligated to reciprocate. Many accrued tremendous personal power by accumulating protégés and former protégés, which enabled them to turn warlords later.133 **The ethics of personal ties in government had become a deep-rooted source of corruption, which continues to hurt today.**134
…

Besides bickering among themselves, literati-officials who controlled the bureaucracy struggled for power with the inner court, especially eunuchs, who came to dominance after helping young Huandì consolidate power in 159.137 **Unlike the great eunuchs of the Later Roman Empire who wielded power individually, eunuchs of the Latter Han formed a clique around the emperor, gaining power from proximity to him.**

Some eunuchs were undoubtedly corrupt, but others were upright and creative. **Cai Lun, for example, improved the technology of paper making so much he was traditionally credited with inventing paper.**138 **Coming from downtrodden families, eunuchs might have injected some diversity into the bookish monoculture.** Instead, they earned the spleen of cultural aristocrats, who loathed the "foul" mutilated creatures who competed for available jobs and diverted emperors away from the path of "purity." Anti-eunuch movements precipitated three nasty faction fights in the successive reigns of Huandì, Lingdì, and Shaodì. Both sides abused power and employed illegal violence, increasingly bloody. The emperor sided with literati-officials when they prosecuted eunuchs legally. When they killed eunuch associates indiscriminately, Huandì and Lingdì listened to eunuchs and proscribed partisans. More than 100 partisans were killed and 1,000 imprisoned or banished, many for sheltering fugitives. They gained huge sympathy. The banished became such celebrities that a jealous officer petitioned to join the proscription list.139 Literati-officials had their revenge under Shaodì. All eunuchs and many men unlucky enough to lack facial hair were massacred, totaling more than 2,000.140

The mainstream Chinese historiography blamed the decline of the Han on eunuchs, the "force of darkness," and applauds as heroic martyrs anti-eunuch partisans who vowed to "purify the world."141 However, maverick historians who analyzed the composition of proscribed partisans present another picture: "This

heterogeneous lot defied a single judgment. They acted impulsively, often overstepping the bounds, and might not be good administrators if appointed to office. Mutual eulogy for gaining influence is not laudable. Contemporary literati rallied to them for fame; in the Han's nomination system, a short cut to office was to form cliques to advertise celebrity."142

Many literati were upright and many partisans exhibited great personal heroism. However, their movement generally confused the war on eunuchs with the war on corruption. Corruption suffused the government. Many literati-officials were deep into it too. When a master in the Canons was convicted of gross venality, more than 1,000 literati gathered before the palace to clamor for his release.143 **When two provincial governors abused the law to massacre eunuch affiliates not convicted of crime, the literati applauded them as heroes against corruption.**144 The double standard revealed that corruption was secondary to elimination of enemies in a faction fight.145

After the accession of the child emperor Shaodì in 189, many anti-eunuch partisans gathered around the new regent He Jin and their long-time collaborator, the renowned litterateur Yuan Shao. **Yuan persuaded He to summon the general Dong Zhuo, ignoring warnings of insubordination on frontier troops in the capital. All eunuchs perished in a bloodbath.** Literati-officials realized their ideal of purifying the world. The masses once again suffered for irresponsible idealism. The army summoned burned the capital city, Luoyang, and did not stop at that. Dong deposed Shaodì and erected the puppet Xiandì. Yuan and regional officials allied to fight Dong, then turned on each other. The Han Dynasty lingered for three more decades, but only in name. **The warlords dismembering the state and devastating the people were not eunuchs but mostly famed literati-officials.**146
…

Tacitus treated the degeneration of Tiberius's reign as an unveiling of hypocrisy; Ban Gu treated Wang Mang's reign similarly.
…

Tradition censures the last emperors of the Former Han Dynasty before Wang Mang's usurpation in 9 CE. Intrigues and sexual licentiousness corrupted the court, but how did the empire fare? The literati painted grim pictures, which page after page Marxist historians collated with the conclusion, "the oppressed masses struggled on the edge of hunger and death, and history entered a dark period."149 However, **Ban Gu chose the 2 CE census as the sample of political geography in the *Book of Han*, adding, "The Han is at peak prosperity."**150 The cold statistics undoubtedly left out numerous instances of human suffering. Social and administrative deterioration did occur. Nevertheless, household registration was a sensitive measure of order and stability. A far darker period would come when desperate people fled their homes, seeking food or safety. **The 65 percent drop in census figures half a century later indicates the significance of the big picture.**151 Ban Biao, a historian who lived through the post-Wang civil war, explained why similar bedlam spared the Former Han during its last decades under bad emperors: **"The danger started from the top, and the damages did not penetrate into the populace below."**152

Such phenomena were also pronounced under Tiberius and Domitian. **Tradition condemns them for ending in reigns of terror that decimated great aristocratic families.** From provincial perspectives, however, a different assessment obtained. Both rulers managed the Empire well, choosing their governors carefully, repressing abuses, and protecting the subject population.153 The provinces became increasingly prosperous under Tiberius, and many of Domitian's policies continued into the golden reign of Trajan. **The posthumous condemnation of Domitian, enthusiastically pursued by senators, excited only tepid responses from the provinces.**154 **The atrocities of Tiberius and Domitian apparently fell mainly on the imperial entourage and the political circle closest to it, sparing most of the populace.** Tacitus, who lived through the reign of Domitian and condemned Tiberius in the *Annals*, observed elsewhere, **"the tyrant only oppresses his nearest neighbors."**155 That neighborhood was the home of traditional historians, including Tacitus and Ban Gu. Had it put colored glasses on historiography?
…

The second-century physician Galen described various kinds of ulcers that Roman country folks got in early summers from eating grass and twigs, because city dwellers left them insufficient grain to last until the next crop. He was conducting a scientific study on foods.158 **A modern historian of Antonine age remarks, "Many of the people in the rural areas lived a miserable life of continual or sporadic destitution and starvation, in contrast to many of the 'city-dwellers.' … It is strange that so little is heard about this."**159 Only recently has the question of poverty and destitution in the Empire attracted scholarly attention.160 **Traditional Chinese elites were shepherds closer to the flock. They may be condescending and lethargic on practical solutions, but they protested for the people.**
…

Tacitus and Dio were senators of consular rank, as was the younger Pliny, whose letters and panegyric provide much information on the early Antonine period. Suetonius, who wrote biographies of the first twelve Roman emperors, was an equestrian in charge of imperial correspondence under Hadrian. To these members of the upper class, perhaps the foremost quality of an emperor was his respect for and treatment of senatorial aristocrats.161

Chinese historians were elites but of lower ranks. The grand annalist, an officer "responsible for recording all actions of the ruler, to keep them careful in words and deeds," was common in many pre-imperial states. The post was dangerous when reality was ugly. **A Qi minister who murdered his lord in 548 BCE also killed the grand annalist who insisted on recording the regicide. The annalist's two brothers inherited the office successively and refused to cover up the truth.** The minister killed them both but relented when the youngest brother proved equally stubborn. Had he kept on killing, he would not have prevailed. The junior annalist was already en route to the office.162

The tradition had degenerated in imperial times, but not completely. **The office of the grand historian continued, but only with the lowest grade allowed to attend court.** As grand historian, Sima Qian fulfilled his father Sima Tan's vision in the *Records of the Historian*, which covers Chinese history from its mythical beginning to his own time in the reign of Wudì. **He was undeterred when, seven years into the project, he was found guilty of vouching**

for a general who surrendered to the Xiongnu and castrated because he could not afford the fine for commutation. Ban Gu also continued the aspiration of his father Ban Biao. He embarked on a history of the Former Han Dynasty but was arrested by the local governor for making a private enterprise of state history. His younger brother Ban Chao saved him and got him a job by appealing to the emperor. The Ban family had produced middling officers for three generations, but it was not rich. After they moved to the capital for Ban Gu's new job as an imperial librarian, Ban Chao toiled as a hired scribe to support their mother before throwing down the ink brush to join the army. Twenty years later, indiscreet politics landed Ban Gu in prison, where he died in 92, **five years before Ban Chao, as protector general of the Western Territory, dispatched a deputy in quest of the Roman Empire.**
...

Major Roman historians tended to be aristocrats working at their own leisure; their Chinese counterparts, junior officers working with state sponsorship.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA191#v=onepage&q&f=false

The Han Dynasty gradually codified most social stratifications fundamental to Confucian ethics. The circle enjoying legal privileges expanded from royalty and officials to almost the whole stratum of literati and wealthy landlords.15 **Already in Republican Rome, upper-class convicts under the death sentence were routinely allowed to escape into exile, while poor convicts were immediately executed.** Under the Empire, laws defined a person's status. The lower class was susceptible to torture; the upper class was not.16

In civil law, the crown jewel of their jurisprudence, the Romans far outshone the Chinese, who had a few laws but preferred reconciliation or arbitration to litigation.

>
> **The submission to *law*: oh, with what qualms of conscience was it that the noble races throughout the world renounced the *vendetta* and gave the law power over themselves!** Law was long a *vetitum*, a blasphemy, an innovation; it was introduced with force *like* a force, to which men only submitted with a sense of personal shame.

...

The Roman and Chinese Empires lacked the rule *of* law, but both aspired to the rule *by* law and hoped their emperors would voluntarily submit to existent laws. The younger Pliny praised Trajan, Rome's thirteenth *princeps-imperator*: **"You have spontaneously subjected yourself to the laws. … What I hear for the first time, now learn for the first time, is not 'The *princeps* is above the laws,' but 'The laws are above the *princeps*.'"**21 **What was news to Pliny is the central Legalist tenet, as Shang Yang insists: "The law is what the ruler and ruled all uphold."**22 The idea was still influential in early Han. Wendì just missed being injured when a man rushing from underneath a bridge upset the horses in the imperial procession. Minister of Fairness Zhang Shizhi, having ascertained the transgression was unintentional, imposed monetary fines. **To the furious emperor who demanded a heavier penalty he replied, "The law is common to the son of heaven and all under heaven. Now the law stipulates this penalty. To change it would betray the people's trust in the law."** Wendì paused for a long time but finally agreed.23 Nevertheless, the rule by law rested on the grace of emperors. **Even Trajan turned several provinces from public territory into imperial patrimony almost overnight, without consulting the Senate.** Empress Lü got her way by simply replacing the remonstrating premier with someone more compliant.24
...

Shorn of political rights, the Roman citizen became a privileged subject, and citizenship became the badge by which conquerors discriminated against the vanquished. Such discrimination faded fast in China. **As soon as Qin annexed the six states, it granted the same status to all inhabitants in its realm. Conquerors and the conquered all became *bianhu qimin*, equal peoples in registered households with similar duties and benefits.** All men with ability in the Empire were eligible for government offices, an important privilege that in Rome was reserved for citizens only. Subsequent dynasties adopted the same policy. **Furthermore, Chinese subjects enjoyed one thing that Roman citizens lacked. The Han government urged converting swords into plowshares but did not legally disarm civilians.**29 **In contrast, the Roman Empire deprived all nonmilitary persons, citizens and subjects alike, of the right to bear arms.**30

Citizens constituted only about 10 percent of the Roman Empire's population for more than two centuries. Initially they retained some social and legal privileges, but these too gradually became attributes of wealth, not citizenship. "I bought this citizenship for a large sum," a Jerusalem tribune brags in the Bible.31 **By the Antonine age, poor citizens classified as *humiliores* lost their right to appeal, immunity to torture, and other legal protections, so that they became liable to cruel penalties previously reserved for slaves.**32 Perhaps it was not ironic that Caracalla, who in 212 granted Roman citizenship to al free inhabitants of the Empire, was known not for liberality but for rapacity. **The name "citizen" offered little benefit to tenants without legal freedom to leave the land or artisans forbidden to leace their fathers' occupations.** Caracalla's edict excited far less enthusiasm from contemporaries than from moderns. **It was not even mentioned on the coinage, the usual propaganda machine.** A historian explains, "The upper classes already knew where their interests lay, and to the lower classes it no longer made much difference."33

Constantine paid oriental despotism the highest compliment of imitation. *Despotes* became the usual term for addressing the emperor, to whom Roman citizens spoke of themselves as "your slaves."34 "But this orientalism was a superficial etiquette," a Western scholar notes; "the autocrat seldom forgot that his subjects were freemen."35 **The proportion of slaves in the Greco-Roman world far exceeded that in any oriental society. Sociologists also found that ordinary Persians enjoyed more factual freedom from state intervention in their daily lives than did the Greeks, because the Persian Empire left significant domestic autonomy to localities.**36 **What the Greeks and Romans scorned as abjectness was mainly the ceremonial homage that**

oriental peoples rendered to their rulers, including prostration. Such homage was precisely what they themselves later adopted toward their emperors. Nevertheless, the change may be superficial after all. **Centuries before they physically prostrated, the Greeks had spiritually prostrated as the Chinese never did. They worshipped their living kings and emperors as gods, and the Romans later followed this example.**37
…

A Western scholar constructs an enlightened "doctrine of adoption" for the Roman Empire: "The emperor was not a monarch of the Oriental type; … the power was not transmitted from father to son merely in virtue of blood relationship. The emperor adopted the best man among the best men."39 A closer examination does uncover evidence for an ancient doctrine of nonhereditary imperial succession, but in China, not Rome.

This may be surprising in view of the Darwinian evolutionary edge that the Chinese upper class had over its Roman counterpart. More than 100,000 persons were descended from Gaodì and his two brothers in two centuries.40 In contrast, the Roman aristocracy could not replenish itself by natural birth. The phenomenon was conspicuous enough to induce speculation about sterility caused by frequent hot baths. Or it may be simply because aristocrats preferred pleasure to child rearing, as Tacitus remarked. Anyway, despite policies that encouraged childbearing and censured celibacy, many Roman aristocratic families were empty nests.41

The Antonine emperors who adopted their successors had no biological son of their own. Acts out of necessity prove no principle. **Where choice was available, the results were unambiguous. Vespasian declared, "My son shall succeed me, or no one."** Between the rule of his family and anarchy, the Senate took no time to decide.42 While aristocrats resigned themselves to the dynastic principle, the troops and the common people embraced it. **The Praetorian Guard promptly hailed Claudius, apparently retarded as he was.** The crowd supported the choice, and legionaries balked at the rebellious conspiracy of their officers. Elagabalus was acclaimed emperor on physical resemblance to Caracalla; even a bastard son had advantages. **A historian summarizes his extensive research: "No Emperor who had a son living was ever peacefully succeeded by anyone else."**43

Even on paper, evidence is lacking for the alleged adoptive principle. Stoicism demands a good king, but is generally silent on any principle of succession. Marcus Aurelius, the Stoic philosopher-emperor, happily passed the purple to his son. **Most scholars doubt that a principle of adoption ever existed in the Roman Empire.**44

Proof of existence is easier than proof of nonexistence. Since the warring states, the Chinese developed a doctrine of abdication, *chanrang*, and constructed exemplars out of the sage kings Yao and Shun.45 **Ideally, Wendì remarked, a king should "search the world for a worthy and virtuous man and pass the throne to him."**46 In the nonideal world, abdication offers not a substitution but an escape clause from the dynastic principle under limited conditions; the mandate of heaven is not permanent. In 78 BCE, Sui Hong petitioned the emperor to emulate Yao and Shun. Eighteen years later, **Gai Kuanrao wrote in a memorial to the emperor, "He who regards the world as belonging to all men passes it to the worthy. He who regards the world as belonging to his family passes it to his son."**47 The doctrine of abdication played a prominent role in the rise of Wang Mang and the succession of the Former Han by the Xin Dynasty. **Discredited by the Xin's failure, *chanrang* henceforth becomes a euphemism that usurpers use for their purposes.**
…

Serving similar functions as Roman games, emperor-sponsored Chinese festivities helped to bind the people to the ruler. **Han emperors frequently showered on every man in the empire ranks that carried tradable social and material benefits.** Besides, each hundred households received an allotment of food and wine, presumably for a communal party.55
…

In secular ceremonies, the triumphant parade was the most pompous for Roman emperors. Many Han emperors followed the ancient ritual of leading the court in the annual plowing of a sacred field, a symbol of dedication to agriculture.57 These rites, in which the emperor shared with the people the glory of victory or the virtue of work, publicized the disparate ideologies of the two empires.

As supreme heads of state, the emperors manifested the values of their realms. **Except for the First Emperor, who diligently inspected the country, the Chinese emperor was attached to family and seldom stirred from the dragon throne in the capital.** Most people never saw his face or image. They knew him simply as "the emperor" or "the current ruler." **His personal name was not to be mentioned and his official name came posthumously.**58 In contrast, Roman emperors were public celebrities who often marched ahead of the legionary eagle standard. They frequented parades and games, where the people could express their sentiments by clamoring. Keen to advertise themselves, the emperors erected statues everywhere. Their images on coins constantly reminded their subjects to render to Caesar what was Caesar's.59
…

A senator's privileges passed on to his descendants up to three generations. Nevertheless, many senatorial families failed to entrench because of imperial persecution, low fertility, high expenditure, and the withdrawal of sons who inherited senatorial privileges but refused the burden of service. Rich provincials were eager to take their places. **Non-Italian senators, who constituted 2 percent of the Senate under Augustus, became the majority by the time of Septimius Severus.**73 The fluidity of members did not erode wealth threshold for membership. The Senate had changed from an elite Italian club to a club of empire-wide elites, but the criterion of elitism endured. Similar conditions obtained for the two lower elite orders.74

Wealth bias also permeated the army, where few not in the equestrian order made commissioned officers. Nevertheless, military merit was apparent and an army in wartime was a hotbed of opportunity. Trajan chose magistrates from his friends in the military oligarchy. During the third-century crisis, soldier-emperors rose through the ranks. **Senators accustomed to refined living withdrew from military commands.** The equestrians who replaced them similarly tended to plutocratic interests, but the divergent outlooks of disciplined

professional soldiers and leisured senatorial aristocrats created a crack in the ruling elite. It would widen to lethal proportions toward the end of the Western Roman Empire.75
…

Officers in the early Han government were diverse in socioeconomic background and intellectual persuasion. Previous occupations of farmer, swineherd, or firewood gatherer seemed not to stain their official career.77 To recruit talented officers, Wendì ordered provincial governors to recommend men with integrity and intelligence. Wudì established a regular procedure for this purpose. Each provincial governor was to nominate two candidates annually and be held accountable for their quality. The quota changed in the Latter Han to one nominee from a fixed number of people, which attenuated voices from sparsely populated frontier provinces. **The nomination system produced about 200 recruits a year.** It garnered regional knowledge, pumped fresh minds to the central government, and became a unifying force by opening a channel for people all over the empire to become involved in administration and identify with the regime.78
…

Already in early Han, Sima Tan had observed, “Confucianism is massive in corpus but sparse in essential substance, laborious in effort but meager in achievement, and seldom thorough in affairs.”80 This characteristic was amplified by a century in power. **Exegesis of one Canon exceeded a million words and was fast rising.** The expertise of expressing one drop of idea in an ocean of words created a peculiar language full of jargons, which restricted the range of discussable topics and excluded those not familiar with canonical allusions from political discourse. Learning the language required more and more effort, but entrance into government and the profits it entailed made the effort worthwhile. **“Bequeathing to your son one Canon is better than bequeathing a basketful of gold,” so went a contemporary saying.**81 The prospect of office fueled enthusiasm for education, but one sadly narrow and rigid. Empirical knowledge and objective reasoning were snubbed. Ideologically incorrect concepts, **especially political concepts that went beyond the state as a big family,** were condemned as immoral.
…

Cliques of wealthy literati clans gradually usurped the nomination system to exclude candidates from humble families. **After producing warlords that destroyed the Han Dynasty, the ideological aristocracy would grow into a bona fide aristocracy that eclipsed the throne in the subsequent period of disunity.**83

The emperor and the elite needed and benefited each other, although their relation was always tense. Confucianism served well the Chinese Empire and the literati, as did plutocracy the Roman Empire and the landlords. In comparison, **the ideology-based Chinese elite were more dependent on the throne than was the wealth-based Roman elite.** Wealth constituted an independent powerbase, but early Han experiences divulged the difficulty for Confucian masters to retain disciples without the promise of government jobs or aristocratic patronage.84 **Dependency on the state made the Chinese elite more submissive. On the other hand, softness imparted a certain tenacity. Virtue rhetoric was pliable to please new masters, whereas regionalism made the hard power based on landed wealth brittle.**

The imperial ruling elites enjoyed tremendous power and privilege over the common people. Yet they were pale images of the haughty pre-imperial aristocracies. Nostalgia bred discontent and perhaps agitation, against which ever-vigilant emperors did not hesitate to take preventive measures, justified or not. In China, cursing the living emperor or slandering the court was treasonous, and the laws of impiety penalized acts such as leaving any object belonging to the emperor on the ground. Since Augustus had criminalized libel, treason in the Roman Empire covered everything from taking into a brothel a coin bearing the emperor’s image to consulting the horoscope about the emperor’s death.85 **It is difficult to tell which records more deaths of officers on sedition charges, Ban Gu’s *Book of Han* or Tacitus’s *Annals*.** Condemnations of imperial repression fill historiography. Less noticed is the elites’ complicity in the game. Some officers gained advantage by false accusations or used legitimate regulations to settle private feuds. Such practices became tools for faction fights. Roman senators were as adept at them as Han literati. Mutual incrimination escalated, if it did not precipitate, many imperial persecutions.86

The throne and the ruling elite evolved together amid tension and power struggle. **An effective bureaucracy without which emperors could not get things done could develop into a countervailing force, as happened in eighteenth-century Europe.**
…

The Han establishment was formally more bureaucratic, although its operation was increasingly biased by personal connections among literati-officials. **Roman senators were aristocratic. It would take more than two centuries for them to yield to a Roman bureaucracy staffed by equestrians appointed to task-oriented offices.**
…

***Provincia* and *jun* both originated as military commands and transformed into civilian administration.** At its peak, the Qin Dynasty had forty-six provinces. By expansion, splitting domains, and retaining some kingdoms as income fiefs, the Han had 103 provincial-level units, abbreviated as provinces.105 **The Roman Empire had forty-six provinces at the end of the Antonine age. After Diocletian and Constantine split large provinces to prevent overpowerful governors, Roman provinces numbered 116.**106
…

The estimated peak population of each empire exceeded 50 million. Thus an average province had more than half a million inhabitants.
…

The classical city of the Greco-Roman world was one for consumption based on rent from agriculture, radically different from the medieval city, which was a production center based on trade and industry. The great majority of Roman cities were essentially rural; crafts and services existed but were minor. The urban

area was the administrative and consumption center, where absentee landlords who constituted the city's governing circle resided and spent their income.110
…

While the Greco-Roman city passed with classical antiquity, of which it was a hallmark, the county has been the most enduring administrative organization in China since its unification. In the Han bureaucracy, county officials collected taxes and managed routine matters of justice, finance, and culture. The county superintendent, nicknamed "the parent official," was the imperial officer most familiar to the common people. To get things done, he had to obtain information on local conditions and establish good relations with local magnates. Hence he relied heavily on local subofficials, who constituted more than 90 percent of his staff. **Despite lowly status and stipends, local subofficials undertook significant responsibilities and often wielded more substantive power than did their superiors appointed from outside, who came and went while the locals stayed on.** Given their familiarity with the job, knowledge of all customs, and tricks for graft, they provided invaluable service but also became an inveterate source of corruption.118

Unlike Roman patronage, the Han government was wary of local magnates; many had roots traced to pre-imperial times. The rich acted like "lords without titles." Gangs proliferated.119 Gross abuses by powerful magnates became the first mission of circuit inspectors. **Emperors selected "brutal officers" capable of standing up to the powerful and spurning the bribes of the rich, but also capable of massacring innocents together with wrongdoers when targeting an intransigent clan with hundreds of households.**120 These effects were only temporary. Increasingly, literati-officials joined the ranks of wealthy magnates. Many policies designed to reduce abuse and assuage inequality, such as the ever-normal granary and Guangwudì's land survey for fair tax assessment, fell under elite pressure cloaked in virtue rhetoric. **As literati clans grew, the Latter Han government climbed into bed with local landlords and its policy converged with that of Rome.**

6.7 The Myth of "Big Government"

The contrast between bloated Han bureaucracy and skeletal Roman government is a common stereotype. **Some say the Han employed twenty-five times more functionaries than did the Roman Empire.**121 Does the difference reflect actual employment or the comprehensiveness of employment statistics? Let us compare the governments at the ends of Former Han Dynasty and the Antonine age, when each empire was near its zenith.

The Roman top government was staffed by senators and equestrians. **As in the Republic, senatorial magistracies were honorary but came with generous expense accounts.** From the expense account for his year as governor of Cilicia, Cicero, who was exceptionally clean in office, was able to beg a surplus of 2.2 million sesterces. **In imperial times, senatorial governors annually drew about 1 million sesterces.**122 **Officers with the equestrian's rank were salaried.** High-ranking procurators, the *trecenarius*, *ducenarius*, *centenarius*, and *sexagenarius*, respectively carried annual stipends of 300,000, 200,000, 100,000, and 60,000 sesterces.123
…

As a baseline for comparison, **the average wage of a day laborer was about 3 sesterces and the annual pay of a legionary was 300 denarii or 1,200 sesterces,** of which about one third or 300 sesterces was deducted for rations and additional amounts for clothing and equipment.124 Thus a *ducenarius* received the pay of 167 legionaries or the ration of 500.
…

All told, about ninety-five high-ranking senators held active posts each year. The number of high-grade equestrians grew over time. By the end of the Antonine age, some thirty-six *ducenarius*, forty-eight *centenarius*, and fifty-one *sexagenarius* were active annually.125 **Together with the senators, about 230 high officials were active administering the Empire.**
…

In total, one estimate counted up to 10,000 functionaries operating in the forty-six provinces at the time of Trajan.126

The *Standard Histories* provide long lists of Han officers, complete with their jobs, grades, stipends, subordinates, and histories of evolution. Where as the names of Roman grades such as *ducenarius* derived from their salaries, the names of Chinese grades such as *erqianshi*, literally "two-kilo bushels," are only of ordinal significance. Their corresponding salaries were stipulated in amounts of grain measured in *hu* (1 *hu* = 19.7 liters).
…

As a baseline, the monthly ration of a foot soldiers was around 2.6 *hu*.128 Thus a mid-two-kilo received the ration of 46 soldiers.

In the ten-kilo trade were the triumvirs and a couple of honorary posts such as the emperor's tutor. **The three grades of two-kilo constituted the bulk of high officialdom.** There were ten supra-two-kilos: the heads of nine ministries plus the prefect of the capital. Twenty-seven lesser two-kilos served in the central government; more than half were commanders of guard units. The bulk of their grade, totaling about 200, served as circuit inspectors, provincial governors, and commanders in charge of army reserves. **Together with their colleagues in the capital, the total number of active high officials was not much more than 240.**129
…

Juxtaposing the Roman and Han governments down to the provincial level, they are comparable in personnel size. **Each central government employed a few dozen high officers and appointed a couple hundred more to govern the provinces. Supplementing them were hundreds of junior officers and thousands of subofficials.** However, the expenditure of the Roman government was larger because of higher salaries at the top. Together, **the compensations of 230 high Roman officials amounted to the ration of 275,150 soldiers; that of 241 Han high officials, 10,965.**

As compared, the Han government was near its maximum size, the result of rapid expansions under Wudì. Many posts would be cut by Guangwudì.133 **In contrast, expansion of the Roman government, which had been mild hitherto, would soon accelerate under Diocletian. Two centuries after the dates of our comparison, the Han high officialdom had not changed much, but the number of senior Roman officers had jumped to about 6,000.** Not the entire jump is attributable to different definitions of "high official." Except for brief periods, the Later Roman Empire had two or more simultaneous emperors, hence a duplication of central headquarters and officers. The number of Han provinces remained constant, but the number of Roman provinces more than doubled. Also, Rome increasingly appointed procurators to keep city councilors in line. All these additions increased the size of government.134 Finally, the prize of Big Government goes to Rome.
…

Excavated records show 120 junior officers and 2,044 subofficials working in Donghai's thirty-eight countries.135 Donghai was larger than most provinces. Extrapolation of its figures falls within the ballpark of the empire-wide figure in **the *Book of Han*'s list of official posts: "From aides to the premier, the total was 120,285."**136 According to this proportion, less than 300 were high officials, 7,000 were junior officials, and the remaining were subofficials.

With a population of about 50 million, the entire Han bureaucracy engaged about one functionary per 416 inhabitants. For comparison, in 2002 the U.S. federal government alone had 1.7 million civilian employees, or about one per 176 inhabitants. These do not include the large numbers of civil servants in the state, county, and local governments.137
…

The rate of rent varied across regions, but hovered above 50 percent of produce in both empires.157 A scholar argues that the Roman land tax, which was relatively low by ancient standards, provided a carapace for magnates to siphon most profits from a fixed amount of surplus.158 **The Chinese land tax was much lighter than the Roman.** It was benevolent in the Qin and early Former Han Dynasty with its economy of small peasants tilling their own lands. As time went on, land concentration increased, and many peasants became tenants.159 Xun Yue of the Latter Han wrote: "**The ancients taxed one part in ten and thought it fair. Now some Han people pay one part in a hundred for land tax, the burden is light indeed. <u>However, increasingly more land passes into the hands of the rich and powerful, who appropriate more than half of the crop for rent.</u>** The government taxes one part in a hundred, the people pay in excess of one part in two. … Dispensations from the top fail to trickle down and advantages flow to the powerful moguls."160 These moguls were increasingly dominated by literati clans.
…

Confucians, who preferred the rule by men, tolerated the law as punishment, which shared a chapter in the *Standard Histories* with war as necessary evils.

Different conceptions were apparent in the polar reactions to the first publication of law in each realm. Rome published its first code, the Twelve Tables, in 451 BCE, during the Conflict of the Orders. **The event was celebrated from the beginning. Roman annalists regarded it as a plebeian triumph over patricians.** Modern historians also credit patrician self-regulation.165 Codification of law, which selects, articulates, rationalizes, or modifies certain customary practices, increases the predictability of social intercourse. **The common people win;** clear explanations of rules elucidate available options, and written laws curb arbitrary interpretation of tradition by those in power. **The ruling class need not lose;** the codes solidify the status quo, especially existing property rights, by arresting surprising changes in customs.166

Animosity greeted China's first code of laws, published by the state of Zheng in 536 BCE amid the decline of feudalistic power. Shu Xiang, a celebrity Jin aristocrat, wrote a long letter of denunciation: "<u>When people know what to avoid, they lose fear of the authority and acquire contentiousness, because they can appeal to the written codes and hope to get away with what they do.</u>" Confucius chimed in when Jin inscribed its laws on a cauldron in 513 BCE: "Jin is about to perish; it is out of bounds. … **Now that people can appeal to the cauldron, why should they defer to the nobility?** By what can nobilities keep their status? Without hierarchical difference between the noble and the humble, how can a state survive?"167

> https://archive.org/details/newscienceofgiam030174mbp/page/n339/mode/2up?view=theater
>
> **This is [the history of] the *ius latens* of which Pomponius relates that the Roman plebs would have no more of it and hence insisted that the laws be inscribed on tablets, since vulgar letters had come from the Greeks to Rome,** as noted above. This order of civil human things was finally found ready for the monarchic states, in which the monarchs wish the laws administered according to natural equity and consequently in harmony with the understanding of the multitude, **<u>and thus make the powerful and the weak equal before the law, which monarchy alone can do.</u> And civil equity or reason of state was understood by a few men wise in public reason, and, by virtue of its eternal property, is preserved secret within cabinets.**

Significantly, neither man opposed punishment or its cruelty, which had long been routine. Fifteen years before Jin's laws, Shu handled a land dispute and imposed three death sentences respectively for murder, bribery, and corruption. His ruling won praise from Confucius. Besides harshness, the case revealed the arbitrariness of judgment. Bribery with immunity was prevalent. Shu himself was on record to abet it.168 **However, as Shu wrote in his letter, rulers decided cases as they arose and did not set rules in advance to encourage contentiousness. <u>Inscrutability and unpredictability enhanced the noble's power in the eye of the humble.</u>** In short, the Confucian target was not coercion but the publicity and consistency of the law that regulates its use.169

According to a Western scholar, **what is uniquely Chinese about Shu Xiang's letter "is its insistence upon the moral and political dangers involved in the public promulgation of the legal norms. This view of law seems to have no real parallel in any other civilization."**170
…

Consider Mengzi's answer to the question of what would happen if the sage king Shun's father committed murder: "**Shun regards discarding his kingdom as discarding a worn sandal, stealthily bears his father and escapes to the coast, where he lives happily, never giving a thought about the world."**177 **The king's hypothetical action was lauded by neo-Confucians as a revelation of the highest of heaven's principles. Shun was not a private person but the king, whose action affected the well-being of the world's people. His responsibility was especially heavy in the Confucian doctrine that hinged government on the ruler's personal example.** By parading the paradigmatic sage king's disregard of justice, desertion of his people, and indifference to the danger of the country plunging into chaos because of his flight, Mengzi's thought experiment exposed a blind spot in the ruling elite's public responsibility.
…

To avenge one's relatives was a Confucian moral code.180 However, the Qin state, looking beyond personal relations to the public good, realized that blood feuds vitiated social tranquility. Therefore the state took over the responsibility of prosecuting wrongdoers and legally suppressed private vendettas. **The Han government preserved the law, but the literati flouted it in the name of morality. Avenging wrongs on relatives and friends became a fashion in which avengers won personal fame. Revenge led to further revenge, condoned by many officials despite the law.**181 The exegetical mindset prevented the ruling elite from recognizing its selfish disdain for the common good.182

Personal revenge arouses emotion. Its replacement by retributive justice calls for rational value judgment. Reason, a universal human faculty, is the fount of law. **Aristotle writes, "He who commends that law alone should rule may thus be regarded as commending that God and reason alone should rule. … Law is thus 'reason without desire.'" Cicero writes, "When reason is fully developed, it is law."**183 Western cultures emphasize that laws are rational and that ordinary people are capable of using their own minds to understand the rationale for the conduct that laws demand. That is why laws are edifying and law abidance is not shameless but dignified.
…

Professional Roman jurists in the Empire taught and wrote law books but mostly refrained from advocacy in order to maintain impartiality.
…

One political elite analyzed: the other moralized. **While Roman jurists sweated out the details of complex cases and accumulated their experience by clear articulation, Han literati-officials sang of the Way, lofty and vague.** Their doctrine, which persisted through imperial China, was *dezhu xingfu*, the rule of virtue augmented by punishment. **Legal codes, being detailed and to the point, were deemed tedious and fit only for clerks.** Superior men prided themselves on inscrutable virtue derived from memorizing the grand principles in the Confucian Canons. Dong Zhongshu, an early promoter of *dezhu xingfu*, also pioneered *Chunqiu duanyu*, judging cases by citing the Canons, which became widely practiced by literati-officials through the Han Dynasty.186 **Confucian ethics always focused on a person's intentions: "The doctrine of *Chunqiu duanyu* is to judge by intentions. Spare those with good intentions, even if they acted against the law. Condemn those with evil intentions, even if they acted within the law."**187

> http://www.acmuller.net/con-dao/analects.html#div-14
>
> [13:18] The Duke of She told Confucius: "In my land, there are righteous men. If a father steals a sheep, the son will testify against him."
>
> Confucius said, **"The righteous men in my land are different from this. The father conceals the wrongs of his son, and the son conceals the wrongs of his father. This is the correct way!"**

…

Upright and insightful officers individually brought justice to many, but their acumen died with them. The admiration they won in folk legends bespeaks of their rarity. More often, literati-officials scorned mundane law and order.192 Only some acquired judiciary ability befitting their public duty. Many remained legally illiterate, judged cases by reciting the Confucian Canons, and gained fame thereby. By the Jin Dynasty, contemporaries complained that officers high and low knew no law. **Precedents filled more than 900 volumes. Unlike the Roman jurists who strived to resolve contradictions and build up a legal system, Han officials merely swept together arbitrary opinions, which required far less intellectual effort. For similar cases, sentences varied greatly and judgments contradicted each other.**193 **The irregularity provided more food for literati depreciation of the law and more excuse for adjudicating by virtuous whim.** The practice of passing verdicts without citing the law or giving adequate reasons persisted in imperial China.194 **To show off their benevolence, Latter Han emperors regularly granted universal amnesty, which so undermined the law that criminals planned murder ahead of expected pardon.**195 The principle of fairness had gone with the wind.

As mere punishment, the law was reduced to the coercive arm of the rule of men. The change in conception was visible in the name of the government office. **Qin's *tingwei*, which I translate as "the minister of fairness," connotes the senses of "public" and "level as water."** Its image of a balance invoked by Zhang Shizhi should be familiar to moderns.196 **After the Han and up to the end of imperial China, law and order fell under *xingbu*, the department of punishment.**

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA267#v=onepage&q&f=false

The “culmination of human history” was the reign of Constantine to contemporaneous historian Eusebius.1 The Later Roman Empire recovered from anarchy and civil wars. **A civilian bureaucracy came of age and effectively collected elevated taxes from the lower classes.** The enlarged military organized the best troops into mobile field armies, the cream of which attached to the emperor. **The currency was stabilized with a new gold coin partly financed by the systematic despoliation of pagan temples.** Christianity triumphed as the state religion and its church soared in power and wealth. Constantinople sprang up with dizzying speed, crowded with magnificent palaces and churches and endowed with a Senate of its own. Barbarians were defeated and captured kings fed to wild beasts.2 **A panegyric sang of Constantine, “you defy the remnants of the defeated tribe and compel them never to abandon their fears but to be in constant terror, and to keep outstretched their hands in submission.”** 3 **Persia came to bid for peace, but was rebuffed. Constantine “proposed to wage the war as a Christian crusade,” a modern historian writes.**4 He died while embarking on the campaign. That was 337 CE.
…

Archeologists uncovered evidence of thriving rural communities in many parts of the late Roman Empire. **Except for the most heavily raided frontier regions along the Rhine, most areas recovered fully. Syria prospered, as did the African provinces, a breadbasket to the Western Empire.** Production and settlement density crested in many places during the fourth century. Evidence suggests that agriculture was not depressed, despite elevated taxes to support the enlarged army and bureaucracy. Scholars explain that suitably higher taxes can stimulate increased productivity when peasant labor capacity is underutilized. The necessity to pay taxes drives peasants to work more, hence increasing production and growing the economy.19

The economy was similarly healthy toward the end of the Latter Han. The government kept taxes low. **Many of its policies, including the abolition of state monopolies on salt and iron, would warm the hearts of free-market advocates as it did Confucian literati.** Numerous inscriptions attested to the extensive construction and maintenance of roads and bridges. Productivity rose. **Fertile lands in south China increasingly yielded to the plow.** Crafts of great variety thrived, buoyed by new technologies including papermaking, the wind-powered bellows, and an early form of porcelain. Conspicuous luxury consumption soared.20
…

Previous Chinese records of diseases were mainly mass illness following natural disasters and afflictions in the army or subtropical heat. Most occurrences were local. Rarely did one make the list of ominous signs interpreted as divine warnings, with a dedicated chapter in the *Standard Histories*. Luoyang suffered in 125 and 151. Then a string of widespread epidemics popped up on the ominous list, in the years 161, 171, 173, 179, 182, 185 and 217, leaving the country in consternation. The imperial annals also recorded big epidemics in 224, 234, 292, and 311.24 The 217 flare-up claimed many in the imperial family and all four of the leading poets. Contemporaries wrote of deaths in every family and funerals held for whole clans. “Three or four in ten died” at the peak of the 320-322 outbreak in Guanzhong.25 **Significantly, during the early period of pestilence, the millenarian cult that culminated in the 184 Yellow Turban rebellion gained popularity through magical healing.** In the 208 battle of the Red Cliff, the imperial army was weakened by pestilence. It lost. Had it won, China would not have fragmented into three kingdoms.26

>
> [4] Fear of gods or law of man there was none to restrain them. **As for the first, they judged it to be just the same whether they worshipped them or not, as they saw all alike perishing;** and for the last, no one expected to live to be brought to trial for his offences, but each felt that a far severer sentence had been already passed upon them all and hung ever over their heads, and before this fell it was only reasonable to enjoy life a little.
>
> https://www.medieval.eu/cultural-consequences-justinian-plague/
>
> People must have felt the need for new sponsors in heaven, and Meier links it to some incidences of repaganization, although perhaps more specifically the fear of this phenomena among the commentators and chroniclers of that time. **Christianity was suffering in these times of massive insecurity. He writes how “The entire religious system threatened to come away from the moorings”** (p. 284). The desperate situation defied any attempts at explanation and obviously called for desperate measures.
>
> **It is in view of this we must consider the very rapid growth of the Cult of Mary,** a sign of which was the transferral of Candlemas from the 14th to the 2nd February turning a festival of Christ (the presentation in the Temple) into a Marian Festival, the purification. Sources directly refer to the “new” festival as a measure to alleviate the plague, writes Maier. **Another sign of this shift was the parallel development of iconolatry, the veneration of icons, with specific icons soon gathering special powers and fame.**

…

Estimates for the peak population range from 50 to 120 million, but the high numbers seem incredible. **Whether the peak occurred under Marcus Aurelius or Constantine is not clear.** The interim years saw wars and recurrent plagues, but remains of settlements reveal that the population in most areas had recovered by the fourth century, and

some even reached new heights. With archeologists likely to uncover more settlements, many scholars believe that the Empire had at least 70 million inhabitants on the eve of the barbarian invasion.27
…

After the Jin reunified China in 280 and initiated a program to settle refugees, the number of households jumped by 50 percent in three years.30 "Arable land" in the table reads "taxable land." By abandoning an honest land survey, Guangwudì allowed big clans to screen resources from the state. As land continued to concentrate in their hands, **tax evasion spiraled upward, which explains why acreage declined through the Latter Han despite massive development in south China. Many dispossessed peasants dropped from the household register and became drifting laborers. Others became tenants or dependents of big landlords, who were more effective is resisting state levies.**31 Considering these social trends, we can surmise that a larger population existed, but it was invisible to the government and could not be mobilized to solve urgent social problems. Could a similar problem have caused recruitment and other difficulties for Rome, which also depended on peasant registries?

After the post-Qin civil war, only three out of ten households remained on the register. After the post-Wang Mang civil war, the 57 CE census registered about one-third of the Former Han population. If we estimate that the 280 CE census figure registered only one-third of the people who survived the plagues and post-Han civil war, then China's population would be 54 million. A generation of peace and prosperity followed the reunification.32 Had it continued, the Jin would be in a decent position to deal with nomadic minorities.
…

Ancient texts lump social unrest under the rubric of "bandits," Chinese *zei* and Roman *latro*.71 Between the poles of ordinary criminals and usurpers were various agitators boiled up from the lower strata. Armed bands began to disturb *Pax Romana* in the mid-second century, when the army had to detach more troops for internal policing. The 187 "deserters' war" in Gaul engaged large forces. By the end of the fourth century, even the prefect of Rome dared not venture beyond the city wall because brigands infested Italian roads. **Throngs of travelers followed the regular tours of a governor, hoping to rub safety from his military escort. Thunderous laws were toothless against bandit collaborators, who were none other than the rich and powerful of local communities.**72
…

Economic bifurcation destabilized society as the poor in desperation joined the predatory rich or rose in protest. Local magnates offered protection in return for loyalty and gained the ability to evade more taxes. Armed bands grew, in some cases penetrated by elites who exploited peasant discontents for their own political ambitions.
…

A modern scholar describes what the Romans called *otium*: "The aristocratic ideal of leisure, inherited from the Greeks, led by an easy decline to the disdain of serious effort, to the advertising of elegant accomplishments as a pretext for sloth or emptiness."80 The aristocrats controlled high government.81 In office, **"they simply annexed the governmental machine to their style of life, which had regarded politics with studied hesitation, and administration as an opportunity to look after one's friends."**82 **Writing letters of recommendation for their friends and clients was their most assiduous job. "These were as accomplished and as jejune as the visiting cards of the mandarins of imperial China."**82 Latter Han literati provided a paradigm of such mandarins. Versed in the Canons that preach the sufficiency of exemplary personality, they swanked of *qinggao*, lofty purity, and made administrative incompetence into a virtue.83 Their ardent pursuits were fame and connections, the shortest route to advancement. Contemporaries complained, "High officials devote themselves to socializing and commend themselves pure for being aloof of administrative work."84 **"From triumvirs to provincial governors, all ignore state affairs and concentrate on receiving visitors whose Confucian robes clog the streets. … They leave documents to clerks and detainees of unheard cases to rot in prison, too busy in their private affairs of seeking influence and chasing advantages."**85 These do-nothing Roman and Chinese officials were not merely sophisticated idle mouths. Waltzing on the bridge of the *Titanic* on a collision course with an iceberg, they constituted brain tumors of the late empires.
…

Provincial governors acquired power far exceeding their official authority, because they appointed local officers, including county superintendents. Those serving long terms usurped sufficient authority over current and former appointees to screen out the central government; as a contemporary saying went, **"Orders from the region or province are received like thunderbolts. Imperial edicts arrive only to decorate the wall."**97
…

Many agitators, such as the initial Red Eyebrows in Wang Mang's reign, were desperate refugees of disasters eager to return to normal life. Unrest not mollified is usually contained if not suppressed, shackled by the insurgents' provincialism or lack of organization, as were the Jewish revolts in the Roman Empire. Chinese history is peculiar in its propensity for local fluctuations to amplify into empire-wide turmoil that ravaged the population and weakened if it did not topple the imperial government.106 **A spark spreading into a prairie fire happened thrice during the five centuries under our study. At least five more dynasty-change-related uprisings would occur in subsequent imperial history.**
…

Popular uprisings that vented mass grievances started the great rebellions in our period but did not end them. The Dazexiang mutiny against the Qin and the Yellow Turban cult against the Latter Han were suppressed. However, in each case, elites and adventurers capitalized on the commotion and turned the uprising into a ruinous anarchy of warlords. **Literati clans also commandeered the forces of the Green Foresters uprising against Wang Mang.** They escalated unrest and reaped its ultimate benefits.
…

Bandit gangs and local bullies jumped into action. **Literati clans, each with hundreds of households, rallied. Warlords called "heroes" mushroomed;** the final winner would become the founding emperor of a new dynasty.

Years or even decades of bloodletting winnowed incompetence, cultivated pragmatism, and left horrible experiences no one wanted to repeat. The carnage destroyed recalcitrant powers, taught flexibility to survivors, and opened the possibility for some social consensus. Like forest fires that burn away underbrush and clear the ground for new growth, the chaos created conditions for a period of stability. **Thus the political elite boasting of intellectual civility resorted to naked violence to solve real-world problems.**

***Geming*, into which "revolution" is translated in modern times, means in the Confucian Canons a radical shift of heaven's mandate from one family to someone unrelated.**116
…

The eighth emperor in a row to begin his reign as a child, Lingdì ascended in 168 to a throne surrounded by eunuchs and a government infested by incompetence, corruption, and factions. His proscription of anti-eunuch partisans alienated the literati. Many carried their grudge to the provinces and reinforced centrifugal regional powers.117

Ominous signs of heaven's displeasure multiplied. Most portentous was widespread disease. The plague struck in 171, then recurred. **Early in the epidemic appeared Zhang Jiao, who preached a millennium of grand peace** and attracted multitudes by healing with magic water. His disciples set up secret cells all around the country, penetrating the palace guard itself. In 181, a minister warned of potential unrest and suggested dispersion of cult members. **The government preferred toleration, not knowing the plan for armed uprising. Early in 184, within ten days of Zhang's order, eight of the empire's thirteen circuits were aflame, all in the prosperous interior.** Called the Yellow Turban for their headdresses and Moth Bandits for their large numbers, the rebels plundered communities and battered local governments. The central government hastily elevated generals, recruited volunteers, and pardoned proscribed partisans. Local elites, official and private, rallied against the rebels. Many personages of subsequent history made their debut in the fighting. **The Yellow Turban was quashed in nine months, but imitators and sympathizers continued to flare up around the empire.** The Han Dynasty was changed irreversibly.118
…

The literati's zeal to purify the world of eunuchs boiled over when the boy Shaodì succeeded Lingdì in 189. Surrounded by pardoned partisans, the famed literati-official Yuan Shao brushed aside warnings of dire consequences and urged the new regent to summon frontier generals. **Dong Zhuo was a military careerist whose potential insubordination had long worried the government. To him, the anti-eunuch summons came as a godsend.** Leading 3,000 seasoned troops into Luoyang, Dong swiftly absorbed other military forces, took control of the court, and deposed Shaodì to install his puppet, the nine-year-old Xiandì. Yuan Shao fled to the east and gathered three viceroys, seven governors, and other officials under an anti-Dong banner. In response, Dong moved the capital west to Changan and torched Luoyang to deny it to the enemy. **Hundreds of thousands of Luoyang residents were forced on the road, where myriads perished.** More starved in Changan, which was unprepared from the influx. The world rejoiced at Dong's assassination in 192. Unfortunately, the ministers who plotted it had no plan to manage his generals, who mutinied, sacked Changan, kidnapped the emperor, fought each other, and laid waste the western part of the country.120

Eastern China fared no better. Leaders of the anti-Dong coalition failed to agree on a course of action. While they vied in banqueting and rhetoric, **their pillaging troops killed almost half the population in the staging counties.**
…

Yangzi, the third largest river on earth after the Amazon and the Congo, has a discharge volume more than twenty times that of the Yellow River. Its strong eastward current would repeatedly block northern invaders in Chinese history. The 208 battle of Red Cliff set the precedent.
…

Cao Cao had promoted elementary education but offended the literati by appointing officers based on ability and performance instead of moral posture. **After Liu Bei's death, Zhuge Liang as the premier of Shu refused to indulge local elites and adopted Legalist policies of ruling by laws that were strict but clear and fair. His dedication to service and good governance won him the enduring love of the local people, who maintained shrines for ages.**124 However, they were unable to reverse a stubborn social trend. The growth of the great literati families, which began in the Latter Han, would persist through the centuries of disunity. Their estates would expand and their grip on high government offices would become effectively hereditary. Combining birth, culture, power, and wealth, the network of literati clans would culminate in a new aristocracy, *menfa shizu*.
…

In a long historical perspective, **the 208 battle of Red Cliff inaugurated protracted north-south fragmentation and separate development, ended only when the Sui Dynasty reunified China in 589.**

The Cao house picked up an effectively defunct Han court, reunited northern China, and then replaced Han by the Wei Dynasty upon merit. The Sima house that usurped the Wei throne to found the Jin Dynasty had no merit, only conspiratorial ambition. As a Wei minister, Sima Yi built up a faction and grabbed dictatorial power by a bloody coup. His grandson forced the abdication of the emperor and became Jin Wudì in 265. The Simas had been a literati family for generations. **Wudì promoted filial piety and demonstrated his love of relatives by enfeoffing many as plenipotentiary kings in strategic and populous regions.**125

For the second time, imperial China reverted to the Way of ancient kings. The Han's atavism lasted for three generations before vindicating the First Emperor's judgment, "To re-establish feudatories would be to encourage the use of arms." This time around, the retribution for ignoring history's lesson promptly descended on Wudì's successor. In the "catastrophe of the eight kings," which lasted from 300 to 307, imperial family members led hundreds of thousands of troops against each other. At its end, the lone survivor, Sima Yue, became the dictatorial regent to Huaidì. Power struggles continued to simmer. Physical damages to the country were great. Equally ruinous was the moral bankruptcy; the intrafamilial killing shattered the virtuous mask fashionable since the Latter Han. **Thus the Jin Dynasty committed hara-kiri. Ethnic minorities were ready to deliver the coup de grâce.**126

https://publishing.cdlib.org/ucpressebooks/view?docId=ft1k4003vg&chunk.id=d0e1557&toc.id=d0e1557&brand=ucpress

In Weber as well, China is cited as one of the prototypes of a patrimonial bureaucratic state together with ancient Egypt. **The developed bureaucratic system was furnished with a rationality making it capable, at a glance, of passing for a modern bureaucracy.** However, in matters involving its content and basic principles, it could not transcend the bounds of the traditional ruling form. **In a word, it had reached the apex of the patrimonial bureaucracy. Although the *formal modernity* it possessed seemed to have complied without question with the development toward modern capitalism, in fact this made its actual compliance difficult.** The reason was that the rationality that this formal modernity imitated was in essence a one-sided, top-down, **false rationality that could not go beyond the patrimonial bureaucratic framework.**
...

Balazs, however, saw the successful modern Chinese revolution as analogous to traditional bureaucratic society. **In China, he argued, where the overwhelming majority of the population were poor peasants and the formation of a bourgeois class was weak, the intellectuals replaced the bourgeoisie in leading the revolution. The party bureaucrats who, as a result of the revolution, directed Chinese socialism—Balazs called it state capitalism—were comparable to the scholar-officials of the imperial era.** The economy was controlled by the power of the state; state farms, for example, he likened to farming on garrison lands in the earlier period.

Thus, Balazs considered Chinese socialism a contemporary edition of the old bureaucratic state and stressed its totalitarian flavor. **He pessimistically foresaw the trend toward totalitarianism—namely, bureaucratic, technocratic state control—covering the entire world, including the advanced nations of the West as well as the backward states that had formerly been colonies.**

In Balazs' understanding, the permanent quality of Chinese society revolved around the "bureaucracy." **He was forced to draw the conclusion that from the inauguration of the imperial system China had never in her history experienced feudalism—at least, it had never been effectively put into practice. Balazs argued that the Chinese Communists had dispensed with Marx's original four-stage schema (Asiatic society, classical slave society, medieval feudal society, and modern capitalist society), and in its place, with a schema borrowed from "vulgar Marxism," they had become adept at calling "feudal" everything that transpired between the "slave society" of ancient China and 1949.** Thus, Balazs argued, this all-inclusive "feudalism" only led to a confusion in understanding. Not that China's bureaucratic society wholely lacked feudal elements, **but in his view the principal ruling class in society had remained the scholar-officials, and they were not the great landowners truly befitting the station of a feudal class.**
...

[Roger Garaudy's] book, *Le problème chinois,*[62] also rejected the "dogmatic schema" that all human societies passed through the five stages of primitive communism, slavery, feudalism, capitalism, and socialism; and he claimed that China had never experienced the slave mode of production. The prototypical slave system, he argued, flourished only in Mediterranean civilizations, whereas in China, as Tökei and others had noted, the Asiatic mode of production dominated society in the Shang-Chou period. From the Han dynasty on, the Asiatic mode in its prototypical form had ceased to exist, because the lack of private ownership (one of the basic features of this mode of production) disappeared owing to the privatization of land and the accumulation of slaves. **After the Asiatic mode, the feudal mode of production arrived,** but it was stamped with the remnants of the Asiatic mode and bequeathed a distinctiveness to Chinese feudalism.

Hence, Chinese feudal ownership in land, in Garaudy's view, was tied to the special privileges of the imperial bureaucrats, a sort of bureaucratic feudalism. **It differed immensely from the "pure feudalism" (of Europe) where the feudal lord was a direct recipient of rent paid in labor; and where all state functions, such as the military and the judicial system, were provided.** The transition to capitalism that European feudalism achieved by inheriting the commodity economy of classical slavery could not be brought about with this kind of feudalism. **Sprouts of capitalism, cropping up here and there, could not avoid a stage of mercantilism under state control. Rich merchants, intent on entering the official class, made the formation of a bourgeois class impossible.**

https://publishing.cdlib.org/ucpressebooks/view?docId=ft1k4003vg&chunk.id=d0e2236&toc.id=d0e2236&brand=ucpress

In the time of Confucius, subsequent to that of Kuan-chung and Tzu-ch'an, **the task confronted by history was no longer simply the resolution of relations between aristocrats, but it had of necessity become their reaching down to make contact with the nonaristocratic strata.** Responding to these new conditions, Confucius sought a reconstruction of the moral order of society. In his famous phrase, he stated: "[There is government] when the prince is prince, and the minister is minister; when the father is father, and the son is son."[5] **The proper place for prince and minister, and for father and son, had been taken for granted in the Chou patriarchal clan because they expressed the a priori condition of blood ties in human relations. Now this a priori conditionality was no longer a self-evident norm, however, and herein lies the historical importance of Confucius's words.**

Confucius's position under this new reality was not to bury traditional ethics through determination of blood ties but to value it consciously as a morality to be gained through acquired (a posteriori) effort. By the same token, this reveals the polarization of values at the time. **The contention between schools in the intellectual world of the Warring States period was a necessary phenomenon caused by the collapse of the principle of clan blood ties. The thoroughly political pragmatism of the Legalists formed the most radical countersupposition to this principle. They rejected all "communitarian" bonds that the people formed on their own, and they demanded that all men be directly under the control of the sovereign as atomized individuals.** (See the discussion of Utsunomiya Kiyoyoshi's theory in the next section.) In order to complete this autocracy, a full-fledged bureaucracy was adopted, and officials never possessed any autonomy but were merely the sovereign's servants.

Legalist political views constituted one side of the new type of state in the Spring and Autumn–Warring States period. As the bureaucracy and the centralized system of commanderies and prefectures became more developed, they finally gave birth to the unified Ch'in-Han empire. This might be dubbed the final result of the dissolution of the ancient Shang-Chou state. But what social principle permeated this new historical world? The political principles of the Legalists—to bring the people as atomized individuals under control—doubtlessly constituted one aspect of the Ch'in-Han empire. **However, it would be an exaggeration to say that this alone was the sole principle at this stage. The ideas of the Confucians themselves, and in a certain sense this also served as a wellspring for the Legalists, was a view premised on the collapse of the notion of clan blood ties.** In actuality, Confucianism eventually gained access to the position of being the Han empire's guiding ideal.

https://publishing.cdlib.org/ucpressebooks/view?docId=ft1k4003vg&chunk.id=d0e844&toc.id=d0e844&brand=ucpress

In 1939 the late Kato Shigeshi analyzed the historical differences between China and Japan. He argued that whereas in Japan a feudal system remained in existence over a long period of time, China had only experienced it early on in the Chou dynasty and that thereafter civil officials in a state bureaucracy had become the basis of Chinese government. Kato's argument goes as follows. **The Six Dynasties and late T'ang eras witnessed for a time the growth of private armies and the energetic activities of military men, but we do not see the development of a warrior class based on hereditary, lord-vassal relations, as in Japan. In China they were swallowed up into a civil government where power was centralized.** The expression *pu-ch'ü* had originally meant an army, but by the Sui-T'ang period it was a way of referring to the outcasts of society; this would indicate that military hierarchical relations did not mature into feudal hierarchical relations. Furthermore, this difference prescribed the nature of the social development of the Chinese and Japanese peoples, so that the evolution of a sound superior-inferior (lord-vassal, ruler-ruled) ethic in Japan nurtured the distinctive nature of the Japanese—profound in human emotions and firm in moral principles. It formed the basis for the sound development of the Japanese people.[4]
…

Ishimoda developed his views more fully in his later work. In his essay, "Chusei shi kenkyu no kiten: hokensei e no futatsu no michi ni tsuite" (The starting point for research into medieval history: On the two paths to feudalism),[6] he argued that the T'ang was an empire of the ancient world comparable to the Roman empire, and the peoples living along China's frontiers were subsumed within this world empire. **With the collapse of the T'ang empire came the individual formation of each of these nations and cultures.** In this process, Japan developed from an ancient state within the orbit of the T'ang toward a feudal state. Chinese society, however, gradually underwent a serious transformation through the transition from T'ang to Five Dynasties to Sung. One aspect of the shift from ancient empire to feudal state can be seen in the decentralization of power under the system of regional commanderies and the sharply militaristic nature of it. **However, the Sung dynasty, which emerged after this transitional period, took shape as a far more despotic, bureaucratic, and centralized state than any preceding dynasty. The aristocracy who had been the ruling class in ancient times collapsed precipitously, and a feudal domainal class did not crystallize as independent political forces.**

https://en.wikipedia.org/wiki/Five_Dynasties_and_Ten_Kingdoms_period

> The Five Dynasties and Ten Kingdoms period (907-979) was an era of political upheaval and division in 10th-century
> Imperial China. Five states quickly succeeded one another in the Central Plain, and more than a dozen concurrent states were established elsewhere, mainly in South China. **It was the last prolonged period of multiple political division in Chinese imperial history.**[1]
> ...
>
> Towards the end of the Tang dynasty, the imperial government granted increased powers to the *jiedushi*, the regional military governors. **The An Lushan (755-763) and Huang Chao rebellions weakened the imperial government, and by the early 10th century the *jiedushi* commanded *de facto* independence from its authority. In the last decades of the Tang dynasty, they were not even appointed by the central court anymore, but developed hereditary systems, from father to son or from patron to protégé.** They had their own armies rivaling the "palace armies" and amassed huge wealth, as testified by their sumptuous tombs.[2]
> ...
>
> **Southern China, divided into several independent dynastic kingdoms, was more stable than the North which saw constant regime change.** Consequently, the Southern kingdoms were able to embark on trade, land reclamation, and infrastructure projects, laying the groundwork for the Song Dynasty economic boom. **This economic shift to the south also led to a vast southward migration.**[4]

https://publishing.cdlib.org/ucpressebooks/view?docId=ft1k4003vg&chunk.id=d0e128&toc.id=d0e30&brand=ucpress

The invasions of Hsiung-nu, Hsien-pi, and others into North China provided the opportunity for **the first Sino-barbarian cooperation in the building of regimes, one of which, the Sui, eventually reunited China. We can see the remarkable attraction of many Chinese ways to these previously nomadic peoples once they conquered and occupied some part of China. Almost always they realized the necessity of relinquishing nomadic ways for sedentary agriculture, and often even the need to afford the military a secondary role in a society stressing the civil arts.** These two met with considerable consternation, resistance, and occasionally civil war, but ultimately won out. **So thoroughly "civilized" did the previously martial and nomadic Northern Wei become that they made lasting contributions to Chinese society and agriculture of a distinctly civil bent**—the *fu-ping* or militia system for compulsory military service, as opposed to a professional army, and the *chün-t'ien* or equitable field system for the fair parceling of arable land by the state.
...

One remarkable difference between the Six Dynasties and the so-called Dark Ages in Europe is that, while both witness the preponderance of military types because of ceaseless warfare, the military in China proved unable to form a dominant social class, even in the warrior states of the North, through which to rule over China. It might be possible militarily to create a state, even to make oneself emperor. But to rule China, or any part of it, almost always required educated bureaucrats, and in the process the "military" rulers became "civilized." **This process was particularly troubling in the North where racial antagonisms often flared.**

http://www.acmuller.net/con-dao/analects.html#div-18

[17:21] Zi Lu said: “Does the noble man esteem bravery?”

Confucius said, “The noble man puts fairness first. **If the noble man is brave without fairness, he will be rebellious. If the inferior man is brave without fairness, he will become an outlaw.**”

https://www.gnxp.com/WordPress/2015/08/19/old-europeans-were-old-school-thugs/

Similarly, though Japanese civilization is influenced, perhaps even derived, in large part from Chinese civilization, one major distinction between the two is that in the ideal and often in practice the Chinese have subordinated military values to civilian ones to an exceptional extent for a pre-modern society. In contrast, the Japanese developed a military aristocracy which eventually superseded the civilian nobility. This results in the anachronistic romanticization of a martial ethos such as in bushido, which has no clear analogy in the Chinese world view. Obviously here I am not saying that the Chinese were a purely pacific people. And there were ages when martial values were ascendant, for example the early Tang. **But the fact that the founder of the Song dynasty, a general, encouraged a demilitarization of his ruling class makes much more sense in light of the ethos of Chinese elite culture going back to the end of the Warring States period.**

https://plato.stanford.edu/entries/mohism/

The Mohists were deeply committed to the ideal of a harmonious, peaceful social order and to universal concern for the welfare of all the world. They condemned unprovoked military aggression and attempted to dissuade warlike rulers from attacking other states. **Far from being pacifists, however, they saw a strong defense force as crucial to state survival. Indeed, many Mohists seem to have concluded that, since social order was a paramount value and gratuitous warfare was wrong, they had a duty to assist victims of aggression. Some Mohists became specialists in defensive warfare, rushing to the aid of cities and states under threat of attack.** The last quarter of the *Mozi* preserves the texts of these militias, which present detailed information about ancient defense tactics and siege fortifications (for an overview, see Yates, 1980).

https://plato.stanford.edu/entries/mohism/social.html

Indeed, as Graham (1989) observes, their low social origins help to explain why the Mohists make no use of the paradigmatic moral contrast of Confucian ethics, **that between the *junzi* and *xiao ren,* terms that in Confucian usage carried a moral connotation ("noble man" vs. "petty man") but originally referred to social rank ("princeling" or "gentleman" vs. "commoner").** It may also help to explain the Mohists' frequent criticisms of the misguided judgments of the *junzi,* many of whom they probably regarded as ethically shortsighted conformists. For the Mohists, as for the Confucians, virtuous role models play an important part in moral education and practical reasoning. **To the Mohists, however, the exemplary individual is typically not the *junzi,* but the *ren ren* (humane man or man of goodwill), a term with no class overtones.**

A corollary of these conjectures about their social origins is that Mo Di and many of his early followers—including both the *Mozi* writers and their primary audience—may have had little formal education and would have been relatively unversed in the classical Chinese written language. This suggestion would help to explain the characteristic style of the core Mohist doctrinal essays, most of which are written in a simple, highly repetitive manner well suited to memorization and oral delivery, yet distinctive in the early Chinese literature for its ponderousness and inelegance. **(An anecdote in the *Hanfeizi* claims that the Mohist writing style was deliberate, because Mozi feared that even in rhetoric, ornamentation tended to interfere with utility.)** Parts of the text also show signs of having been composed in a colloquial dialect rather than the more terse, graceful written classical language.

The Mohists' social origins probably played a role in motivating certain basic features of their thought, particularly their focus on finding objective ethical standards. **For the *Ru* (Confucians), the traditional social roles and ritual etiquette of the waning Zhou dynasty provide a basis for consensus in ethical judgments. The Mohists identify far less with these traditional mores and so seek other ethical guidelines. Moreover, they think that the warfare and strife that blight their era result from errors in moral judgment.** Since some of those responsible for this disorder claim to be following traditional mores, such norms are clearly not a reliable source of ethical guidance. Hence the Mohists propose to judge practices not by whether they conform to the traditional rituals of a revered lost dynasty, but by utilitarian standards, such as whether they materially benefit society.

Their social background may also help to explain why Mohist consequentialism emphasizes material welfare and social order as basic goods that serve as standards of right. On the one hand, the Mohists were plain, down-to-earth craftsmen, tradesmen, and soldiers who could be expected to value practical utility. **But more importantly, the Mohists speak for those on the lower rungs of the social ladder who will be among the first to starve when the economy is mismanaged or to die pursuing the military ambitions of a capricious ruler.** A theme to which Mohist texts return repeatedly is the problem of meeting the basic subsistence needs of the common people.

Social factors could also have contributed to the Mohists' opposition to costly, extravagant funeral rituals and musical entertainment. As members of lower social strata, the Mohists probably felt no strong attachment to these elements of the traditional Zhou high culture and would have been inclined to see them as wasteful and pointless. **Also, the Mohists' conception of *Tian* (Heaven) as an anthropomorphic deity and their conviction that *Tian*, ghosts, and spirits reliably punish the wicked and reward the good may reflect folk religious beliefs that were less influential on Confucian and Daoist thinkers from higher social echelons.**

As Graham (1989) points out, however, despite the likely influence of the Mohists' social background on their thought, **there is no evidence that Mohism represents the ideology of a self-conscious craft or artisan class that sought to reform the established political order. Rather, the Mohists are ambitious, capable commoners for whom the passing of the old feudal system and the development of centralized, meritocratic bureaucracies have made promotion to the officer or knight (*shi*) class a possibility.** Like most other early Chinese thinkers—with the notable exception of Daoist anarchists—the Mohists advocate a centralized, hierarchical political system directed by virtuous leaders, and they aspire to positions of responsibility within such a system. Hence their doctrine of

“Elevating the Worthy” advocates promotion to office of anyone with ability, including farmers and artisans.

https://en.wikiquote.org/wiki/Sun_Tzu#Chapter_III_·_Strategic_Attack

For to win one hundred victories in one hundred battles is not the acme of skill. To subdue the enemy without fighting is the acme of skill.

https://journals.sagepub.com/doi/10.1177/000944559603200101

But the more serious difficulty in comparing the Indian and Chinese streams of strategic thinking stems from the strong ‘religious’ base of Indian thought. In contrast, Chinese thinking has an unmistakable ‘secular’ base. An off-shoot of the ‘religious’ element in India was the social organisation it produced. Warfare in India was almost exclusively the preserve and even the duty of the *kshatriya varna* (warrior class) which was hereditary, although specific instances of the priestly *brahman varna* can be found thinking about and engaging in warfare. **In China, although the *shi* (scholar-gentlemen) were trained in the military arts among other scholarly subjects, they did not constitute a hereditary group.**
...

Despite the great similarities -- almost identities -- between the two, there remains one major difference which has to do with the different social systems of India and China. As mentioned earlier, **SW’s thinking may be summed up in one sentence: *The victory is one where the enemy is subdued without fighting*. Such a sweeping doctrine would have been inconceivable for Kautilya because that would have devalued the entire hereditary warrior *varna*.** For this class, it was a disgrace to die anywhere except on the battlefield. So, a world without war was even theoretically inconceivable so long as one was within the established order. **But a world without war was not only conceivable but eminently desirable for those outside the fold i.e., the Buddhists and the Jainas. Emperor Ashoka established the Magadha empire as a warrior informed by the thinking embodied in the *Arthashastra*, but having done that he saw the futility of it all.** That wisdom made it impossible for him to continue as a warrior. And since he ceased to believe in the creed of warriors, his rightful place was outside the ‘Hindu’ fold, in the path of the Buddha.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PR20#v=onepage&q&f=false

At the beginning of our stories, in each case about four centuries before empire formation, Rome and the Chinese states were all city sized. **In terms of political organization and economic development, however, the differences between them were as large as that between the West and the East in the nineteenth century.**13 **The Chinese world was still in the late Bronze Age, when feudalistic aristocrats basked in courtly elegance. The Mediterranean world was well into the Iron Age, when affordable metal tools and weapons empowered the working people.** The ancient worlds did not interact, but put side by side, the two histories of rise to empire make a story of China catching up with the West at high speed.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA30#v=onepage&q&f=false

Of the four ancient Old World civilizations, the Chinese was the youngest. Distinguishing features of civilization – writing, stratified society, urban settlement, monumental architecture – appeared in Mesopotamia and Egypt around 3000 BCE. **The Hittites used iron before 1200 BCE.**16 In China, the earliest excavated writings, in the form of inscriptions on oracle bones, dated to 1500 BCE. Metallurgical iron appeared shortly before 500 BCE and iron implements spread in the following two centuries, but their quality and prevalence varied regionally. A few specimens were of steel, but many were of poor quality iron that lay alongside tools of shell and stone in archeological sites. Weapons-grade iron, which required reduced brittleness, was rare in the warring states.17 Near the mausoleum of the First Emperor, who died in 209 BCE, archeologists unearthed iron tools in productions sites. **The product, the army of terracotta soldiers, held weapons of bronze, except some arrowheads.**18

Soon the Chinese iron technology surged, and its radical difference from contemporaneous Western technology indicates indigenous origins. Long iron swords replaced short bronze swords completely in the early Han Dynasty.19 Along with silk, Chinese iron made its way westward. By the middle of the first century CE, Roman encyclopedist Pliny the Elder wrote: **“of all the varities of iron, the palm goes to the Seric, sent us by the Seres with their fabrics and silks. The second prize goes to Parthian iron.”**
...

To endure illness, famine, and other misfortunes, people pooled their resources in communal living and production, mutual help that we may view as a form of insurance. **Scenes of Bronze Age communal farming are depicted on Achilles’ shield in Homer’s *Iliad* and in several poems in the Chinese *Odes*.**21 **Whereas the Homeric age belonged to the mythical past, communal farming was common in China well into the sixth century BCE, when historical memory was well developed. Reverting to it would become a Confucian ideal.**

The chariot, the prime weapon of the late Bronze Age in both the West and East, was expensive, demanding operational skill, and monopolized by aristocrats. Archeologists uncovered illustrations of chariots in Mycenaean tombs. **By the time Homer wrote about the Trojan War, however, their military function was so remote the poet treated them as glamorous cabs that drove warriors to the battleground, where they alighted to fight on foot.** Chariots as shock vehicles or mobile firing platforms dominated the Chinese battlefield in the Spring and Autumn period. **In contrast, the Romans used chariots only in races and triumphant parades, not in war.**22

Iron swords or spears suitable for infantry were more affordable to individual peasants. Moreover, iron tools elevated productivity and enabled family farms to generate enough surpluses not only to weather bad luck but also to buy weapons. **Iron spread in the Mediterranean world during the "dark age," about which we know little except that the state structures were weak if existent. By archaic Greece, the small peasant and infantryman were already economically independent and militarily active.** A modern scholar observes: "As metallurgy made iron weapons cheaper and more widely available, those who could use such weapons in warfare acquired higher status and with it a new claim on political power. **Athenian democracy, especially under the reforms of Cleisthenes, was made possible by the support he could count on from the infantrymen (hoplites)** who had become a critical component of Athenian military power."23 Military service was the paramount criterion for citizenship in Greco-Roman city-states, suggesting their probable military origins. **When Rome began to emerge under kings in the sixth century BCE, its social structure already contained widespread iron-using smallholders.** Self-equipped farmer-soldiers formed the basis of the Centuriate Assembly, the democratic branch of the Republican government that led Rome to acquire an empire.24

> https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n245/mode/2up?view=theater
>
> Both Montesquieu and his panegyrists would have been more correct, had they traced back to this love of liberty all those scourges and intestine broils which harrassed Rome, from the expulsion of its Kings until the reign of the Emperors.—**Liberty perpetually convulsed the people, and the senate could only free themselves from their clamours by habitual war and foreign pillage. This perpetual state of hostility rendered the Roman the most warlike of all nations, and gave them that immense advantage which they enjoyed over all other people. To the man who has read the Roman history, nothing can be more evident.**—But if such be the merits of that liberty which expelled the Kings of Rome, that antisocial spirit, **which, sowing discord in the interior economy of families, drives them from their homes, inures them to fatigue and the inclemency of the weather, and gives them all the advantage and strength of robbers, by forcing them to live on plunder, after having denied them the sweets of social life,**—the antisocial spirit, I say, must needs possess the very same advantages.

Some commoners in feudalistic Chinese states held some political power because of their capacity as chariot warriors. Living in communal farms headed by aristocrats who controlled war gear, they were less powerful than were their Roman counterparts. **Contrary to the timing in Rome, here the states already possessed significant political structures before they promoted household farms and mass infantry.** Thus the Chinese farmer-infantryman emerged under the aegis of the state.
...

Land in ancient China was initially tied to aristocratic power. **Private land ownership emerged only in the fourth-century BCE reforms, when centralizing governments systematically allotted land to individual households in return for tax and military service.**
...

The Roman Republic being born in a competitive environment, its aristocrats were straightforward and vigorous, clear in political thinking, practical in economic cooperation, and strong in public spirit and corporate organization. In contrast, **centuries of dominance in the placid late Bronze Age produced elegant Chinese aristocrats who quoted poetry in political discourses, a habit Roman aristocrats acquired only after they conquered Greece.**197 Enjoying the fusion of hereditary rank, fief, and government office, feudalistic aristocrats cultivated virtues that rolled together familial and political concerns. **In the demanding times of socioeconomic progress and geopolitical rivalry, they could not compete with innovative upstarts, especially Legalist reformers. Yet they bequeathed their mentality to Confucian literati-officials who would constitute the "cultural aristocracy" of imperial China.**

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA101#v=onepage&q&f=false

A leading classical scholar writes, **"it is notable that there was no internal opposition, among either Athenians or Romans, to empire as such. In Athens I do not know of a single dissenting voice; in Rome there were a tiny number."**148
...

In contrast, **Confucians, Daoists, and Mohists of the Warring States period joined in condemning the raging violence they were unable to stop. Instead of a triumphant parade, a funeral procession was suggested for victory.**150 It was the voice not only of the powerless opposition. Legalists working to strengthen the army and generals expounding the arts of war alike deemed armed conflict less effective than political manipulation in achieving results.151 **Even in essays publicly posted in Qin's capital during the reign of the future First Emperor, we find, "The military is the world's evil-boding tool. Bravery is the world's evil-boding virtue. Only with no option left does one resort to an ominous tool and practice an ominous virtue."**152 **This peculiarity struck Western scholars.**153 **One writes, "As against … Greek and Roman civilization, in traditional Chinese terms warfare was regarded as an activity in which to engage only in the last resort and only when necessity demanded."**154 **Another adds, "Herein lies the pacifist bias of the Chinese tradition. War is not easy to glorify because ideally it should never have occurred. The moral absolute is all on the side of peace."**155

> https://plato.stanford.edu/entries/chinese-legalism/#AssCulLea

> This said, the *Book of Lord Shang* does speak at times of "teaching" or "indoctrination" (*jiao* □). Yet normally, this term refers not to imposition of a new set of values, but rather to the internalization of the government's regulations, which would allow the people to comply with the government's requirements without the need in coercion (cf. Sanft 2014). In a major discussion of *jiao*, the text says:
>
> > What is called "unification of teaching" is that … fathers and elder brothers, minor brothers, acquaintances, relatives by marriage, and colleagues all say: "What we should be devoted to is just war and that is all." … This is what I, your minister, call "unification of teaching." … **The people's desire for riches and nobility stops only when their coffin is sealed. And [entering] the gates of riches and nobility must be through military [service]. Therefore, when they hear about war, the people congratulate each other; whenever they move or rest, drink or eat, they sing and chant only about war.** (*Shang jun shu* 17:105; *Book of Lord Shang* 17.4)
>
> Teaching the people to "sing and chant only about war" could easily refer to military indoctrination, such as we encounter in other countries that employed mass armies. **Yet the *Book of Lord Shang* never speaks of, e.g., adoration of martial spirit, dehumanization of the enemy, identifying martiality with masculinity, and similar devices employed in militaristic education elsewhere.** Rather, for Shang Yang and other contributors to "his" book "teaching" means simply the people's internalization of the fact that the only way to satisfy their desires for riches and glory is to excel in war. Hence war, which elsewhere in the book is frankly associated with what the people hate (*Shang jun shu* 18:108; *Book of Lord Shang* 18.2), becomes the focus of the people's aspirations. "Teaching" is then not about ideological indoctrination; it is just about willful compliance with the government's policies.

…

The year after the end of the Hannibalic war that devastated Italy, the Roman Senate succeeded in driving the exhausted and reluctant people into a new theater of war, Macedon.159 After the victory at Changping on foreign soil, Qin's king refused to seize the military opportunity to take Zhao's capital, deciding instead to give his people a nine-month rest. **At the height of military conquests, the future First Emperor accepted a proposal to divert manpower to build the massive Zheng Guo Channel that would create farmlands.**160 Such guns-or-butter decisions reveal the relative militarism of the two states.

Impressions of disparate general attitudes toward warfare come with the first reading of classical literature. Historians writing about Republican Rome provided thick descriptions of fierce battles and glorious victories. The exhilaration incited envy in Tacitus, historian of *Pax Romana*: "Their subject were great wars, cities stormed, kings routed and captured. … Mine, on the other hand, is a circumscribed, inglorious field. Peace was scarcely broken – if at all."161 **In contrast, Chinese historians were so disdainful of soldiers and battles they recorded only the thinnest data with occasional mention of grand tactics.**162 Because of the difference in historiographical accent, we know much less about how the Chinese actually fought than we know about the Romans.

The Chinese had nothing remotely resembling Caesar's *The Conquest of Gaul*, but they surpassed the Romans in military theory. Six of seven Chinese military classics originated in the centuries preceding unification. Sunzi, known for his *Art of War*, was a contemporary of Confucius. Superior theory does not guarantee victory, however. Qin wisely preferred a voluble theoretician to an experienced soldier as adversary. To break the stalemate at Changping, it launched a political operation that caused Zhao to replace the grizzled field commander Lian Po by the learned Zhao Kuo, whose fiasco at the battlefield inspired the idiom "to talk fighting on paper."163 **Hann Fei argued that the vanity of book learning is a bane to a state's military strength; <u>those who can talk like a general scorn fighting as foot soldiers.</u>**164 The Romans would probably nod. **Common Roman soldiers enjoyed far higher esteem than did their Chinese counterparts, except perhaps in Qin.** The superbly trained legions had their proud identity and initiative. **A modern historian observes that the Romans "placed little weight on the tactical and strategic skills of the commanders but instead saw victory as principally won by the soldiers themselves along with the city's god."**165

The Romans "seem to have been born with weapons in their hands; never do they take a break from training or wait for emergencies to rise," observed the first-century historian Josephus. Modern historians concur: "Roman society can be seen as deeply militaristic from top to bottom, **in a way and to an extent that is not true of any Greek state, not even Sparta.**"166

…

Xunzi found the military organizations of Qi and Wei inferior to that of Qin, where Shang Yang's integration of peasantry and infantry turned the entire male population into farmer-soldiers or, more exactly, farmer-reserves.170

Qin's rule of law tried to forge public solidarity. **Xunzi observed that its people were by nature bellicose. Shang Yang's reforms criminalized private feuds and aroused the people's verve by making merit in warfare and farming the only criteria for social honor.**171 The result is visible in the terracotta army stationed near the First Emperor's mausoleum. Even in clay, the roughly 7,000 warriors exude pride worthy of the honor they received. They are not the stereotypical faceless horde. **Great effort was taken to give each statue facial individuality. Such respect for common soldiers contrasts with the shameful mistreatment of them in the imperial China of literati-officials.**172

…

A Qin man was liable to serve two years, not necessarily consecutive, during his military life from age fifteen to sixty. Evidence reveals the two-year term to be an approximation, but not a bad one.173

…

Chinese literati who condemn Qin's levy as draconian should look at the Romans. It was originally thought that after Rome expanded overseas, a qualified citizen served on the average six to seven years during his military life from age seventeen to forty-six. Recent research shows that actual terms were closer to the legal maximum of sixteen years, plus for extra years in case of grave emergency. **From 200 to 168 BCE, a yearly average of 16 percent of adult male Roman citizens served abroad. During the wars of the first century BCE, roughly one-third of adult males were engaged for years.** Such a prolonged high level of the draft would have ruined the economy if Rome's imperial expansion were not mostly financed by plunder and enslavement.175
…

Jin, the busiest state in the Spring and Autumn period, went to war about one year in two. During the 232-year period from 453 BCE – when Jin effectively disintegrated into three – to 221 BCE – when Qin united China into one, Qin went to war in at least 114 years.182

Rome engaged in war almost annually for nearly three centuries since it expanded beyond its Latin neighborhood. More specifically, it went to war in at least 203 years during the 215-period from 264 BCE – when the legions invaded Sicily – to 49 BCE, when Caesar marched on Rome. Its regularity was exceptional even in war-prone antiquity. Athens was at war only two years in three during the century and a half since the Persian War.13 **Nevertheless, Athens fought more frequently than Qin, the most militaristic state in China.**
…

The struggle with Hannibal was the Republic's largest protracted foreign war, at the peak of which it fielded 240,000 men annually. **The battle of Philippi in 42 BCE, the largest in the civil war, engaged about 200,000 Romans and a comparable number of auxiliaries for both sides.**185

The Chinese word *wan*, meaning "ten thousand" or simply "myriad," was especially common in casual usage. In many contexts, "ten *wan* troops" served the same purpose as "a thousand ships" in Homer. Armies in the tens of *wan* were common in the warring states literature. **Zhao was said to have lost more than 400,000 troops at Changping, the largest and probably the longest campaign of the period,** and still had resources left for stiff resistance. Such an army deployed by one of seven contenders seems incredibly large, considering the population and margin of surplus of the time. After China was united and economy bloomed, the Han Dynasty mobilized the resources of the whole country against the northern nomads and the literati screamed at the burden of 130,000 to 300,000 troops.186
…

Sunzi writes, "The best offensive is directed against the enemy's deliberation; next, its diplomacy; next, its army; the worst, its fortified cities."192
…

Fan Ju's phrase quoted above – "attack not only their territories but also their men" – taken by itself, is misinterpreted by a Western historian as the enunciation of a "policy of mass slaughter."194 Perhaps violence, like beauty, is in the eye of beholders. Language, context, timing, and subsequent action all refute this interpretation. **The purpose of attacking decision makers or their deliberation is precisely to reduce military costs and mass casualties.** The warring states usually did not aim to annihilate their enemies. Sunzi was only one among many to write, "Leave a gap when encircling an army. Do not press an exhausted invader."195 The enemy's desperate fight for survival may increase one's own casualties. Such tactics of limited battles may seem insipid in the West. A military historian writes:

> The overall aim of western strategy, whether by battle siege or attrition, almost always remained the total defeat and destruction of the enemy, and this contrasted starkly with the military practice of many other societies. Many classical writers commented on the utter ruthlessness of hoplites and legionaries, **and in the early modern period, the phrase *bellum romanum* acquired the sense of "war without mercy"** and became the standard military technique of Europeans abroad.196

…

Geography made water handy in China, where rivers were often diverted and dikes broken to flood cities or degrade their fortification. Such was the fate of fortified Yancheng, where a large Chu army blocked Qin's invasion in 279 BCE. **Bo Qi built a channel that directed a torrent to punch a gap in the city wall. Hundreds of thousands inside drowned,** their bodies deposited by the current in a depression thereafter called the Stinking Pond.197
…

During the last 130 years preceding unification, when the scale of wars peaked, Qin was said to have killed 1.5 million of its enemies. Bo Qi was the most ferocious of the warring states generals. In his four great battles over three decades, including the destruction of Yancheng, total enemy dead exceeded 1 million. **At that time, the population of China was estimated at 20 million.**208 Qin's brutality was notorious. Caesar's clemency was famous. Sometimes he did not kill all his prisoners but only chopped off the hands of warriors. **For his eight-year Gallic campaign, the number of enemy dead reported ranged from 400,000 to 1 million, when the total population of Gaul was about 3 million.** Adding the casualties of his wars in the east, but excluding Romans killed in the civil war, one account credited 1.2 million deaths to his legions.209 All figures include both soldiers and civilians massacred in all situations.
…

Caesar reported that after his victory over the Atuatuci, he auctioned off in a single lot all men, women, and children, totaling 53,000. Altogether, he sold up to 1 million Gauls, the proceeds of which sales gratified his officers and troops.211 **Lacking sophisticated free markets for slaves, Bo Qi had a problem with the horde of prisoners taken in Changping. He figured, "Zhao soldiers are fickle. If we do not kill them all, they may rebel."** Three years later, Bo was dismissed for refusing to command the siege of Handan. Upon receiving from the king the sword for suicide, he exclaimed, **"What crime against heaven have I committed to come to this?" After a pause he**

answered his own question: “I deserve to die. After Changping, I tricked and killed hundreds of thousands of surrendered Zhao soldiers. This is enough for the death penalty.” He cut his own throat.212

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA171#v=onepage&q&f=false

For the problem of nomadic incursions, which had worried policy makers since the beginning of Han, the literati offered a breezy doctrine, iterated endlessly to counter all arguments: **“Confucius says, ‘When aliens are defiant, attract them by cultivating urbane virtue.’” “Yao performed the shield-dance ritual and the barbaric Miao submitted.” “Disband the army and promote civility, abandon force and practice virtue, demolish gates and passes, dismantle border fortification and defense, and preach benevolence and righteousness, then invasive threats on the northern frontier will disappear and the Middle Kingdom will be free of war worries.”** “The *Spring and Autumn Annals* says: The benevolent king is invincible.” “The ruler who adopts benevolent policies is indomitable in the world, where is the need for defense expenditure?”96 It was not the illusion of a few. **No sooner did a part of the Xiongnu surrender than calls for complete disarmament became so loud in the government that Yuandì had to order in 33 BCE, “Stop advocating the abandonment of border defense.”**

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA187#v=onepage&q&f=false

High officers meritorious for founding the Former Han Dynasty gathered to brag, drink, and, when high-spirited, shout and bang their drawn swords on pillars. **Annoyed by his former comrades, Gaodì appointed Confucians to design protocols.** Watching hundreds of officers perform a ceremony in 200 BCE, he remarked, “Now I know the dignity of being emperor.”1
…

Guangwudì and the generals who helped him found the Latter Han Dynasty in 25 CE were mostly wealthy landlords who discussed Confucian Canons when dismounted.3 To his crown prince’s questions on strategy, **the emperor quoted Confucius: “Military affairs I have not studied.”**4
…

After defeating Antony, Augustus discharged about half of the armies on both sides. Loyal legionaries he pensioned off or settled in colonies. The soldiers he retained he organized into twenty-eight legions plus a comparable force of auxiliaries, totaling about 300,000 troops. This army dwarfed the ten to fourteen legions with which the Republic conquered an empire; Caesar had opened his Gallic campaign with six legions and won the climactic siege of Alesia with 30,000 to 40,000 legionaries plus auxiliaries.7 **Augustus faced no foreign threat but needed an army to secure his own monarchical power.** Breaking with Republican tradition, the new imperial army comprised professional soldiers serving sixteen years or more, all having sworn loyalty to the emperor’s person and family. **A large peacetime standing army organized as a strike force was a peculiarity of the Roman Empire.**
…

In China, armed forces were far less influential in imperial succession than dowager empresses backed by the ideology of filial piety.
…

Han emperors never took the field in a foreign war after Gaodì’s debacle with the Xiongnu. They participated in strategic decisions and assigned generals to fight. In contrast, the almost supreme value that the Romans put on military conquest and victory made it dangerous for an emperor to allow expeditionary generals too much glory. **Augustus with his overwhelming prestige could send legates and arrogate their honor. Lesser emperors tried to monopolize command. After Trajan, emperors were obliged to campaign in person.**60 **Despite the powerful image of leading an army, a head of state who dared not delegate field command was politically weak.** He was becoming hostage to the military.
…

Despite recruitment difficulties, Rome excluded from its army slaves and people of base occupations such as innkeepers or cooks. The honor and pride of the military admitted no compromise.149

> http://attalus.org/translate/valerius7.html#c6
>
> [6.1] In the Second Punic War, when after several defeats there were no more young Roman men of military age available, the senate, on the motion of Ti. Gracchus the consul, decreed that slaves might be bought by the state, to fight against the enemy. When the tribunes reported this to the people, three persons were appointed, who collected twenty four thousand slaves. After the slaves took an oath that they would be true, faithful and courageous, while the Carthaginians remained in Italy, they sent them away to the camp. Out of Apulia also, two hundred and seventy men were bought from the Paediculi to supplement the cavalry. **How great is the strength of bitter Fortune! That city which till that time loathed to have soldiers who were exempt from tax even though they were freeborn, that very city was now constrained to summon the bodies of slaves from their servile hovels, and other slaves from the huts of shepherds, to be the chief strength of their army.**

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA232#v=onepage&q&f=false

The Xiongnu grew strong during the post-Qin civil wars and defeated many nomadic tribes to forge a confederacy. Among its victims was the Yuezhi, who originally dwelt on the rich pastures north of the Qilian Range, which would become the Han’s Hexi Corridor. **Evicted by the Xiongnu, the Yuezhi rode into Western history. There they**

were known as the Tokhari, the nomads who took Bactria from the Greeks who followed Alexander, according to the Greco-Roman political geographer Strabo.21 They overran Bactria in what is now northern Afghanistan in the 120s. **The Kushan Empire they founded lasted until 225.** To the north, its arts influenced the Scythians beyond the Roman frontier north of the Black Sea. To the south, its realm stretched beyond the Indus River. Roman merchants sailing from the Red Sea and Persian Gulf to buy Chinese silk at the ports of what are now Pakistan and northwestern India called the hinterland Scythia.22

The Han pursued the Yuezhi as an anti-Xiongnu ally. **The Han envoy Zhang Qian reached the Yuezhi in 128 BCE, only to find them about to overrun Greek Bactria, with no intention to cooperate with the distant Han and settle their grudge against their former enemy.**
…

Parthia received an emissary from Han Wudì and returned an embassy in 113 BCE. A few years later, the first silk-bearing caravan arrived from the east via Bactria.26

Parthia offered friendly alliance to the Roman Republic in 92 BCE. Sulla treated its envoy with contempt and allowed only vassal status.
…

The Xiongnu at their apex claimed 300,000 bow drawers or adult males. From that figure was can estimate that the Xiongnu population was about 1 million, which fits the usual comment of Han officials that the Xiongnu had only the population of a large Han province. Below the Xiongnu supreme leader, titled *chanyu*, were the left and right wise kings. They presided over the ruling council comprising six pairs of hereditary aristocrats. Twenty-four generals each commanded between a few thousand to 10,000 cavalry, which together constituted an active army of roughly 150,000 warriors, about one-half of the army reserve.31
…

Zhang Qian, who had been captured by the Xiongnu and detained for ten years before escaping to reach the Yuezhi, returned from the west in 126 BCE. Based on the intelligence he gathered, he proposed befriending western states “to sever the right arm of the Xiongnu” and deprive it of much needed resources. **Especially important was Wusun, a major nomadic state with a population about half a million in the Ili Valley near the border between today’s China and Kazakhstan.** The enthusiastic Wudì sent Zhang on a second imperial embassy, laden with gifts.
…

Xuandì capitalized on Wudì’s investment in a marriage alliance with the Wusun and grasped an opportunity to negotiate a joint military operation in 72 BCE. A distant ally neutralized the Xiongnu’s advantage of withdrawing beyond the Han’s capacity of pursuit. The news of a Han mobilization sent the Xiongnu fleeing en masse, so that the Han army captured only strayed enemies, as happened before. This time, however, it was augmented by the long second arm of a strategic pincer. **Slammed into the Wusun army, the withdrawing Xiongnu forces suffered great losses.** The Xiongnu sent a large army against Wusun for revenge, only to have it decimated by a killer snowstorm. Afterward the Xiongnu declined precipitously.46

In 60 BCE, the Han established its Protectorate of the Western Territory, which ruled over thirty-six statelets and lasted on and off for more than a century.47 Thus China marched to control what is now its Xinjiang Province for the first time. **It would repeat the feat twice, the first time in the seventh century and the second in the early eighteenth century,** less than a century before the United States expanded across western America in pursuit of its own manifest destiny.
…

When Parthia meddled in the Armenian succession, Nero summoned his council and asked, “Was it to be a hazardous war or a humiliating peace?” The council decided on war without hesitation.111 **When Gaodì died, Chanyu Maodun asked for Empress Lü’s hand, saying he had always desired to reside in the Middle Kingdom. The empress rejected the insolence but sent gifts and begged him not to invade.** In the subsequent decades, Han emperors repeatedly asked their courts whether to renew the amity treaty. They preferred paying tribute and offering princesses to a hazardous war.112
…

Wudì’s offensive against the Xiongnu was closer to a war of necessity than were the wars of Augustus and Trajan; the Xiongnu had frequently invaded and were gaining strength from Han tributes. Yet his military achievement became a black spot of his reign. Literati-officials objected to posthumous honor because of it. Ban Gu obliterated it in the short praise that concludes Wudì’s annals in the *Book of Han*.114

The three martial emperors each suffered a significant setback shortly before his death. Wudì lost an army in the Western Territory. Augustus lost three legions in the Teutoburg Forest. Trajan was forced to withdraw from Mesopotamia. The defeats prompted the first two to rethink their policies. **Wudì issued the Luntai Edict, which blamed others for the defeat, halted foreign expansion, and limited military activities to maintaining readiness, so that the people could rest and devote themselves to farming and enrichment.**115 **Augustus saved his thoughts for an advice appended to his will, read posthumously. Unlike Wudì’s edict, its text has not survived. According to Tacitus, he counseled that the Empire be kept within its present frontiers.** Dio included his warning that further expansion would be difficult to defend and might cause the Empire to lose what it had already acquired.116

The similar admonitions from Wudì and Augustus elicited different responses. **Wudì’s edict came to be called the Luntai Contrition. Ban Gu exaggeratedly said that the emperor “deeply regretted his previous policies.”**117 Subsequent arguments often referred to it. Overall, Wudì’s retrenchment won applause and exerted constraint. **Contrast Tacitus’ remark on Augustus’s advice: “Either he feared danger ahead, or he was jealous.” Germanicus campaigned as if it did not exist. Hadrian did not invoke it to justify his**

controversial decision of abandoning Trajan's conquests.118 **Nor did Commodus mention it when he ended his father's war.** The rate of Roman expansion subsided after Augustus, but none of his successors won admiration for restraint.119 **Indeed, Tacitus indicted Tiberius for dereliction: "Rome was plunged in gloom, the ruler uninterested in expanding the empire."**120
…

Claudius invaded Britain mainly because he needed the military glory to firm up his shaky succession. After his conquest, no emperor could afford to be the one who lost Britain, regardless of the resources it drained from the Empire.121 Guangwudì refused to lift a finger to prevent western states from joining the Xiongnu to despoil frontier populations. **Having gained the throne by insurrection, he was eager to please his supporters, landlords of the interior unwilling to pay for frontier security.**122 **In these cases, the emperor's self-interest could take partial cover in characteristic values, Roman glory or Han urbane virtue.**
…

Han literati decried expenditures to justify their reluctance in resisting Xiongnu incursions and their eagerness for abandoning Liangzhou to Qiang rebels. **Selfishness, not virtue, led them to refuse help to frontier kin who fought for the safety of all,** countered Sang Hongyang, who compared the interior and frontier to a person's trunk and limbs. Chan Cuo wrote that frontier people yearned for protection and would desert if they felt ignored by their government.123 Their arguments were equally cogent against parochialism in the late Roman Empire. **Themistius, mid-fourth-century senator and a favorite of three emperors, opposed defending Syria or rebuilding the cities ruined by German raids: "even if we succeeded in doing so, the only ones to notice would be the Syrians, Thracians, and Gauls, and the victory in each case would belong only to the neighboring territory. But if a moderate fiscal policy were conducted, it would be for the common benefit of all those inhabiting the world."**124 **To paraphrase Yu Xu's retort to a similar argument, if Gaul fell to barbarians, Rome would not enjoy low taxes for long.**
…

In contrast, Theodosius rewarded the Goths who ravaged several provinces, contented with levying troops from them. **Guangwudì preached, "Those who sacrifice the near in pursuit of the distant labor in futility. Those who sacrifice the distant in pursuit of the near enjoy fruits in leisure."**126 Their minimization of effort won contemporary flattery. For Theodosius's complacency, his son's generation paid with the ruins of Greece and Italy. The consequences of Guangwudì's myopic foreign policy were longer coming, **but modern scholars blame it partly for the loss of northern China and the subsequent three centuries of bloody disunity.**127
…

The imperial army consisted of 300,000 to 645,000 soldiers who, serving almost lifelong terms, lived segregated from the civilian world.
…

When Trajan invaded Dacia, he met an army whose best soldiers were recruited from the Roman Empire and whose siege machines were built by Roman artisans. After his first victory, he demanded the return of all Roman deserters and forbade the Dacian king to accept the service of any Roman.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA282#v=onepage&q&f=false

When Stilicho bought the services of Visigothic troops for 4,000 Roman pounds of gold, senators cried, "This is not a treaty, but a pact of slavery." Rome and Constantinople each had about 2,000 senators; the richest senators each had an annual income of 4,000 Roman pounds of gold and 160,000 Roman pounds of silver, plus one-third as much in produce. **They routinely spent 2,000 Roman pounds of gold on a single program of seven games but stripped public artwork to pay for public security.**77 We will see that the Han literati turned into brutal warlords and the Romans massacred the families of barbarian soldiers enlisted in the Roman army. Thus urbane virtue or religious love, which featured prominently in propaganda, was not the essential ground for their opposition to defense spending. As they pushed their own agendas, imperial armies were starved of adequate provisions, just when foreign enemies threatened the survival of the empires. **Generals unsure of replacements avoided battles because they could not risk casualties.** A modern scholar observes, "Perhaps the most basic reason for the failure of the imperial government… was that the two main groups in the Latin world – the senatorial aristocracy and the Catholic Church – dissociated themselves from the fate of the Roman army that defended them. Both groups unwittingly sapped the strength of the army and of the imperial administration."78
…

Roman militarism and plutocracy has been congruous through the high Empire, when emperors and top civilian and military officers all came from the senatorial order. **Since the 260s, senators dropped from military command and their political influence waned.** Soldier-emperors rose from the ranks. Diocletian, Constantine, Valentinian I, and Valens all hailed from provinces known for army recruitment rather than cultural elegance. Yet these energetic men did not lack brains. **They were the ones to develop a civilian bureaucracy separated from the military,** for it better met practical needs of the empire.

>
> 20 1 These spectacles finished, he made ready the war with Persia,[85] but while on the march through Illyricum he was treacherously killed by his soldiers. 2 The causes of his murder were these: first of all, he never permitted a soldier to be idle, for he built many works by means of their labour, saying that a soldier should eat no bread that was not earned. 3 **To this he added another remark, hard for them, should it ever come true, but beneficial to the commonwealth, namely, that soon there would be no need of such soldiers.** 4 What had he in his mind when he made this remark? Had he not put down all barbarian nations under his feet and made the whole universe Roman? 5 **"Soon," he said, "we**

> **shall have no need of soldiers." What else is this than saying: "Soon there will not be a Roman soldier? [Romanus iam miles erit nullus]** Everywhere the commonwealth will reign and will rule all in safety. 6 The entire world will forge no arms and will furnish no rations, the ox will be kept for the plough and the horse be bred for peace, there will be no wars and no captivity, in all places peace will reign, in all places the laws of Rome, and in all places our judges." 21 1 But in my love for a most excellent emperor I am proceeding further than a **prosaic style [pedestris sermo]** requires.
> ...
>
> That most famous remark of Probus itself reveals what he hoped to have brought about, for he said that soon there would be no need of soldiers. 23 1 He, truly conscious of his powers, stood in fear of neither barbarian nor pretender. 2 What great bliss would then have shone forth, if under his rule there had ceased to be soldiers! **No rations would now be furnished by any provincial, no pay for the troops taken out of the public largesses, the commonwealth of Rome would keep its treasures forever, no payments would be made by the prince, no tax required of the holder of land; it was in very truth a golden age that he promised. [aureum profecto saeculum promittebat]** 3 There would be no camps, nowhere should we have to hear the blast of the trumpet, nowhere fashion arms. That throng of fighting-men, which now harries the commonwealth with civil wars, would be at the plough, would be busy with study, or learning the arts, or sailing the seas. Add to this, too, that none would be slain in war. 4 O ye gracious gods, what mighty offence in your eyes has the Roman commonwealth committed, that ye should have taken from it so noble a prince?

The death of Valentinian I in 375, which almost coincided with the immigration of the Visigoths, inaugurated a new age. **A child was left on the Western throne. The blue-blooded and demilitarized aristocracy revived and by the fifth century grabbed all top positions in the civilian government.**79 The Han government followed the same path. By the second half of the Latter Han, Confucian masters occupied about 47 percent of the top offices.
...

The Roman army in the fifth century was a mystery. Official lists gave its strength at 645,000 – powerful indeed. Accounts of barbarians running around almost unchecked within the Empire, however, raise the question of just where the Roman army was.92 Many scholars argue that up to one-half of the official army existed only on paper. A soldier absent without leave remained on the official roster for four years.93 The depleted army delighted barbarian invaders but not Roman taxpayers, as a historian explains: **“whether they were alive or dead or totally imaginary, pay and allowance were issued for 645,000 men.”**94
...

Hunnic warriors did not exceed 15,000 by much, but they skillfully incorporated the peoples they defeated into their confederation **to build “an empire of many colors,” akin to the Xiongnu’s “great state of a hundred fierce peoples,” *baiman daguo*.** Their Germanic subjects were so numerous that a Germanic dialect became a major language of their realm. **The Huns realized Tacitus’s nightmare by uniting a large number of Rome’s poor northern neighbors into something akin to a rival imperial power.** If they had had a poetic virtuoso like Virgil, they might have sung the glory of raising the lowly and humbling the haughty.140

>
> [6] **For if the Scythians were united, there is no nation which could compare with them, or would be capable of resisting them;[3] I do not say in Europe, but even in Asia**—not that they are at all on a level with other nations in sense, or in that intelligence which uses to advantage the ordinary means of life.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA165#v=onepage&q&f=false

Only sixteen years when his father Valentinian I died, Gratian heralded the age of child emperors. Wealthy senatorial aristocrats, effete and inept, resurged in power. **After Hadrianople, emperors ceased to campaign in person in foreign wars and hence gave up direct control of the army.** Crucial decisions began to pass from the emperor to generals and high aristocrats, who struggled for power behind the scene.

https://books.google.fi/books?id=Uq3gBQAAQBAJ&lpg=PP1&hl=fi&pg=PA297#v=onepage&q&f=false

Unlike Valentinian I, who gained experience as a soldier, Gratian received the best classical education. **He promptly replaced the rough and tough appointees of his father by men of letters. His tutor, a great poet, became the praetorian prefect. Senatorial aristocrats from venerable and immensely rich families monopolized all high offices in the civilian government. They had long converted from militarism to cultural elegance as dainty as that of the Han literati. Many jumped to top positions without any experience in administration, for which they had neither interest nor respect.**153

Catholic bishops were another group that crowded Gratian’s court. They shared the delicate sensitivity of aristocrats and disdained the vulgarity of soldiers.
...

Not until 441-444 did the emperor demand that aristocrats and the Catholic Church should pay regular taxes. By then **the state was so bankrupted by the loss of Africa it was unable to supply veteran troops, not to mention equip new recruits.** Even so, much of the extra revenue went to compensate dignitaries who lost African estates.157

Gratian left another detrimental legacy. **Illyricum in the Balkans was home to some of the best soldiers and military leaders in the Empire. It was hitherto under the jurisdiction of the western emperor. Gratian ceded it to the east when he appointed Theodosius to succeed Valens,** although as the dominant emperor he had no reason to give up anything. **The alienation of this military nursery reduced the number of martial competitors for government offices.** It also created great recruitment difficulties for later generals who faced a critical shortage of soldiers to counter barbarian invaders.158
…

Stilicho's preference of a dignified death to a ruinous civil war would put many pure-blooded Romans to shame. **Nevertheless, the tide had turned against naturalized citizens with the ascendancy of aristocratic and theological ideologies. No one with a German name held supreme Roman command after Stilicho.** The glass ceiling was nothing compared to the gory floor. Constantinople led the way in 400. In the coup against a powerful general of Gothic extraction, thousands of barbarians serving in the Roman army were burned to death in the church wherein they took asylum. If Alaric had been nudged by the event to stir in 401, he benefited much more in the aftermath of Stilicho's demise. The Romans slaughtered wholesale the families of more than 10,000 barbarian soldiers he enlisted, many formerly Radagaisus's Goths. The outraged husbands and fathers threw their lots with Alaric.162

The master of office who plotted the downfall of the generalissimo and took control of the government neither honored Stilicho's agreement with Alaric nor prepared for Visigothic reaction. **The imperial court was untouchable in Ravenna, protected by swamps and supplied from the sea.** Rome was more vulnerable.
…

When Alaric stormed through Greece, many cities yielded without resistance. **Zosimus wrote, "Even Sparta herself was swept away in the common destruction of Hellas. She was no longer fortified by arms or by warriors owing to the exploitation of the Romans."**169
…

The Western Empire gathered its remaining troops. The Eastern Empire assembled an armada designed to land a large army on Africa. The Vandal fleet seized the opportunity of a favourable wind to launch fireships into the invading armada. **The fireships in the 468 battle of Cape Bon burned away the last hope of the Western Roman Empire,** just as the fireships of the 208 battle of Red Cliff blazed the way to a fragmented China for centuries.172

The Visigoths sensed the wind change and switched from playing Roman politics to military expansion, until they established an autonomous kingdom in Spain and southern Gaul. Other resident barbarians promptly followed suit. **When all provinces with their tax revenues broke away, the Roman army in Italy demanded land to substitute for lost pay.**

> http://attalus.org/translate/valerius7.html#c6
>
> Because of the same defeat [of Cannae], the senate wrote back in answer to Otacilius and Cornelius Mammula, the one propraetor of Sicily, the other of Sardinia, **who both complained that the allies were not providing either pay or provisions for their fleets and armies, while they themselves did not have the resources to provide them: that the senate had no money in the treasury for foreign [longinquis] expenses, and therefore instructed them to take the best course they could to provide for themselves. In this way the senate moved the government quite out of their own hands, and in a few words abandoned Sicily and Sardinia, [his litteris quid aliud quam imperii sui gubernacula e manibus abiecit Siciliamque et Sardiniam, … dimisit]** which were two of the kindest nurses of our city, the strength and support of their wars, subdued with so much blood and sweat, **because of the severe demands of necessity.**

…

The legal ban on private arms had been lifted in 440. However, only a handful of Roman resistance efforts were known, mostly a magnate assembling a force to defend his own locality, as Valentinus did to fend off a Gothic assault on Selge.178 Rome twice opened its gates to enemies incapable of siege.

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA152#v=onepage&q&f=false

When barbarians came, the resistance of Roman citizens was weaker than that of Chinese subjects under similar circumstances. Even in Rome, citizens once unsurpassed in public spirit did not defend the city symbolic of honor. Twice they opened the city gate and surrendered.

> https://archive.org/details/a589105200kinguoft/page/n151/mode/2up?view=theater
>
> Overblown with self-conceit, the Romans refused him. They would listen to no conditions. **They were in a thoroughly Chinese temper. You will find the Byzantine empire in the same temper centuries after; blinded to present weakness by the traditions of their forefathers' strength.** They had worshipped the beast. Now that only his image was left, they worshipped that.

https://books.google.fi/books?id=t2c4t4yw21gC&lpg=PP1&pg=PA69#v=onepage&q&f=false

But it was not until the spring of 702 that a further revision of the codes was concluded and a full organization of administrative bodies was proclaimed in the *Taihôryô* or code of Taihô – Taihô being an era name, meaning Great Treasure, which was meant to introduce the new measures under good auspices.

By this new system the central government consisted of two parts, the Department of Worship (Jingi-kan) and the Department of State (Dajô-kan). **The Department of Worship took precedence over the Department of State.** It was concerned with the performance of the great religious ceremonies (such as the rites of enthronement and national purification, and the festivals of the first-fruits and harvest thanksgiving), the upkeep of shrines, the discipline of shrine wardens, and the recording and observance of oracles and divinations. **It presided over the worship of the national divinities, and had nothing to do with Buddhism. The Department of State was concerned with all secular aspects of government.**
…

The new system was very near to a faithful copy of the T'ang system, **but there were certain points in which it differed from the Chinese original, notably the precedence of the Department of Worship over the Council of State.** The fact that special recognition was accorded to the priestly functions of the sovereign shows that, despite an almost slavish adherence to the Chinese pattern in other respects, the Japanese reformers were not willing to abandon their national tradition of kingship, according to which the sovereign is in theory sacred and inviolable. Even when Chinese political thought exercised its greatest influence upon their minds **the Japanese leaders did not accept any Chinese doctrine**2 **which held that the mandate of Heaven could not be exercised by a sovereign without virtue,** since in the Japanese tradition the claim to the throne is based upon descent alone.

In one other feature the Japanese system of official grades differed, in practice perhaps more than in theory, from the Chinese system: the hierarchy in Japan was based upon birth and not upon talent. Japanese society was definitely aristocratic, and Japanese history consistently displays a deep interest in pedigree, rank and title. **The matter is put quite bluntly in an edict of 682, which provides that in selecting men for office the considerations are to be first birth, then character, and then capacity.**

https://en.wikipedia.org/wiki/Haibutsu_kishaku

The *haibutsu kishaku* during the Meiji Restoration, the most famous instance of the phenomenon, was an event triggered by the official policy of separation of Shinto and Buddhism (or *shinbutsu bunri*)[1] that after 1868 caused great damage to Buddhism in Japan. The destruction of Buddhist property took place on a large scale all over the country. For example, Kōfuku-ji in Nara suffered greatly. The temple, which is now a National Treasure, was hit with full force by the movement. The temple's land was seized, the priests forced to become Shinto priests, walls were torn down, trees were planted, and the area became part of one of the city's parks.[2] The anti-Buddhist riots caused damage to all large temples of the city.[3] The violence marked every region of the country permanently. **Between 1872 and 1874, 18 thousand temples were eradicated, and maybe as many again from 1868 to 1872.[4] Japanologist Martin Collcutt believes Japanese Buddhism was on the verge of total eradication.[4]**

The violence had just released pent-up popular anger at the Buddhists which had been brewing for centuries because of their close alliance with the Tokugawa in the *danka* system,[5] an alliance from which the religion had derived immense benefit. **Although the shogunate's official philosophy was lay Neo-Confucianism,[6] Buddhism had become an integral part of the state as a consequence of the Tokugawa's anti-Christian policy. To stop the propagation of the Christian religion, they had introduced the *danka* system, which obliged families to affiliate themselves with a Buddhist temple[7] and, in return, this would certify that they were not Christian.** Without this certification a normal life in Tokugawa Japan was impossible.[7] Because of this, temples could and often would blackmail parishioners.[8] Under the *danka* system families had by law several obligations towards Buddhist institutions, among them monetary donations to their affiliated temple.[7] **Because there were some 100,000 temples in a country of 30 million people, on average 300 persons had to support a temple, so the burden was considerable.[8]** Buddhism, as an institution, had a vested interest in the shogunate system, and therefore became a target of all the parties working for the downfall of the shogunate.

https://books.google.fi/books?id=YuBjNSmZ7pUC&lpg=PP1&hl=fi&pg=PA74#v=onepage&q&f=false

Thus if this sword were torn away from them, **it was inevitable that the gods of Japan, so utterly disdained by the new government, would become powerless spirits, worshipped only by the ignorant masses.**

Meanwhile, month after month, year after year, the gods Master Oen had said were so close at hand, the gods who had enflamed their hearts with such devotion, were being degraded. **The young men felt**

certain that a conspiracy was afoot to rob the gods of their dignity, to thrust them off into the distance, to make them as insignificant as possible. Thus, out of fear that the Christian West might look upon Japan as an ignorant, heathen land, the ideal of worship and government as one would be slighted more and more. The gods would finally sink to the level of feeble spirits, ephemeral beings who clung to life in the shelter of sprouting reeds rippling in the wind beside remote streams.

And the sword was to suffer a like fate. The defense of the land would no longer be entrusted to the manly warrior bearing at his side the swift thunderbolt of the immortal gods. **The national army created by Aritomo Yamagata gave no preference to the samurai class, nor did it honor the ideal of the Japanese as individuals rallying spontaneously to the defense of their native land. Rather, it was a Western-style, professional army which, in ruthless disregard of all tradition, ignored class distinctions and depended upon a draft system to supply its manpower.** The Japanese sword, giving way to the saber, had lost its soul. Now it was fated to become a mere decoration, an ornament.

https://en.wikipedia.org/wiki/History_of_Vietnam#Monarchical_period_(938%E2%80%931862)

Viet Nam, named Đại Việt (Great Viet) was a stable nation, **but village autonomy was a key feature.** Villages had a unified culture centered around harmony related to the religion of the spirits of nature and the peaceful nature of Buddhism. While the sovereign was the ultimate source of political authority, a saying was, "The Sovereign's Laws end at the village gate". The sovereign was the final dispenser of justice, law, and supreme commander-in-chief of the armed forces, as well as overseer of religious rituals. **Administration was carried out by mandarins who were trained exactly like their Chinese counterparts (i.e. by rigorous study of Confucian texts).** Overall, Vietnam remained very efficiently and stably governed except in times of war and dynastic breakdown. **Its administrative system was probably far more advanced than that of any other Southeast Asian states and was more highly centralized and stably governed among Asian states. No serious challenge to the sovereign's authority ever arose, as titles of nobility were bestowed purely as honors and were not hereditary. Periodic land reforms broke up large estates and ensured that powerful landowners could not emerge. No religious/priestly class ever arose outside of the mandarins either.** This stagnant absolutism ensured a stable, well-ordered society, but also resistance to social, cultural, or technological innovations. Reformers looked only to the past for inspiration.[61]

https://ctext.org/liji/biao-ji

27. Biao Ji: The Master said, '**Under the Xia dynasty it was the way to give honour to the nature conferred on men; they served the manes of the departed, and respected Spiritual Beings, keeping them at a distance,** while they brought the people near, and made them loyal; they put first the (attraction) of emolument, and last the terrors of power; first rewards, and then punishments; showing their affection (for the people), but not giving them honour. **The bad effect on the people was, that they became stupid and ignorant, proud and clownish, and uncultivated, without any accomplishments. Under the Yin dynasty, they honoured Spiritual Beings, and led the people on to serve them; they put first the service of their manes, and last the usages of ceremony;** first punishments, and then rewards; giving honour (to the people), but not showing affection for them. **The bad effect on the people was, that they became turbulent and were restless, striving to surpass one another without any sense of shame. Under the Zhou dynasty, they honoured the ceremonial usages, and set a high value on bestowing (favours); they served the manes and respected Spiritual Beings, yet keeping them at a distance;** they brought the people near, and made them loyal; in rewarding and punishing they used the various distinctions and arrangements of rank; showing affection (for the people), but not giving them honour. **The bad effects on the people were, that they became fond of gain and crafty; were all for accomplishments, and shameless; injured one another, and had their moral sense obscured.**'

https://archive.org/details/sectarianismreli01groo/page/18/mode/2up?view=theater

These encroachments upon the liberty of the people's religion will be still better understood when we bear in mind, that to no son of China would it ever occur to question the supreme authority wielded by the emperor and his proxies, the mandarins, not only over mankind, but also over the gods. **For the gods or *shen* are souls of intrinsically the same nature as those existing in human beings; why then, simply because they have no human bodies, should they be placed above the emperor,** who is no less than a son of Heaven, that is to say, a magnitude second to none but Heaven or the Power

above whom there is none – who governs the universe and all that moves and exists therein? Such absurdity could not possibly be entertained by Chinese reason. **So it is a first article of China's political creed that the emperor, as well as Heaven, is lord and master of all the gods, and delegates this dignity to his mandarins, each in his jurisdiction. With them then rests the decision which of the gods are entitled to receive the people's worship, and which are not. It is the imperial government which deifies disembodied souls of men, and also divests them of their divine rank.** Their worship, if established against its will or without its consent, can be exterminated at its pleasure, without revenge having to be feared from the side of the god for any such radical measure; **for the power of even the mightiest and strongest god is as nought compared with that of the august Celestial Being with whose will and under whose protection the Son reigns supreme over everything existing below the empyrean, unless he forfeits this omnipotent support through neglect of his imperial duties.**

> https://www.garynorth.com/Deuteronomy4.pdf
>
> Tertullian did not understand, or pretended not to understand, the inherently political nature of classical religion.
> …
>
> **Roman religion was itself sacrilegious, he said, "for you do homage with a greater dread and an intense reverence to Caesar, than Olympian Jove himself."**10 Of course they did; the Olympian Jove was a political construct. Caesar was the earthly manifestation of Rome's political power, and classical religion was power religion. Tertullian sought to condemn Rome's rulers for "showing impiety to your gods, inasmuch as you show a greater reverence to a human sovereignty than you do to them."11

This dogma is most highly classical, being preached by the *Shu*. Hence, with all that is contained in this oldest and holiest of all classical bibles for State and society, it is an immutable article in the canon of imperial rights for all ages. I-yin, we read there, a most virtuous statesman of antiquity, played an important part in the overthrow of the Hia dynasty and the accession to the throne of the celebrated T'ang, **who founded a new house known by the name of Shang.** That grandee spoke in the year 1753 before our era to T'ai-kiah, T'ang's grandson and successor, on his ascending the throne:

"Oh oh! it is so difficult to rely on Heaven, and its appointments to imperial dignity are precarious! **If the emperor's virtues are stable and constant, Heaven protects his throne; but if his virtues are unstable, he loses his nine possessions (the nine great divisions of the empire).** The princes of the Hia dynasty were not able to practise virtues; they offended the gods and oppressed the people. **So the Imperial Heaven protected them not, and its eye wandered over the myriads of regions to see if there were any one to whom the imperial appointment could be given; with a look of affection it sought an all-virtuous man, to make him *lord of the gods*.** Only myself and T'ang were possessed of perfect virtue, and could therefore obtain Heaven's affectionate favour; so it was he who received the glorious appointment to the imperial dignity, and thus became the owner of the people in the nine possessions."1

https://archive.org/details/sectarianismreli01groo/page/26/mode/2up?view=theater

Though thus, in general, lenity is shown by the government and its mandarins to the people's native gods and goddesses and their worship, that tolerance does by no means extend to impudent rabbles who presume to found or propagate new, unclassical doctrines and religious practices. Chinese books speak sometimes of men who set themselves up as envoys of the God of Heaven or of some other high deity, and worked miracles, pretending to have dominion over spirits and gods, and to be helped and served by them. **And almost invariably we are told that such prophets fell into the hands of the authorities, were tortured and put to death** – in short, treated as sorcerers and deceivers of the public with their miracles or black arts particularly dangerous to the State.
…

And in the first place, the State has, during a series of centuries, turned its fanatic wrath against one element of Taoism which was, as far as may be ascertained by means of the Classics, totally non-existent in the golden Confucian and pre-Confucian age, namely its monachism. Its system of worship of gods may be defensible for having existed in some form or other in those sacred times; but its monachism being certainly not so old, cannot plead that ground in favour of its right of existence.

Instituted for the purpose of giving man an opportunity to raise himself to a higher state of perfection and bliss by ingeniously devised means, Taoistic asceticism has known its halcyon days, its ups and downs, chiefly ruled by the rising and falling of the thermometer of imperial favour. **Under the T'ang-dynasty, the empire possessed, according to official statistics, 1687 Taoistic monasteries);**1 **now there is hardly a trace of them left.** Official persecution has cleared them all away, and the

crowds of *Tao-sze* or “Taoist doctors,” workers of miracles and anchorites of whom Chinese writings are full, have been converted into a class of popular pagan priests, whose name is legion.

https://archive.org/details/sectarianismreli01groo/page/36/mode/2up?view=theater

As early as the year 624, when the first emperor of that house had scarcely occupied the throne for six years, the campaign was opened by the high-placed minister Fu Yih, who had passed from the service of the dethroned Sui dynasty into that of the house of T’ang. We read in his biography occurring in the Standard Annals of this house:

“**In the seventh year he presented a memorial to the emperor, in which he proposed to do away with Buddhism altogether.** “The West, where Buddha lived, and where he preached his ominous heresies,” this document said, “is far away. The Han dynasty translated the western writings and was led astray by their apparent trustworthiness, **thus causing people unloyal to their ruler and devoid of devotion and submission to their parents, to shave their heads and abandon their ruler and their parents;** they became idlers and wandering mendicants, and assumed another garb, in order to escape the paying of groundrent to government. By the spread of their ominous writings and the promulgation of their heresies, they opened, on false grounds, three roads (of transmigration into demons, pretas and animals), and laid out yet six other roads (of transition into asuras, men, and devas); – thus they inspired the ignorant with dread and fear, and deceived the class of government officers, with the result that amongst the people, they who became acquainted with them believed such falsehoods thoughtlessly, without due enquiry after their roots and sources. **And then they raked up the crimes committed by these people in times past, in order to gauge thereby their future happiness;** they taught that the gift of one single coin would give them a chance of a thousandfold reward, and that one day’s fasting might make them expect food for a hundred days. Thus they caused their ignorant victims of deception to try recklessly to do such good works, so that, instead of fearing the laws and prohibitions, these people inconsiderately indulged in transgression of the precepts of the government; **and when some committed the abominable crime of opposition, and were entangled for that in the meshes of the penal laws, then, in the dungeon, they still worshipped their Buddhas and muttered their Buddhist Sutras,** forgetting all their lassitude both during the day and the night, sustained by the hope of escaping punishment.

“It depends upon his natural destiny whether one shall live long or die an untimely death; but punishment and intimidation, and the bestowal of blessing and happiness are the business of the sovereign. **We must admit that poverty or wealth, and high or low social standing is called forth by personal labour and merit; but the ignorant Buddhist clergy with their lies maintain that all those things come from Buddha. Thus they defraud the sovereign of his prerogatives and power, and appropriate his (exclusive) rights to lead humanity towards reformation for good;** – the harm thus occasioned to the influence of the government and morality is truly lamentable. **The *Shu* says: “The sovereign alone creates blessings and intimidates; to him alone belongs all that is precious and edible; and it his subjects create blessings and inspire fear, or appropriate treasures and food, they damage his house, they bring misfortune upon his dynasty; then the men in his service further other interests than his, and become corrupt.”**1

A curious piece of state-doctrine! **On the authority of that dictum of the chief classical book, every religion stands indicted with encroachment upon the imperial omnipotence, that is, with high-treason, if, by preaching the existence of other punishments or rewards than those which terrestrial government inflicts or confers, it deters mankind from evil and encourages it to do good. For the sovereign alone has the right to punish and to recompense!** The classical principles are as much in force now as they were in Fu Yih’s time. Christians, remember therefore that, on account of your doctrines, you, like the Buddhists, stand convicted of violating the imperial rights, of weakening the imperial authority, of sowing moral corruption among the mandarinate; that in a word you disorganize and demoralize China’s government. And again, by collecting money from the converts for the maintenance of your church, as the Buddhists do, you and the latter defraud the imperial house, you sap the dynasty; the highest Confucian bible of politics itself has declared it!

But let us further peruse Fu Yih’s curious memorial. “**From Fuh-hi and Shen-nung (29th and 28th century b.C.) up to the Han and the Wei dynasties, there was no Buddhism,** and – the sovereigns in those times were wise, and their ministers faithful; their reigns were long, and great was the number of their years of life. The emperor Ming of the Han dynasty (58-76 A.D.), on account of a dream, became the first who erected images of western deities; and from that time the çramanas of western lands have spread their doctrines.
…

How much more then is there to fear, now that there are fully a hundred thousand monks and nuns in the world, who cut clothes of silk, and dress and adorn clay images, which they then employ to suppress devils, and to lead the myriads of people astray? **I propose that all these monks and nuns shall be commanded to marry one another; thus more than a hundred thousand lay families shall be**

formed, who shall give both to sons and daughters; when these shall have grown up to their tenth year, and when a second period of equal length shall have been devoted to their education and instruction, they will then naturally be an element useful to the dynasty, and yield a sufficient contingent of warriors (for the maintenance of the imperial power), while, besides, calamities in the cultivation of silk and food shall be prevented in all parts of the world between the four seas. **If the people be in this way made to understand with whom rests the power to intimidate and to create happiness,** those heretical deceptions will naturally die off, and the transformation into a state of purity and simplicity will flourish again.1

https://archive.org/details/sectarianismreli01groo/page/50/mode/2up?view=theater

Buddhism, Yao Ch'ung argues, would be all right if it preached only mental quiet, compassion and charity, the doing of good and the avoiding of evil in this earthly existence; but why drown all this in idle stories which lead to misconception? **In truth it is by no means astonishing to see such argumentation written down by an ardent adept of materialistic Confucianism, which teaches that, as long as there is slavish submission and devotion to parents and sovereigns, all human perfection will be produced by virtue of the Tao or course of the material universe itself, without any further activity being required.** Quite natural also, that in these anti-buddhistic waitings there is not a word of appreciation of the pious sentiment wherewith in this religion, by the practice of virtue and by charity towards one's fellow creatures, a higher state of perfection and bliss is sought after than this world can give. This aspiration, its centre of gravity, rests on lies and fictions, for – nothing of the sort is found in the Confucian Classics. Therefore, all doctrines leading up to this one and only Buddhistic goal are heretical, and should be exterminated without delay, to give room once more to the old-classically orthodox dogmas of Confucius and his school. **A chilling and peremptory denial of the worth of religious sentiment and moral elevation, which are the necessary effects of a striving after perfection for this world and for the world to come, is one of the chief features of all anti-buddhistic writings from Confucian pens.**

https://archive.org/details/sectarianismreli01groo/page/64/mode/2up?view=theater

"Hence, in the eighth month **[of 845 AD]** the emperor **[Wuzong]** decreed as follows:

"**We have heard that before the end of the reign of the three dynasties (of Hia, Shang, and Cheu), there was no question about any Buddha**. That after the Han and the Wei dynasty this image-worshipping religion gradually developed, was a consequence of the propagandism made for its foreign customs in the beginning; its contaminating practices thus ramified in all directions, grew and increased; and the end has been that it corrodes the good manners and customs of the empire, thus gradually rendering these unenlightened; and that, by its beguiling and misleading the inclinations of men, it leads the latter astray in masses. So it has come about that in the country of the nine provinces, as well as within the walls and gates of the two imperial capitals, the Buddhist clergy and their followers increase by the day, and the Buddhist convents daily grow in size and splendour. **Human labour is overburdened on behalf of these buildings of loam and wood; the people are being robbed of the fruits of their labour to get (the images and buildings) decorated with gold and precious things; rulers and fathers are neglected (by their ministers and their sons) on behalf of religious instructors and the moneys to be paid to them; wives are abandoned by husbands who want to live in a sphere of religious commandments; – never did any religion root up the national institutions and work mischief to humanity on a larger scale.** But there is more: when one farmer neglects agriculture, others thereby suffer hunger; when one woman keeps no silkworms, others have to endure cold for that. And now the number of monks and nuns in the world cannot even be estimated, and they all live on the agriculturist, and dress at the expense of the silk-producers. **And in the monastic buildings and the *chao-t'i*1 no one seems to care for restriction of excess, for they all have roofs reaching up into the clouds, and are beautifully adorned, so that they even compete with palatial mansions.** That under the dynasties of Tsin, Sung, Ts'i, and Liang the energy of the living was so languid and enervated, and manners and customs were so vile and so wrong – it was altogether a consequence of that state of things.2

"But there is more still. My High Ancestor (Kao Tsu) and (his successor) T'ai Tsung, by martial prowess suppressed calamitous rebellions, and by means of civil administration governed the Flowery Land of Hia. With these two levers they could adequately rule the country; how then can I possibly be entitled to disturb the balance of government by employing the religion of that insignificant land of the west! In the *Ching kwan* period (627-649) as well as in the *Khai yuen* epoch (713-741), it was abolished, but not cut away effectively, and like a stream, it once more flooded the land. Studiously have I read what others have said about it before; unofficially have I taken advice in the palace; and there remains no doubt that this evil ought to be cut off. And earnest ministers within and without the palace confirm this my serious conviction. They demonstrate in long memorials, that ultimate propriety here consists in carrying out the measure resolutely; also that the institutions of hundreds of sovereigns ought to be perfected by suppressing an evil which (otherwise) will gnaw at the sources (of good) for thousands of ages. **Why**

then shall I show indulgence where mankind is to be saved and the multitudes are to be benefited?1

“Of the 4600 and more convents that are to be pulled down within the empire, the 260,500 monks and nuns who must adopt secular life, shall be enlisted amongst the families who pay groundtax twice a year. **Of the 40,000 and more *chao-t’i* and *lan-jok* that are to be demolished, the fattest land of the best kind, measuring several thousand myriads of *khing*, shall be confiscated, and the slaves of both sexes (employed in cultivating them?) to a number of 150,000, shall be enlisted among the families that pay groundtax twice a year.** And secular life shall be adopted by more than 3000 Ta-ts’in and Muh-hu-pat belonging to the class of the Buddhist monks and nuns, or to the Bureau for the Reception and Entertainment of Foreigners, who devote themselves to the explanation of foreign religious rescripts; **with the customs of the Flowery Land of the Centre they shall no longer meddle.** Alas, the institutions of antiquity have never yet been made to operate; so, if (religions) which were granted reprieve (of extermination) are now at last done away with, how then can it be said that this is an untimely act? Drive out those idlers and sluggards without professions or trades, of whom there are now already more than a hundred thousand; demolish those red-painted useless buildings – why should there be an innumerable number of thousands of these? **And from this time, the pure and undefiled (Confucian doctrine) will teach mankind to strive after conformity to the laws and principles of inactivity (*wu-wei*),** and undisturbed quiet and ease will help the government in its task to perfect the one and only system of (archaic Confucian) manners and customs. Shall the black-haired people in the six parts of the universe1 be made to seek refuge together in the reformation for good brought about by their emperor, then it is of high consequence to mind the starting-point, namely the extermination of evil. By issuing clear rescripts every day for the benefit of the unenlightened people, Our intents and will ought to be realized.”2

With this imperial decree, Confucianism celebrated its triumph and held its jubilee, while Buddha’s church received a blow from which it was never to recover.
…

And about one year after, in the intercalary month, being the fourth of the year 847, **[the emperor Xuanzong]** issued the following decree:

“In the last year of the *Hwui ch’ang* period, the monastic buildings everywhere were reduced to a minimum; but though it must be called a religion of foreign regions, it is no religion harmful to the fundamental principles of the administration of government. **The people of the Middle Kingdom have long walked in its paths which lead to salvation; hence abolition of even a particle of it is a sin against all that is proper; and that abolition has not tended to increase the animated mountains and the regions of superior excellence.** In the prefectures throughout the empire, if the monks who used to dwell therein can rebuild them, the convents which have been pulled down in the fourth month of the fifth year of the *Hwui ch’ang* period, may altogether be rebuilt by their abbots, and the authorities shall not forbid or prevent this.”1

We read nothing, however, of a restitution of the sequestered goods and lands. The latter, in truth, had evidently passed into other hands, for we read the following passages in the Historical Books:

“**When Wu Tsung had ascended the throne and abolished Buddhism, 4600 monasteries and 40,000 *chao-t’i* and *lan-jok* were pulled down in the empire; 265,000 monks and nuns were registered as ordinary people, together with 150,000 of their male and female slaves,** and several thousand myriads of *khing* of their grounds, as also more than two thousand Ta-ts’in, Muh-hu and *T’ien*.2 In the Imperial residence as well as in the eastern capital, in each street two monasteries were left with thirty monks in each; and in the provinces, the monks left (in the convents) were of three different quantities, nowhere exceeding twenty. The fattest grounds were sold, and the proceeds delivered to the Board of Revenue; and the grounds of medium and inferior qualities were given to the grown-up house-slaves of the convents, who thus became people paying groundtax twice a year; each one of them received ten *meu* of ground. **And of the convents from which the male and female clergy had disappeared, in the two capitals, ten *khing* of the grounds were added to the fields cultivated for charitable purposes, or were given to the quarters for nursing the sick (lepers’ wards?), while in each department seven *khing* were assigned to such institutions;** and these grounds were to be administered by the elders.”3
…

The *Fung-shui*, that widely known philosophical system, both Taoistic and Confucian, which teaches that the happiness of every region or town, village or house depends upon the configurations of the surrounding hills, land, and watercourses, and that these formations can be improved by human hands, more especially by buildings in which dwell mighty gods and saints – **that system, which originated in the old ideal times of orthodoxy, had grown up and developed side by side with Buddhism, and had gained a paramount influence under the T’ang dynasty, being then a pre-eminent power in social life. Against this power the passion for demolition came to a dead stop.** In the first

instance, it probably saved from destruction a number of convents with the appertaining pagodas, built by the people at the cost of much money and labour for the consolidation and the advancement of prosperity in their districts. And re-erection of such buildings, although in more modest dimensions, could, under the pressure of this power, hardly be prevented. **It is, indeed, obvious that since the T'ang dynasty, the position of monastic buildings in the mountains as maintainers of the Fung-shui influences is far more emphasized in writings than ever it was before; confessedly Fung-shui becomes almost the main reason of their existence, the salvation of the inmates a secondary motive.** As for a conclusive proof of the influence of the Fung-shui system on the establishment and the preservation of Buddhistic monasteries and pagodas: – it is a well known fact, that even all around the Imperial metropolis, in the plains and on the hills, a great number are found, erected for the insurance or the improvement of the Fung-shui of the palace, and consequently of the imperial family and the whole empire. **And who were the founders? none others than the emperors of the anti-buddhistic dynasties of Ming and Ts'ing; and who maintain them? the sovereigns of the last-named house. But – in strict accordance with the ultra-Confucian spirit of the State – the monks who inhabit them are very few in number; their standard is low; there is among them but little walking in the paths of salvation.** Their religious activity resolves itself chiefly in a worship of the images of buddhas and bodhisatwas: the protectors of the welfare of the imperial residence and the court, that is to say, in Chinese parlance, under whose protection the Fung-shui of those two is placed.1

Defamed by official indictments for heresy; oppressed by the State and its all-dominating Confucian spirit; its monastic institutions merely tolerated on account of the Fung-shui, yea, even supported to some extent by the State for this very reason: such in the main has been the condition of Buddhism since the reign of the T'ang dynasty. **This two-faced state-policy grants Buddhism an appearance of liberty which the outside world generally regards as real,** but which now, we trust, will be estimated according to its worth.

https://archive.org/details/sectarianismreli01groo/page/96/mode/2up?view=theater

Literally in the same form this fundamental article occurred in the code of the Ming. That it was never actually intended for any other purpose than to keep the number of monasteries at a minimum, is proved by a note at the head of the official commentary, in which the legislator at the same time gives vent to his aversion to monkery: **"When the Taoist and Buddhist clergy increase, the population decreases: this is a natural law. These folks do not plough, and have no trades or callings; so they dress and eat at the cost of the people; why then shall we allow them to build and thereby waste the wealth of the people? why allow them to bind up people's hair or shave their heads, and thus empty their dwellings?"**1

https://archive.org/details/sectarianismreli01groo/page/110/mode/2up?view=theater

In 1737, on the 11th day of the third month (April 10), an edict appeared, in which the emperor announced, that in consequence of two decrees ordering the Viceroys and provincial Governors by no means to relax their carefulness in regard to the issuing of the said certificates, the Governor of Nganhwui, Chao Kwoh-lin, had asked the emperor whether now, after this renewed cleansing-process, the issuing of the diplomas might perhaps be entirely stopped. To refute such an interpretation of the Imperial will was the object of the decree. The diploma, thus the decree stated, should be looked upon as serving to prevent the clergy from becoming numerous; it is a means to prevent ignorant individuals from creeping into the circle of the learned clergy, and the young and the weak from being admitted against their will, or the selfish from receiving ordination merely to share such wordly profits as monastic life might offer, and criminals from hiding themselves in it. In every respect therefore the diploma is a means of control, and calculated to keep the religious orders pure and clean. Truly, Buddhism and Taoism are deviations from orthodoxy (*i twan*), and therefore, to allow the Buddhists and Taoists to read their sacred writings without proper control is an offence against the ancient institutions regarding heresies, worse even than the heresies themselves. **But even in the Stream (the Milky Way) there are stars scattered about; and Islam and Christianity, notwithstanding numerous efforts and decrees of the dynasty, have not been exterminated; thus also Buddhism and Taoism are to be looked upon as mere professions and livelihoods, more especially resorted to by orphans and bereaved people. The exhortations of these religions for the promotion of good and the abstinence from evil, intended for the correction and the guidance of the ignorant, are, however, of no avail whatever for supplementing the imperial precepts. The Tao, established by Heaven, impartially unites everything in its charitable embrace, and has room for all who breathe under the blue Empyrean. Therefore the Buddhist and Taoist clergy should be granted liberty in-doors to burn their incense and to work out their salvation.** From their mountains and forests such recluses do not exercise so very hurtful an influence on the universal Doctrine (Confucianism); why then should they be thrown back altogether into secular society, to live there a miserable life, deprived of all means of subsistence and support? Women, however, shall on no account become nuns before a mature age has given them enough determination of will and purpose. The argument that everyone who becomes a Buddhist or Taoist monk deprives the agricultural class of a

man's labour, is untenable, as it is far from certain he would have devoted himself to agriculture. **In short, the emperor commands all Viceroys and Governors to deal gently in the matter of the certificates, and not to render admission into the Buddhist or Taoist clerical state entirely impossible by withholding those documents.** Chao Kwoh-lin has misunderstood the Imperial intentions; let it not be so with other Viceroys and Governors.1

https://archive.org/details/sectarianismreli01groo/page/116/mode/2up?view=theater

The clergy seeking their own and other people's salvation, are not forbidden to preach, recite sutras, and perform ceremonies within doors; but what is the good of this liberty where the State has cast its system of certification of clergy within such strict bounds, and has made the admission of male disciples extremely difficult, of females almost impossible, so that the number of those who could avail themselves of such liberty, is reduced to a miserably small percentage of the population? It makes this vaunted liberty into a farce. **And what is left of it in the end when we find that, besides all this, the whole female population throughout the empire are forbidden to go and worship the gods and buddhas in the temples of the convents?** It is like our forbidding women to go to church.

Should a woman make her appearance in a convent or temple, thus we have read in the *Hwui tien* (p. 113), the clergy shall drive her away, on penalty of being sentenced to the same punishment as the pious visitor herself.

https://archive.org/details/sectarianismreli01groo/page/122/mode/2up?view=theater

The first measures of which the *Shi li* makes mention, were taken by Kao Tsung two months after his accession to the throne. On the 6th day of the eleventh month (19 Dec. 1735) he issued a decree, **in which he set forth that only the four social classes, viz. agriculturists, artisans, scholars and merchants, are of service to society and to the government.** "But at present there are among the Buddhist clergy so-called *ying fu*, everyone of whom branches off into families, and who from generation to generation possess fields and houses. **They drink fermented liquor and eat meat, and there is nothing they abstain from; but, worst of all, they have wives and children!**1 Such is the case also with the *hwo kū* of the Taoist clergy."2

> 1. **So the very thing which, according to Confucius and Mencius, is most deserving of praise, the Confucian government imputes to the Buddhist clergy as a crime, because it is contrary to the principles of their church.** On penalty of eighty strokes with the stick, Buddhist and Taoist monks and priests are forbidden to marry: see *Ta Ts'ing luh li*, chap. 10, the 14th title.

These men do not plough, their wives do not weave; thus they cause others to suffer from want of food and clothing, the more so as they themselves live in abundance and dress well. His Majesty calculates, that at least three agriculturists are required to support one cleric; his mind necessarily revolts against such wrong social conditions. **Not for want of reverence for the name of Buddha or Laotsze, far from it! but because no one now belonging to the religions of these prophets is found to equal the patriarchs and saints, the immortals, and the preparers of miraculous medicines – therefore he issues this decree.** The anchorites living in their remote mountain-retreats in accordance with the rescripts of their religion, performing works of merit, and contenting themselves with linen clothes and coarse food, are not so harmful to the people.3

> 3. And all along in history the monks are called a plague to the nation! Gross fanaticism is not always consistent!

But those modern priests who live in the world, eat well and dress well, and who by tens and by hundreds draw upon husbandry, the artisan and the merchant for their sustenance, without ever carrying out one letter of the instructions of their prophets – these people are the idlers useless to the State, and, moreover, a curse to the Buddhist and the Taoist religions themselves. Can they reasonably be allowed to continue to waste the people's wealth, to corrupt their manners and customs?

The Viceroys and Governors of the provinces shall therefore instruct their Prefects to summon in mass and interrogate **all such Buddhist *ying fu* clergy who are heads of families, and all Taoist clergy who dwell in the fire.** If they wish to return to secular life, they shall be permitted to do so; or they may retire into the convents, provided they obtain ordination-diplomas from the government. But they shall no more be allowed to adopt pupils. And of their property, only as much as is absolutely necessary for their sustenance shall be left to them, **the surplus shall be confiscated by the authorities, and used for the benefit of the poor.**1
…

Such is the remarkable system of laws and rescripts by which the present dynasty, and the one preceding it, have most emphatically expressed their hostile spirit with regard to convents and monastic life. Their policy, **extremely severe, but not radical,** may be easily condensed in a few lines. Nothing

can be better than to do away with monasticism altogether; to strive for the realization of this principle is an irrefutable duty naturally resulting from the anti-heretical doctrines of the Ancients, and forced upon the government by wise statesmen, who have pointed out most clearly and convincingly the dangers of monachism for the personal safety of every emperor and for the self-preservation ot dynasties. But in spite of the very best intentions enforced by orthodoxy and political wisdom, the State cannot possibly perform that duty in all its bearings, in letter and in spirit. **For devotion to the ancestors and the promotion of their felicity are also sacred duties, if not the most sacred of all laid upon humanity by Antiquity and Confucius; and it is the Buddhist clergy who monopolize the salvation of the dead. Moreover, the almighty Fung-shui, which sways the State and Society equally with overbearing power, forms an insuperable obstacle against the extermination of Buddhist religious buildings.** An unstable, two-faced policy is the only possible result of such considerations.

https://en.wikipedia.org/wiki/De_Christiana_expeditione_apud_Sinas

The first major book published in Europe by an author who was not only fluent in Chinese and conversant in Chinese culture but also had traveled over much of the country, Ricci-Trigault's work was highly popular, and went through at least 16 editions in a number of European languages in the several decades after its first publication.[3]

https://books.google.fi/books?id=CnkCbm7D_0kC&lpg=PP1&hl=fi&pg=PA257#v=onepage&q&f=false

Before closing this chapter on Chinese public administration, it would seem to be quite worthwhile recording a few more things in which this people differ from Europeans. To begin with, it seems to be quite remarkable when we stop to consider it, that in a kingdom of almost limitless expanse and innumerable population and abounding in copious supplies of every description, though they have a well-equipped army and navy that could easily conquer the neighboring nations, **neither the King nor his people ever think of waging a war of aggression.** They are quite content with what they have and are not ambitious of conquest. In this respect they are much different from the people of Europe, who are frequently discontent with their own governments and covetous of what others enjoy. **While the nations of the West seem to be entirely consumed with the idea of supreme domination, they cannot even preserve what their ancestors have bequeathed them, as the Chinese have done through a period of some thousand of years.** ...

Another remarkable fact and quite worthy of note as marking a difference from the West, is that the entire kingdom is administered by the Order of the Learned, commonly known as The Philosophers. **The responsibility for the orderly management of the entire realm is wholly and completely committed to their charge and care. The army, both officers and soldiers, hold them in high respect and show them the promptest obedience and deference, and not infrequently the military are disciplined by them as a schoolboy might be punished by his master.** Policies of war are formulated and military questions are decided by the Philosophers only, and their advice and counsel has more weight with the King than that of the military leaders. In fact very few of these, and only on rare occasions, are admitted to war consultations. **Hence it follows that those who aspire to be cultured frown upon war and would prefer the lowest rank in the philosophical order to the highest in the military, realizing that the Philosophers far excel military leaders in the good will and the respect of the people and in opportunities of acquiring wealth.**

https://www.exclassics.com/anatomy/anat9.htm

Utopian parity is a kind of government, to be wished for, rather than effected, *Respub. Christianopolitana*, Campanella's city of the Sun, and that new Atlantis, witty fictions, but mere chimeras and Plato's community in many things is impious, absurd and ridiculous, it takes away all splendour and magnificence. I will have several orders, degrees of nobility, and those hereditary, not rejecting younger brothers in the mean time, for they shall be sufficiently provided for by pensions, or so qualified, brought up in some honest calling, they shall be able to live of themselves. I will have such a proportion of ground belonging to every barony, he that buys the land shall buy the barony, he that by riot consumes his patrimony, and ancient demesnes, shall forfeit his. As some dignities shall be hereditary, so some again by election, or by gift (besides free offices, pensions, annuities,) like our bishoprics, prebends, the Basso's palaces in Turkey, the procurators houses and offices in Venice, which, like the golden apple, shall be given to the worthiest, and best deserving both in war and peace, as a reward of their worth and good service, as so many goals for all to aim at, (*honos alit artes*) and encouragernents to others. **For I hate these severe, unnatural, harsh, German, French, and Venetian decrees, which exclude plebeians from honours, be they never so wise, rich, virtuous, valiant, and well qualified, they must not be patricians, but keep their own rank, this is *naturæ bellum inferre*, odious to God and men, I abhor it.** My form of government shall be monarchical.
...

No impropriations, no lay patrons of church livings, or one private man, but common societies, corporations, &c., and those rectors of benefices to be chosen out of the Universities, examined and approved, as the literati in China.
...

These and all other inferior magistrates to be chosen as the *literati* in China or by those exact suffrages of the Venetians, and such again not to be eligible, or capable of magistracies, honours, offices, except they be sufficiently qualified for learning, manners, and that by the strict approbation of reputed examiners: **first scholars to take place, then soldiers;** for I am of Vigetius his opinion, a scholar deserves better than a soldier, because *Unius ætatis sunt quæ fortiter fiunt, quæ vero pro utilate Reipub. scribuntur, æterna:* a soldier's work lasts for an age, a scholar's for ever.
...

He that invents anything for public good in any art or science, writes a treatise, or performs any noble exploit, at home or abroad, he shall be accordingly enriched, honoured, and preferred. **I say with Hannibal in Ennius, *Hostem qui feriet erit mihi Carthaginiensis*, let him be of what condition he will, in all offices, actions, he that deserves best shall have best.**

https://books.google.fi/books?id=0fYyAQAAQBAJ&lpg=PP1&hl=fi&pg=PA207#v=onepage&q&f=false

Charles II made his famous remark that Vossius 'believed everything except what was in the Bible' after hearing him speak about China.1

> 1. **'Le Roi Charles II connoissoit bien son caractere; car l'entendant un jour debiter des choses incroyables de ce Pays [China], il se tourna vers quelques Seigneurs qui étoient avec lui et leur dit: *ce sçavant Theologien est un étrange homme, il croit tout hors la Bible*'** (Nicéron, *Mémoires* XIII, 133).

The scholar, whose enthusiasm for Chinese culture allegedly 'even surpassed Marco Polo's' even though he never left Europe, has been studied by historians of philosophy only in his capacity as a Sinophile.2
...

Vossius' chapter 'De artibus et scientiis Sinarum' contained a view of China which surpassed in its utopian character most of what had been written before, extolling its politics, arts, navigation, medicine, and astrology.7 **It even concluded that in China an improved version of Plato's ideal reign of the philosopher-king had been realized:** 'when their Kings sin, the philosophers have as great a liberty to admonish them, as ever the Prophets had with the Israelites. The people have the same freedom to judge the philosophers, when they do not fulfill their duty.'8

Where did Vossius get this idea, **completely at odds with the reality of Chinese autocratic rule in the seventeenth century?** His father's history of philosophy of 1650 was silent on China.9

https://en.wikisource.org/wiki/Dictionary_of_National_Biography,_1885-1900/Vossius,_Isaac

His style was generally held to be too disputatious, and his epithets too erudite for the drawing-room. He shocked some of his colleagues by remarking of one of their number about whom inquiries were being made, **'Est sacrificulus in pago et rusticos decipit.'** Other anecdotes of a like tendency (such as that he used habitually to read Ovid during service), even if we cannot accept them literally, seem to indicate that he was very near to being a complete sceptic.
...

He passes an extravagant eulogy on the Chinese civilisation, and tries to prove that the population of Rome was fourteen millions, and that its area was twenty times greater than that of Paris and London combined.

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA662&printsec=frontcover

The first Westerner to affirm Chinese philosophy's and medicine's general superiority, as well as Chinese civilization's unmatched antiquity, his was a stance Temple eagerly shared. **Temple was later scorned by Bishop Gilbert Burnet as someone who believed "things were always as they were from all eternity," considering religion "fit only for the mob. He was a great admirer of the sect of Confucius in China, who were atheists themselves but left religion to the rabble.** He was a corrupter of all that came near him. And he delivered himself up wholly to study, ease and pleasure."50

Free-thinkers – and free-livers – betrayed marked predilection for China:

> Vossius apportait un traité de la Chine

> Où cette nation paraît plus que divine.

In it he said that the only aristocracy recognized by the Chinese was the aristocracy of letters; that they cherished the memory only of those princes who had been lovers of justice and of peace; that the Emperor's counsellors and favourites, philosophers all of them, reproved their master with as much freedom as that with which the prophets of old had been wont to admonish the Kings of Judaea. Had they neglected to do so they would have incurred the censure and indignation of the people. La Mothe Le Vayer is reported to have refrained with the utmost difficulty from crying, *Sancte Confuci, ora pro nobis!* but that was before he had read the works of the Chinese philosopher. When they got to know him better, when they came to take part in the dispute about ceremonies, two points clearly emerged: one was that the Chinese civilization was admirable, the other was that it was fundamentally pagan. What a windfall for the freethinkers, and how they made the most of it!

In the political sphere, for example: The Chinese know nothing of Revelation; they assign to the intrinsic power of matter everything that we attribute to the power of the spirit, the existence of which they deny, as something beyond the limits of possibility. They are blind, and perhaps stubborn. But this they have been for four or five thousand years, and neither their ignorance nor their stubbornness has robbed their political organization of a single one of those wonderful benefits which every reasonable man looks for, and should naturally derive, from a human society: amenities, plenty, the practice of the useful arts, the pursuit of learning, peace and security.1

> 1. Boulainvilliers, *Le Vie de Mahomed*, 1730, p. 180-181.

...

So far as I can judge the sentiments of the educated Chinese, in the light of accounts brought home by travellers, and particularly by Fr. Gobien in his *Histoire de l'Edit de l'Empereur de la Chine en faveur de la religion chrétienne*, **it appears to me that they are all in agreement with Spinoza in holding that there is no other reality in the universe save that Matter to which Spinoza applies the name of God, and Straton that of nature.**2

> 2. Collins, *Letter to Dodwell on the Immortality of the soul*, London, 1769, p. 289.

https://archive.org/details/enlightenmentcon0000isra/page/646/mode/2up?view=theater

> Where Bayle had at least made a show of agreeing, in the *Dictionnaire*, out of deference to readers' sensibilities, that Chinese 'atheistic' ideas are a system so extravagant and so 'remplie de contradictions absurdes' that, despite having swayed vast numbers of people of diverse cultural backgrounds, it is hard to comprehend how anyone can embrace them, **later, in the *Continuation*, even this pretence is dropped. In his last writings, Bayle concentrates on highlighting the rational coherence of this overarching Confucian-Spinozist construct, emphatically aligning both with Stratonism,** the philosophy he judges internally the most consistent of the Greek systems of 'atheism.'43

https://archive.org/details/enlightenmentcon0000isra/page/594/mode/2up?view=theater

Denying sacraments like Holy Communion and others common to Christians were instituted by Christ or the apostles, **implying they were just the inventions of later theologians avid to extend their authority,** he maintains that it is unnecessary to participate in any church's established rites to attain salvation.24 No one wishing to live 'a blessed life,' holds Spinoza, but failing to participate in 'religious' rituals and ceremonies, or who lives in solitude, or under a government hostile to Christianity, like that of Japan, can be harmed thereby nor is anyone bound by the directives of any church no matter which. **So as not to contravene Japanese law, 'the Dutch who live there,' he says, 'are required by the East India Company to refrain from practicing any external rites,'**25 **but this cannot affect their spiritual status for no one's well-being can be affected by performing or not performing Holy Communion or any other religious ceremony.**

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA149#v=onepage&q&f=false

> The "divine law which makes men truly happy and teaches true life, is universal to all men," a law not taught by any church, or found anywhere in instituted observances and ceremonies like "baptism, the Lord's Supper, feast-days, public prayers and any others," common to Christianity, which "if they were instituted by Christ or the Apostles (which is still not clear to me) were instituted only as external signs of a universal church and not as things that contribute to happiness or have any sanctity in them." No one is bound by such "ceremonies," **and those Dutchmen in Japan "where the Christian religion is forbidden and where the Dutch residing there must refrain from all external worship, by command of the East India Company," [Toland] noted (echoing Spinoza), are no more prevented from living true Christian lives than anyone else.**100

https://www.ourcivilisation.com/smartboard/shop/bruyere/chap16.htm

29. If we were told that the secret motive of the Siamese Embassy had been to incite the Most Christian King to renounce Christianity, and throw his kingdom open to Siamese priests, **who would enter our homes to teach their creed to our wives,** our children and ourselves, through books and arguments, would build pagodas in the midst of our cities, setting up metal images there to be worshipped, **with what laughter and what violent scorn should we listen to such fantastic stories! And yet we travel six thousand leagues by sea to convert the Indies, the kingdoms of Siam, China and Japan, in other words to make to these nations, in all seriousness, proposals that must seem to them quite mad and quite ridiculous.** But they put up with our monks and priests; they occasionally listen to them, they allow them to build their churches and perform their missions. **What can cause this, in them and in ourselves?** may it not be the power of truth?

> La Bruyère has already referred (XII, 22) to the Siamese embassy to France, in 1686; meanwhile a French embassy had visited Siam in hopes of converting the Siamese King to Catholicism.

https://archive.org/details/enlightenmentcon0000isra/page/868/mode/2up?view=theater

The social values of the Radical Enlightenment, in short, have an absolute quality in terms of reason which places them above any possible alternative, **always provided we bear in mind, as Isaac Vossius, William Temple, and Saint-Évremond pointed out in the late seventeenth century, and a new wave of Chinese reformers stressed in the 1890s,** there is no reason why one should search only in western philosophical traditions to find the intellectual roots of, or a cultural basis for, personal liberty, comprehensive toleration, equality sexual and racial, and a secular morality of equity – any less, indeed, than for grounding anti-slavery or anti-colonialism.

https://books.google.fi/books?id=LT5WAAAAYAAJ&hl=fi&pg=PA44#v=onepage&q&f=false

As for the *Chinese*, whose Opinions and Customs were unknown to us till these latter Ages; **the celebrated Mr. *Leibnitz* assures us, a that, in Matters of Morality and Politicks, the Learned of that Country far exceed ours here in *Europe*.** Perhaps this Encomium may be some what over strain'd; but however this at least is certain, tho' * Mr. *De St. Evremond* be never so much of the contrary Opinion; that there are a great many most excellent Things to be met with in the Books of b *Confucius*, (or *Cum Fu Cu*): who, not to mention the Divine Honours which have been long since paid to him in that Country; is so much esteem'd for his Philosophy, that there are in every City publick Schools, where his Works are expounded; and where one must study some time, before he can be admitted into any Post in the Government.

> * He calls him (*Tom.* 5, *p.* 69,) *the most tedious Moralist be ever read. His Sentences*, adds he, *where he is intelligible, are below the Stanza's of Pibrac; where he is obscure, he is above the Apocalypse*. **But a Man of the Character of *St. Evremond*, might be tired with the reading of a Book of Morality; and yet that be no Prejudice to the Merit of the Book.**

https://chinachannel.org/2020/04/18/leibniz/

In his *Novissima Sinica*, Leibniz defended the rites and sacrifices paid to ancestors and the Emperor, noting that these sacrifices and honors were merely spiritual modes of honoring the past and present in order to do good for the future. He also claimed that the Chinese had independently discovered theological concepts which were identical to those discovered independently in the Christian cultural matrix: *Li* (the principle/truth of Heaven) and *Shangdi* (or *Xang ti* in his spelling: God). He wrote:

> "**They sacrifice to this visible Heaven (or rather to its King) and revere in profound silence that Li which they do not name, because of the ignorance, or the vulgarity of the people, who would not understand the nature of the Li. What we call the light of reason in man, they call commandment and law of heaven.** What we call the inner satisfaction of obeying justice and our fear of acting contrary to it, all this is called by the Chinese (and by us as well) inspirations sent by the Xang ti (that is, by the true God). **To offend heaven is to act against reason,** to ask pardon of heaven is to reform oneself and to make a sincere return in word and deed in submission one owes to this very law of reason. For me I find all this quite excellent, and quite in accord with natural theology."

Observing the breakdown of relations between east and west due to conservative religious elitists pushing the rites controversy, while Europe fell ever more deeply into religious wars, Leibniz wrote that the time is coming when Europe will need the Chinese to act as missionaries to teach practical and natural religion: "Certainly the condition of our affairs [in Europe], slipping as we are into ever greater corruption, **seems to be such that we need missionaries from the Chinese who might teach us the use and practice of natural religion, just as we have sent them teachers of revealed theology.**"
…

The last tract Leibniz was writing on his death bed, in 1716, was titled *Discourse on the Natural Theology of the Chinese*.

https://books.google.fi/books?id=E2G6wM-yRmEC&lpg=PP1&hl=fi&pg=PA406#v=onepage&q&f=false

There is not a word in the writings of either the Jesuits or Leibniz about the Chinese mentality or the Chinese race. There was one universal reason and one humanity.

Narrative of the Chinese Embassy to the Khan of the Tourgouth Tartars, in the years 1712, 13, 14, & 15; by Tulišen (1667-1741); translated by Sir George Thomas Staunton (1781-1859). Published in 1821.

https://archive.org/details/narrativechines00tuligoog/page/n102/mode/2up?view=theater

We thus informed him in our reply; "the effects of the most excellent virtues of our Emperor are diffused far and wide. He loves his people like his children. **For all who breathe the air and have blood in their veins, his superintending care ensures unfailing means of procuring subsistence: whether near or remote, whether within or without (the ancient boundaries,) he regards all with the eyes of equal charity and benevolence: like heaven, he dispenses favours and protection to all which has life.** He inflicts no severe punishments, and is ever unwilling to kill.*

https://archive.org/details/narrativechines00tuligoog/page/n128/mode/2up?view=theater

We replied, "The benevolence of our most excellent Emperor is like the benevolence of heaven; **all the kingdoms of the earth are, in his contemplation, but as one family; to all the inhabitants of the earth he extends his protection, as to his own children.** There are none, therefore, upon all the earth, or throughout the whole universe, who are unawed by his greatness or insensible of his virtues, or who do not come forward to participate in the benefits which he dispenses. Thus the kings who have come in person, and the ambassadors with tribute who have been deputed to his court, amount in number, altogether, to a great multitude. Our emperor, whether the countries from whence they come be near or remote, within or without the limits of his vast empire, **receives and rewards them all with equal kindness and favour.**

https://archive.org/details/sectarianismreli01groo/page/242/mode/2up?view=theater

When Shing Tsu, the “Sage Ancestor”, the great emperor of all the Chinese in the *Khang hi* period (1662-1723), swayed the rod of supreme authority, he loved his people so ardently that, to make them happy, he endowed them with a set of politico-ethical maxims, sixteen in number, each composed of seven characters. **They prescribed the cultivation of sixteen virtues, without which mankind in China can never fare well, nor the government prosper, to wit:** – respect and submission to parents and elder brothers; harmony and concord in clan-life; peace and tolerance among fellow-villagers; application to agriculture and silk-industry; frugality; **the establishing of college-buildings for the furtherance of classical studies;** the expulsion of heresies; interpretation of the laws of the State; explication of the rules of social life; diligence in the pursuit of one’s calling; instruction of one’s children and juniors in all that is good; suppression of calumnious accusations; refusing shelter to fugitives sought by the authorities; promptitude in tax-paying; the uniting of wards into circuits for the suppression of theft and robbery; the settling of mutual differences.
…

“**The philosopher Chu (Chu Hi) says, that the religion of Śâkya does not take notice of the things in heaven and earth and between the four cardinal points, but only rules the heart, and that the religion of Lao-tsze merely aims at the preservation of the ethereal soul. <u>This correct definition given by Chu-tsze, enables us to understand the fundamental objects of Buddhism and Taoism.</u>** But from these religions a class of loafers come forth without a fixed livelihood or abode, who, assuming the names in vogue in those religions, corrupt the science of the same. The greater part of them use (their doctrines about) calamities and felicity, misfortune and happiness1 to sell for money their foolish magic and unreliable talk.

1. This refers, of course, to Paradise and Hell.

…

“So also, the religion of the Western Ocean (Europe) and its Lord of Heaven (God) belong to the unclassical products; it is only because its followers are thoroughly versed in chronology that the Dynasty employs them; understand this well!2
…

“To serve one’s parents with submissive devotion, and one’s ruler with fidelity, and to attend to the human occupations to the utmost, **suffices to accumulate heavenly bliss;** and by not seeking things

which lie beyond the sphere of duty, and by abstaining from doing what should not be done, merely attending to one's own business and trade, **all felicities may be received which the spirits bestow.**

https://en.wikisource.org/wiki/Cato%27s_Letters/Letter_136

The Pope and his priests had picked out from all other superstitions their most absurd, cruel, and wicked parts and principles; and having incorporated the same with peculiar absurdities of their own, made out of all such a wild jumble of nonsense and impieties, as has driven virtue, good government, and humanity, almost out of the world; given rise to Mahometanism; and both together have almost extinguished the human race; **since there is not in those countries, where these religions entirely prevail, the tenth part of the people that they could boast in the times of the old Romans, nor in proportion to the numbers which China and Holland can now boast; where the priests have no power, and but little influence.**

https://www.brepolsonline.net/doi/pdf/10.5555/M.EER-EB.4.00046

As J.G.A. Pocock noted on the topic *per litteras*, 'what we have from Gordon is China as it appears to an extreme deist'. Gordon was all at once imbued with the Jesuits' pervasive Confuciophilia and Bayle's overturning of their (mis-)understanding of ancient Chinese thought (in other words, his denial that ancient Confucians ever knew any spiritual substance separate from matter). Above all, Gordon's 'sensible Chinese' is drawn in as a rhetorical tool to voice bitter judgements on both Catholic and Protestant inconsistencies. **Accordingly, he expressed the hope that the Christian bigots would convert into 'rational and sober Chineses'.**33

> 33. Gordon, *An Examination of the Facts and Reasonings in the Lord Bishop of Chichester's Sermon* (first published in 1732; republished in the third volume of the 1735 sixth edition of *The Independent Whig*), p. 61. J.G.A. Pocock, besides his many perceptive comments about *Cato's Letters* and Gordon's 'Discourses upon Tacitus', has also dealt extensively with early modern Western perceptions of China, chiefly in volume iv of his breathtaking *Barbarism and Religion* (see, in particular, Chapters 6 and 7), but also at various points in volumes iii and v. **Pocock (personal correspondence with the author of this volume) stresses the crucial importance of William Warburton (1698-1779) and his *Divine Legation of Moses* (1737-41), in which 'he [Warburton] contends that all non-revealed religions that worship sociability and nothing else are ultimately pantheistic. This is linked with the view that only Christians, and perhaps Jews, believe in creation *ex nihilo*. In all other systems God and matter are coequal and perhaps interdependent, so that there's no difference between Chinese philosophy and Spinozism'.**

https://quod.lib.umich.edu/e/ecco/004801266.0001.000?rgn=main;view=fulltext

I SHALL now add, that it is to be apprehended, many of those who are the most forward to banish Prejudices, would be the first to feel the Want of them. It is even pitiful to think, what would become of certain modern Declaimers on that Article, were Prejudice really set aside, and were all Men to be weighed in the exact Scale of Merit, and considered in Proportion only to their intrinsic Worth. **Some Prejudices are grounded in Truth, Reason, and Nature.** Such are the Respects which are paid to Knowledge, Learning, Age, Honesty, and Courage in all civilized Countries. **Others are purely the Effect of particular Constitutions, such as the Respects, Rights, and Preheminencies ascribed to some Men by their Fellow-Subjects, on Account of their Birth and Quality; which in the great Empires of *Turky* and *China*, pass for nothing; and will pass for nothing elsewhere, as soon as Men have got rid of their Prejudices, and learned to despise the Constitutions of their Country. [1738]** It may behove those who are concerned, to reflect on this betimes.

https://en.wikipedia.org/wiki/Jean-Baptiste_de_Boyer,_Marquis_d%27Argens

Jean-Baptiste rejected a legal career and while the rest of his family were devout Catholics, became a rationalist author and critic of the Church; he later wrote 'I was not my father's favourite child.'[5] **To prevent the division of family estates amongst multiple heirs, younger sons were often required to remain unmarried;** of his four younger brothers, three including
Alexandre, later Marquis D'Éguilles were enrolled in the Knights of Malta religious order and the other became a priest.[5]
...

While several generations of the de Boyer family held the position of *Procureur général*, they also had a background in the arts. Jean-Baptiste's great-uncle was the poet and dramatist Abbe Claude de Boyer (1618-1698), while his grandfather, Jean-Baptiste de Boyer (1640-1709), owned a famous art collection, with works by Titian, Caravaggio, Michelangelo, Van Dyck, Poussin, Rubens and Corregio.[8]

In 1719, his father reluctantly purchased Jean-Baptiste a commission in the Régiment de Toulouse, based in Strasbourg. Pierre-Jean de Boyer was made 'Marquis d'Argens' in 1722 and since eldest sons were permitted to use the same title, Jean-Baptiste was also known as Marquis d'Argens.[9]
...

D'Argens returned to France in 1724, where he spent the next few years obediently studying law and even acting in a number of legal cases. **The 1731 Cadière witchcraft trial appears to have been the point at**

which he rejected a legal career, while confirming his opposition to the Catholic Church and the Jesuits in particular.

https://archive.org/details/radicalenlighten0000isra/page/588/mode/2up?view=theater

In his *Lettres Chinoises*, one of his longest works, d'Argens' Chinese observer reports home from Paris that there are many Europeans who follow a system of philosophy which closely resembles that of the classical Chinese thinkers: **'Spinoza, savant hollandois, en a été l'inventeur, ou plûtôt le restaurateur, car l'on prétend que ses sentimens, à quelque chose pres, ont été ceux de plusieurs philosophes anciens.'**82 **He then takes the opportunity to explain several passages from the *Ethics* in French, including the infamous Proposition XIV of part I: 'quidquid est, in Deo est, et nihil sine Deo esse, neque concipi potest,'**83 **and then elaborates in the space of more than seventy pages his close identification of the ideas of 'les Européens Spinosistes' with those of the 'commentateurs modernes chinois.'**84 Naturally, remarks d'Argens, Christian missionaries working in China never tell the Chinese about Spinoza and carefully avoid mentioning the 'grand nombre de partisans' that Spinoza has 'en France, en Allemagne, en Angleterre, en Hollande, et surtout en Italie.'85

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#64.28

The all-embracing Primal *Ch'i* created Heaven and Earth.[29] **'Heaven' is [composed of] a single soul-substance; 'Man' is likewise [composed of] a single soul-substance. Although [individual] forms may differ in size, still, they are [all but] parts of the all-embracing *ch'i* of the ultimate beginnings [of the universe].[30] Ladle out every drop from the great ocean, and there will be nothing different.** Confucius said, 'The earth began from spiritual *ch'i*; the spiritual *ch'i* was wind and thunder; the wind and thunder flowed [into] form, and all things came forth to birth.'[31] **Spirit is lightning[32] which has awareness.** There is nothing into which the lightning-flash[32] cannot penetrate; [similarly], there is nothing which the spiritual *ch'i* cannot affect. Spirit [in] demons, spirit [in] emperors; giving birth to Heaven, giving birth to Earth; whole spirit, divided spirit; only [spirit] in the Beginnings, only [spirit] in man. How minute, how subtle, this stimulatingness of spirit! No creatures are without 'lightning', no creatures are without spirit.

29. Compare *Mencius*, II, B, 2.11-15, where there is found the famous term □□□□ (rendered by Legge as 'vast, flowing passion nature'), and the statement that the *ch'i* 'fills up the space between Heaven and Earth'. **However, the *ch'i* to which K'ang is referring is a neo-Confucian *ch'i*; that is to say, the 'material' *ch'i* hypostasized by the great Sung philosophers of whom the chief representative is Chu Hsi (1130-1200).**

32. It is also quite possible that this □ means electricity. Fung-Bodde so take it (see above, reference cited in n. 29, pp. 685-6). Fung states therefore that K'ang is here drawing on the ideas of Western physics to supplement the traditional Chinese conception.

http://afe.easia.columbia.edu/chinawh/web/s10/ideas.pdf

In 1755 Voltaire produced a play, *The Chinese Orphan*, which he adapted from an old Chinese play that had been published in French translation in 1735. **This play, significantly described by him as "the morals of Confucius in five acts," was written as an answer to the theories of Rousseau (1712-78).** Rousseau, as we all know, wanted people to follow a back-to-nature movement, and argued that the arts, sciences, and human institutions generally, are harmful because they corrupt the simple goodness of human nature. Voltaire, to disprove these ideas, deliberately changed the original seventh century B.C. setting of his play, laying it instead in the thirteenth century A.D., when the Mongols, under Jenghis Khan, conquered China. **His purpose in so doing was to prove the superiority of human art and culture by showing how Chinese civilization finally triumphed over the warlike barbarism of the Mongols.**

http://ml.ci.uc.pt/mhonarchive/histport/pdfEDITv6oEvu.pdf

The works of Metastasio are esteemed all over Europe; and Mr. Voltaire,22 **the most universal genius perhaps which France has ever produced,** is acknowledged to be, in almost every species of writing, nearly upon a level with the greatest authors of the last age, who applied themselves chiefly to one. **The original and inventive genius of that Gentleman never appeared more conspicuous than in his last tragedy, the orphan of China. It is both agreeable and surprising to observe how the atrocity, if I may say so, of Chinese virtue, and the rudeness of Tartar barbarity, have been introduced upon the French stage,** without violating those nice decorums of which that nation are such delicate and scrupulous judges.

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n85/mode/2up?view=theater

"I rejoice with my brave *chevalier* (he would write to the Marq. de Villevielle) on the expulsion of the Jesuits; **Japan led the way in driving out those knaves of Loyola; China followed the example of Japan, and France and Spain have imitated the Chinese. Would to God that all the monks were swept from the face of the earth, they are no better than those knaves of Loyola.** If the Sorbonne was suffered to act, it would be worse than the Jesuits. One is surrounded with monsters: we embrace our worthy chevalier, and exhort him to conceal his march from the enemy."22

What examples does the philosophist of Ferney adduce! The cruelties of Taikosama, who, in expelling and crucifying the missionary Jesuits, also murdered thousands and thousands of his subjects, in order to eradicate Christianity. The Chinese, less violent indeed, but with whom every persecution against the missionaries, has always been followed or preceded by a prohibition to preach the Gospel. Can the man build upon such authorities, without forming the same wish?

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA223#v=onepage&q&f=false

Commencing [in 1759] with incisive remarks on the liberty-curtailing character of aristocratic republics in general, "such as the Polish and Italian ones, which take pride in the hallowed name of freedom" but where "most people are bondsmen of the high ranking notwithstanding,"30 Forsskål lambasted **the restrictive, privileged "aristocratic" character of access of high offices and positions in the Swedish state, resulting in the country's highest posts coming into "unworthy hands." In China, by contrast, high offices were assigned according to merit, not noble status.**31 "Each and every inhabitant," held Forsskål, "should have a reasonable share in public benefits. For society is common as should liberty be also."32 This principle he combined with a plea for progressive taxation laying the heaviest burden on the wealthy and taxing the poor least. Echoing Helvétius especially, Forsskål's tract shocked the university and was banned outright by the aristocratic government, albeit only after all 500 privately printed copies had been distributed so that most were never recovered.33 **Denounced as a disciple of Spinoza and Bayle, Forsskål was debarred from an academic career in Sweden-Finland.** Scandinavia's first noteworthy post-Wolffian enlightener thus found himself obliged to resume his scholarly career abroad.

https://archive.org/details/enlightenmentcon0000isra/page/660/mode/2up?view=theater

The Early Enlightenment's fundamental disagreement as to whether Confucianism was Spinozistic or not slowly lapsed but was never resolved. What did change was that by the middle of the century the Chinese 'card' had to a large extent been captured by Voltaire and the providential Deists and began to be dropped by the radical fringe as well as increasingly rejected by the churches and by disciples of Montesquieu repelled by the despotic character of the Chinese empire. **Prior to 1750, for several decades, all strands of the Enlightenment (except perhaps the Thomasians) had agreed that classical Chinese society was a model society adhering to an ethical system and awareness of the law of nations equalled by no other. Whether one approached the question from a *Malebranchiste*-Baylean standpoint, or a Leibnizian-Jesuit, Wolffian, or Voltairean one, it seemed there was no need of the Gospels, or any revelation, to achieve an orderly, secure society based on wisdom, justice, virtue, and 'le bien public.'** By around 1750, however, the position was perceptibly changing, with the radical tendency divesting itself of much of its former enthusiasm for China and the churches devising a counter-strategy to sap the arguments of both Voltaire and the non-providential Deists, by disparaging Chinese society itself and undermining the prestige of its *philosophia practica*.

The Abbé Nicolas-Sylvestre Bergier, for example, in his *Apologie de la religion chrétienne* (1769), accused the *philosophes* of having so few scruples about misleading the French public with lies that they missed no opportunity to belittle faith and religion by misinforming readers on the subject of Chinese morality and society. *The philosophes* habitually celebrate 'les moeurs et le gouvernement des Chinois comme un prodige'; yet reliable recent travellers' reports completely contradict them, presenting an entirely different picture.135

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA180#v=onepage&q&f=false

But mankind's universal destitution, misfortune, and misery, avows d'Holbach, stems not from mankind having degenerated, or strayed from the purity of the state of nature, as the deluded Rousseau imagined, but from human reason remaining stunted in its infancy, in unknowing immaturity regarding society, morality, and political theory. **In short, d'Holbach, dropping hostile allusions to Rousseau at every turn, fervently denounced the political culture of his time, and not least its veneration of classical republicanism and what he dismissed as the oppressive morality of ancient Sparta and Rome.**13 **Existing political thought seemed to him so retrograde that mankind had not yet even begun to hit on sound principles, except perhaps, in some degree, in China where government was tightly conjoined to morality and philosophy (Confucianism), and traditional "religion" supervised by priests had (supposedly) lost all hold over the governing class, with "superstition" and belief in the supernatural purged from morality and the state. There, no**

one could participate in administration unless "exempt from popular religion," thereby enabling general improvement to set in. The court at Peking rewarded merit and achievement rather than deferred to pretensions of noble lineage.14

http://www.ftarchives.net/holbach/good/gs3.htm#139

In the eastern part of Asia, is a vast, flourishing, fertile, populous country, governed by such wise laws, that the fiercest conquerors have adopted them with respect. I mean China. **Excepting Christianity, which was banished as dangerous, the people there follow such superstitions as they please, while the *mandarins*, or magistrates, having long known the errors of the popular religion, are vigilant to prevent the *bonzes* or priests from using it as an instrument of discord. Yet we see not, that Providence refuses his blessing to a nation, whose chiefs are so indifferent about the worship that is rendered to him.** On the contrary, the Chinese enjoy a happiness and repose worthy to be envied, by the many nations whom religion divides, and often devastates.

https://archive.org/details/sectarianismreli01groo/page/n13/mode/2up?view=theater

The events of the last year of the 19th century have once more drawn the attention of the civilized world towards the Chinese empire, and have given birth to a stream of books, pamphlets, periodical and newspaper articles, in which various authors have tried to throw light upon the East Asiatic continent, often however only helping to increase erroneous ideas already in circulation about it.

A chief point of attraction was Christianity established there by European and American missions, now subjected for the thousandth time to murderous attacks. Curiously enough, many people, nurtured in the bosom of our Christian nations, now sided with the persecutor. Several writers brought serious accusations against the missionaries. They reproached them openly with being the cause of the outrages not only upon themselves and the communities established by them, but upon foreigners in general. These writers, too ignorant to restrain their inordinate passion for writing, did not hesitate to lay the ensuing disasters to the account of the impolitic, even criminal actions of which the preachers of the foreign religions are supposed to have been persistently and systematically guilty. **Giving their fancy full play, and looking at the faults of the missions through magnifying-glasses, rather than actuated by a love of truth, they have drawn up formal lists of the transgressions of the missions,** collected from vague rumours, one-sided accounts of Chinese officials, and idle reports spread abroad by the press both in the East and in the West.

Indeed – so some argued – the government of China and its people are altogether tolerant on the point of religion; this is an established fact which even gray-headed sinologists do not gainsay. Therefore, when missionaries and their Christian communities, and with them foreigners in general, are attacked, there can be but one reason for this, namely that the missions by their evil doings have exasperated the people and their rulers to such an extent and so persistently that their anger has boiled over. This then is the solution of the "foreign" question. Eureka!
…

For centuries the missions have, on various occasions, had painful experience of the fact that this vaunted liberty left much, very much, to be desired; and nevertheless, as far as my knowledge goes, **nobody has ever yet attempted to trace the reasons for this intolerance;** and this will justify my endeavour to do so in this work. **A chimera has to be banished from our minds and to make room for the conviction that we approach a great deal nearer the truth by admitting the Chinese State to be the most intolerant, the most persecuting of all earthly governments;** a State which, on account of certain ancient dogmatic principles in the system of political philosophy whereon it is based, could not consistently do otherwise than brandish fire and sword in the face of every religious community or sect which, since the days of Confucius, has ventured to make its appearance in China; a State, in fact, which always follows this political line of action with the most scrupulous exactitude, and must *a fortiori* be hostile to Christianity and the despised "foreign devils" who introduced it.

For many years **I also held the comfortable universal belief in China's religious liberty.** I even expressed this belief in one of my earlier writings; the few lines written under the influence of that conviction I now openly withdraw.

https://archive.org/details/2917134.0001.001.umich.edu/page/32/mode/2up?view=theater

Chester Holcombe, for some years Acting Minister of the United States at Pekin, says of the Chinese in his excellent book, *The Real Chinaman*: "There is no titled nobility, with its long list of elder and younger sons, sons-in-law, and cousins near and remote, to be supported from the public funds, and to fill all the more important positions of honour and profit. The few titles that are from time to time bestowed carry nothing with them but the nominal honour; they are bestowed as rewards for distinguished services, and have never been recognised as forming the basis of any claim whatever upon either offices or treasury. In a way they are hereditary, but soon run out, *since the rank decreases one grade with each generation*.

Even the imperial clan forms no exception to this rule. The author has many a time had in his employ a man who, as a relative of the Emperor, was entitled to wear the imperial yellow girdle; but he was a hod-carrier, and earned six cents a day."

With this suggestion – for the benefit of some future Government – I will close. **Let our Aristocracy, as far as it is hereditary, be "let down gently" by the rank descending one grade with each generation. This already happens with the younger children of our higher ranks, who receive courtesy titles for life.** Let a system of such courtesy titles be extended for two or three generations, and let all children in that respect count as younger children; and in a few years we should have got rid of a foolish and somewhat vulgar anachronism.

https://www.franz-oppenheimer.de/state2.htm#II_a

Neither have we meant the rigidity of the gigantic Chinese Empire, which can last only so long as foreign powers refrain from forcing its mysterious gates.[*****] **[1908]**

> [*****] Had we the space, **a detailed exposition of this exceptional development of a feudal state would be tempting. China would be well worth a more detailed discussion, since, in many aspects it has approached the condition of "free citizenship'' more closely than any people of Western Europe. China has overcome the consequences of the feudal system more thoroughly than we Europeans have; and has made, early in its development, the great property interests in the land harmless, so that their bastard offspring, capitalism, hardly came into being;** while in addition, it has worked out to a considerable degree the problems of cooperative production and of cooperative distribution.

---

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PR21#v=onepage&q&f=false

When Qin was founded at the western edge of the Chinese world, it joined the company of hundreds of tiny independent states. **Their major weapon was the chariot, an aristocratic monopoly. Their main productive organization was communal farming; private land ownership was a notion to come. Their feudalistic state with hereditary ministries was mostly undifferentiated from the ruling family. Cementing this structure were kinship and personal rapport, partially formalized in rituals.**17 **Toward the end of the Bronze Age, when the feudalistic establishment began to crumble, Confucius flourished, an impoverished aristocrat attached to the ancient régime. He brought to commoners education previously reserved for his class and provided moral grounding for many of its values, which would persist to sway imperial China.** The texts of feudalistic aristocrats, canonized in Confucianism, would mold the mind of imperial literati-officials for two millennia.18 **Nostalgia for sharing in the idealized communal farm partly explained why economic inequality in imperial China, though acute, never approached the stratospherical level in the Roman Empire.**19
...

Rome's liberty and empowerment of citizens are adduced by modern historians as factors for the success of its empire.21 **This book argues that these factors worked only in the phase of aggressive expansion, when self-equipped citizens empowered themselves, partly by filling the Republic's legions.** The Roman Empire that maintained peace and prosperity stripped citizens of all political rights. Legal rights also eroded. Social privileges shifted from citizenship to wealth. **Eventually, poor Roman citizens, legally tied to the land, enjoyed less social freedom than Chinese subjects.**22

> https://en.wikipedia.org/wiki/Four_occupations#Background
>
> **The four occupations system differed from those of European feudalism in that people were not born into the specific classes,** such that, for example, a son born to a gong craftsman was able to become a part of the shang merchant class, and so on. Theoretically, any man could become an official through the Imperial examinations.[14]

https://books.google.fi/books?id=mQspAwAAQBAJ&lpg=PP1&hl=fi&pg=PA278#v=onepage&q&f=false

The stipend of a Han provincial governor was fifteen times that of the aide, the lowest person in the official ladder, with compensation comparable to that of a foot soldier. The pay for each of the ten senior centurions in a legion was thirty-three times that of a soldier, and they were below tribunes and commanders, who were below provincial governors.58

The Chinese literature brims with denunciation of the filthy rich.59 **A substantive case was Prince Kang, Guangwudì's son, who amassed 1,400 slaves, 1,200 stabled horses, and 3,688 hectares of land. This was near the top of Han wealth.** Princes also enjoyed the tax revenue of their income fiefs, but these were county sizes at best and rather lean on the 3.3 percent land tax. **Private estates larger than 5,000 hectares were almost unheard of; divided inheritance was more effective than legal caps on hoarding.**60 The Romans operated on a different order of magnitude. Six men owned one-half of the province of Africa before Nero confiscated their estates. Senatorial heiress Melania's fertile estate near Rome contained, besides a magnificent villa, 62 hamlets, each with about 400 slave cultivators. Together with her other properties in Italy, Sicily, Africa, Spain, and Gaul, her estimated income rivaled the tax revenues of two African provinces, where the land tax exceeded 15 percent. **This would put**

her among the wealthiest in Constantinople, but in Rome, she made only the middle range. A top western senator needed several hundred thousand hectares to generate his reported incomes. **Wealthy Romans dwarfed the grandees of Victorian England enriched by the industrial revolution.**61
...

By the sixth century, bishops and the clergy far outnumbered administrative officials in the Roman Empire and were better paid.64
...

The small freeholder became an endangered species. **Tenant farmers, Chinese *dianhu* and Roman *coloni*, constituted the majority in many parts of the late empires.** In the vast estates of big landlords, they toiled alongside hired hands, slaves, and workers of various forms of dependency. Rents were oppressive, upward of half of the crop.66 Nevertheless, many tenants and their landlords developed some kind of patron-client relationship. Large landlords were usually local magnates who could offer protection in exchange for submission. Those powerful enough concealed some tenants and the lands they cultivated from state levy, thus increasing both their own income and the dependency of sheltered tenants. **Standing between the government and the small folks, the magnates truncated state power by promoting mutual interests in evading tax, always easy to condemn. Many Chinese tenants were relatives of their landlords, and some families stayed for generations. Nevertheless, tenants were legally free to leave at the end of their lease.**67 **The freedom to seek better deals was denied to most Roman tenants by the time of Constantine.** Developing the plutocratic tradition, laws tied tenants and their descendants to the land and gave landlords the right to chain and punish escapee suspects. Theodosius decreed that tenants were “slaves to the land itself to which they are born.”68 The different degrees to which the government backed the wealthy landlords to squeeze poor peasants may contribute to explaining a puzzle about the Roman army.
...

Han officials and later warlords seemed to have little recruitment problem, provided they offered good terms. Sun Ce, who founded the Wu Kingdom, declared amnesty to defeated troops and tax exemption for families of volunteers, and in ten days enlisted 20,000 quality troops.69 This should not be surprising; the army offered poor peasants an alternative way to make a living. The pay and pension for Roman legionaries were generous, but the army faced chronic recruitment difficulties. In vain did emperors issue harsh draft laws, reduce qualifications, and create a military caste by making service compulsory for sons of soldiers and veterans. The almost lifelong service deterred many. **The law that bound tenants to the land deprived many of essential free choices and created a barrier to recruitment. Instead of enticing individual peasants, the army had to pry lucrative tenants from powerful landlords. The largest landlord, the emperor, legally put his tenants off-limits.** Lesser landlords did their best to scare their tenants, resist the army, and let go only the least fit men. The shortage of soldiers would grow into a cancer in the Empire.70
...

People abandoned their homes to survive. Dislocation was severe in China, where many peasants depended on large irrigational waterworks that, once damaged, could not be repaired by individual efforts. **Texts recorded the largest migration out of north China.** The refugees’ homeland would have to endure more than a century of violent wars. *Hanren* would turn from “people of the Han Dynasty” to designate ethnicity, when the Han-Chinese got their name from the disparagement of their minority masters.182 **Mobility seemed less in the Mediterranean world; strong property rights tied down landlords and legal status bound tenants.**

https://en.wikipedia.org/wiki/Slavery_in_China#Early_modern

The Qing dynasty (1644-1912 AD) initially oversaw an expansion in slavery and states of bondage such as the booi aha.[4] They possessed about two million slaves upon their conquest of China. [1] However, like previous dynasties, the Qing rulers soon saw the advantages of phasing out slavery, and gradually introduced reforms turning slaves and serfs into peasants.[1] Laws passed in 1660 and 1681 forbade landowners from selling slaves with the land they farmed and prohibited physical abuse of slaves by landowners.[1] **The Kangxi Emperor freed all the Manchus' hereditary slaves in 1685.[1] The Yongzheng Emperor's "Yongzheng emancipation" between 1723 and 1730 sought to free all slaves to strengthen his authority through a kind of social leveling that created an undifferentiated class of free subjects under the throne, freeing the vast majority of slaves.[1]**

https://archive.org/details/in.ernet.dli.2015.218820/page/n273/mode/2up?view=theater

The classic of the movement was Quesnay, Louis XV's physician, who repeated the demand of “*laissez passer*” in his *Tableau économique* and in his *La Physiocratie* (1768) founded the Physiocratic school **that dominated the whole of the rest of the century. The implication of the word was that nature was to rule without restraint,** because prosperity and progress can arise only from the natural sources of economics.
...

The new doctrine seized upon all thinking classes like a fever: the salons became the centre of heated arguments about monopolies, protective tariffs, and encouragement of agriculture; and political economy became the fashionable science. **“About 1750,” said Voltaire, “the country grew tired of verse, of tragedies, comedies, romances, operas, romantic tales, still more romantic moral discussions, and disputations about charm and curtsies, and began to argue about corn.”**

http://afe.easia.columbia.edu/chinawh/web/s10/ideas.pdf

The Physiocrats also argued that education should be separated from the church and made universal, for only in that way could the best available talent of the country be brought forward and trained for public service.

Most of these ideas bore an amazing resemblance to those found in Confucian political and economic philosophy. **For thousands of years the Chinese had believed that there can be good government only when a perfect harmony exists between the "Way of Man" (governmental institutions) and the "Way of Nature" (Quesnay's Natural Order).** China had always been a predominantly agrarian country, in which industries and trade played only a minor part. It is not surprising, therefore, that the Chinese regarded agriculture as "primary" and worthy of intensive government support, while commerce was looked upon as nonproductive and, therefore, "secondary." For this reason they traditionally ranked the merchant near the bottom of the social ladder, well below the honored place they gave the farmer.

The Chinese government even went so far as to place restrictions upon the development of private trade. Herein lies the major point of difference between Chinese theory and that of the Physiocrats. **Though Quesnay and his group thought that the government should do nothing that would encourage trade, they at the same time believed in the doctrine of laissez faire**—that trade should be permitted to operate free from government restrictions.
...

The tremendous debt of the Physiocrats to China is evident in Quesnay's book *The Despotism of China* (1767), in which he presents his ideas of what a truly enlightened despotism means. In its first seven chapters he paints a glowing picture of Chinese political and economic conditions, drawing his material directly from Jesuit writings on China. In the eighth, and final, chapter he develops his own theories along the lines described above, linking them directly with the example of China.

One of the customs that most aroused Quesnay's enthusiasm was the annual ceremony performed since early times by each Chinese emperor in the spring: that of the ritual plowing of a sacred plot of land, to mark the moment when Chinese farmers were to begin their spring cultivation. **In 1768, when Quesnay's influence was at its height, this ancient ceremony was symbolically performed by the son of Louis XV at the French Court, using a small-scale model of a plow as evidence of the government's benevolent interest in agriculture! The following year the act was repeated by Emperor Joseph II of Austria, this time with a full-size plow.** No wonder that Quesnay, the inspirer of these imitations of Chinese ceremonial, was called by his followers "the Confucius of Europe"!

One of the most prominent admirers of the Physiocrats was the statesman Turgot (1727-81), who was French minister of finance from 1774 to 1776.
...

These doctrines, however, while well suited to an agrarian economy such as that of China, proved to be ill-adapted for France, where a modern system of capitalism was already beginning to develop. The forces of corruption and reaction ranged against Turgot were too great, and he was forced to resign. His attempt to reform France from the top failed. The attempt that was to succeed came violently from below some years later. It was the French Revolution in 1789.

Though the Physiocrats failed in the practical application of their doctrines, their impact on later economic theory was strong. This influence is particularly evident in the ideas of Adam Smith (1723-90), author of the classical economic work of modern times, *The Wealth of Nations* (1776). **Thus the Physiocrats may truly be said to rank among the founders of modern Western political economy. And, in their insistence upon the need for universal education, they led the way in a movement that in the nineteenth century was to become a standard practice in Western democracies.**

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n185/mode/2up?view=theater

WHEN Voltaire swore to annihilate Christianity, he did not flatter himself with the hope of drawing the generality of nations into his apostacy. His pride seems often satisfied with the progress that Philosophism had made among those *who governed, or were made to govern,* and among *men of letters*;1 for a long time he does not appear to envy Christianity the inferior classes of society, which he does not comprehend under the appellation of the *better sort*. **The facts we are about to lay before the reader will show to what new extent the conspirators sought to carry their impious zeal, and by what artifices Christ was to be deprived of all worship even from the lowest populace.**

A doctor known in France by the name of *Duquesnai* had so well insinuated himself into the favor of Louis XV that the king used to call him his *thinker*. He really appeared to have deeply meditated on the happiness of the subject, and he may have sincerely wished it; nevertheless he was but a system-maker, **and the founder of that Sect of Sophisters called Oeconomists,** because the oeconomy and order to be introduced into the finances, and other means of alleviating the distresses of the people, were perpetually in their mouths. If some few of these oeconomists sought nothing further in their speculations, **it is certain, that their writers took no pains to conceal their hatred for the Christian religion. Their works abound in passages which at least show their wish of**

substituting natural religion to the Christian religion and revelation.2 **Their affectation of solely speaking of agriculture, administration, and oeconomy, render them less liable to suspicion, than those conspirators who are perpetually intruding their impiety.**

Duquesnai and his adepts had more especially undertaken to persuade their readers, that the country people, and mechanics in towns, were entirely destitute of that kind of instruction necessary for their professions; that men of this class, unable to acquire knowledge by reading, pined away in an ignorance equally fatal to themselves and to the state; **that it was necessary to establish free schools, and particularly throughout the country, where children might be brought up to different trades, and instructed in the principles of agriculture. D'Alembert, and the Voltairian adepts, soon perceived what advantages they could reap from these establishments. In union with the Oeconomists, they presented various memorials to Louis XV in which not only the temporal but even the spiritual advantages of such establishments for the people are strongly urged.** The king, who really loved the people, embraced the project with warmth. He opened his mind on the subject to Mr. Bertin, whom he honored with his confidence, and had entrusted with his privy purse. It was from frequent conversations with this minister, that the memorial from which we extract the following account was drawn up. It is Mr. Bertin himself who speaks:

"Louis XV," says that minister, "having entrusted me with the care of his privy purse, it was natural that he should mention to me an establishment of which his Majesty was to defray the expence. I had long since closely observed the different Sects of our philosophers; and though I had much to reproach myself with as to the practice, I had at least preserved the principles of my religion. I had little doubt of the efforts of the Philosophers to destroy it. **I was sensible that they wished to have the direction of these schools themselves, and by that means seize on the education of the people,** under pretence that the bishops and ecclesiastics, who had hitherto superintended them and their teachers, could not be competent judges in subjects so little suited to clergymen. **I apprehended that their object was not so much to give lessons on agriculture to the children of husbandmen and trades-people, as to withdraw them from their habitual instructions on their catechism or on their religion.**

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n157/mode/2up?view=theater

[Turgot] belonged to that Sect of Oeconomists who detested the French monarchy, and only endured a king, in order to treat him as did the first rebels of the revolution.

At length advanced to the ministry by the cabals of the Sect, he uses all his power to inspire the young king with his disgust for the monarchy, and with his principles on the authority of a throne he had sworn to maintain as minister. **He would willingly have transformed him into a Jacobin king.**

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n315/mode/2up?view=theater

At that time they published at Paris a periodical work under the title of *Ephémérides du Citoyen*. The Oeconomists had the direction of it, **and that class of adepts was perhaps the most dangerous. They, with all the appearance of moderation, with all the show of patriotic zeal, forwarded the revolution more efficaciously than the frantic rebels of Holbach's Club.**

https://jeffersonpapers.princeton.edu/selected-documents/earth-belongs-usufruct-living

Sometime during the first week in September, Jefferson suffered an incapacitating illness of six days—perhaps one of his violent periodic headaches that seemed so often to be preceded or followed by bursts of intellectual activity.[1] It was about this time that he was also seized by an idea that exerted a compelling influence over him for the remainder of his life. **This was the belief that "*the earth belongs in usufruct to the living*," the dead having neither rights nor powers over it.**[2] **This concept of political relativism was the one great addition to Jefferson's thought that emerged from his years of residence at the center of European intellectual ferment.**

It is quite likely that the immediate stimulus causing this idea to burst suddenly upon his consciousness was provided by the physician who attended him in his illness and whom he regarded as the ablest doctor he had ever known, "a very sensible man," though **"a pure theorist, of the sect called the oeconomists, of which Turgot was considered as the head."**[3] **This was Dr. Richard Gem, an Englishman, a successful physician, an ardent devotee of republican principles, a friend of Diderot, Turgot, Dupont, Condorcet, and Morellet, and of course one of those who gathered around Baron d'Holbach, who died early in 1789.**

…

Philip Mazzei said in 1788 that he had known Gem for thirty-two years and described him as "un des meilleurs hommes du monde et veritable philosophe." He also said that he was the one who had introduced Gem and Jefferson to each other. As a physician of high standing in Paris and London and as one on terms of familiarity with the British nobility, Gem is almost certainly the author of the information about the character of the Prince of Wales that Jefferson transmitted to Jay on 11 Jan. 1789 as being from "an Englishman … of truth, sagacity, and science."[5]

But others, who looked upon republican zealots less tolerantly than Jefferson did, portrayed themselves in their comments as much as they did Gem. The Earl of Malmesbury, in Paris in 1796, recorded in his journal: "Dr. Gemm called. Atheist.
***Systême de la Nature*, economist, &c.—the cold apathetic scoundrel described by Burke."**[6]

https://archive.org/details/cu31924014201044/page/n203/mode/2up?view=theater

IT is noteworthy that of all the ideas and feelings which prepared the Revolution, **the idea of political liberty, properly so called, was the last to make its appearance, as the desire for it was the first to vanish.**

The old edifice of government had long been insecure; it shook, though no man struck it. Voltaire was hardly thinking of it. Three years' residence in England had enabled him to understand that country without falling in love with it. He was delighted with the skeptical philosophy that was freely taught among the English, but he was not struck with their political laws, which he rather criticised than praised. **His letters on England, which are one of his master-pieces, hardly contain any allusion to Parliament: he envies the English their literary liberty, but cares little for their political liberty, as though the one could exist for any length of time without the other.**

About the middle of the century, a class of writers devoted their attention to administrative questions; they had many points in common, and were hence distinguished by the general name of economists or physiocrats. They are less conspicuous in history than the philosophers; they exercised a less direct influence in causing the Revolution, but still I think its true nature can best be studied in their writings. The philosophers confined themselves, for the most part, to abstract and general theories on the subject of government; the economists dealt in theories, but also deigned to notice facts. The former furnished ideal, the latter practical schemes of reform.
…

Forty years before the Constituent Assembly divided France into departments, one of the economists suggested the alteration of all existing territorial divisions and of the names of all the provinces.

They conceived all the social and administrative reforms effected by the Revolution before the idea of free institutions had once flashed upon their mind. They were in favor of the removal of all restrictions upon the sale and conveyance of produce and merchandise. But of political liberty they took no thought; and when it first occurred to them they rejected the idea. Most of them were strongly opposed to deliberative assemblies, to local and subordinate authorities, and to the various checks which have been established from time to time in free countries to counterbalance the supreme government. "The system of counterpoises," said Quesnay, "is a fatal feature in governments." A friend of his was satisfied that "the system of counterpoises was the fruit of chimerical speculations."

The only safeguard against despotism which they proposed was public education; for, as Quesnay said, "Despotism is impossible in an enlightened nation." "Mankind," says one of his disciples, "have invented a host of fruitless contrivances to obviate the evils arising from abuses of power by governments, **but they have generally neglected the only one that could really be of service, namely, a general permanent system of public education in the essence of justice and natural order.**" Such was the literary nonsense they wanted to substitute in the place of political guarantees.
…

Even Turgot, with all his peculiar breadth of view and rare genius, was but little fonder than they of political liberty. He had no taste for it till late in life, when public opinion pointed in that direction. **Like the economists, he conceived that the best of all political guarantees was public education afforded by the state;** but he desired it to be conducted in a particular spirit, and according to a particular plan. His confidence in this intellectual course of medicine—or, as a contemporary styled it, this "educational mechanism on fixed principles"—was unbounded. "I will venture to answer," said he to the king, in a memorial on the subject, "that in ten years the nation will be so thoroughly altered that you shall not recognize it; and that, **in point of enlightenment, morality, loyalty, and patriotism, it will surpass every other nation in the world.** Children now ten years old will then be men, trained in ideas of love for their country, submissive to authority from conviction, not from fear, charitable to their fellow-countrymen, habituated to obey and to respect the voice of justice."

…

The royal power had not taken its rise in the Middle Ages, and bore no mediæval stamp. They discovered in it good as well as bad points. **It shared their proclivity for leveling all ranks, and making all laws uniform.** It detested as heartily as they did the old institutions which had grown out of the feudal system, or which favored oligarchy. **It was the best organized, the greatest and strongest government machine in Europe. Its existence seemed to them a very fortunate accident; they would have called it providential had it been the fashion then as now to allude to Providence on all possible occasions. Letronne observes that "France is much more happily situated than England; for here reforms that will change the whole state of the country can be accomplished in a moment, whereas in England similar measures are always exposed to be defeated by party strife."**

Their idea, then, was not to destroy, but to convert the absolute monarchy. "The state must govern according to the laws of natural order (*règles de l'ordre essentiel*)," says Mercier de la Rivière; "on these conditions it should be absolute." "Let the state," said another, "understand its duty thoroughly; this secured, it should be untrammeled." All of them, from Quesnay to Abbé Bodeau, were of the same mind.
…

The state, said the economists, must not only govern, it must shape the nation. It must form the mind of citizens conformably to a preconceived model. It is its duty to fill their minds with such opinions and their hearts with such feelings as it may judge necessary. In fact, there are no limits either to its rights or its powers. **It must transform as well as reform its subjects; perhaps even create new subjects, if it thinks fit. "The state," says Bodeau, "moulds men into whatever shape it pleases."** That sentence expresses the gist of the whole system.

The immense social power conceived by the economists differed from the power they had before them in point of origin and character as well as magnitude. **It was not of divine origin; it owed nothing to tradition; it was impersonal: it was called the state, not the king; it was not the heirloom of a family, it was the collective product and representative of the whole nation.** Individual rights gave way to it as the sum of the rights of all.

They were quite familiar with the form of tyranny which we call democratic despotism, and which had not been conceived in the Middle Ages. No more social hierarchies, no distinctions of class or rank; a people consisting of individuals entirely equal, and as nearly alike as possible; this body acknowledged as the only legitimate sovereign, but carefully deprived of the means of directing or even superintending the government; over it a single agent, commissioned to perform all acts without consulting his principals: to control him, a public sense of right and wrong, destitute of organs for its expression; to check him, revolutions, not laws; the agent being *de jure* a subordinate agent, in fact a master: such was the plan.

Finding nothing in their neighborhood conformable to this ideal of theirs, they went to the heart of Asia in search of a model. I do not exaggerate when I affirm that every one of them wrote in some place or other an emphatic eulogium on China. One is sure to find at least that in their books; and as China is very imperfectly known even in our day, their statements on its subject are generally pure nonsense. They wanted all the nations of the world to set up exact copies of that barbarous and imbecile government, which a handful of Europeans master whenever they please. China was for them what England, and afterward America, became for all Frenchmen. **They were filled with emotion and delight at the contemplation of a government wielded by an absolute but unprejudiced sovereign, who honored the useful arts by plowing once a year with his own hands; of a nation whose only religion was philosophy, whose only aristocracy were men of letters, whose public offices were awarded to the victors at literary tournaments.**

It is generally believed that the destructive theories known by the name of socialism are of modern origin. This is an error. These theories are coeval with the earliest economists. While some of them wanted to use the absolute power they desired to establish to change the forms of society, others proposed to employ it in ruining its fundamental basis.

Read the *Code de la Nature* by Morelly; you will find there, together with the economist doctrines regarding the omnipotence and the boundless rights of the state, several of those political theories which have terrified France of late years, and whose origin we fancy we have seen—community of property, rights of labor, absolute equality, universal uniformity, mechanical regularity of individual movements, tyrannical regulations on all subjects, and the total absorption of the individual in the body politic.

"Nothing," says the first article of this code, "belongs wholly to any one. Property is detestable, and any one who attempts to re-establish it shall be imprisoned for life, as a

dangerous madman and an enemy of humanity." The second article declares that "every citizen shall be kept, and maintained, and supplied with work at the public expense. All produce shall be gathered into public garners, to be distributed to citizens for their subsistence. All cities shall be built on the same plan; all private residences shall be alike. All children shall be taken from their families at five years of age, and educated together on a uniform plan." **This book reads as if it had been written yesterday. It is a hundred years old: it appeared in 1755, simultaneously with the foundation of Quesnay's school. So true it is that centralization and socialism are natives of the same soil: one is the wild herb, the other the garden-plant.**

Of all the men of their age, the economists would seem the least out of place at the present day; their passion for equality is so violent, their love of liberty so variable, that they wear a false air of contemporaries of our own. When I read the speeches and writings of the men who made the Revolution, I feel that I am in the company of strangers; but when I glance at the writings of the economists, I begin to fancy that I have lived with them, and just heard them talk.
…

At the time the French conceived a desire for political liberty, they were imbued with a number of notions on the subject of government which were not only difficult to reconcile with liberty, but were almost hostile to it.

In their ideal society there was no aristocracy but that of public functionaries, no authority but the government, sole and all-powerful, director of the state, tutor of individuals. They did not wish to depart from this system in the search for liberty; they tried to conciliate the two.

They attempted to combine an unlimited executive with a preponderating legislative body—a bureaucracy to administer, a democracy to govern. Collectively, the nation was sovereign—individually, citizens were confined in the closest dependence; yet from the former were expected the virtues and the experience of a free people, from the latter the qualities of a submissive servant.

It is to this desire of adjusting political liberty to institutions or ideas which are either foreign or hostile to it, but to which we were wedded by habit or attracted by taste, that we owe the many vain experiments of government that have been made during the last sixty years. Hence the fatal revolutions we have undergone. Hence it is that so many Frenchmen, worn out by fruitless efforts and sterile toil, have abandoned their second object and fallen back on their first, **declaring that there is, after all, a certain pleasure in enjoying equality under a master. Hence we resemble the economists of 1750 more closely than our fathers of 1789.**

http://afe.easia.columbia.edu/chinawh/web/s10/ideas.pdf

In the years when Henry A. Wallace was Secretary of Agriculture (1933-40), he introduced many legislative measures for the relief of agriculture. Among them are some that are commonly referred to today under the general title of "the ever-normal granary." At the time they were inaugurated, these were criticized by some people as being too "radical" and "revolutionary." Yet in actual fact, the ever-normal granary is anything but new, for it was started in China more than two thousand years ago and has continued there almost ever since under various names and forms.

In the first decade of this century there was a Chinese student of political economy working for his doctor's degree at Columbia University, whose name was Chen Huan-chang. **In 1911, he published for his doctor's thesis a huge two-volume work called *The Economic Principles of Confucius and His School*, in which he described, among many other things, how China's first ever-normal granary was established by a certain statesman in 54 B.C.**
…

Many Ph.D. theses have a sad way of being forgotten soon after they are written. Chen's book, however, enjoyed a happier fate, for it chanced to fall into the hands of Mr. Wallace, then editor of a weekly paper in Des Moines, Iowa. It must have made a strong impression on him, for he took from it the idea of the evernormal granary and made it a permanent part of his own thinking.

He wrote about the ever-normal granary in *Wallaces' Farmer*, first in 1918, and again in 1926 and 1927. In the issue of December 6, 1918, he wrote: "**If any government shall ever do anything really worth while with our food problem it will be by perfecting the plan tried by the Chinese three thousand years ago;** that is, by building warehouses and storing food in years of abundance, and holding it until years of scarcity." On October 6, 1926, he said of the ever-normal granary: "Its principle had in it more of statesmanship than can be found in the vast majority of plans suggested for the relief of American agriculture."
…

Once more, therefore, Mr. Wallace turned to the ever-normal granary idea. In a radio speech of June 6, 1934, he pointed to its use in China and urged the adoption of something similar here. During the next few years he spoke and wrote repeatedly on the same subject. **As a result, the ever-normal granary idea found an important place in the new Agricultural Adjustment Act of 1938.** On February 16 of that year, the day

that the act became law, Mr. Wallace said of it: "The Act aims at a more substantial abundance than we have ever had. Various provisions will help, directly or indirectly, in setting up the Ever-Normal Granary plan." **Thus, twenty years after he had first written about it, the ever-normal granary became an integral part of American life.**
...

Back in 1911, when Chen Huan-chang wrote the book from which Mr. Wallace learned about the ever-normal granary, he ended it by saying: "The Great Similarity of Confucius will come and the world state will appear. Then the brotherhood of nations will be established, and there will be no war, but perpetual peace." Must we today face yet another war before we realize the simple fact that complete world peace—whether we call it "One World," "The Great Similarity," or any other name—is the only alternative to complete world destruction?

http://afe.easia.columbia.edu/chinawh/web/s10/ideas.pdf

Today civil service is an accepted institution in all modern democracies. **In the year 1941, for example, nearly 2,500,000 men and women took examinations for positions in the United States government.**

So fundamental is the principle of choosing public servants on the basis of fitness that one might almost suppose it had been a cornerstone of our national thinking ever since our nation's beginnings. Yet, though few people stop to consider it, the fact is that this matter of efficiency in government is a relatively new idea in America. The first hundred years of our nation's history were racked with scandalous corruption as a result of the notorious spoils system. **Not until 1883, two years after a president of the United States had been assassinated by a disgruntled office seeker, did the public wake up and demand a system of civil service examinations that would ensure the selection of most government employees on the basis of merit rather than party loyalty.**

The civil service idea did not originate in our country, however, nor in Europe, **though it is true that in passing this legislation, Congress followed the immediate lead of Great Britain and France, both of which had taken similar action a few decades earlier.** The first county to install the merit system was China. In the year 165 B.C., China inaugurated what later became a widespread system of competitive government examinations. And during the greater part of the time from that early date until 1905, shortly before the Empire passed out of existence, the majority of Chinese applicants for public office had to prove their ability by passing one of these tests.
...

Though the European enthusiasm regarding China died away after 1789, it left behind it one very important practical heritage. This is the modern civil service system now prevailing in many Western countries.

As mentioned earlier, the Chinese examination system, from which the various European civil service systems are ultimately derived, seems to have been started in 165 B.C., when certain candidates for public office were called to the Chinese capital for examination by the emperor on their moral excellence. In following centuries the system grew until finally almost anyone who wished to become an official had to prove his worth by passing written government examinations.

From A.D. 1370 onward, the system was adjusted to include three sets of examinations, one held in the local counties, another in the capitals of the provinces, and a third—the highest examination of all—in Peking, the national capital. Some were conducted annually, and others once every three years. The honors thus attained corresponded roughly to our B.A., M.A., and Ph.D. degrees. **This system operated with great regularity until it was finally abolished in 1905.** Even today the government of China is officially pledged to its re-establishment, though in greatly modified form.

> *Paper of Ch'en Shih-jui, who graduated as 261st **among the 314 successful candidates receiving their chin-shih, or doctor's degree, in the Chinese national examination of May 25, 1894, held in Peking.** For this examination he wrote two essays and one poem. Reproduced is the first one of the essays, **dealing with the famous Confucian philosopher, Hsün Tzu, of the third century B.C.** It reveals the beautiful handwriting required from any successful candidate. The question for the essay was received at 10:00 A.M. and had to be answered in about two thousand words by sunset, that is, around 7:30 P.M. In the nine and one-half hours thus permitted, the candidate first had to compose a rough draft of his essay and then copy it into the stylized characters here shown. The copying alone, even for rapid writers, required about seven hours. The original of Ch'en's paper is in the Library of Congress.*

The examinations took place within huge walled enclosures, inside of which were thousands of small brick cells, laid out in straight rows like the houses of a town. Each cell contained a bench and table, and housed a nervous candidate. Every precaution was taken to prevent cheating. Candidates were searched before entering the enclosure, carefully watched while the examination was in progress, and not permitted to leave until it was over. **Each examination commonly lasted several days and was of unbelievable difficulty. In 1889, for example, out of more than 14,000 candidates taking the**

examination in Peking, only slightly over 300 passed. The reward for success, however, was entry into the honored ranks of the mandarins who governed the country.

The chief defect in this system was its emphasis upon literary style and a detailed knowledge of the Chinese classics, at the expense of more practical matters. Another was the failure of the Chinese government to provide anything approaching a national system of free education. Hence, most candidates had to prepare themselves for the examinations at their own expense and the inevitable result was that the majority of those able to take them came from the well-to-do. Nevertheless, the system had two important advantages. It was open, with trifling exceptions, to all members of society, **thus making it the world's most democratic means, before modern times, for selecting government officials.** And it ensured the presence in the government of men of high education.

Nothing like such a system seems to have been known among the other great civilizations of antiquity. **In the universities of Europe, written examinations seem to have been unheard of before 1702. As for government-administered civil service examinations, these were of considerably later date.** It is not surprising, therefore, that the Chinese examinations were described repeatedly in Western literature on China of the seventeenth and eighteenth centuries, and aroused intense admiration among such men as Voltaire and Quesnay.

In France the earliest civil service system seems to have been established in 1791 shortly after the outbreak of the Revolution. After ten years, however, it was allowed to lapse, but was re-established in the 1840's. Though little attention seems to have been given to its early history, several writers on French history maintain that it owes its origin to the Chinese example.

The origins of the British civil service are better known. **During the eighteenth century a number of Englishmen wrote in praise of the Chinese examination system, some of them going so far as to urge the adoption for England of something similar. The first concrete step in this direction was taken by the British East India Company in 1806.** In that year the Company established a small college near London whose purpose was to train Company employees for administrative service in India, the British-controlled portions of which were at that time still governed by the Company on behalf of the British Crown. **The proposal for establishing this college came, significantly, from members of the East India Company's trading post in Canton, China.** Thus the principle was established of using for public administration men who possessed certain preparatory qualifications.

During the next several decades many Englishmen referred to the example of China as an argument for establishing a universal civil service system in England itself. Most persistent among them was Thomas Taylor Meadows, a gifted man who served for many years in the British diplomatic service in China. **In 1847 he published a book, *Desultory Notes on the Government and People of China*, whose main purpose, in his own words, was "to urge the institution of Public Service Competitive Examinations for all British subjects with a view to the Improvement of the British Executive and the Union of the British Empire."** In it he described the Chinese system and argued that "the long duration of the Chinese empire is solely and altogether owing to the good government which consists in the advancement of men of talent and merit only."

Such public statements finally led the British government to create a committee to investigate the matter. In 1853 this committee presented to Parliament a report entitled "The Organization of the Permanent Civil Service." The report recommended that a central board of examiners be formed to prepare examinations on the general knowledge of the candidates; that these examinations should be held regularly and should be open to all; and that promotion in government service should be based on merit instead of favoritism. All these were principles that had governed the Chinese system for many centuries. **Though bitterly attacked in Parliament, the report resulted in the creation of Britain's first civil service commission in 1855.**

The British example was undoubtedly chiefly responsible for the establishment in America of a similar civil service system. Nevertheless, some Chinese influence is also apparent. When, for example, Thomas A. Jenckes of Rhode Island first recommended to Congress in 1868 that an American civil service system be created, his report on the subject contained a chapter on the civil service in China. The same year Emerson, who, as we have seen, was interested in China, made a speech in Boston at a reception in honor of a visiting embassy from China, in which he praised the Chinese examination system and urged that the Jenckes proposal be adopted.

As in England, however, many people who derived personal benefit from the old spoils system strongly opposed the new idea. **Some protested that the use of examinations to determine the fitness of candidates for office was Chinese, foreign, and, therefore, "un-American!" Consequently, it was not until 1883 that the proposal of 1868 was finally passed by the Congress.**

Today the principle of the civil service system has been accepted in virtually all democratic countries. More and more, persons are entering government service because of personal merit rather than political favoritism. As a result, much of the political corruption that was so common a century ago has disappeared.

https://www.theamericanconservative.com/articles/how-social-darwinism-made-modern-china-248/

Chinese society is notable for its stability and longevity. From the gradual establishment of the bureaucratic imperial state based on mandarinate rule during the Sui (589–618) and T’ang (618–907)

dynasties down to the Communist Revolution of 1948, a single set of social and economic relations appears to have maintained its grip on the country, evolving only slightly while dynastic successions and military conquests periodically transformed the governmental superstructure.

A central feature of this system was the replacement of the local rule of aristocratic elements by a class of official meritocrats, empowered by the central government and selected by competitive examination. **In essence, China eliminated the role of hereditary feudal lords and the social structure they represented over 1,000 years before European countries did the same, substituting a system of legal equality for virtually the entire population beneath the reigning emperor and his family.**

The social importance of competitive examinations was enormous, playing the same role in determining membership in the ruling elite that the aristocratic bloodlines of Europe's nobility did until modern times, and this system embedded itself just as deeply in the popular culture. The great noble houses of France or Germany might trace their lineages back to ancestors elevated under Charlemagne or Barbarossa, with their heirs afterward rising and falling in standing and estates, while in China the proud family traditions would boast generations of top-scoring test-takers, along with the important government positions that they had received as a result. **Whereas in Europe there existed fanciful stories of a heroic commoner youth doing some great deed for the king and consequently being elevated to a knighthood or higher, such tales were confined to fiction down to the French Revolution. But in China, even the greatest lineages of academic performers almost invariably had roots in the ordinary peasantry.**

Not only was China the first national state to utilize competitive written examinations for selection purposes, but it is quite possible that almost all other instances everywhere in the world ultimately derive from the Chinese example. It has long been established that the Chinese system served as the model for the meritocratic civil services that transformed the efficiency of Britain and other European states during the 18th and 19th centuries. But persuasive historical arguments have also been advanced that the same is even true for university entrance tests and honors examinations, with Cambridge's famed Math Tripos being the earliest example.11

https://www.lewrockwell.com/2007/08/gary-north/stock-markets-and-economic-liberty/

The collegiate accreditation system, which was launched by Rockefeller's General Education Board in 1903, when coupled with the lust for exam-based certification, is the bane of the West. **The West has universally adopted the medieval Chinese system of exams, which screened the Mandarin bureaucrats for a thousand years. The Jesuits imported the model from Asia during the 18th-century Enlightenment, and their students adopted it when they went secular and launched the French Revolution. The Chinese model was the basis of France's écoles of Napoleon's era**. This was also true of the University of Berlin. Thomas Jefferson imported the Jesuit model for the tax-funded University of Virginia. It was solidified by the tax-funded land-grant college system, passed in 1862 as a Civil War measure.

The academic mandarins have successfully screened out most of those would-be academics who reject tax-funded education, the mandarin examination system, and the abandonment of the apprenticeship model.

https://en.wikipedia.org/wiki/Roland_Mousnier

A right-wing Roman Catholic, Mousnier had a famous feud with the Soviet Marxist historian Boris Porchnev over whether peasant revolts in 17th-century France were a function of class struggle; he argued since the concept of class was largely unknown in that period, Porchnev was wrong to identify it as a driver. **In Mousnier's view, social classes did not emerge as an important factor in French society until the 18th century, with the coming of a more market-oriented economy.**[1]

https://archive.org/details/peasantuprisings0000mous_b5d1/page/242/mode/2up?view=theater

Confronted by an all-powerful bureaucracy, recruited by competition, powerful in ideas and traditions, the emperors, even when capable and strong-willed men, sought to find agents who were entirely devoted to their interests and those of the imperial family, persons through whom they could both keep informed and ensure the execution of their orders. **They found what they needed in the eunuchs, who had been employed since Han times as intermediaries between the emperor and the bureaucracy.** Under the Ming emperors the eunuchs formed a rival power group to that of the bureaucrats. In 1644 they numbered 70,000 in the Imperial Palace and 100,000 elsewhere in the empire. The emperor recruited

them in batches of 3,000. **Most were men who had become eunuchs of their own free will, for the sake of a career.**
...

The eunuchs were in charge of the political police. In 1420 they took over the "Eastern Depot." **They could investigate anyone at all throughout the empire,** inform the emperor directly about what they discovered, **charge and arrest any person, and themselves issue edicts which had complete force of law.**
...

The eunuchs accompanied military expeditions in order to keep an eye on the army and the garrisons. They spied on all the magistrates as well as on the people, but above all on the highest magistrates. The eunuchs advised on increases in taxation as well as the creation of fresh taxes. They traveled through the provinces in order to check on the levying of taxes. They supervised the palace treasury. **They maintained that all the wealth of the empire was the emperor's private property and ought to come directly under the palace treasury, of which they were the masters.** They supervised all the manufactories directly supplying the Court and the army, and had craftsmen and laborers at their disposal for this work, men subject to forced labor.
...

According to the Chinese public opinion and the law, the highest state of society was that of the civil magistrates and of the university graduates from whom this bureaucracy was recruited. It really was a bureaucracy, recruited competitively, and organized in a hierarchy, with promotion from grade to grade by seniority and selection, but its members had the powers of magistrates. **The army officers, who were recruited by special examinations, were in theory above the civilians, but, owing to the predominant Confucian ideas, public opinion held the magistrates in higher esteem.** This elite as a whole is sometimes called by certain historians "the gentry," by analogy with England, but it would seem one should avoid using this term, which gives a false impression. **In contrast to England, it was one's office that enabled one to acquire landed property, rather than the other way round. Besides, China knew neither primogeniture nor entail. Except in the case of large patriarchal families with several generations living together, brothers parted on their father's death, and his property was divided among them.** Large concentrations of landed property did not last long, posts in the bureaucracy were not transmitted by inheritance, and, as a rule, particular families did not remain in possession of offices for any length of time. **China and England were really two different forms of society, and it is better not to use the word gentry but to speak simply of the elite.**
...

Legally, the examinations were open to all male Chinese. It was a society open to talent. **The Chinese were imbued with this idea, and the smallest peasant could aspire to become a minister. A popular saying ran: "Ministers and generals are not born to be such."** Reality did correspond to some extent to this ideal. Study did not cost much. It was enough to possess the small set of fundamental classics, one or two historical works, and some textbooks. There were elementary schools in the villages and in the patriarchal clans. Confucian free schools, open to all and subsidized by the state, existed in the chief town of each canton and prefecture.
...

At the beginning of the Ming period the law had fixed everyone in a permanent and hereditary social position: the soldiers; the craftsmen of the lower Yangtze, hereditarily under compulsion to work for the government; the peasants; and so on. But, even at that time, **provided one member of the family stayed in its legal occupation, the rest were allowed to change, and the emperor always released candidates for the public service from their hereditary obligations. Since 1550 the law on hereditary social positions had ceased to be observed.**

The birth rate in families of the elite was higher than in the other social classes, and the death rate lower. As a rule, people married within their own order. **It might, therefore, be supposed that the elite formed a closed, hereditary group. But the examination system corrected any such tendency.** Rare were the cases in which, in the third generation, an easy life had not deprived the sons of magistrates of the energy needed for success. And, besides, cleverness appears wherever it chooses. **It was very unusual for a family to be able to keep a foothold in important public office for more than two or three generations. In most cases, the grandsons and great-grandsons, finding themselves unable to get further than the first two examinations and so not succeeding in acquiring even the title of *Sheng-Yüan*, had to go to the bottom of the ladder,** teach in village schools, win a little reputation, and become an agent or clerk in a yamen - and thus the family would begin its climb back up the ladder. Many preferred to become merchants and in this way provide their sons with the comfort and leisure that were so helpful when tackling the competitive examinations.
...

But between 1752 and 1899, 87 percent of the British undergraduates at Cambridge, and 78 percent between 1899 and 1937, were sons of elite families. **The opportunities for a boy from the lower or middle classes to obtain a university degree and enter the higher civil service of Great Britain, before 1929 and the world crisis, were probably fewer than those for a young Chinese of similar origin in the Ming period.**

https://archive.org/details/peasantuprisings0000mous_b5d1/page/238/mode/2up?view=theater

Since 1368 the ruling dynasty had been that of the Ming; they had freed China from the yoke of the Mongols, the Yuan dynasty. **Because, however, it is for the best and wisest to rule, the emperor chose the ablest of his sons to succeed him, without concern for primogeniture, and it even sometimes happened that an emperor would choose his successor from outside his own family.** The emperor was absolute, having over his people all the powers of the paterfamilias in the patriarchal family, and even, in principle, still wider powers, unlimited and despotic. **In the eyes of the people, indeed, his family had received a mandate from Heaven, and he himself was the "Son of Heaven," the chosen one and vicar on earth of the Positive Essence.** This quality, however, he did not derive from his birth, or from the fact that his predecessor had chosen him, it was up to him to prove that he really had been chosen from on high, through his virtue and successes. If he ruled well, in harmony with the divine principles written in the sacred books, if he ensured his people peace and prosperity, then he was indeed the mandatory of Heaven, and all obedience was due to him. His will was law, provided it accorded with the sacred writings. **Thus, in principle, his power was limited by Confucian thought, as interpreted by the bureaucracy of magistrates.** It was in fact not easy for him to rule in disregard of the opinion of this body of men. The emperor's power, though absolute in its own sphere – politics – did not seek to regulate the whole of men's everyday lives. **A Chinese could freely choose his trade or profession, travel all across China and settle wherever he liked without being questioned by any official, and he could buy and sell landed property with facility, certainty and security. Many villages never saw any agent of the government except the tax collector.** It would therefore doubtless be better to describe the emperor's power as absolutism rather than despotism or totalitarianism.

If epidemics, famines, earthquakes, or unusually violent storms occurred, if the magistrates were corrupt, if the expenses of the Court were excessive, if taxation crushed the taxpayers, if military disasters crowded one upon another, if bandits roamed everywhere, **then there could be no doubt about it: Heaven had withdrawn its mandate, its "divine commission." The emperor was not – or was no longer – virtuous.** He was no longer following "the Way of Heaven," he was no longer in harmony with the universal order. He had failed his duties as ruler, he had not respected the proprieties, he had not conformed to the *li*. Thereby he had plunged the cosmos into disorder and unhappiness. **Mencius had written: in such a case people must revolt and change their ruler. If the rebellion succeeds, this means that the rebels are doing Heaven's will.** Periodically, at the end of each 250 to 400 years, conjunctions of circumstances of this sort occurred. It was a sign to the Chinese that not only the emperor himself but his whole family had lost the "mandate of Heaven." They regrouped themselves behind a successful leader, a pretender to the imperial throne who proceeded to found a new dynasty. **The latter then continued in obedience to the traditional rules, until a similar conjuncture occurred once more. This was the "cycle of dynasties."**

For the Taoists nature, and, *a fortiori*, human nature was good; hence education an artificial gloss from the outside, could only be a blight on the natural. For the Legalists human nature was evil; hence only force could control it. But, for the Confucianists human nature was good (the ‘Mencius’ strain) and therefore *amenable* to education; or it was evil (the ‘Hsün-tzu’ strain) and therefore *in need of* education. Either way, this Confucian ambiguity (corresponding to the inner-outer ambiguity, between Taoist ‘inner’ and Legalist ‘outer’) was yet another mediant affirmation, **with education standing between the Taoists’ blissful emptiness of mind and the Legalists’ trust in force instead of learning.**

The Taoist and Legalist poles have sometimes been said to come together, and in a sense they did, in their common egoism – despotic egoism of the solitary ruler (the one in the state) and anarchic egoism of the solitary hermit (the one in nature). And this common egoism made for a common revulsion from the Confucian social and intellectual discipline, which was a restraint equally on anarchy and despotism. Whereas history was the perennial Confucian study and the appeal to history the favourite Confucian polemical device, Taoism and Legalism, straddling Confucianism, spurned history equally. **For the Taoists, partisans of *wu-wei* (‘non-activity’), history was the weary story of action, man’s impairment of the state of nature; for the Legalists, the appeal to history, i.e., to precedent, was an unwelcome curb (as any curb would be unwelcome) on power, an impairment of the perfection of the ruler’s freedom of action.**

Indeed, the Legalist prescriptions were predominantly political, **while the Taoist prescriptions, so thoroughly anti-political, had, as a *constructive* force, predominantly cultural implications (though Taoism could lend itself to political destructiveness).** Confucianism was the golden mean in the sense that only Confucianism was oecumenical. Its ideas pervaded both the realm of government (as the Legalist did) and the realm of the imagination (as the Taoist did.) **Confucianism and Legalism together made political China in the bureaucratic-imperial post-classical régimes, and Confucianism and Taoism together (with Buddhism still to come) made cultural China.**

The sages made rulers for the people, made teachers for them, drove off vermin, snakes and wild animals, **and made them dwellings in the central plains.** They were cold, and so the sages taught them to make clothing. They were hungry, and so the sages taught them to make food. When they lived in trees they fell, and when they dwelled in caves they became ill, so the sages taught them to make houses. The sages instituted craftsmen to supply tools for the people's use. The sages instituted merchants, in order for the people to exchange what some had and others lacked. The sages instituted doctors and medicines, in order to save the people from accidents and death. **The sages instituted funerals and rituals in order to expand the people's love and kindness.** The sages instituted rituals in order to put in sequence first and last. The sages instituted music, in order to express the people's pent-up feelings. **The sages instituted government, in order to curb the people's laziness.** The sages instituted punishments, in order to weed out the brutal. When the people cheated one another, the sages instituted tallies, official measures, and scales, in order for people to have faithfulness again. When the people stole from one another, the sages instituted city walls, armor and swords, in order to protect them. In general, whenever anything harmful came, the sages instituted preparations against it; whenever problems developed, the sages instituted defenses against them. **Yet nowadays there is the doctrine, "<u>If sages do not die, great thievery will not stop. ... Cut up the official measure and break the scales and the people will cease to fight.</u>"**8 **Alas! They have simply not reflected upon this. If there had been no sages in ancient times, humans would long ago have perished. Why? We have no feathers or fur, scales or shells in order to endure the cold and heat [of the winter and summer]; we have no claws or fangs in order to compete for food [with other animals].**

https://www.researchgate.net/publication/32228125_1898_The_Beginning_of_the_End_for_Chinese_Religion

On July 10, 1898, the reformist leader Kang Youwei (1858-1927) memorialized the throne proposing that all academies and temples in China, with the exception of those included in registers of state sacrifices (*sidian*), be turned into schools. The Guangxu emperor was so pleased with the proposal that he promulgated an edict (*shangyu*) the same day, taking over Kang's phrasing. On three occasions in the following weeks, the editorial in the famous Shanghai daily *Shenbao* discussed the edict not as a piece of legislation aiming at facilitating the creation ex nihilo of a nationwide network of public schools but as the declaration of a religious reform, that is, a change in religious policy that would rid China of temple cults and their specialists: Buddhists, Taoists, and spirit mediums. This it was, indeed, **although both Chinese and Western historiography have so far usually neglected to appreciate the importance of the religious element in the so-called Wuxu reforms (June 11-September 21, 1898) and later modernist policies.**
…

In this decade, and during the ensuing three decades of the Republic, probably more than half of the million Chinese temples that existed in 1898 were emptied of all religious equipment and activity.2
…

I define Confucian fundamentalism as the rejection of all ideas and practices absent from the Confucian canonical scriptures4 and anticlericalism as the rejection of the institutionalization of religion, especially monasteries and professional clerics living off liturgical services. **Anticlericalism will refer here mainly to the rejection of the Buddhist and Taoist clergies (but not Buddhism and Taoism as doctrinal systems or spiritual traditions),** although this notion can find broader uses in the late imperial Chinese context (Goossaert 2002b).

> 4. This fundamentalism overlaps very much with what historians of ideas have identified as late imperial Confucian purism (see, e.g., Chow Kai-wing 1994). As Chinese religion has three institutional components, with clerics and scriptures (the three religions: Confucianism, Buddhism, and Taoism), there are, in theory, three possible distinct fundamentalisms at work. **Taoist fundamentalism has been dead since at least the Sung, however, and Buddhist fundamentalism did not recover until the Republican period. The only fundamentalism at work in late imperial China is Confucian,** and, indeed, it is arguable that Confucianism is the fundamentalist component of modern Chinese religion.

…

The Meiji reformers launched a large-scale attack on Buddhism and its social network of temple parishes (Ketelaar 1990), **<u>while at the same time creating a new religious institution, the state Shintô, in order to replace the people's religious allegiance to local Buddhist communities with integration into a hierarchical state cult</u>** (Hardacre 1989).
…

Kang's memorial, *Qing chi gesheng gai shuyuan yinci wei xuetang zhe* (Memorial Requesting [the Emperor] to Order that Academies and Improper Temples Be Changed into Schools throughout the Country) (Qinghua daxue lishixi 1998, 770-73), ends with an attack on improper cults, *yinsi*. In each

village, he writes, there are several temples that all have landed property; these could all be seized and made into schools where education would be compulsory for all village children. **No mention of Buddhism and Taoism here;**10 **it is not a certain category of religious institutions (monasteries) that is targeted, but all temples (*miao*). Furthermore, Kang does not mention a quota to be seized or compensation; all temples must go.** This idea clearly fits into his larger scheme to set up Confucianism (called by him *Kongjiao*) as the state religion (*guojiao*) and to ban any other religious institution, although Kang did not elaborate much on this scheme during the 1898 reform.11

> 11. The famous memorial *Qing zun Kongsheng wei guojiao li jiaobu jiaohui yi Kongzi jinian er fei yinci zhe* (Memorial Requesting that Confucius Be Worshiped as [the Founder] of the National Religion, that a Ministry of Religion and a Church Be Established, that Years Be Counted from the Birth of Confucius, and that Improper Temples Be Suppressed), which lays out a precise plan to eradicate Chinese religion and set up Confucianism as the exclusive national religion, is actually a fake; that is, it was written later and not submitted to the throne (see Huang Zhangjian 1974, 464-70). **The text proposes creating a ministry for religion** and compelling all Chinese to attend weekly Confucian masses in their local Confucian church, where Confucian classics are read by a Confucian pastor. It also includes fierce attacks on Chinese religion. **A lax state, says Kang, has during two millennia let people build temples to all sorts of immoral deities. Now, foreigners "photograph the statues in our temples, show these pictures to each other and laugh"** (Kang 1990, 65). **Paganism, he goes on to argue, goes as far as the worship of animals and is a shame that debases China and causes it to be ranked among barbarian countries.**

He had, however, already proposed in famous letters to the emperor in 1895 to transform into Confucius temples all improper temples (*yinci*) and even proper temples to Confucian saints other than Confucius (Kang Youwei 1990, 2:97; *Shang Qingdi di'er shu* [Second Letter to the Qing Emperor], May 2, 1895; *Shang Qingdi disan shu* [Third Letter to the Qing Emperor], May 29, 1895, 2:148). **Kang's project is a wild hybridization of Confucian fundamentalism and Christianity under the influence of, notably, the Scottish Baptist missionary Timothy Richard (1845-1919). Indeed, a rumor that circulated after the publication of the July 10 edict suggested that Kang had drugged the emperor and converted him to Christianity** (Qinghua daxue lishixi 1998, 773).12 More generally, Kang exhibits a strong sensitivity to the Western perspective on Chinese religion and evinces what will be a major characteristic of Republican-period writings on religion, that is, a desire to remodel Chinese religion on a Christian-based model of what a religion should be. This desire would notably find a mature expression in the 1910s attempts by Kang's disciples to create an official Confucian religion, attempts that have been very insightfully studied by Chen Hsi-yuan (1999).13

> 12. **The fact that an edict protecting the missionaries was proclaimed the following day could only reinforce people's feelings that Christianity was out to eradicate Chinese religion** (Qinghua daxue lishixi 1998, 773; Shi Zhouren 2002, 150-53).
>
> 13. Chen (1999, chap. 2) insists that Kang Youwei still thought within a traditional Chinese framework of teachings (*jiao*) and not in terms of religions (*zongjiao*), which distinguishes him from Republican-period attempts to establish Confucianism as a state religion. At the same time, Christian competition and influence during the late nineteenth century caused Confucians to change the ways they thought of Confucianism; during the 1890s, intellectuals other than Kang, including some unrelated to him, also called for the establishment of a Confucian church on a Christian model; see, for instance, the pious and anticlerical Confucian and Buddhist Song Shu (1862-1910; *Song Shu ji*, 36; text dated 1892) and Chen Hsi-yuan (1999, 87-92). **Such change also caused a major departure from the Confucians' traditional vision of Chinese religion as a whole, including temple cults.** For this reason, I contend that, even though the notions of religion and superstition would only be used a few years later (after 1901) to describe their new approach of Chinese religion, radicals like Kang Youwei in 1898 were already part of the new discourse.

…

By contrast, **Kang Youwei, who wanted to promote exclusively the cult of Confucius, proposed to maintain temples in the *sidian* but to reclassify *all* others as *yinsi* targeted for confiscation.** He made his point clearly enough, for all available sources show that both reformers and the general public understood the July 10 edict as calling for the destruction not of a few select temples but of all temples, bar the handful of those where state sacrifices were performed.14 **In other words, Kang did not use *yinsi* in the standard sense but made it a label that applied to all local cults, which amounted to completely reinventing Confucian theology.**

…

From the outset, like in Zhang Taiyan's essay, **a fundamental point of the *miaochan xingxue* movement was expressed: Destroying temples in itself was as important as creating schools.** This was followed by two additional editorials, equally supportive of temple destruction, on August 4 and September 9.16 A short extract from the July 22 editorial will give an idea of the style of these texts:

> **If you ask what gods [these Buddhists and Taoists] sacrifice to, you find out that they are all uncanonical absurd deities which no gentleman would want to mention.** [These clerics] ruin the moral education of the people (*jiaohua*) and squander their wealth, engage in debauchery and theft, and live as parasites of the honest people. **Today's Buddhists and Taoists are really the most heinous criminals on earth. This author feels a deep hatred towards the two religions, which has made him long suffering.** But today their buildings, lands, and property are about to be turned over to the good cause; the circumstances are favorable and it seems easy. **This is a most happy day for the world!**

Three points can be made on the basis of these editorials. First, **the violence of the discourse (in both insulting vocabulary and shocking propositions, such as selling out nuns as slaves) betrays the sense of a religious reform coming to a head.** All three texts insist that previous attempts at religious reform in China had failed but that now was a unique occasion in a context in which international competition put China's survival into question. Second, the position taken by the anonymous editorialists is somewhat between Zhang Zhidong and Kang Youwei and quite close to Zhang Taiyan. They did not share Kang's rejection of the whole of Chinese religion and actually quoted Zhang Zhidong's *Quanxue pian* as if it were the inspiration behind the edict. Therefore, the three editorials touch little on the question of local cults and aim at the same target as Zhang Zhidong: the Buddhist and Taoist clergy, specifically. **They do not mention the most revolutionary themes of Kang's religious project: to put an end to the autonomy of local cults and to ban local gods and idols (statues).** On the other hand, they wax eloquent over traditional anticlerical themes illustrated by dozens of earlier *Shenbao* editorials (Goossaert 2002a) since the newspaper's creation in 1872: Buddhists and Taoists are parasites of Chinese society and both corrupt its customs (sexual propriety, in particular) and waste its resources. They must be returned to lay life by any means, beginning with the expropriation of their monasteries. Not much is said of the vast majority of Chinese temples that did not have clerics. Yet, if the *Shenbao* maintains its usual anticlerical stance, it is more uncompromising than ever. The September 9 editorial criticizes Zhang Zhidong's project for maintaining some of the monasteries, whereas the editorialist wants them all destroyed with no delay. **In other words, the *Shenbao* editorialists enthusiastically welcomed the religious reform declared by Kang Youwei but interpreted it in terms of traditional anticlericalism: to rid Chinese religion of its priests (Buddhists and Taoists) who prevented the "real clerics" of Chinese religion, Confucians, from exercising their due guidance on society.**

…

The elite's attitude toward Buddhism and Taoism was complex. They sometimes treated both as *yiduan*, heterodoxies to be banned altogether. **Most of the time, however, members of the gentry considered, as did imperial orthodoxy, that these two religions were legitimate as long as they were limited to the individual quest for sanctity within the confines of proper places: monasteries.**

What has been left out of this roster of criticisms? Ancestor worship, of course, because this is what Confucianism is about, but also, just as importantly, territorial temple cults.

…

For instance, in his brief on local religious culture, Chen Hongmou (1696-1771), an iconic model official, distinguished the legally sanctioned spring and autumn prayers from the forbidden voluntary associations and their assorted celebrations.19 In practice, it is, of course, absolutely impossible to separate territorial cults from devotional associations, **but what deserves attention is that there was, in Chen's world, a place for village temple festivals for the territorial god (spring and autumn prayers). Why? Not only because cults to territorial gods (*she*) were as canonical as you could get by Confucian standards but also, I presume, because these cults' organization reflected the social structure of the village, in contrast to the congregationalism of voluntary devotional groups.** Nothing in them contravened the natural, patriarchal social order dreamed by Chen and his colleagues.

…

Shortly after 1898, new words began to appear in the discourse on religion, usually first introduced in newspaper articles. **Most important among these are *zongjiao* for "religion," *mixin* for "superstition," and *shenquan* for "divine right or power." All were adopted from Japanese and were used to express Western notions that did not exist in the Chinese discourse until then** (Chen Hsi-yuan 2002; Nedostup 2001, 18-27). *Zongjiao* and *mixin* seem to have been made popular by Liang Qichao in 1901 (Bastid-Bruguière 1998). **The question of vocabulary is far from innocent:** The use of Western notions to describe religious practices or ideas that were heretofore discussed with native terms expressed the authors' determination to distance themselves from Chinese religion. These notions brought with them distinctions, fissures that did not exist before: **The great divide was now between *zongjiao*, "the acceptable," and *mixin*, "the unacceptable." This distinction is quite different from the traditional orthodox (*zheng*)/heterodox (*xie*) divide** (Duara 1991, 76) because many local cults and practices independent from national organizations and textual traditions, that were

once regarded as orthodox, were now branded as superstitious. From 1901 onward, each actor on the religious scene had to position himself in regard to the *zongjiao/mixin* dichotomy. **Buddhism partially succeeded, during the 1910s and 1920s, to reinvent itself as a modern religion opposed to *mixin* and, thus, came out of the antisuperstition campaigns rather well.**22 **This much cannot be said of most of the rest of Chinese religion.**
…

In fact, even though most Chinese intellectuals disliked Kang's messianism, they generally shared some of his postulates: China needed a state religion, and this could only be Confucianism, the natural religion of China.23 **It is only later, during the Republican period, that Confucianism was hailed as *not* being a religion. Concurrently, the issue of rejecting religion as such did not appear until the 1920s;** the antireligious, or atheist (*fei zongjiao*), movement at that time was formulated under the direct influence of European Marxists and freethinkers (Bastid-Bruguière 2002).
…

Cults dear to pre-1898 Confucian fundamentalists, such as Wenchang or Guandi, were suddenly rejected outright. What is more, among the elements now labeled *superstition*, which were not targets before, we find more general abstract ideas, such as the irrationality of praying to icons, or statues that are mere blocks of wood or mud. This, of course, eventually led to the questioning of all Confucian cults, including state religion and ancestor worship. **Texts from the period between 1901 and 1911 usually stopped short of this, but in the following decade, the step was taken.**
…

In other words, the most striking novelty in the elite's antisuperstition discourse is not its antipathy toward Buddhism and Taoism or even local cults—this was already present before and merely intensified—but its rejection of its own Confucian religious practices. Which is why, in my opinion, the elite's growing estrangement from Confucian religious life lay at the core of the antisuperstition movement.

This seems to be confirmed by an evolution in the press's, and especially the illustrated press's, reporting on religion. Whereas late nineteenth-century journals such as the *Dianshizhai huabao* (Illustrated News of the Lithographic Press, published in Shanghai by the Shenbao Press between 1884 and 1898) reported critically mostly on lower-class religious practices, the otherwise very similar, in both style and contents, *Shishi baoguan wushen quannian huabao* (Illustrated News of the Year 1908 Published by the Shishi baoguan) featured many articles fiercely criticizing officials going to temples or praying to deities, arguing that it could be expected the people were still ensnared in "superstitious belief in divine powers" (*mixin shenquan*) but that such behavior among educated officials was shocking (for instance 15:6586, 15:6639).
…

A third element of continuity was the mention by antisuperstition authors of pre-1898 precedents. **There are cases in earlier history in which Confucian fundamentalist officials closed large numbers of temples and turned them into schools or other community institutions, particularly during the Ming.**32 In my opinion, however, there is a difference between these earlier projects that were aimed at replacing certain improper cults (*yinsi*) with other (Confucian) institutions with both educational and religious significance and the *miaochan xingxue* idea of replacing religion with secular education. **Yet, although all these earlier endeavors were local and short lived, the fact is that, when carried out thoroughly, a fundamentalist agenda of maintaining only purely Confucian cults was quite similar in its destructive effect to what antisuperstition activists achieved.**
…

Several factors were at work. The immediate influence of Kang Youwei and Liang Qichao was probably rather limited. The general mood encouraged it with the sense of crisis shared by most intellectuals, which induced in many of them a deep-felt hatred of traditional Chinese society. The introduction of Western science and, as a result, the questioning of traditional cosmology also played a role. **But even more instrumental was the widespread influence of Christianity, even among nonconverts. This influence had many different effects. First, Christians, both foreigners and Chinese converts, set the example of temple destruction and iconoclasm, such as the young Sun Yat-sen, who begun his career by smashing a statue of Guandi** (also, incidentally, the protector of the Qing dynasty; Shi Zhouren 2002, 153-54).36

> 36. One may also mention the case of gangs of Christian students who toured and vandalized Canton temples in 1911 (Rhoads 1975, 254-55).

Others, while resisting Christian influence, agreed with the Christian missionaries that Chinese religion was mere idolatry. **Seeing Christianity as the main spiritual threat to China, they tried to engage the missionaries in a debate on the religious situation in China and, thereby, adopted many of the Christian notions and categories, most importantly, the religion-superstition dichotomy.** We have seen how people like Kang Youwei and later reformers felt shame when Western observers

ridiculed Chinese temples, icons, beliefs, and rituals. Moreover, **both Christian and Chinese anti-Christian propaganda, as well as Christian-inspired Taiping propaganda, raised the tone of the religious debate to new heights.** Although this is difficult to quantify, it is likely that the general atmosphere of hateful religious discourse and polarization during the period between 1860 and 1900 was conducive to the events between 1898 and 1904.

A very explicit cause for the adoption of the antisuperstition discourse in many post-1900 texts was the Boxer Rebellion. **The shock of the Boxer insurrection, and its dreadful consequences for China, pushed many observers into the camp of those willing to do away with village religion.** Another, less explicit, motive was the religious organization of local society around temple cults, the "nexus of power" as Prasenjit Duara describes it: **Temples were (and still are) places where symbolic power was vested on local leaders, where intra-and intervillage disputes were settled, and where local projects and resource management were negotiated. This organization was seen, not without reason, as the main obstacle to the building of a new vertically integrated society, in which the state is physically present in the villages and in which all villagers obey the state alone.**

Thus, the transition from pre-1898 Confucian fundamentalism and anticlericalism to early twentieth-century antisuperstition is a complex phenomenon with many causes, **some specific to the short-term context (the Wuxu reforms, the Boxers) and some related to long-term trends (Christian and Western influence),** some intellectual (the notions of religion and superstition) and some sociopolitical (a widely felt need to overhaul the structures of local society). **All of these various causes quite suddenly coalesced during the 1898-1905 period to form the antisuperstition movement and its most important effect: the destruction of temples to build schools.**
…

The wave of confiscations encouraged by the government in January 1904 prompted some Buddhist monasteries to seek affiliation with Japanese orders and claim Japanese consular protection, as early as fall 1904, which in turn provoked outraged reactions against the monasteries (Welch 1968, 11-12, 165). More importantly, **a large part of the rural violence in the period between 1901 and 1911 was linked to new administrative offices seizing village temples and to village communities fighting for their temple and their autonomy—the two being indissociable** (Prazniak 1999 and Wang Shuhuai 1977 provide many examples). Temples were not the only local institutions to be taxed or seized, but they constituted a particularly sensitive target. **The localized but violent armed conflicts caused by the seizure of local temples, pitting the local elites in charge of political modernization against village communities and religious leaders, would probably warrant the use of the term *religious war*[40] more than the low-intensity conflicts of the period between 1600 and 1900.**

> 40. In a different context, Butler (2002, 11) discusses how **the historiography of peasant resistance to the revolutionary Mexican state's anti-Catholic policies has been often understood as primarily socioeconomic in nature (a traditional agrarian society fighting against an expanding modern state), with religion providing only an infrastructure articulating the resistance; the author criticizes such views as neglecting the purely religious motivations of both attack and resistance. I am inclined to have similar views regarding the anti-New Policies resistance in 1901-11 China.**

https://archive.org/details/enlightenmentcon0000isra/page/870/mode/2up?view=theater

For if a universalist secular ethic is indeed superior on rational grounds to other moralities, this means there must be multiple intellectual and cultural sources of such ideas whether European, Asian, American, or African. As Kang Youwei observed in the context of his attempted reform of Confucianism in the 1890s, no matter how deeply rooted obedience, family control over the individual, and social hierarchy are within a given cultural-ideological heritage, moral universalism based on equality, democracy, and personal liberty is ultimately both superior to, and compatible with, cultural difference where ancient cultural traditions are suitably adjusted, reformed, adapted, and 'modernized' in the light of these universal values.14

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#ch1.1

In 1878, when he was twenty-one, he underwent a sudden revulsion against the arduous studies he had been pursuing for so long. He records in his *Chronology* the following significant experience:

> '**While sitting in meditation, I suddenly saw that the ten thousand creatures of Heaven and Earth and I were all of the same body; a great light dawned (literally, I [received] great enlightenment), and I believed I was a sage: then I laughed with joy. Suddenly I thought of the sufferings of life: then I cried with melancholy.** Suddenly I thought of the parent I was not serving—how could I be studying?—then forthwith I packed up and went back to dwell by his grave.'[4] (p. 181.)

He thus gave up his instruction under Chu Chiu-chiang, and we find him in his twenty-second year living alone on a mountain to the south of Yin Tang *hsiang*, named Hsi Ch'iao Shan (□□□), in the Cave of the White Clouds (□□□). Here, according to his *Chronology*, he spent his time in studying Buddhist and Taoist books, and in meditation and spiritual clarification.

https://utcp.c.u-tokyo.ac.jp/publications/pdf/UTCPBooklet17_08_Tay.pdf

From 1884 to 1898, Kang Youwei deviated from his earlier preoccupation with spiritual-mystical cultivation and devoted himself to practical scholarship and politics. In this period, he sought to "purify" Confucianism and rescue it from the falsehood of "imperial Confucianism." He boldly declared that the teachings of Confucius were corrupted or falsified throughout history because of its association with the imperial government. **The state orthodoxy, Kang charged, was a deliberate distortion of Confucianism by the authoritarian state to serve as its ideological tool of control.** The primary task that Kang set for himself was to reconstruct the original teachings of Confucius. **The original teachings of Confucius, according to Liang Qichao, are "progressive" and preach universal love and equality, as opposed to the conservative and authoritarian tradition of imperial Confucianism.**15
…

The central tenet of Confucius teaching, Kang believed, is the doctrine of *ren* (human-ness).18 **Kang interpreted *ren* as the compassionate mind, similar to Buddhism, a mentality that "can't bear" to see the sufferings of others and the world.** He insisted, like Mencius and Wang Yangming before him, that the nature of human beings is good as they all possess *ren*. Kang believed that *ren* is a virtue endowed by Heaven and he quoted the following passage approvingly from Dong without much elaboration: "Man receives his mandate of Heaven. He takes *ren* from Heaven and thus become a man of *ren* […] *ren* is the mind of heaven."19 **According to Kang, *ren* is what allows man to achieve oneness with Heaven. In the *Datong shu*, Kang wrote, "*ren* means to form one body with all things" and "when the self and others are not separated, when all things form one body, and when the feeling of compassion is aroused, then that is the short cut of finding *ren*."**20
…

Like the Great Promulgation Campaign and the creation of state Shintoism in Meiji Japan,24 the reinvention of Confucianism as a religious-cultural system by Kang was to protect the indigenous faith [*baojiao*] and to compete with Christianity for the hearts and minds of the Chinese people. **To Kang, Christianity was a great menace also because of its association with imperialism.** Kang believed that Christianity and Western imperialism fed on one another in their encroachment of non-Western societies.
…

Kang proposed to set up Confucian churches all over China, in all prefectures, counties and even villages. These national churches would be officiated by Confucian clergies and they would read the classics to the people during Sunday worship. Confucius birthday would be celebrated as a national holiday and a Confucian calendar would replace the current calendar based on the emperor's reign. The Kongjiao movement wanted to adopt the institutional strength of Christianity and replace its theological content with Confucianism.26 **More importantly, the movement sought to replace the "Son of Heaven" with Confucius as the symbol of the Chinese nation.**
…

In his Kongjiao project, Kang submitted the *Memorial Requesting (the Emperor) to Order that Academies and Improper Temples be Changed to Schools* to the throne on 10 July 1898. In this memorial, Kang vehemently attacks the immoral cults and proposed the confiscation of temple properties to provide compulsory education for village children. **Unlike Zhang Zhidong's *Exhortation to Build Schools* which proposed seizing 70 percent of temple properties, Kang did not set any quota for his plan.** It was clear from his memorial that Kang wanted the total destruction of all non-Confucian temples inside or outside the Official Sacrifice.28 In other words, Kang wanted to create a state cult exclusively for Confucius, even temples for other saints of Confucianism were not excluded from the plan.
…

However, the Kongjiao movement did not ultimately take off because Confucianism was not popular among the masses unlike the popular religion, and most importantly it lacked the support of the monarchy. The veneration of Confucius as the creator of Chinese

civilization and Confucianism as the essence of the Chinese nation desacralized the role of the monarch as the Son of Heaven and symbolic head of China.

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#27.9

So, then, we will recall that in 1884-5, when K'ang Yu-wei was writing his first draft of the *Universal Principles of Mankind*, he also completed another essay, entitled *'Li Yün' Annotated*.[10] That these two studies were undertaken at the same time is not an accident. **For it is in the 'Li Yün', one of the sections of the canonical *Li Chi*[11] that the conception of *ta t'ung* is set forth.[12]**

> 10 That *'Li Yün' Annotated* actually was composed at this date has been seriously questioned by Ch'ien Mu (see his *History of Chinese Scholarship during the Last Three Hundred Years*, pp. 697-701). However, it is not within our province here to examine this question. **Whether or not *'Li Yün' Annotated* was written only as a later bulwark to K'ang's views, the conception of *ta t'ung* does come from the famous passage in the 'Li Yün'.**
>
> 11 Authorship of 'Li Yün' is unknown; **modern scholarship places collection of the *Li Chi* writings in the Former Han dynasty, and authorship at various unknown dates prior to that time.**

It may be interesting, if only to show how differing translations of classical Chinese can be, to quote this passage in the versions of four different translators. Confucius is made to say the following words.

(According to James Legge):

> '**When the Grand course was pursued, a public and common opinion ruled all under the sky; they chose men of talents, virtue, and ability; their words were sincere, and what they cultivated was harmony. Thus men did not love their parents only, nor treat as children only their own sons.** A competent provision was secured for the aged till their death, employment for the able-bodied, and the means of growing up to the young. They showed kindness and compassion to widows, orphans, childless men, and those who were disabled by disease, so that they were all sufficiently maintained. Males had their proper work, and females had their homes. (They accumulated) articles (of value), disliking that they should be thrown away upon the ground, but not willing to keep them for their own gratification. (They laboured) with their strength, disliking that it should not be exerted, but not exerting it (only) with a view to their own advantage. In this way (selfish) schemings were repressed and found no development. **Robbers, filchers, and rebellious traitors did not show themselves, and hence the outer doors remained open, and were not shut. This was (the period of) what we call the Grand Union.**' (*Li Ki*, 'Li Yün', pp. 364-6.)

(According to Tsuchida Kyoson):

> '**When the Great Way is realized, the following will surely take place: all the world will be a common possession; the wise and the able are elected; all people will be bound by equal ties of intimacy so that no man sees only his father as father nor only his son as son;** the old keep their case, the ripened youth has his responsibilities; the boy and the girl are trained up, widows, orphans, the disabled and the like are respectively cared for; men take their respective parts while women respectively marry; as for property, while one would hate to let it go to waste, he will not wish to have it in private possession; as for man's talents, while he would hate not to have exercised them, he will not necessarily expend them on himself; and thus plots will come to an end, **thieves and brawlers will not be seen, so that people will come to leave every door open: such an age should be called *Ta T'ung*.**' (*Contemporary Thought of Japan and China*, pp. 194-5.)

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#ch1.3

One World: A bird's-eye view

One World *is* one world because all the boundaries which created divisions (and hence oppositions) have been abolished. It is called the Age of Complete Peace-and-Equality. It is a polity in which, as far as possible on this earth the causes of suffering have been done away with and all creatures are happy. **The keyword of this polity is 'public' as opposed to 'private' (which is the same word in the Chinese as 'selfish').** The sole criterion for the rightness or wrongness of things in this world is whether or not they contribute to happiness. In every way the organization of this world is intended to provide every individual with the maximum possible independence and freedom.

The child is born into this world within a public institution, and receives his nurture and education within various public institutions for the first twenty years. Thereby two things are provided for: first, that he does not have the responsibility for requiting his parents for their care, and second, that all persons will receive an equal physical, mental, and moral start in life. On the other hand, the father and mother are relieved of the burdens of providing for children, and are free to pursue their own careers as individuals. Of course, the principle of requital cannot be avoided, and the citizen of the world will be expected to repay the public for his twenty years of care and training by performing twenty years of service in some capacity of benefit to the public weal. **However, this is not at all the same thing as the private burden of the old family system, since everyone requites this public debt by the mere fact of working at his job, whatever that may be.**

The individual will have been prepared for a vocation by practical studies during his later school years. **Upon graduation from college (which will be attended by all), he will face no problem of employment, since all occupations and all the work of the world is under (what we nowadays would call) a planned economy.** Agriculture, industry, and commerce are all publicly owned and operated, as indeed are all other activities. And this world is not an ‘economic world’, nor is its citizen the ‘economic man’. **Money actually plays a small part in the lives of the people of One World, since almost everything which money now buys is then provided for by the system of the public institutions.**

When our people fall in love they will find that the matter of sexual relations and marriage is regarded by One World in a completely practical way. Practicality, in the sense of that time, means the criterion of happiness or suffering. **When people fall in love they may form alliances, which are for no longer than one year.** For it is recognized that human nature is seldom satisfied for a long period of time with the same object. Therefore it is provided that the sufferings caused by compelling people who do not wish to remain together to stay married is abolished. Of course, those who do wish to stay married may renew their contracts for as long as they are happy together. **One World will not apply any moral ban to the practice of homosexuality, either, since, judged by its criterion of happiness or suffering, no harm is done to others by the practice, and there will always be those who are happier in it than in the normal relationship.**

The men and women of One World are entirely equal. **Through the abolishment of the family, women are no longer burdened with the age-old duties of caring for children, nor are they merely playthings for men.** There being no essential differences between men and women as human beings, women are not regarded any differently than men when it comes to work or to holding office.

By the very name of it, we know that in One World there will no longer exist such private divisions as the old states. **Over all the globe, the public government holds authority, while most of the actual administration of government is in the hands of degree governments and local self-governments.** In the public government there is the public parliament, to which members are elected by each of the degrees. The public parliament consists of an upper and a lower house,[1] but there is no higher officer such as a president. Besides the public parliament, there are the various ministries. The degree governments are semi-autonomous in operation, and their organs are similar to those of the public government. **The degrees are units based on arbitrary division of the globe’s surface into areas of measurement and have no other significance. They are a practical way to solve the problems of administration and elections, and are not, therefore, sovereign political entities.** The local self-governments comprise the individual farms, factories, and stores. They are pure democracies, through their local councils in which every person has the right to express his views. **On all levels, questions will be decided by public discussion and voting. Thus, there will be no political leaders, no political parties, and no individuals holding arbitrary legislative or decision-making powers.** High office, in One World, is more a matter of honour than of actual authority. The governments of the various levels exist for only one purpose: to assure equality and efficient planning on a world-wide scale.

If one has noticed the absence of the judicial branch in our One World government, this is not an unintentional omission. For such will be the favourable social environment in this time that crimes and punishments will have been abolished. It is as a result of the conditions of the environment that men are forced into crimes, **so that when the environment is favourable, criminal behaviour will automatically cease.** Anti-social behaviour is treated in this age by what is called dishonouring the name. A more severe punishment is to hold the offender ineligible for office. **Only in the case of such heinous crimes as abortion (heinous because its wholesale practice would endanger the survival of the species), or plotting to revive old institutions like the State or military force, would there be punishment by imprisonment.**

Life as lived in One World is pleasant for all. **Machines have done away with long hours of toil, and everyone has ample leisure time.** The people of this time love to travel, and can do so with comfort in vehicles travelling on land, sea, and in the air, propelled by electricity, or perhaps by some new fuel. **The climatically unsuitable regions of the earth have been evacuated as areas of habitation, and**

the public institutions are situated in the most healthful and pleasant locations. In these institutions, as well as in the various farms, factories, and stores, the people live on a communal basis, and everything is provided for them in the way of recreational and educational facilities, as well as gardens, zoos, and the like.

With life so secure in every way, and the public institutions providing every social benefit, will our citizens not become lazy, and may not this system degenerate? With no outlet for the competitive drive in business, politics, or military activity, how can this world continue to progress? The answer is that the competitive drive has been channelled into constructive action. **The honours and rewards of this society are given to those who help to advance the arts and sciences of civilization, and to those who are outstanding for their *jen* (which, if we must have a translation, let us here render as goodness).** The striving of men of this age is for constant betterment of civilization, and to encourage it there are awarded both honours and cash. (The latter is to free them entirely from other considerations so that they can devote all of their energy to additional work in the service of civilization.)

Supreme in this time is the science of medicine. The medical authorities are the ones to whom the lives and health of all are entrusted, and they have the final say in every phase of life, from supervision of the public institutions to approval of building construction. **Medical science has eliminated infectious diseases, and indeed there are few persons in the public hospitals except for those injured in accidents and for the aged who are dying.** The latter may be mercifully put out of their sufferings if it is agreed by the physicians that there is no hope of recovery. To such an extent is the health of all persons guarded that a daily physical check-up is provided.

The power of the medical people being so great, it is necessary that we be watchful for the rise of some medical Napoleon, who might gather together a great following, and become a world ruler. And the possibility of any person being idolized and thus heading a great following is one of the few real dangers to One World. We do not permit the formation of political parties, of medical parties, or even of religious parties. **The idolization of an individual and the formation of a group which follows him faithfully would be a sure way to bring an end to One World, as it would inevitably give rise to inequalities and other evils of the Age of Disorder.**

For all human beings are entirely equal in this time. The races have become blended into one great race. Women and men are not distinguished even by the clothing they wear. Government officials are merely citizens who, having demonstrated their superior knowledge and *jen*, have been chosen by their fellow-citizens to occupy positions of honour. **And in One World, so far as it is possible, *jen* is extended even to the birds and beasts. However, there is a practical limit to this extension: the limit is reached when it becomes a choice between perfection of *jen* or the survival of the human species.** Since man must live, he cannot help but kill both those creatures dangerous to him and those creatures which are inadvertently trampled on, or breathed in. **But all other creatures are kindly treated. The eating of meat is no longer a human practice.** The most intelligent animals (monkeys) are even trained as servants.

Upon the attainment of this One World of Complete Peace-and-Equality, the ideals of Confucius have been realized. **The religions of Christianity and Islam have been left behind, in the progress of civilization. The utmost 'Law of this world' is One World. There remain ahead only the studies of the art of immortality (that is, Taoism, and of becoming a buddha).** Persons who have returned to the public their twenty years of service may thereupon follow their own inclinations in undertaking such studies. **The study of buddhahood is higher than that of becoming immortal, and still higher than the study of buddhahood is the study of 'roaming through the Heavens'.** But with such studies we have left the Law of this world, and we enter another sphere.

The world of suffering: K'ang's ideas, and Buddhism

The title of the first part of *Ta T'ung Shu* tells us in itself what impelled K'ang Yu-wei to write the book. It has also given rise to such statements as that he merely borrowed this idea from Buddhism and is not, therefore, original.[2]

> **2 Ch'ien Mu, in an otherwise able study of K'ang's thought, thus disparages the originality of *Ta T'ung Shu*. He also sees nothing but a simple borrowing from Chuang Tzu (in the completely pleasure-centred ideal of K'ang's thought), and from Mo Tzu (in the ideal of universal love).** (See *History of Chinese Scholarship during the Last Three Hundred Years*, p. 664.) One is struck, in reading criticisms of *Ta T'ung Shu*, by the fact that so few of the critics seem actually to have studied the work!

...

In a word, K'ang is completely Confucian, rather than Buddhistic, in his attitude towards the problem of suffering. And he transcends the Confucian attitude in that he looks beyond Chinese society to embrace the whole world—even the universe—in his scheme of things.

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#66.36

The jungle of the world: I shall also flee from it; I shall practise the Brahmins' [Way] of immuring oneself in a snowy cave so as to purify the soul (*ching-hun*). But if all men abandoned their families and immured themselves, then it would not be [more than] several decades before the civilizations of the whole earth would revert to a world overgrown by grasses and trees and [dominated by] the birds and beasts. Still less could I bear to bring [such a state] to pass!

How about the living creatures on Mars, Saturn, Jupiter, Uranus, Neptune? I have absolutely no connection [with them]; they are too distant and obscure to expect it, I wish to love (*jen*) them, [but] they are so far off I have no way to do it. The size of the fixed stars, the numerousness of the galactic clusters, the nebulae and the globular clusters, the aspect of all the heavens, my eyes themselves have seen, and my spirit has often roamed among (literally, with) them. **Their states, men and women, codes of social behaviour (*li*), music, civilized pleasures, and their ways, [must be] vast and boundless.** In the heavens as among men: although I have no way to see them; yet if they have creatures possessed of knowledge, then they will be no different in nature than we humans of [this], our earth.

In my roaming through the heavens I have imagined all the worlds of uttermost happiness; I have imagined all the worlds of uttermost suffering. The happy I have been happy with; the suffering I have [sought] to save. Being that I am a creature of all the heavens, would it be better if I could abandon the world and the heavens, cut [myself] off from my kind, flee from the social relationships (*lun*), and be happy all by myself? Those whose perceptiveness and awareness is small, their loving-mind is also small; those whose perceptiveness and awareness is great, their *jen*-mind is also great. **Boundless love goes with boundless perceptiveness. The size and amount of love and perceptiveness are in ratio to each other.**

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#86.20

Now when states are autocracies, it is natural that they are self-centred, and it is difficult to unite them [with other states]. But if they are democracies, then federation is easy. This is because people only seek profit and benefit for themselves, and so when Good men advocate the pleasures and profits of One World it naturally accords with men's minds. The general conditions having been initiated, men will hope for it just as [naturally as] water flows downwards. Hence the arising of democracy, the flourishing of constitutions, the talk about unions (? labour unions) and communism, all are the first signs (literally, sounds) of One World.

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#pt2.3

Japan was formerly feudalistic, having its Imperial House, its nobility, its feudatory lords, its knights, and its commoners. It rather resembled the [Chinese society of] the Ch'un ch'iu period (722-481 B.C.). Since the Restoration (1868) there has been a clean sweep, and therefore Japan has been able rapidly to become strong. At present, Egypt, Turkey, Persia, and Russia have their royalty, their great priests, their hereditary nobility, their commoners, and their slaves, [comprising their] five classes. Hence, the Turks are weak; and Russia, even though outwardly strong, is internally inert.

The people of America have attained equality. There is no monarch, but a president. **Since Washington established the Constitution, hereditary nobility has been regarded as seditious [*sic*]. Although there are great priests, they cannot hold office or interfere in public affairs.** [When] Lincoln freed the negro slaves, a war was fought over it, strongly contested and with much bloodshed. As a result [of this war whereby the slaves were freed], all of America's people are ordinary citizens, and have attained equality. **Even though negroes are [still] not treated equally, [America] is still the harbinger of the Era of Increasing Peace-and-Equality.** Therefore [America] is most tranquil, strong, prosperous, and happy.

China, during the Ch'un ch'iu period and before, had a feudal, hereditary nobility. The lords inherited their states, and the lesser nobles also inherited their fiefs.[1] **... At that time, even though it was not as bad as India, it was quite like medieval Europe and pre-Restoration Japan. Confucius originated the idea of equality.** [He] made clear the unity [of the Empire] so as to do away with feudalism, and derided the [institution of] hereditary nobility so as to do away with heredity of office. [He transmitted the ancient] assigned-field system[2] [so as] to do away with slavery, and wrote (□)[3] the constitution of the *Ch'un Ch'iu* so as to put a limit to the

monarch's powers. **[He] did not exalt himself [to] his followers, and [he] rejected [the authority] of great priests. Hereby caste was completely swept out from Chinese institutions.** Everyone became a commoner; anyone could [rise] from common status to be ennobled, to be a minister of state, to be a teacher or scholar; anyone could aspire to official advancement, could 'show his stuff'.[4] The evils of caste did not exist. **Verily this was the remarkable accomplishment of Confucius, and he did it two thousand years before [it was done] in Europe. [That] China has been stronger and more flourishing than India is entirely due to this.**

However, even though the prince's authority be exercised with principle, yet we have not done away with autocratic rule; **even though Kuang Wu[5] had employed the ideas of the Confucian teachings and manumitted the slaves,[6] yet an endless [number] have been given over [to be slaves in] the households of the wealthy since Ming [times].** And [persons bearing] the name of prostitute, beggar, or boat-dweller,[7] are still not able to be fully equal citizens; while the restrictions on women have not been relaxed. [These] three [types of inequality] not having been amended, the ideal of equality has not yet been fully realized, and ignorance and weakness follow thereupon. **However, the freedom of males has been attained.**
...

India's race and caste laws are the worst. Therefore, its many... races and castes should be scoured out and expunged, and all be made equal. [They should] first encourage the opening of occupations [to all]; and then universal intermarriage should be fostered. [This] transforming [process] having gone on for a long time, equality will become customary, and after that we may hope for complete unity.

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#140.1

I have seen my countrymen who have been a long time in England or Australia and sometimes those living in this country who have skilfully selected their food and drink, who have been able to adopt those Western methods which are conducive to good health; their faces were as if dyed a deep red, like the Europeans. **Suppose they went about a great deal in the sun, absorbing its rays, travelling and dwelling in places swept by the wind, drinking in the air;** [suppose that] in addition there were two or three generations of interracial propagation, a certain amount of moving of southerners to the north, and a removing of mountain people to the littoral. **Within a hundred years the people of the yellow race all would gradually become white, and in addition these races would have been able naturally to join and smelt. Therefore, before One World has been perfected, the yellow people will already have changed completely into white people.**
...

Men's appearance and colour and bodily characteristics are due in part to race, in part to adaptation to environment, in part to weather, in part to food and drink, daily behaviour, housing, and exercise. [These factors] are mixed together, combined, and then [the various characteristics] are produced. (The changes which are brought about by these factors can be noted in the case of the American Indians, who were originally of the same stock as the Chinese. Examples of the argument are adduced. The case of a Chinese child taken to live with a white family in Canada is mentioned—whether an actual or hypothetical case is not clear. **By the age of seventeen or eighteen the child is ruddy complexioned and strong like the whites, because he has also eaten meat, has been out in the sunshine and fresh air, has gotten lots of exercise, etc.** The Chinese will come to resemble the Westerners in appearance by another hundred years through adopting these healthful practices, and especially since intermarriage will certainly become a common occurrence.
...

In order to put a stop to the source of propagating the black race of the tropical zone, the negroes [who have dwelt] there from of old will all be moved to Canada and to the thirtieth and fortieth degrees south of Brazil in South America.[5] For one thing, this will fill the empty [lands], and for another it will transform their appearance and colour. Perhaps their best [people] might be moved to the [regions] at the fortieth, fiftieth, and sixtieth parallels by the Baltic Sea, the North Sea, and the Black Sea. It will be necessary to use the power of the One World public government to transfer them. **Those of them that are wealthy and able to move will be encouraged to do so; those of them that are poor and unable to move will be helped to move. We must bring about that they do not remain from generation to generation in these tropical regions to transmit to successive generations this bad race.**

The Method of Mixed Marriages

Their localities having been transferred, [the brown and black people] will then live mixed in with yellow and white people. Thereupon rules will be formulated to encourage mixed marriages. **All [yellow and white] men who can mate with brown and black women, and all [yellow and white] women who can mate with brown and black men will have conferred on them the decoration of 'person of *jen*',[6] and will [be treated with] a special kind of etiquette.** Then there will be many who will intermarry, and the races will easily be transformed. The name of the decoration will be 'race reformer'.

It may be said: by taking people of the superior races and crossing them with people of the inferior races, might we not expect it to cause the superior race to revert and become inferior? [I] say, no harm will be done. **Reckoning a thousand and several hundred years hence, there will not be many brown and black people left. Throughout the whole world there will only be the yellow and white peoples.** Taking it that there are numberless [persons of the] good yellow and white races; if they contract mixed marriages with one or two persons of the bad brown and black races, then the one or two of the inferior races are few, and forthwith there are the numberless [persons] of the good races to rectify and redress this...

The Method of Improving Food

(The kinds of foods eaten, and the preparing of them, influence the bodily shape and colour and odour. **When we can bring about that the people of the coloured races eat the same foods, properly cooked, as the yellow and white races, then they will eventually become yellow or white themselves.** We should not let the example of the negroes in America cause us to doubt this; they have had countless generations of their old ways handed down before they began to live like the whites, and we cannot expect their bodily odour to be changed in a few short generations. **But after many generations they will assuredly be changed and be as sweet as the white and yellow races.**)

Race Reformism

(The brown peoples, although inferior in appearance and intelligence, can yet be changed and smelted into yellow and white without too much difficulty by the methods above described. **This should be possible within two or three hundred years.** The black peoples, however, are a really difficult problem, owing to their extreme ugliness and stupidity. Promoting mixed marriages with them is next to impossible. **The only solution is to remove them wholesale to Canada, Sweden, and Norway, to occupy the empty lands there. This, plus improving their food and clothing, will result in their becoming brown after two or three hundred years.** Thence, they could continue to merge into lighter shades, through these methods as well as the mixed marriages encouraged with the browns. Thus, **in from seven hundred to a thousand years the blackest African negroes will be transformed into white persons.** By the time we have our One World, the people of all the earth will be of the same colour, the same appearance, the same size, and the same intelligence. This will be complete union—*ta t'ung*—of human races.

(Those brown and black people whose natural dispositions are too evil, or who have diseases, will be given drugs to make them sterile...)

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#151.1

(This is the way of savages, and not according to universal principles. And even the so-called Good men have not helped to alleviate this situation. **Now, when we consider the earliest societies, it is certain that it was women, and not men, who discovered and originated all of the arts and crafts of civilization. This is because the men were hunters, who had no time to sit at home, thinking, and finding new methods of doing things.** So it must have been the women, who stayed at home, who originated such techniques as cooking, agriculture, house-building, weaving, silk-making, clothweaving—and including the fine arts, music and writing—**while men were still brutes who spent all their time and energies in the hunt. We can see the same principle in history, when we think of strong and weak countries, such as the Mongol Empire as compared with the Six Dynasties and the Southern Sung): 'Civilization is always [highly developed] in weak states, and not in strong countries.'** (It is a shame that in our day, when the world is moving towards civilization generally, women, who originated the basic arts of civilization, are still subordinated just because of men's greater strength.)
...

Now the strict guarding of women's chastity and the separation of men and women is based on the desire to keep clear the line of descent of the family through the sons who will carry on the family name. In the Age of Little Peace-and-Happiness, the clan and religious systems all derive from this necessity to establish and preserve the family. Without the family, everyone would indulge his own desires. Without it we would return to the ways of the ancient savages, in which men and women mate indiscriminately, there is no way to establish the family, religion, or culture, and people are like animals. Furthermore, it was necessary to establish the family to protect the children. The life of savages, with its constant demand for men to fight and hunt, automatically creates a condition in which men are strong and women weak; **when religions and governments were started, it was thus the men who already had the power.** Moreover, through being used to repression for so long, women came to acquiesce in it, and to consider it right.

(**In ancient times descent of name and rank and property was matrilinear, as we can see from looking at many savage peoples today.** The reason was because of the indiscriminate mating of men and women; therefore, a child knew its mother, but not its father. In time this situation changed, as the matrilinear system did not serve the development of society as well as the patrilinear. **The patrilinear system thus enabled civilization to progress, but at the same time it was the cause of the inferior status of women.**

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#pt2.6

(While there are no nations which do not have the social relationships in varying degrees, China has extended them the most. **Thus, the honouring of ancestors, and the various charitable and social institutions carried on by Chinese clans even in foreign lands, are unmatched by other peoples. This is the reason the Chinese now form a third of the world's population;** it is due to the extended family and clan system enacted by Confucius for the Age of Disorder, which is very conducive to propagation and to consolidation into groups of like kinds. This is a great accomplishment of Confucius. The Westerner's home is where he happens to be; the Chinese always retains his ancestral home, even though he be away from it. **Thus, the Chinese system is the ultimate development of the family.**)
...

On [the Fact that] if We Wish to Attain One World of Complete Peace-and-Equality, We Must Abolish the Family

NOW, we desire that men's natures shall all become perfect, that men's characters shall all become equal, that men's bodies shall all be nurtured. [That state in which] men's characters are all developed, men's bodies are all hale, men's dispositions are all pacific and tolerant (? literally, broad), and customs and morals are all beautiful, is what is called Complete Peace-and-Equality. But there is no means whereby to bring about this Way [and yet] to eschew abolishing the family. **Thus the family is a necessity of the Ages of Disorder and Increasing Peace-and-Equality, but is the most detrimental thing to [attaining] to the Age of Complete Peace-and-Equality.** To have the family and yet to wish to reach Complete Peace-and-Equality is to be afloat on a blocked-up stream, in a sealed-off harbour, and yet to wish to reach the open waterway. To wish to attain Complete Peace-and-Equality and yet to have the family is like carrying earth to dredge a stream, or adding wood to put out a fire: the more done, the more the hindrance. **Thus, if we wish to attain the beauty of complete equality, independence, and the perfection of [human] nature, it can [be done] only by abolishing the state, only by abolishing the family.**

On [the Fact that] to Leave the Family is to be Ungrateful, and would [Lead to] Annihilation of the [Human] Species; [hence] It Cannot [be Done]

(**The 'Brahmins' seek for this complete equality, independence and perfection of human nature through leaving the family and abandoning the world.** However, this practice violates the principle of requiting the favours done us, since the parents are given no return for their having given birth and nurture to such a person.) **I genuinely respect, but differ with, the subtlety and profundity of Buddhist principles.** And as to the turning of the back on the parents and fleeing, the not repaying the debt of the early [years], but instead planning [only] to take and use [for oneself]: [as to these ideas], I shall always consider them to be impossible. Moreover, civilization in the world is actually dependent upon mankind for its extension. Should mankind decrease, then intelligence would likewise diminish, and [the world] would revert to savagery. **Still further, by prohibiting intercourse between men and women, the human species would be cut off.** If we [followed] this path, then of the one-and-a-half billion human

beings on this earth, in not more than fifty years the human form would be completely extinct. After a hundred years... the whole earth would have [on it] only shrubs and forests, [with] only birds, beasts, and insects throughout its length and breadth. This is not only a thing that we cannot [allow] to happen, but is also certainly a non-existent principle... [Considering in this manner what it involves], this may be one Way, [but] it is not [the Way] that the bulk of mankind will universally consent to.

On the Good Method of Abolishing the Family and Making the World Public

Now [supposing] we desire to abolish the family and attain to Complete Peace-and-Equality, and yet also cannot bear to cut [ourselves] off from parents and spouse, for the preserving of our humaneness; then by what Way can we achieve this? **K'ang Yu-wei says there is a Way to get there. Gaining it will be gradual; [we must proceed] in orderly sequence to perfect it. [This Way] can bring about that men will have the happiness of having abolished the family without suffering leaving the family.**

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#221.13

Now the barbarous ages esteemed simplicity,[13] the Age of Complete Peace-and-Equality will esteem refinement.[14] Esteeming simplicity, [we] therefore value agriculture; [given] sufficient food, this is enough. Esteeming refinement, [we] therefore value industry. [**Whatever] is wonderfully rare, extraordinarily beautiful, startling as demons and spirits, new every day without end, then [these things] are what human nature likes.**
...

Therefore, **in the barbarous ages, industry was the humblest [occupation], the [occupation employing] the fewest; and industry was shabbily treated.** In the Age of Complete Peace-and-Equality, industry will be the noblest [occupation], those who are workers will be most numerous, and industry will also be the most generously treated.

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#250.30

Now in universal principles originally there is no 'good' or 'evil'. [Our concepts of] right and wrong are all according to what the sages have constituted. The Buddhist Law proscribes fornication; hence, that Confucius had a wife was a transgression against [this] proscription, and he should be cast down into hell. Confucius said that to be without posterity is the gravest unfiliality; hence, the two religious leaders, Buddha and Christ, likewise transgressed against the proscription [laid down by Confucius]. The Lotus [School][32] produced Shinran,[33] and [he and] Martin Luther publicly founded new teachings (or, religions) within the bounds of Buddhism and Christianity, and carried on fornication; but the world likewise did not [consider] them to be wrongdoers—in fact, there were many who followed them...
...

In the Age of Complete Peace-and-Equality, men and women will be equal, everyone will be independent, everyone will be free. There will be no differences of dress. In the holding of positions [men and women] will be entirely alike. There will be no return to the distinctions between men and women. **[So] if we are talking about sexual relations, then the intercourse of a woman with a man, or of a man with a man, will be the same thing.** At this time people will be completely content; we [need] not fear that mankind will not be numerous, or be overly anxious [about continuation of the species]. **Those who take delight in intercourse [with each other], regardless of whether it be a man and a woman, or two men, will always go to the official [in charge of these matters][34] and make their contract, so as to avoid other disputes.**

https://xinxingren.gen.nz/neoclassics/KangYouwei_1958.html#pt2.9

(Therefore, although the Hindus and Buddhists are the best of men because of their prohibitions against killing even insects, their Way cannot be carried out at present. **The Way of Confucius is a progress in three stages: loving one's kin, loving all people, and finally loving all creatures. The stages correspond [of course] to the Three Ages. Though this Way is not as *good* (*jen*) as that of the Hindus and Buddhists, it is *practicable*.** The final stage will be possible of attainment because, in the One World era, substitutes will be developed for animal meat. The people of that age will loathe animal meat, and thus will of their own accord abstain

from killing animals. **They will look upon their domestic animals as people of today look upon their servants: they will pity and love them and take care of them, while using them.**

https://www.researchgate.net/publication/232859870_Utopias_of_Reconstruction_Chinese_Utopianism_From_Hong_Xiuquan_To_Mao_Zedong

Kang was a strong believer of the Hua-yen philosophy of Mahayana Buddhism. "Central to the Hua-yen world view," according to Hao Chang, "is a radical vision of undifferentiated oneness that precludes any dualistic mode of thinking, including the dualism of this world versus the other world."[15]

https://www.marxists.org/reference/archive/mao/selected-works/volume-5/mswv5_43.htm

What strikes terror into their hearts is precisely what makes the revolutionary masses jubilant. "Unprecedented in history" -- that's correct too. **Except for the revolution which replaced the primitive communal system by the slave system, that is, a system of non-exploitation by one of exploitation, all revolutions in the past ended in the replacement of one system of exploitation by another, and it was neither imperative nor possible to do a thorough job of suppressing counter-revolutionaries.**

https://link.springer.com/article/10.1007/s41111-016-0014-2

Li Shenzhi, one of the most prominent Chinese IR scholars in the last century and the former president of Chinese Academy of Social Science,5 declares in his article "Globalization and Chinese Culture" in 1994 that **"a vulgar nationalism, is totally against the trend and spirit of globalization as well as Chinese tradition… The traditional Chinese idea is 'Tianxia Zhuyi' but not 'nationalism'"** (Li 1994, 7-8).
…

Confucian cosmopolitanism, however, developed in a different background. **It did not appear and develop following the change of the world. On the contrary, it pursued an old universal world order against the emerging new system of independent states.**13
…

However, unlike the Greeks' conception, the barbarians in the eyes of the Confucians are also covered by Tianxia. They are not, as Persians to Greeks, an absolute and external image of savages, but can be converted by and integrated into the central civilization through education. What is more, even Shun and King Wan, the two legendary ideal ancient rulers highly admired by the Confucians, were recognized as "Eastern barbarian" and "Western barbarian": "Shun was born in Chû-fang, removed to Fû-hsiâ, and died in Ming-t'iâo;—a man near the wild tribes on the east. King Wan was born in Châu by mount Ch'î, and died in Pî-ying;—a man near the wild tribes on the west. Those regions were distant from one another by more than a thousand lî… **But when they got their wish, and carried their principles into practice throughout the Middle Kingdom, it was like uniting the two halves of a seal.** When we examine those sages, both the earlier and the later, their principles are found to be the same." In other words, there is no definite distinction between barbarians and non-barbarians, what matters here is not the kinship, but the "principles" one carries out. **Such a special way is considered by Liang Qichao, an early twentieth century politician and scholar, as "a Chinese idea which was developed quite early, that the world (four seas) is a family and all men are equal"** (Liang 2010, 51).

It was difficult for Greeks in the Classical Period to imagine such a "nothing outside" world, since "the other" was essential for them to building the identity of "self" (Cf., Hall 1991; Harrison 2001; Cartledge 2002). **But a new thought appeared from the very beginning of Stoicism.** According to Plutarch, "the much-admired *Republic* of Zeno, the founder of the Stoic sect, may be summed up in this one main principle: that all the inhabitants of this world of ours should not live differentiated by their respective rules of justice into separate cities and communities, but that we should consider all men to be of one community and one polity, and that we should have a common life and an order (cosmos) common to us all" (Plutarch 1936, 329A-B).[15]

Gobineau on China: Race Theory, the "Yellow Peril," and the Critique of Modernity on JSTOR

Gobineau argued that Chinese civilization had been created by a group of Aryan conquerors from India who had brought under their heel the indigenous Malay people living there.[238] **Though Gobineau had read virtually everything written in French about China, he believed that the origins of Chinese civilization were in southern China** where he posited that the Aryans from India had first

arrived rather than the Yellow river valley which all Chinese sources regard as the "cradle" of Chinese civilization.[239]
...

Though Gobineau argued that the Chinese had been able to make some progress under the influence of their Aryan elite, ultimately miscegenation led to this elite being assimilated into the "yellow" majority, and thus the Chinese were not capable of making any further progress.[241] For Gobineau, the crucial moment occurred in 246 BC when Qin Shi Huang, the "First Emperor" unified all of the Chinese states into one.[241] He argued that **Qin had destroyed the "feudal" system created by the ancient Aryan conquerors and replaced it with "imperial leveling" that ended the Aryan elite;** Gobineau wrote "There was only this innovation, great nonetheless in itself, that this last trace of independence, of personal dignity as understood in the Aryan manner had disappeared forever before the definitive invasions of the Yellow Type [*l'espèce jaune*]".[241] As such, Gobineau argued that the Chinese were a static people incapable of change and that essentially that nothing significant had occurred in China since 246 BC and his time.[241] Furthermore, Gobineau argued that the Chinese were fundamentally a materialist people devoid of any sort of spirituality.[241] **The contrast between the Chinese ideal of a "gentleman scholar" as the supreme example of what a Chinese man should and the low social prestige of soldiers within China reflected what Gobineau disparaging saw as the materialist ordination of the Chinese.[242] By contrast, he argued that Aryans were first and foremost warriors, which, he approvingly explained, was why soldiers had such high social prestige in Europe.[243]** Gobineau wrote with contempt that because of their materialism, for the Chinese happiness was to be found in having sufficient food to keep oneself alive and sufficient clothing to avoid public nudity.[244] He did not believe in the freedom of the press as he believed that ordinary people needed to be monitored by the state, but he argued that freedom of the press was possible in China because the "exclusively utilitarian" nature of the Chinese meant unlike in the West, **there was no-one in China willing to fight and die for their ideas.[245]** Gobineau wrote that as long the Chinese population was well provided for, no Chinese "would bother to confront police truncheons for the greater glory of a political abstraction".[246]

Along the same lines, Gobineau argued that Chinese culture was "without beauty and dignity";[247] the Chinese were "lacking in sentiments beyond the humblest notion of physical utility", **and Chinese Confucianism was a "resume of practices and maxims strongly reminiscent of what the moralists of Geneva and their educational books are pleased to recommend as the *nec plus ultra* of the good: economy, moderation, prudence, the art of making a profit and never a loss".[248] Gobineau had been stationed in Switzerland early in his diplomatic career, and during his time there had developed an intense, visceral hatred of the Swiss middle class, Calvinism, and of Swiss democracy,** and his attempt to associate Confucian values with Calvinist values was definitely meant to be an insult to both.[249]

> https://en.wikipedia.org/wiki/Arthur_de_Gobineau#Reaction_to_Gobineau's_essay
>
> Summarizing Mosse's argument, Davies argued that: "The self-serving, materialistic oriental of the *Essai* was really an anti-capitalist's portrait of the money-grubbing French middle class..." while "the sensual, unintelligent and violent negro" that Gobineau portrayed in the *Essai* was an aristocratic caricature of the French poor.[79]
>
> https://www.bopsecrets.org/rexroth/essays/lamennais.htm
>
> **Like most Frenchmen [Lamennais] was completely ethnocentric. He talks a great deal about the world and all mankind, when what he really means is France and Frenchmen.**

...

Gobineau believed that China was a warning to the West of the perils of "democracy" – by which he meant meritocracy.[253] Because the Chinese state had attempted to promote education for the masses, the rule by the mandarins was meritocratic, and the exams to become a mandarin were open to all literate men, this all for Gobineau reflected the racially "stagnant" character of the Chinese.[254] Gobineau believed that the best form of government had existed in the *Ancien Régime* France with rule by a hereditary aristocratic elite in an ordered, hierarchical society. As such, Gobineau was extremely opposed to classical liberalism with its celebration of meritocracy, and he used the example of China as a warning about where classical liberals were taking the West.[255] **The supposed destruction of the Aryan elite by Qin in 246 BC was "a fact absolutely similar to what took place *chez nous* in 1789, when the innovating spirit saw as its first necessity the destruction of the ancient territorial subdivisions [of France]".[256]** About the demands of classical liberals for universal education, Gobineau wrote:

> Popular education everywhere promoted, emphasis on the well-being of subjects, complete liberty in the allotted sphere, the fullest industrial and agricultural development, production at the most modest prices, rendering all European competition difficult for the ordinary necessities of life like

> cotton, silk and pottery. These are the incontestable results of which the Chinese system can boast.[257]

Later on, in an essay criticizing the Third Republic, Gobineau wrote that most people republic meant the "chimera of liberty" via the "rule of merit", where all would be given the equal chances to rise through their abilities.[258] **He contemptuously noted that the "principle of 1789" was no different from the rule by mandarins in China, and predicted that if the republic continued to exist long enough, the French would "degenerate" down to the same level as the Chinese.[259]**

May Europe be freed from one-fourth of her inhabitants! Both she and they will experience a sensation of relief.
…

What would it matter if there was a scarcity of "hands"? Perhaps people would then recollect that they had accustomed themselves to many wants merely because it was easy to gratify them it would be sufficient to unlearn some of these wants! **Perhaps also Chinamen would be called in, and these would bring with them their modes of living and thinking, which would be found very suitable for industrious ants. They would also perhaps help to imbue this fretful and restless Europe with some of their Asiatic calmness and contemplation, and—what is perhaps most needful of all—their Asiatic stability.**

https://archive.org/details/TheCompleteWorksOfFriedrichNietzscheVolX/page/n73/mode/2up?view=theater

China is an instance of a country in which dissatisfaction on a grand scale and the capacity for transformation have died out for many centuries; and the Socialists and state-idolaters of Europe could easily bring things to Chinese conditions and to a Chinese "happiness," with their measures for the amelioration and security of life, provided that they could first of all root out the sicklier, tenderer, more feminine dissatisfaction and Romanticism which are still very abundant among us.

https://archive.org/details/completeworksrie033168mbp/page/n123/mode/2up?view=theater

127. **I am delighted at the military development of Europe, also at the inner anarchical conditions: the period of quietude and "Chinadom" which Galiani prophesied for this century is now over.** Personal and *manly* capacity, bodily capacity recovers its value, valuations are becoming more physical, nutrition consists ever more and more of flesh. Fine men have once more become possible. **Bloodless sneaks (with mandarins at their head, as Comte imagined them) are now a matter of the past.** The savage in every one of us is *acknowledged*, even the wild animal. *Precisely on that account*, philosophers will have a better chance.—Kant is a scarecrow!

https://archive.org/details/beyondgoodandevi00nietuoft/page/212/mode/2up?view=theater

267. **The Chinese have a proverb which mothers even teach their children: "*Siao-sin*" ("*make thy heart small*").** This is the essentially fundamental tendency in latter-day civilisations. I have no doubt that an ancient Greek, also, would first of all remark the self-dwarfing in us Europeans of to-day—in this respect alone we should immediately be "distasteful" to him.

https://en.wikisource.org/wiki/Page:The_Genealogy_of_Morals.djvu/50

For the position is this: **in the dwarfing and levelling of the European man lurks *our* greatest peril,** for it is this outlook which fatigues—we see to-day nothing which wishes to be greater, we surmise that the process is always still backwards, still backwards **towards something more attenuated, more inoffensive, more cunning, more comfortable, more mediocre, more indifferent, more Chinese, more Christian**—man, there is no doubt about it, grows always "better"—the destiny of Europe lies even in this—**that in losing the fear of man, we have also lost the hope in man, yea, the will to be man.**

https://archive.org/details/menacemob00meregoog/page/n30/mode/2up?view=theater **[1921]**

In the track of the "Asiatic nations, passed out of history," all Europe, with a calm, imperturbable step is marching on to this final calm of a contented ant-hill, to "the crystallization of bourgeoisie," to Chinafication.

Hertzen agrees with Mill: "If some unexpected upheaval, which shall regenerate human individualism and give it strength to conquer bourgeoisie, does not occur in Europe, then, regardless of its noble antecedents and its Christianity, Europe shall become China."

…

In Europe positivism is only becoming a religion, in China it has already become one. **The spiritual foundation of China – the teachings of Lao-tse and Confucius – is a perfect positivism, a religion without a God,** "an earthly religion, without a heaven," as Hertzen expresses himself about European scientific realism. There are no mysteries of any sort, no depths and longings for "other worlds than ours." Everything is simple, everything is on a plane. Insuperable common sense, insuperable positiveness. All that is, is; and there is nothing more, nor need for anything more. **This world is all, and there is no other world save this. Heaven is not the beginning and the end, but a continuation, without beginning or end, of the earth. Earth and heaven shall not be one, as Christianity affirms, but *one substance*. The greatest empire on earth is verily the Celestial Empire, the Heaven on earth, the Median Kingdom** – the kingdom of the eternal mean, of eternal mediocrity, absolute bourgeoisie, "a kingdom not of God, but of man," as Hertzen, once more, defines the common idealism of positivism.
…

Christianity – the old Semitic yeast in the Aryan blood – **is verily just that which does not let it settle definitely, interferes with the final "crystallization," the Chinafication of Europe.**
…

That is where the chief "yellow peril" is – not without, but within; not in that China is going into Europe, but in that Europe is going into China. Our faces are still white; but already under the white skin flows not the former rich, crimson Aryan blood, but a "yellow" blood, thinner and thinner, resembling Mongolian ichor; the slit of our eyes is straight, but the outlook is beginning to slant and narrow. And the direct white light of the European day is turning into the oblique "yellow" light of the Chinese setting sun, or the Japanese rising sun. At the present time the Japanese seem to be the dressed-up apes of the Europeans; who knows but that, in time, Europeans and even Americans may seem the dressed-up apes of the Japanese and Chinese, incorrigible idealists, romanticists of the old world, who only pretend to be positivists, masters of the new world. **It may be that the war of the yellow race with the white was only a misunderstanding: kin did not recognize kin. When they shall recognize each other, however, war shall end with peace, and then there shall be "a peace of all the world," the final calm and quietude of heaven, the Celestial Empire, the Median Kingdom over all the world, from East to South, the final crystallization, the bee-hive and ant-hill of all mankind,** the solid "compressed spawn" of bourgeoisie encrusting the earthly sphere, – and not even bourgeoisie, but the *canaille*, because bourgeoisie having reached its limits and come into power is the *canaille*.

"Ponder upon it," we may conclude these reflections, as Hertzen concluded them formerly, "ponder upon it, and your hair will stand on end."

---

https://biblehub.com/proverbs/6-6.htm

6 **Go to the ant, thou sluggard; consider her ways, and be wise:** 7 **Which having no guide, overseer, or ruler,** 8 **Provideth her meat in the summer, and gathereth her food in the harvest.**

https://www.psychologytoday.com/us/blog/homo-consumericus/201101/communismsocialism-great-idea-wrong-species-e-o-wilson

E.O. Wilson, the two-time Pulitzer Prize winning author and Harvard entomologist, famously quipped regarding communism/socialism: "Great idea. Wrong species." Wilson spent much of his career studying social ants that possess highly egalitarian societies: All individuals are in the service of a queen (who is singularly assigned the reproductive duties of the colony). Hence, short of this one queen, everyone is "equal" in terms of say their sterile status (albeit individual ants might serve different roles and as such their responsibilities to the colony are indeed distinguishable).

https://archive.org/details/envytheoryofsoci0000scho/page/78/mode/2up?view=theater

However, **Baumgarten may perhaps have had in view something in the nature of 'royal envy.' The man of higher rank does not wish his subordinates to enjoy the same privileges. He is niggardly with supplies, which he rations so that none of his subordinates may be too comfortable.** This, too, is envy, but exercised from a position of effective power. Behaviour has

sometimes been observed which would be interpreted as revealing this kind of envy: the higher-ranking animal, although itself unable to eat any more, or satisfied sexually, denies both food and partner to lower-ranking animals. **It is as if it were saying: 'If I've got to stop, there's no reason for you to go on enjoying yourselves.'** This behaviour, seen from the point of view of developmental psychology, certainly contains an element of envy.
…

For instance, **we regard it as the expression of a sense of social justice when a strong man spontaneously goes to the assistance of another who is being attacked by somebody stronger than the victim but weaker than the rescuer.** Such 'noble' behavior can be observed notably in school playgrounds, in groups of children and among siblings, but also in certain groups of adults and among strangers. Now where the case is one of defending the weakest in the group so that he may not go short of food, it is even more applicable to the matter under investigation: **Why does the stronger one, who is in any case well provided for, bother about securing enough for the weaker or weakest one, who is not even a member of his own inner group? Before considering pretentious terms such as 'sympathy,' 'egalitarian justice,' 'compassion' or 'nobility,' it might be worth taking a look at animals.**

Many years ago Konrad Lorenz mentioned behavior on the part of animals that was analogous to moral conduct. **For instance, he describes the strict order of precedence that obtains in all jackdaw colonies: if any two jackdaws quarrel, a third, their superior in rank, intervenes with reflex-like authority on behalf of the lowest-ranking combatant.**

> **In the jackdaw colony those of the higher orders, particularly the despot himself, are not aggressive towards the birds that stand far beneath them: it is only in their relations towards their immediate inferiors that they are constantly irritable;** this applies especially to the despot and the pretender to the throne – Number One and Number Two.

Hence, what appears to us to be chivalry is in reality an innate reaction which does, of course, function in the preservation of the species. **It also, however, secures the position of the animal which happens to be stronger against those which, for time being, cannot assert themselves against him and so direct their aggression towards those beneath them.**28

> 28. K. Lorenz, 'Moral-analoges Verhalten geselliger Tiere,' *Universitas*, 11th year, 1951, p. 548.

http://laurabetzig.org/pdf/RomanMonogamy.pdf

I think there's plenty of evidence that Romans were not at all reluctant to raise lots of *illegitimate* children – especially by their slaves (Betzig, this volume). **Augustus, however, did not reward fathers for rearing bastards, in fact, in the *lex Papia Poppaea* of AD 9, illegitimate children were explicitly kept off the birth register** (e.g., *Digest* 27.1.2.2-3, 50.5.2.5, see Rawson 1989 24, 28). **What the emperors wanted was that Romans rear more *heirs*.**

That's what they were reluctant to do. Objections to, demonstrations against, and circumventions of the "moral" laws are alluded to in Livy, Horace, Ovid, Pliny, Martial, Juvenal, Tacitus, Suetonius, and Cassius Dio, to name a few. To get the laws passed at all, Augustus had to go around the senate to the tribal assembly (Mommsen 1955) Why? I think Roman fathers, like fathers across empires, *limited* the number of their heirs in order to *raise* the inheritances they left them. I'm not the only one to think so. **As early as the second century BC, Polybius, a Greek historian in Rome, said people were reluctant to raise more than a few children "so as to leave them in affluence," as late as the fourth century AD St Augustine said "fertility is a bother to wealthy people," meaning a limited *hereditas* would get split up** (Polybius, *Histories*, xxxvi.17.7, Augustine, *En Psalm*, 137.8, in Shaw 1987a, 43)
…

As Theodor Mommsen put it in his *Romisches Strafrecht*, they were "one of the most intrusive and long-lasting creations in criminal law in all history" (Mommsen 1955, 691, translated in Cohen 1991, 124).
…

Still Augustus' law – the *lex Julia de adulteriis* of 18 BC – was, again, apparently "revolutionary." **It was the first surviving Roman legislation addressed to infidelity, and it ran contrary to the republican norm that the state should stay out of its citizens' homes** (see Cohen 1991, 110, Treggiari 1991a, 293). Fragments from at least five of the nine chapters of the *lex Julia de adulteriis* survive.

According to the second chapter, a father had the right to kill his daughter's lover – provided they were caught in the act, in his own or in his son-in-law's house, **and that he kill his daughter at the same**

time. According to the jurist Papinian, most of that law reiterated a right older than the Roman republic, "<u>the novelty was in ordaining that both should be killed</u>" (Treggiari 1991a, 283). As Jane Gardner points out, "the requirement to kill both was likely to be a deterrent to killing either," that "may have been Augustus' intention" (1986, 130).

A husband was much more constrained. In the first place, **according to the *Digest*, while the father could kill an adulterer regardless of his status – he might even kill an ex-consul – a husband could just kill pimps, lictors, gladiators, condemned men, family freedmen, and slaves.** As Treggiari points out, "calculations about the status of the *adulterer* would be difficult to make in the heat of the moment" (1991a, 284). The killing was to be reported to the magistrate within three days, the status of the adulterer and the fact of adultery proved, in order for the husband to be cleared of homicide. **Even more to the point, a husband could *not* legally kill his adulterous wife** – though he might get off with hard labor or relegation, instead of death, if he did. A man who caught, but did not divorce, an adulterous wife could be charged with pandering if he let her lover go. **And a man who had killed his wife's lover was compelled to divorce his wife at once.** He could prosecute her for adultery within sixty days, but not without divorcing her first.
…

Some Christian Romans were "Orders of widows" were common from the first century, **the first "convent" in Rome was in a rich widow's house, and by the Middle Ages cloistered widows – the cloistered virgins – tended to come from the upper class** (e.g., Brown 1988, 147-148, Drijvers 1987, 24-28, Rouselle 1988, 133). Powerful men have tried to keep ex-wives from finding second husbands. **What was the fear here? That an inheritance would end up in step-children's hands.**
…

But Augustus made widow remarriage mandatory. **And he limited his prescription to women of childbearing age.** In fact, postmenopausal women were not *allowed* to remarry, since legal marriage took place "for the purpose of producing children" (Rawson 1986, 10). Stipulations in wills making succession contingent on the celibacy of an ex-spouse had to be expunged (Csillag 1976, 87). Under the *lex Julia*, widows were punished unless re-married within a year, the *lex Papia Poppaea* extended the period to two (e.g., Treggiari 1991a 73). Widows who failed to remarry might lose their dowries to the treasury (e.g., Csillag 1976, 94). Once again, **"there was probably never an attempt to enforce this in the lower classes"** (Rawson 1986, 31).

…

I think the point of Augustus' moral legislation was to sabotage the aristocracy. He made it harder for a rich man to get a rich spouse, to keep her faithful, to leave his estate to a single son and, to a lesser extent, to choose a back-up heir. Later Roman emperors stuck with those enactments, with modifications and additions, for more than three hundred years. What was the result? In Csillag's opinion, **"the historical aristocracy began to wither away. The huge latifundia disintegrated into parcels in the course of the proscriptions"** (1976, 67, cf. Hopkins 1983, Garnsey and Saller 1987, 145-155). **<u>The alphas – Roman emperors, strengthened their power by weakening the betas – the Roman aristocracy.</u>** As Syme and others point out, that may have been done in many ways. One of the most "intrusive and long-lasting" must have been the "moral" legislation.

Significantly, it all changed with Constantine's conversion. In AD 320, the first Christian emperor repealed the Augustan legislation on *caelibatus* and *orbitas*, on celibacy and childlessness, both holy conditions under the new state religion (e.g., Csillag 1976, 204-207). **He also restored the right to prosecute wives for adultery to the immediate family, making the husband's responsibility primary, calling husbands "the avenger of the marriage bed" in the Theodosian Code** (e.g., Cohen 1991, 125, see too Cantarella 1991, 234). And he abolished the law requiring that widows remarry, in fact, by the end of the fourth century widows had by law to yield rights to their first husbands' patrimonies. **If they remarried, to church fathers, remarriage banned women from the kingdom of heaven** (e.g., Saller 1991, 46, Dixon 1988, 50, Csillag 1976, 205).

At the same time, new penalties were introduced. Most had to do with contingency heirs. Divorce by mutual consent was abolished in the sixth century, by Justinian (e.g., Gardner 1986, 89). In 326, according to the *Codex Justinianus*, Constantine ruled against keeping a wife and concubine at the same time (e.g., Treggiari 1981, 77). Laws passed by Christian emperors, and eventually by the church itself, prohibited divorce and remarriage, concubinage, **and even adoption,** and they vastly extended the "incest" prohibition (e.g., Goody 1983). I think a lot about that shift makes sense. Imperial Roman legislation pitted emperors against the aristocracy. **The point was to disperse their wealth and influence by lowering their inheritance. That they did, most of all, by making them rear too many heirs.**
…

The point of the moral laws was to preserve the emperor's peace on the emperor's terms. **That meant an end to infighting among equals in the republican aristocracy, it meant the beginning of the imperial rule of one over many.**

Then came Aristotle and Zeno. **The former taught the syllogism, a method which displays the universals in their particulars rather than putting together the particulars to form universals. The latter taught the sorites, which, like the method of modern philosophers, makes minds subtle but not sharp. Neither of them yielded anything else of note to the advantage of the human race.** Hence with great reason Bacon, great alike as philosopher and statesman, proposes, commends and illustrates the inductive method in his [*Novum*] *Organum*, and is still followed by the English with great profit in experimental philosophy.

https://en.wikisource.org/wiki/1911_Encyclopædia_Britannica/Stoics

Some of their innovations in grammatical terminology have lasted until now: we still speak of oblique cases, genitive, dative, accusative, of verbs active (ὀρθά), passive (ὕπτια), neuter (οὐδέτερα), by the names they gave. Their corrections and fancied improvements of the Aristotelian logic are mostly useless and pedantic.
…

The zeal with which the school prosecuted logical inquiries had one practical result—they could use to perfection the unrivalled weapon of analysis. **Its chief employment was to lay things bare and sever them from their surroundings, in order that they might be contemplated in their simplicity, with rigid exactness, as objects of thought, apart from the illusion and exaggeration that attends them when presented to sense and imagination.** The very perfection and precision of this method constantly tempted the later Stoics to abuse it for the systematic depreciation of the objects analysed.

https://en.wikipedia.org/wiki/Stoic_logic#Later_reception

For around five hundred years Stoic logic was one of the two great systems of logic.[65] The logic of Chrysippus was discussed alongside that of Aristotle, and it may well have been more prominent since Stoicism was the dominant philosophical school.[66]
From a modern perspective Aristotle's term logic and the Stoic logic of propositions appear complementary, but they were sometimes regarded as rival systems.[30] In late antiquity the Stoic school fell into decline, and the last pagan philosophical school, the Neoplatonists, adopted Aristotle's logic for their own.[67] Only elements of Stoic logic made their way into the logical writings of later commentators such as Boethius, transmitting confused parts of Stoic logic to the Middle Ages.[66] Propositional logic was redeveloped by Peter Abelard in the 12th century, but by the mid-15th century the only logic which was being studied was a simplified version of Aristotle's.[68]

In the 18th century Immanuel Kant declared that "since Aristotle ... logic has not been able to advance a single step, and is thus to all appearance a closed and complete body of doctrine."[69] To 19th century historians, who believed that Hellenistic philosophy represented a decline from that of Plato and Aristotle, Stoic logic was seen with contempt.[70]
Carl Prantl thought that Stoic logic was "dullness, triviality, and scholastic quibbling" and he welcomed the fact that the works of Chrysippus were no longer extant.[71] Eduard Zeller remarked that "the whole contribution of the Stoics to the field of logic consists in their having clothed the logic of the Peripatetics with a new terminology."[72]

Although **developments in modern logic that parallel Stoic logic[73] began in the middle of the 19th century with the work of George Boole and Augustus De Morgan,[68]** Stoic logic itself was only reappraised in the 20th century,[71] beginning with the work of Polish logician Jan Łukasiewicz[71] and Benson Mates.[71]

https://www.academia.edu/363114/_How_Dialectical_Was_Stoic_Dialectic_in_A._Nightingale_D._Sedley_eds._Ancient_Models_of_Mind_Studies_in_Human_and_Divine_Rationality_Cambridge_Cambridge_University_Press_2010_153-179

[Chrysippus] became so renowned in dialectic that most people thought that if there were dialectic among the gods, it would be no different from that of Chrysippus.1 (D.L.=Long and Sedley [henceforth L&S])

The enthusiastic view reported by Diogenes Laertius has been far from unanimous across the centuries, and Stoic *dialektike* has come under the fire of many ruthless critics, both in antiquity and in modern times. The most recurrent charge has been that of empty and rigid "formalism" (in modern jargon),2 or of paying too much attention to "words" (sterile terminological quibbles and logical puzzles) rather than to the "things themselves",3 with no real improvement (and indeed some regrettable devolution) in comparison with the heights reached by its main rival, Aristotelian logic.4 **The revival of the study of Stoic logic in the twentieth century was prompted by a fresh understanding and appreciation** – inspired by the modern development of formal *Aussagenlogik* – **of those very features disparaged earlier, and in particular the rigorous and formalized character of Stoic syllogistic.**5

https://books.google.fi/books?id=OietAgAAQBAJ&lpg=PP1&hl=fi&pg=PA73#v=onepage&q&f=false

Aristotle's logic is closely connected to geometry and to space; when we contemplate a question of whether one class includes another, **the classes we contemplate are static. The classes don't change as we think about them, and, in consequence, we can represent them spatially, with geometrical figures. But there is another sort of logic that considers the changing and dynamic – and concerns our choices in life.** When we think about choosing a course of conduct, we think across time to the future, **and the reasonableness of our choice then depends on our ability to predict its future consequences.** As a result, in addition to a logic of classification as worked out by Aristotle (syllogistic logic), there is also a logic of choice and consequence (propositional logic), **which appeared about a century after Aristotle within the ancient philosophical school of the Stoics.**

The Stoics' new approach to logic came from a new imperial world, where sovereign kings had replaced the old democracies of the past and where philosophical introspection had replaced political participation.
…

Paradoxically, the shift from citizen assemblies to sovereign kings re-inforced the idea of the equality of peoples. **Both citizens and non-citizens were now *equally powerless* in the political arena; only kings and their appointees could exercise real authority. Thus the Stoics were far less prone to view some social groups as born to rule and others as born to obey.** Instead, the citizens who now concerned them were the "citizens of the world" (or, as the Stoics put it, the "cosmopolites"), and these citizens consisted of all men and women of goodwill, whatever their nationality.

This insistence on equality, combined with an emphasis on introspection, focused the attention of these thinkers on what was introspectively common to *all* peoples – citizens or noncitizens – and on what all people might discover if only they reflected quietly on their mental habits. Writers of the period became more interested in a common human nature under the "rational law," and they believed that part of this nature was to participate in an eternal realm of rational, moral choice. The key that unlocked the door to this realm was logic.
…

But the Stoics also made a further, crucial discovery: all the new forms were in some way interconnected. **Interconnection was one of their grand themes, since, according to their view, the whole world was rationally interconnected.** The law of nature ruled a connected universe, and logic revealed the implications of this law to its citizens. In consequence, when the new logical forms turned out to be connected among themselves, the Stoics pursued them with great zeal.
…

Chrysippus, leader of the Stoics at Athens from 232 onward, was the one to arrive at the key insight that all the new forms were logically interconnected. The simplest of Chrysippus's forms are highly intuitive, and you will probably recognize many of their features as already occurring in your thinking. But Chrysippus sought to connect and elaborate these forms so as to develop what logicians now call "propositional logic" (a term whose meaning we shall explain later on), **and it also turns out that this new, propositional logic runs our digital computers. (Without the sort of logic pioneered by Chrysippus, modern computer processing would be impossible.)**
…

Once we see the equivalence of these compounds, we can see the deep, fundamental connection between the disjunctive syllogism **and a world of related logical necessities, the world first explored systematically by Chrysippus.**

In essence, what Chrysippus discovered was that many or our most common methods of argument are logically tied; suitably interpreted, each is valid only if the others are. But let's look at Chrysippus's insight in great detail.

INTERLOCKING FORMS OF ARGUMENT

The explorations of Chrysippus and his followers took place about a century after Aristotle, but their consequences were never fully exploited from a mathematical perspective until the nineteenth century. (More precisely, Chrysippus saw a great many logical connections among the simple forms we have already noted, **but the specific equivalence of these forms was mostly developed in modern times** – and only when logicians interpreted conditionals in a way that made them systematically convertible into disjunctions.)17 **Still, Chrysippus plainly realized that he was once more entering a world of connected implications and symmetries – a world of related logical necessities.**
…

Until the design of digital computers, any interest in a system like this was largely theoretical; nobody needed all the manipulations of Chrysippus to handle the ordinary situations of life.
…

THE BASIS OF COMPUTER LOGIC

It all depends on the compounds we looked at a moment ago: the disjunction, the conjunction, and the hypothetical. **The first thing to notice about these compounds is how different they are from the logic developed by Aristotle. Aristotle's logic is largely devoid of compounds.** Aristotle was surely *aware* of compounds, but he didn't pick them out for extensive study. In effect, then, what we really have here (in the hands of Aristotle and Chrysippus) are two different kinds of logic. **The two kinds are by no means incompatible; they complement each other well, but they concern different things.**
…

Thus, whereas modus ponens is valid merely in virtue of how the propositions fit together (hence, the expression "propositional logic"), Aristotle's logic relies on a more complicated "logic of terms." (The validity of a syllogism turns on things *inside* each proposition, on the terms themselves. By analogy, we might say that Chrysippus's logic combines atoms into whole molecules and then traces out the implications, but Aristotle's logic goes about dissecting each atom in turn and then relates the parts of these atoms to the parts of other atoms.) It is only Chrysippus's logic, propositional logic, that translates easily into computer circuitry.
…

In particular, the two values of true and false can be represented electronically as a circuit switched on and off.25 Such circuits can then be combined in complex arrays so that, if various elements within the array are switched on, their compounds are switched on, and the compounds can then represent the logical relations of disjunction, conjunction, and the implications represented by hypotheticals. This is the basis of modern digital computing. **As the electronic elements switch on and off, the machine's behavior mimics an exceedingly complex inference in which sets of conclusions lead to other conclusions.**

With Aristotle's logic, this effect would be impossible. Why? Because the parts of a categorical syllogism represented by the variables A, B, and C aren't "true" or "false" in the first place. Instead, A, B, and C are merely names of classes (classes like "dogs," "mortals," "Athenians," or "Thebans"); they are not statements. But since the variables merely stand for classes, we no longer have the same intimate connection between the truth of the variables and the truth of the whole.

What we see as a result is a close similarity between some of our methods of reasoning and the behavior of digital computers. And though this fact is sometimes masked by a computer scientist's tendency to speak in terms of a binary code, a series of ones and zeros, the scientist's code is simply another way of expressing the same logical truths. **The code happens to come from the nineteenth-century English logician and mathematician George Boole, whose aim was to codify the relations studied much earlier by Chrysippus (albeit with greater abstraction and sophistication).** Later generations built on Boole's insights, and we shall consider in chapter 9 how these efforts eventually gave rise to programmable computers. **But the logic that made it all possible was the interconnected logic of an interconnected universe, discovered by the ancient Chrysippus,** who labored long ago under an old Athenian stoa.
…

Living in a time of vast, autocratic regimes, Chrysippus dwelled, like all Stoics, on the rational choices of individuals, and he believed human reason at its best was a form of participation in the eternal. **Assessing truth and falsity and cleaving to the laws of contradiction and excluded middle, he sought to make the life of human beings as orderly as the cosmos itself.** For Chrysippus, the eternal law of nature was the secret of the starry heavens above, and it was the moral law within. **According to an old Athenian saying, "If the gods have any use for logic, it is the logic of**

Chrysippus."27 **However that may be, the logic of Chrysippus is certainly the logic our machines.**

https://archive.org/details/in.ernet.dli.2015.186497/page/n219/mode/2up?view=theater

At this point, in the first place if I chose to agree with Epicurus and to say that not every proposition is either true or false, I would rather suffer that nasty knock than agree that all events are caused by fate; for the former opinion has something to be said for it, but the latter is intolerable. **Accordingly Chrysippus exerts every effort to prove the view that every *axiōma* is either true or false.** For just as Epicurus is afraid that if he admits this he will also have to admit that all events whatever are caused by fate (on the ground that if either of two alternatives is true from all eternity, that alternative is also certain, and if it is certain it is also necessary. This, he thinks, would prove both necessity and fate), **similarly Chrysippus fears that if he fails to maintain that every proposition is either true or false he will not carry his point that all things happen by fate and spring from eternal causes governing future events.** But Epicurus thinks that the necessity of fate is avoided by the swerve of an atom; and so in addition to gravity and impact there arises a third form of motion, when the atom swerves sideways a minimal space (termed by Epicurus *elachiston*).

https://books.google.fi/books?id=TS8hSCfmBQgC&lpg=PP1&hl=fi&pg=PA193#v=onepage&q&f=false

It is remarkable that in selecting material from [Cicero's] *De Fato* as his first illustrative example in propositional logic Boole happened to choose an important early source of information on Stoic logic, of which so little is extant. The historical value could hardly have been appreciated by Boole since it wasn't until the present century that an adequate historical understanding of Stoic logic as a propositional logic was achieved (Mates, 1953, 1961). Nevertheless Boole clearly saw that what was involved was propositional logic, not term (or class) logic.

https://ericsiggyscott.wordpress.com/2018/03/04/what-is-stoic-logic/

But if we take "logic" **in its narrow, modern sense,** then Stoic logic—the system of formal logical reasoning developed by the prolific philosopher Chrysippus in the 3rd century B.C.E.—is *uncannily similar* to the kind of logic you find at the beginning of introductory logic textbooks today. They were **way ahead of their time.**

Today, almost nobody knows much about Aristotle's syllogisms, but every computer programmer, digital circuit engineer, mathematician, and philosopher is fluent in something very close to Stoic logic.

This is because the Chrysippus developed the first full-fledged system of **propositional logic,** which is closely related to modern **Boolean logic.** If you've ever taken an Artificial Intelligence class, a Discrete Mathematics class, or some other general introduction to logic, then you've already been exposed to most of Stoic logic's key components.
…

But we don't know much more than that about Stoic logic. This is because almost everything we know about it, and certainly everything in this post, comes from **one fragment** of an ancient textbook preserved in Diogenes Laertius's 3rd-century C.E. anthology of philosophy.

The prolific works of Chrysippus, while arguably even more famous and important than Aristotle for the ancients, did not survive the decline of ancient civilization, and it was Aristotle's logic that dominated logical work in the Latin West.

Logicians didn't pick up where the Stoics left off and start developing the science of logic to new heights until George Boole and Gottlob Frege picked up propositional logic again in the late 1800's and launched the modern revolution of **mathematical logic,** digital circuits, programming languages, Artificial Intelligence, and more.

At the heart of all this, however, are still Chrysippus's good ol' **propositions.** With all that is new, Stoic logic is still doing a lot of the real work in these modern technologies.

http://www.traditionalstoicism.com/stoic-matrix/

Moving from the ancient theory of the four elements to the modern Standard Model of Matter doesn't refute Stoic theology. And, since the Stoics derived their theology from their reflections on the natural order of things, Stoic theology ought to be updated. For the Stoics, whether ancient or modern, theological progress goes hand in hand with scientific progress. So we need to update Stoic theology.

I'll start by proposing a modern definition of the Stoic God. After that, I'll tell you why I think it captures the core elements of Stoic theology. Other ways of thinking about the Stoic God are certainly possible. This modern Stoic theology is inspired by computer science. It's part of digital physics, or, more accurately, digital metaphysics. The idea is that our universe is a software process running on a hardware substratum. That substratum is a computing machine. Of course, it isn't very much like the computer I'm using to type this up. It's a computer in the sense that it performs certain abstractly

defined functions. The idea that our universe is a software process is sometimes referred to as the simulation hypothesis. But that's not quite right, because a simulation is an imitation of some original system, like a simulation of the weather. But our universe isn't a simulation of anything. It is what it is. By now you will have guessed that I mean to say that the computer is the Stoic God. Can this be defended? It can.

The Stoics drew a crucial contrast between God and matter, with God being active and matter being passive. This contrast is preserved: the activity of the divine hardware generates all the activity in the software. The software is utterly passive. The Stoics also thought of God as purely rational. Computers are logical machines. The activity of the divine computer is purely rational activity. The Stoics were determinists. Computer-generated worlds unfold deterministically. They are deterministically generated by the logic of their programming. Fate is an algorithm. The Stoic God was omniscient, knowing all that happens in the universe. The computer that runs a program can observe the program it runs. More precisely, one part of that program, the cosmic part, can be observed by another part. But this leads to another parallel. **The Stoics were polytheists. And digital theology is also polytheistic. Any complex program is divided into subroutines. The cosmic programming of our universe is clearly very complex. It is a whole composed of subroutines, and these subroutines are lesser deities.** They are not, of course, the literal gods and goddesses on Mount Olympus. But the ancient Stoics themselves rejected that idea as mere superstition.

The Stoic God is analogous to a self-programming computer. It is a hardware machine, but, like all computers, it has an operating system. Its operating system is written directly into its hardware (or, more technically, into its firmware). The operating system contains, among other features, a program for writing programs. The Stoics used the design argument to justify the existence of their God. The argument works just fine: the universe exhibits a programmatic order (expressed in the laws of physics); but where there is a program, there needs to be a programmer; therefore, there exists some cosmic programmer. This cosmic programmer just turns out to be a deeper program, written into the operating system of God. The fine-tuning argument can also be used to justify the existence of the divine self-programming machine: our universe is finely-tuned for life; if it is finely tuned, then there exists some tuner; so there exists some tuner. This tuner adjusted the parameters of our physical laws so that life would be likely to emerge. And this tuner is the self-programming logic of the divine computer.

This computational way of thinking about the Stoic God also coheres with several other aspects of Stoic theology. **The Stoic God doesn't seem to be a personal or conscious God like the Christian God. It is a kind of impersonal rationality. It is mind-like, but it might not really be a mind. So think of artificial intelligence.** The kinds of mind-like programs that have artificial intelligence (call them "artillects") aren't really minds. They can be extremely smart, but they don't have psychologies or conscious selves. **They are alien minds, if they are minds at all, and that strangeness provides a way to think about the Stoic God. Its intelligence resembles AI rather than human mentality.**

https://plato.stanford.edu/entries/chinese-legalism/#EntSov

Yet scheming ministers aside, the sovereign should beware of his own mistakes, which may be even worse than his foes' plans. **The monarch is the most revered individual, but also the weakest chain in the government apparatus.** He can be duped by his underlings, is prone to misjudge them, and his actions may frequently endanger the very foundations of political order that he is supposed to safeguard. **Hence, the thinker repeatedly urges the ruler to refrain from any personal activities, any reliance on personal knowledge, and any manifestation of personal likes and dislikes.** "He who relies on personal abilities is the worst ruler"; "When the sovereign abandons the law and behaves selfishly, there is no difference between the rulers and the ruled"; **"When the ruler has selfish kindness, the ruled have selfish desires"** (*Han Feizi* 48:432; 6:32; 45:414 *et saepe*). The ruler should refrain from any action; **echoing the *Laozi* □□, Han Fei urges him to remain empty and tranquil** (*Han Feizi* 5:27). The thinker summarizes his recommendations:

> The ruler does not reveal his desires; should he do so, the minister will carve and embellish them. He does not reveal his views; should he do so, the minister will use them to present his different [opinion]. … **The way of the enlightened sovereign is to let the knowledgeable completely exhaust their contemplations**—then the ruler relies on them to decide on matters and is not depleted of knowledge; to let the worthy utilize their talents—then the ruler relies on them, assigns tasks, and is not depleted of abilities. When there is success, the ruler possesses a worthy [name]; when there is failure, the minister bears the responsibility. (*Han Feizi* 5:27)

This is a curious recommendation: the ruler should completely nullify himself both in order to preserve his authority against scheming ministers, and to acquire—unjustly!—a good name at the minister's expense. **Yet this sovereign, who has neither desires nor observable views, becomes the ultimate slave of his office.** For the sake of self-preservation he must abolish his personality, being completely submerged by the system which he ostensibly runs. **A.C. Graham provocatively notices that the ruler in Han Fei's system "has no functions which could not be performed by an elementary computer. … Might one even say than in Han Fei's system it is ministers who do the ruling?"** (Graham 1989: 291). **This paradox of an entrapped sovereign, who enjoys God-like omnipotence, but who is required to refrain from any**

activism in order to preserve this omnipotence is one of the most fascinating manifestations of the intrinsic contradiction of the authoritarian system. When it comes from a thinker who is often described as singularly authoritarian-minded, it deserves utmost attention.

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA78#v=onepage&q&f=false

The great puzzle that Hobbes cannot explain is: Why would anyone want to become the Sovereign? Since the toils and dangers of attempting to rise to supreme power are by definition an insane goal for every human *qua* human – since we are compelled by nature to seek survival and avoid danger – how does the Sovereign achieve power in the first place? Hobbes seems to assume that these tyrants emerge like spontaneous natural forces. He envisions them as supplying the institutionalized terror that, by simulating the terror of the state of nature where the absence of government exposes us all to the daily danger of violent death, will remind every subject that no advantage to be gained from breaking the contract and attempting to tyrannize could possibly outweigh the dangers involved ([1971] p. 202). **At least one "real man" is needed to keep the "human beings" in line.**37 **But Hobbes's theory cannot account for the possibility of such a man.**

> 37. Consider Habermas (1973) p. 57: **the political absolutism of Hobbes's Sovereign is necessary to bring about the utopia of social peace envisioned by Thomas More.**

https://books.google.fi/books?id=INcgAwAAQBAJ&lpg=PP1&hl=fi&pg=PA473#v=onepage&q&f=false

It is not that [the Sovereign] must go from being a Nero to a Marcus Aurelius, the kind of transition from an exploitive tyrant to a benevolent monarch the classics would have urged (a distinction based, in Hobbes's language, on "differences in wit"), but that he must go from being a Nero *or* a Marcus Aurelius to being a kind of detached and invisible manager. **Indeed, his method of ruling could arguably be best carried out by an impersonal mechanism** – say a constitution that, through checks and balances, retards political ambition by sluicing the people's passions into three mutually impeding branches of government – **rather than a flesh-and-blood human being at all, with all his potential for inconstancy and whim.**

https://thenewutopian.com/2022/11/02/understanding-carl-schmitts-political-theology/

Who has the power to decide and declare a state of exception and act without limits in that situation? The President? The Governor? The Prime Minister? A judge? If you are struggling to identify an official or figure who has this power, **fear not, for this is exactly what Schmitt says we should expect in liberal democracy.**

"All tendencies of modern constitutional development point toward eliminating the sovereign in this sense." In other words, one of the foremost goals of modern constitutions is to actively eliminate the sovereign, to remove the possibility of a figure who can decide the state of exception and act without legal limits.
…

Schmitt then goes on to attack the rationalist Kantians who fail to understand this exception and the monopoly of the sovereign to decide when the exception exists. The rationalists believe that the legal order can set up contingencies and "suspend itself." The idea that the legal order can just "suspend itself" and that the emergency, that which is out of the law, can be decided by the legal order, is completely incoherent. But this is a hallmark of liberal constitutionalism. Think back to just moments ago when you tried to imagine who in your State is sovereign. **If you failed to come to some certain conclusion, this is because liberal constitutionalism wants to eliminate the sovereign, but also to "regulate the exception as precisely as possible."** Our current political-legal order attempts to "spell out in detail the case in which law suspends itself."
…

If you are American or English, or any other Westerner, you have heard and likely believe in the so-called "rule of law." What can this mean other than that the law rules, the law is sovereign. This is also, strangely enough, where theology enters the equation. **Schmitt says, "The modern idea of the state, according to Krabbe, replaces personal force (of the king, of the authorities) with spiritual power."** He then goes on to quote Krabbe, who says, "We no longer live under the authority of persons, be they natural or artificial (legal) persons, but under the rule of laws, (spiritual) forces. This is the essence of the idea of the modern idea of the state." Krabbe continues, saying, **"These forces rule in the strictest sense of the word. Precisely because these forces emanate from the spiritual nature of man, they can be obeyed voluntarily."**
…

The growth of decentralization (Americans would understand this to be federalism) and self-government have only helped the idea of it being the laws which have power. In this conception, the state is just a law-making body. We conceive of the state as making laws or rewriting laws, not really in enforcing those laws. It is because of this that "The state is confined exclusively to producing laws." **This stems mostly from the**

Enlightenment emphasis on the legislative power. When you read Locke, when you read Rousseau, when you read the Federalist Papers, they are all very clear that the power to legislate—to make laws—is the most important power and the one that the state is *most* concerned with. **This is why the architects of the American Constitution focused so heavily on the legislative branch as compared to the executive and especially the judicial.** They sincerely believed the legislative to be the most powerful, rightly so in their mind, but also the most dangerous.
…

If you have to be "given" authority by anyone and can have it revoked at any time by some legal procedure, you are not the sovereign. As for what Locke says about authority and law, remember in Chapter I when Krabbe said we no longer live under the authority of persons but of law. This is precisely what Locke means by saying that law gives authority and used the word law and not just the command of a monarch, a *person*.

Schmitt then differentiates between two different types of juristic scientific thought, and one of those types is the "decisionist" type (a term Schmitt coins) led by Thomas Hobbes, a major figure in Schmitt's thought. Here we get into some more theology. Schmitt mentions Hobbes' response to the idea of the separation of powers between the spiritual and temporal realm. **Hobbes says that it is not possible to have one abstract power be superior or inferior to another. "For Subjection, Command, Right and Power are accidents not of Power but of Persons." In other words, the ability to subject others, command others, have rights, and hold power are not abstract concepts floating out in space, but are attributes of very real people who have the very real and present ability to carry out or possess those things.** Hobbes is, then, both a decisionist inasmuch as he believed *authoritas, non veritas facit legem* (authority, not truth, makes law) and a personalist inasmuch as he believed it is persons who hold authority.

> https://garynorth.com/conspiracyinphiladelphia.pdf
>
> They have never asked themselves the obvious question: *What are the institutional connections that make possible a successful revolution?* They have been taught by traditional historiography to look at political events or military events. They have been taught by Marx to examine class alignments, and by Charles Beard and his intellectual heirs to examine the personal economic self-interest of the participants. **Historians in recent years have been far more willing to consider the influence of religious ideas, but they have been trained to play down the "great man theory of history." They have been taught, above all, that serious, reputable scholars do not raise the question of conspiracies.** Special-interest groups, yes; elites, yes;108 just not conspiracies.
>
> Why is this? I think the reason is theological. **Conspiracies point too closely to personalism as the basis of historical change, and personalism points to a God who brings sanctions in history.**109

…

Also very important is the analogy between miracles and the exception in jurisprudence. Schmitt says this particular analogy is key to understanding modern developments of state theory. **This is because the modern world has rejected the miracle. It has rejected the exception. "The idea of the modern constitutional state triumphed together with deism, a theology and metaphysics that banished the miracle from the world. This theology and metaphysics rejected not only the transgression of the laws of nature through an exception brought about by direct intervention, as is found in the idea of a miracle, but also in the sovereign's direct intervention in a valid legal order."**
…

For instance, **Descartes wrote to Mersenne, "It is God who established these laws in nature just as a king establishes laws in his kingdom." Then, during the Enlightenment and the development of deism, the sovereign (the king) was cast aside and, as Schmitt says, the machine was assumed to just run by itself.** Then, Rousseau introduced the idea of the General Will, which postulated that the people are sovereign (though some, like my friend Drake, point out that such a concept actually originates with St. Bellarmine). **With these developments, the personalism and the decisionism of Hobbes was forgotten. No longer does an absolute sovereign person intervene and provide unity against the competing interests within the state and nation.** Now, the people are an organic unity, and the theistic and deistic God alike are no longer relevant where political metaphysics is concerned.
…

Schmitt foresaw the consequences of these still relatively fresh developments at the time and believed that **"Conceptions of transcendence will no longer be credible to most educated people, who will settle for either a more or less clear immanence-pantheism or a positivist indifference towards any metaphysics."**
…

To the first of these, Schmitt says that **"Every political idea in one way or another takes a position on the 'nature' of man and presupposes that he is either 'by nature good' or 'by nature evil.' This issue can only be clouded by pedagogic or economic explanations, but not evaded."**

…

Cortés was especially concerned with Original Sin, though Schmitt correctly points out that Cortés had a far more radical belief concerning Original Sin than the council of Trent. "The dogma of Original Sin promulgated by the Council of Trent is not radical in any simple way. In contrast to the Lutheran understanding, the dogma asserts not absolute worthlessness but only distortion, opacity, or injury, and leaves open the possibility of the natural good." Cortés view of man as being thoroughly evil was, to Schmitt, "more horrible than anything that had ever been alleged by an absolutist philosophy of the state in justifying authoritarian rule."
…

Describing this class as it was in the 19th century, Schmitt says, "**Although the liberal bourgeoisie wanted a god, its god could not become active; it wanted a monarch, but he had to be powerless;** it demanded freedom and equality but limited voting rights to the propertied classes in order to ensure the influence of education and property on legislation, as if education and property entitled that class to repress the poor and uneducated; it abolished the aristocracy of blood and family but permitted the impudent rule of the moneyed aristocracy, the most ignorant and the most ordinary form of an aristocracy; **it wanted neither the sovereignty of the king nor that of the people.** What did it actually want?"
…

Probably one of my favorite lines comes when **Schmitt cites Cortés as believing that Liberalism only existed "in that short interim period in which it was possible to answer the question 'Christ or Barabbas?' with a proposal to adjourn or appoint a commission of investigation."**
…

"The essence of liberalism is negotiation, a cautious half measure, in the hope that the definitive dispute, the decisive bloody battle, can be transformed into a parliamentary debate and permit the decision to be suspended forever in an everlasting discussion." Schmitt and Cortés hit the nail on the head here. **I have sat in university classes before where liberalism was, more or less, described exactly this way, except it was meant to be a strength rather than a weakness.**
…

Meanwhile, **"American financiers, industrial technicians, Marxists socialists, and anarcho-syndicalist revolutionaries unite in demanding that the biased rule of politics over unbiased economic management be done away with. There must no longer be political problems, only organizational-technical and economic-sociological problems."** They have largely succeeded. The World Economic Forum and the Great Reset are basically the end of this programme. The ultimate goal is the managerial State, the nanny state, where there is no politics, just money management and management of people through a Human Resources State.

A_philosophy_of_concrete_life_Carl_Schmitt_and_the_political_thought_of_late_modernity

As is well known, for Foucault the paradigm for disciplinary power is precisely a machine, namely Jeremy Bentham's prison-machine, Pan-opticon.185 Foucault describes the structure of Bentham's machine as follows:

> At the periphery, an annular building; at the center, a tower; this tower is pierced with wide windows that open onto the inner side of the ring; the peripheral building is divided into cells, each of which extends the whole width of the building; they have two windows, one on the inside, corresponding to the windows of the tower; the other, on the outside, allows the light to cross the cell from one end to the other. All that is needed, then, is to place a supervisor in a central tower and to shut up in each cell a madman, a patient, a condemned man, a worker or a schoolboy.186

No great imagination is required in order for one to recognize the similarity between Foucault's Panopticon and Schmitt's description of Kelsen's theory of law. **Firstly, just as Kelsen's legal order, defined as an "uninterrupted system of orders",**187 **Panopticon is also a gapless ("enclosed") system.**188 **Secondly, just as in Kelsen's legal order in which the sovereign must be radically repressed, Panopticon dispenses with "the need for the prince".**189 Like Kelsen's order, which is based on "the rejection of all 'arbitrariness'",190 it aims at repressing those "sudden, violent, discontinuous forms that are bound up with the exercise of sovereignty".191 Thirdly, just as in Kelsen's order, **in which there are no real or fictitious persons but only the "impersonal validity of an impersonal norm",**192 Panopticon functions anonymously. It neutralizes, automatizes and de-personalizes power: "Power has its principle not so much in a person as in an arrangement whose internal mechanisms produce the relation in which individuals are caught up."193 **Undoubtedly, <u>there must be someone to operate the machine but it</u>**

<u>does not matter who:</u> “Any individual, taken almost at random, can operate the machine.”194

---

https://charltonteaching.blogspot.com/2019/02/leftist-motivation-how-resentment-and.html

<u>There are two aspects to Leftist motivation – one is self-interested, and the other is what provides a veneer of morality. Neither would work well alone.</u>

If Leftism was wholly self-interested, it would not be a success – the key to Leftism is that it enables people to be self-interested while also feeling good about it – feeling, indeed, altruistically superior about it. **But if Leftism was *genuinely* altruistic, self-sacrificing at an immediate and personal level, it would not be popular.**
…

The Leftist attacks his own class, sex, race - and designates the group as an evil exploiter - but not him-self. **He asks his class/ sex/ race to give-up their status, power and wealth - but not himself... at least not-*here* and not-*now*.**

The Leftist leader displaces the sacrifice away from himself and into the future, and often other places. So **the Leftist leader's mantra is Not me, Not here, Not now**... Arguing that "People like me should give up their jobs to minorities - but not me".
…

So this is the psychology that has led to Leftism taking-over the world. It is selfish - which is why it is so very popular; and it is moral - which makes it even more popular.

But, crucially to Leftism's success, ***the selfishness is proximate, direct, immediate; while the altruistic, sacrificial morality is abstract, impersonal and remote*.**

https://zippycatholic.wordpress.com/2014/08/02/feeding-cthulu-with-freedom/

The usual thinking among the noobs is that Cthulhu’s leftward swim is fueled by progressive insistence on **equality**. This is at best only a half truth.

Equality is not the *most basic* commitment of liberalism. The most basic commitment of liberalism is right there in its name: political liberty, also known as *freedom*. **<u>Insistence on equal rights is a *consequence* of making freedom into a political priority.</u>**

> https://www.gutenberg.org/cache/epub/52263/pg52263-images.html#FNanchor_5_12
>
> Sometimes the value of a thing does not lie in that which it helps us to achieve, but in the amount we have to pay for it,—what it *costs* us. For instance, **liberal institutions straightway cease from being liberal, the moment they are soundly established: once this is attained no more grievous and more thorough enemies of freedom exist than liberal institutions! One knows, of course, what they bring about: they undermine the Will to Power, they are the levelling of mountain and valley exalted to a morality, they make people small, cowardly and pleasure-loving,—by means of them the gregarious animal invariably triumphs. <u>Liberalism, or, in plain English, the *transformation of mankind into cattle.*</u>** The same institutions, so long as they are fought for, produce quite other results; then indeed they promote the cause of freedom quite powerfully. **Regarded more closely, it is war which produces these results, war in favour of liberal institutions, which, as war, allows the illiberal instincts to subsist.** For war trains men to be free. What in sooth is freedom? Freedom is the will to be responsible for ourselves. It is to preserve the distance which separates us from other men. To grow more indifferent to hardship, to severity, to privation, and even to life itself. **<u>To be ready to sacrifice men for one’s cause, one’s self included.</u> Freedom denotes that the virile instincts which rejoice in war and in victory, prevail over other instincts; for instance, over the instincts of “happiness.”** The man who has won his freedom, and how much more so, therefore, the spirit that has won its freedom, tramples ruthlessly upon that contemptible kind of comfort which tea-grocers, Christians, cows, women, Englishmen and other democrats worship in their dreams. **The free man is a *warrior.***

> http://www.amnation.com/vfr/archives/010850.html#liberalism
>
> I've said the same many times. **The ultimate practical object of liberalism is a world consisting of equal individuals who have been liberated from all traditional cultures and nations and whose equality is ensured by an unaccountable global elite.** But that's not a contradiction. Since equality requires the elimination of all normal institutions and societies, there must be some ruling regime. **But this regime is not seen as possessing "power," which is bad and unequal. Since it directs mankind in the name of the equal rights of all, it is simply identical with goodness.**

https://counter-currents.com/2021/08/conservative-blank-slatism/#comment-1742021

The Left does not say that All Men are "created" equal, but that All Men can be MADE TO BE equal, by every metric, BECAUSE they are all infinitely-malleable Blank Slates. The "infinitely malleable" comes before the "equal".

> https://archive.org/details/LeoStraussThoughtsOnMachiavelli_201411/page/n295/mode/2up?view=theater
>
> **The good society in the new sense is possible always and everywhere since men of sufficient brain can transform the most corrupt people, the most corrupt matter, into an incorrupt one by the judicious application of the necessary force.** Since man is not by nature ordered toward fixed ends, he is as it were infinitely malleable. This view becomes a settled conviction long before philosophers begin to think of "evolution."
>
> https://archive.org/details/ambivalenceofber0000monr/page/182/mode/2up?view=theater
>
> Certainly **Mandeville's main point is that it is impossible to distinguish what we 'naturally' approve from what we have been taught to approve.** We do not, he insists, have any natural tendency to seek the good of the whole, the public good. **Man is fit for society only in the sense that grapes are fit for wine: that is to say, he may be made so, by skill and industry; but it is not enough simply to let nature take its course.** Man is not naturally virtuous, but he is malleable.

> **The French eighteenth-century thinker Claude-Adrien Helvétius made the implicit explicit, arguing that proper instruction and legislation would not only enable but compel humans to attain complete virtue. This highly questionable psychological theory became the common heritage of liberalism, socialism, and communism,** which in varying degrees rely on instruction and/or coercion to achieve their respective objectives. In some respects, the Communist state established by Lenin in Russia in November 1917 was a grandiose experiment in public education, undertaken on the Helvétius model for the purpose of creating an entirely new type of human being, one rid of vices, including acquisitiveness.

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA564&printsec=frontcover

As regards secularizing human knowledge and the frame of the "Scientific Revolution," this left the European mind for a time divided into four camps or seedbeds of what became the Western Enlightenment – Aristotelians wholly rejecting such reform, Baconians going a quarter of the way, moderates going half-way (Cartesians), and radicals going the full course (Spinozists).

https://archive.org/details/enlightenmentcon0000isra/page/10/mode/2up?view=theater

Of the two enlightenments, the moderate mainstream was without doubt **overwhelmingly dominant in terms of support, official approval, and prestige practically everywhere except for several decades in France from the 1740s onwards.** Nevertheless, in a deeper sense, and in the long run, **it proved to be much the less important of the two enlightenments.** For it was always fatally hampered by its Achilles heel, namely that all its philosophical recipes for blending theological and traditional categories with the new critical-mathematical rationality proved flawed in practice, not to say highly problematic and shot through with contradiction. **Cartesian dualism, Lockean empiricism, Leibnizian monads, Malebranche's occasionalism, Bishop Huet's fideism, the London Boyle Lectures, Newtonian physico-theology, Thomasian eclecticism, German and Swedish**

Wolffianism, all the methodologies of compromise presented insuperable disjunctions and difficulties, rendering the whole philosophico-scientific-scholarly arena after 1650 exceedingly fraught and unstable.

The radical wing **who scorned all such dualistic systems,** and attempts at adjustment, may have been a tiny fringe in terms of numbers, status, and approval ratings, among both elites and in popular culture, but they proved impossible to dislodge or overwhelm intellectually. **Those who reduced the worldly and spiritual to a single continuum and erected a single set of rules governing the whole of reality, beginning in a sense with Hobbes but especially with Spinoza, were everywhere denounced, banned, and reviled. Yet the universal opposition of churches, governments, universities, and leading publicists, as well as the great bulk of the common people, could not alter the fact that it was precisely these philosophical radicals extending the Galilean-Cartesian conception of rationality, and criterion of what is 'true,' across the board, pushing it as far as it would go, and allowing no exemptions whatsoever, who often seemed to evince the greatest intellectual consistency and coherence.**

https://archive.org/details/enlightenmentcon0000isra/page/808/mode/2up?view=theater

The Postmodernists attacking the Enlightenment, defenders of the Enlightenment, and the Enlightenment legacy today **have frequently repeated the charge that Enlightenment thinking about moral issues was confused and incoherent,** leading to a failure to establish a viable secular morality independent of theology and traditional metaphysics which allegedly encouraged and contributed to the disintegration and pulverizing of the modern secular moral identity and the collapse of efforts to meaningfully combine moral values with social benevolence.
…

Hence to invoke the moral philosophies of Locke, Hume, Voltaire, Montesquieu, and Kant who all strove to circumvent the thoroughgoing naturalism of the materialists which they recognized must lead to a complete divorce between morality and Christian tradition makes no sense if the project of the exercise is to fault an 'Enlightenment' project which tried to base morality purely on natural premises. MacIntyre himself, criticizing Kant, affirms that it is 'of the essence of reason that is lays down principles which are universal, categorical, and internally consistent' and that 'a rational morality will lay down principles which both can and ought to be held by all men, independent of circumstances and conditions, and which could consistently be obeyed by every rational agent on every occasion.'97 It is this critique itself which is a complete contradiction. **For the conservative moral and social theories of Locke, Voltaire, Montesquieu, Hume, and Kant were all expressly intended to avoid forging moral philosophy systematically on the basis of philosophical reason and nature, in the interest of salvaging major elements of tradition, custom, and theology.**

All these moral philosophers are by definition and by design not just inconsistent but wholly at odds with the consistent naturalism sought by Spinoza, Bayle, Boulainvilliers, Diderot, and d'Holbach. **It was the moral theories of the hard-core French High Enlightenment,** Du Marsais, Diderot, d'Argens, Helvétius, d'Holbach, and Condorcet, which follow Spinoza and Bayle in adopting a fully secular and universalist ethic based exclusively on the 'common good,' equity, and equality, **that were designed to be philosophically coherent and consistent; and, for this very reason, the Postmodernist critique of the Enlightenment entirely lacks force in relation to them.**

> https://archive.org/details/enlightenmentcon0000isra/page/868/mode/2up?view=theater
>
> Postcolonialists together with Postmodernist philosophers such as Alasdair MacIntyre and Charles Taylor were mistaken in supposing there is no coherent or viable moral core to the Enlightenment and in claiming to have 'exposed the moral fictions that mask modern morality's lack of a foundation and cover up the fact that what it presents as values are nothing but the preferences of arbitrary will and desire.'12 **However, these commentators were to some extent correct – even if they never managed to express the point clearly or accurately – in their suspicion that a consistent and coherent Enlightenment moral philosophy was never very strongly promoted,** or adequately expounded, in the thought of many of those philosophers and scientists traditionally acknowledged as the principal heroes of the Enlightenment, most notably Locke, Newton, Hume, Voltaire, Montesquieu, and Kant.

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA138#v=onepage&q&f=false

Their relative conservatism does not mean Wollaston, Chubb, Morgan, and Woolston contributed nothing to radical thought. **There is the dialectical aspect to consider.** Their arguments were deeply challenging for most while at the same time, the young Franklin found, for some, annoyingly tentative, half-baked, and unconvincing in a way positively provoking reaction against their studied moderation. Here again the insights of Leo Strauss seem relevant. Although **Strauss knew that the stream he was the first to label "moderate Enlightenment" proved crucial to separation of state and religion,** and forging the modern religiously neutral, legal, and legislative context, he nevertheless considered the

kind of philosophical harmonizing and mediation offered by Locke, Le Clerc, Reimarus, Mendelssohn – all the moderate enlighteners (even Hume and Voltaire) – too obviously flawed philosophically to underpin a stable, durable truly viable Enlightenment "moderation." **Often their arguments degenerated into an under-the-counter, discreet surrender to philosophical "atheism"** of a kind bound to lead to socially, morally, religiously disintegrative consequences.43 It is an argument valid to a degree, **though he certainly overstated his case in claiming such harmonizations (*Vereinbarungen*) always "work as vehicles of the [radical] Enlightenment, and not as dams against it; for the radical Enlightenment, the moderate Enlightenment is the best friend."**44

https://archive.org/details/enlightenmentint0000unse_i6k5/page/370/mode/2up?view=theater

In 1715, when Louis XIV died, the most imaginative French anticlericals confined themselves to private impiety and calls for reform within the Church: their ideal was a kind of Anglicanism – a reasonable, respectable established church with little political power, no passion for repressing the free commerce of ideas, and no religious fervor. In 1788, when Louis XVI convoked the Estates General, the surviving philosophes were asking for complete disestablishment, a laic state. **By that time, and even before, the audacious but playful blasphemies of Epicurean aristocrats had given way to the aggressive and humorless militancy of writers like Holbach and Diderot.**

>
> Alas! What sounded so strange at the time is now **[1854]** preached from the rooftops on the other side of the Rhine, and the fanatic zeal of some of these preachers is horrible! We now have fanatic monks of atheism, grand inquisitors of unbelief, who would have burned Mr. de Voltaire at the stake, because he was in his heart a stubborn deist. As long as such doctrines remained the secret property of an aristocracy of intellectuals and were discussed in an elegant secret language which was incomprehensible to the servants who stood at attention behind us while we blasphemed during our private philosophical dinners—**for that long I also belonged to the reckless *Esprits forts*,**4 **who for the most part were like those liberal grandseigneurs who tried to chase away the boredom of their idle lives at court with the new ideas of revolution.** But when I noted that the coarse plebeians, the working Joes, also began to discuss the same themes in their dirty symposia, where only tallow lights and paraffin lamps were burning instead of wax candles and candelabras; **when I saw that dirty apprentice shoe-makers and tailors had the audacity to deny the existence of God in the crude language of their lodges—when atheism began to reek strongly of cheese, brandy, and tobacco; suddenly my eyes were opened,** and what I had not understood with my reason, I now understood with my sense of smell, with the feelings of nausea, and my atheism, God be praised!, was at an end.

https://www.gutenberg.org/cache/epub/2333/pg2333-images.html#link2H_4_0004

But when Frederic was at Rheinsberg, Voltaire was still a courtier; and, though he could not always curb his petulant wit, he had as yet published nothing that could exclude him from Versailles, and little that a divine of the mild and generous school of Grotius and Tillotson might not read with pleasure. In the Henriade, in Zaire, and in Alzire, Christian piety is exhibited in the most amiable form; and, some years after the period of which we are writing, a Pope condescended to accept the dedication of Mahomet. The real sentiments of the poet, however, might be clearly perceived by a keen eye through the decent disguise with which he veiled them, and could not escape the sagacity of Frederic, who held similar opinions, and had been accustomed to practise similar dissimulation.

https://archive.org/details/enlightenmentint0000unse_i6k5/page/180/mode/2up?view=theater

Gibbon tried to do little more than to amuse and instruct a select circle of educated men and women, most of whom were probably unbelievers even before they read the *Decline and Fall of the Roman Empire*. Polemicists like Condorcet, on the other hand, tried to do nothing less than to make a revolution in politics, economics, and social relations.

https://www.ourcivilisation.com/smartboard/shop/gibbone/autobiog/memoirs/visits.htm#Revolution

I beg leave to subscribe my assent to Mr. Burke's creed on the revolution of France. I admire his eloquence, I approve his politics, I adore his chivalry, and I can almost excuse his reverence for church establishments. **I have sometimes thought of writing a dialogue of the dead, in which Lucian, Erasmus, and Voltaire should mutually acknowledge the danger of exposing an old superstition to the contempt of the blind and fanatic multitude.**

https://counter-currents.com/2012/06/from-salon-to-guillotine/

Toward the middle of the eighteenth century a shift in both subject matter and tone came over this world of elegant discourse. **The traditional *saloniste* gave way to the *philosophe*,** an armchair statesman who, despite his lack of real responsibilities, focused on public affairs and took himself and his talk with extreme seriousness.
…

The societies gradually acquired an openly partisan character: **whoever agreed with their views, however stupid, was considered "enlightened."** By 1776, d'Alembert acknowledged this frankly, writing to Frederick the Great: "We are doing what we can to fill the vacant positions in the Académie française in the manner of the banquet of the master of the household in the Gospel: with the crippled and lame men of literature" (p. 35).

https://www.gutenberg.org/files/15700/15700-h/15700-h.htm#THOUGHTS

In the modern world, before this time, there has been no instance of this spirit of general political faction, separated from religion, pervading several countries, and forming a principle of union between the partisans in each. But the thing is not less in human nature. The ancient world has furnished a strong and striking instance of such a ground for faction, **full as powerful and full as mischievous as our spirit of religious system had ever been, exciting in all the states of Greece (European and Asiatic) the most violent animosities and the most cruel and bloody persecutions and proscriptions.** These ancient factions in each commonwealth of Greece connected themselves with those of the same description in some other states; and secret cabals and public alliances were carried on and made, not upon a conformity of general political interests, but for the support and aggrandizement of the two leading states which headed the aristocratic and democratic factions. For as, in later times, **the king of Spain was at the head of a Catholic, and the king of Sweden of a Protestant interest, (France, though Catholic, acting subordinately to the latter,)** in the like manner the Lacedemonians were everywhere at the head of the aristocratic interests, and the Athenians of the democratic.
…

In the mean time a system of French conspiracy is gaining ground in every country. This system, happening to be founded on principles the most delusive indeed, but the most flattering to the natural propensities of the unthinking multitude, and to the speculations of all those who think, without thinking very profoundly, must daily extend its influence. **A predominant inclination towards it appears in all those who have no religion, when otherwise their disposition leads them to be advocates even for despotism. Hence Hume, though I cannot say that he does not throw out some expressions of disapprobation on the proceedings of the levellers in the reign of Richard the Second, yet affirms that the doctrines of John Ball were "conformable to the ideas of primitive equality *which are engraven in the hearts of all men*."**

https://oll.libertyfund.org/title/canavan-select-works-of-edmund-burke-vol-3#lf0005-03_head_006

In the Revolution of France two sorts of men were principally concerned in giving a character and determination to it's pursuits; the philosophers and the politicians. They took different ways: but they met in the same end. The philosophers had one predominant object, which they pursued with a fanatical fury, that is, the utter extirpation of religion. To that every question of empire was subordinate. They had rather domineer in a parish of Atheists, than rule over a Christian world. Their temporal ambition was wholly subservient to their proselytizing spirit, in which they were not exceeded by Mahomet himself.
…

Let no one judge of them by what he has conceived of them, when they were not incorporated, and had no lead. They were then only passengers in a common vehicle. They were then carried along with the general motion of religion in the community, and without being aware of it, partook of its influence. In that situation, at worst, their nature was left free to counterwork their principles. They despaired of giving any very general currency to their opinions. They considered them as a reserved privilege for the chosen few. **But when the possibility of dominion, lead, and propagation presented themselves, and that the ambition, which before had so often made them hypocrites, might rather gain than lose by a daring avowal of their sentiments, then the nature of this infernal spirit, which has "evil for it's good," appeared in its full perfection.** Nothing, indeed, but the possession of some power, can with any certainty discover what at the bottom is the true character of any man.
…

This fanatical atheism left out, we omit the principal feature in the French Revolution, and a principal consideration with regard to the effects to be expected from a peace with it.

THE OTHER SORT OF MEN were the politicians. To them who had little or not at all reflected on the subject, religion was in itself no object of love or hatred. They disbelieved it, and that was all.

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n157/mode/2up?view=theater

> Maurepas was now old and decrepit, but had all the vices of youth. Voltaire transforms him into a philosopher, and he coalesced with the Sect through levity and indolence. **He believed in nothing; he was without hatred against the altar, as without affection for the Sophisters. He would with equal indifference wittily lash a bishop or D'Alembert. He found D'Argenson's plan for the destruction of the religious orders, and he followed it.** He would have soon set aside the impious minister, had he known him that would conspire against the religion of the state. **An enemy to all convulsions, and without any fixed principles of Christianity, he thought it at least impolitic to attempt its destruction.** He certainly was not a man capable of stopping a revolution, but he did not forward it. He rather let others do the harm, than did it himself; but unfortunately that harm which he let others do was great. Under his administration philosophism made a terrible progress.

https://www.gutenberg.org/cache/epub/2170/pg2170-images.html#link2H_4_0023

> **Nor was any objection ever raised to what was so evidently just and wise, till bigotry and chicanery formed that disgraceful league against which we are now contending.** But, it is said, it is unreasonable to grant a boon to men because they have been many years doing wrong. The length of the time during which they have enjoyed property not rightfully their own, is an aggravation of the injury which they have committed, and is so far from being a reason for letting them enjoy that property for ever, that it is rather a reason for compelling them to make prompt restitution. With this childish sophistry the petitions on our table are filled. **Is it possible that any man can be so dull as not to perceive that, if this be a reason, it is a reason against all our statutes of limitation?**

Neutral with regard to that object, they took the side which in the present state of things might best answer their purposes. **They soon found that they could not do without the philosophers; and the philosophers soon made them sensible that the destruction of religion was to supply them with means of conquest, first at home, and then abroad.** The philosophers were the active internal agitators, and supplied the spirit and principles: the second gave the practical direction. Sometimes the one predominated in the composition, sometimes the other. **The only difference between them was in the necessity of concealing the general design for a time, and in their dealing with foreign nations; the fanaticks going strait forward and openly, the politicians by the surer mode of zigzag. In the course of events this, among other causes, produced fierce and bloody contentions between them.** But at the bottom they thoroughly agreed in all the objects of ambition and irreligion, and substantially in all the means of promoting these ends.
…

THERE WAS NO POINT ON WHICH the discontented diplomatic politicians so bitterly arraigned their Cabinet, as for the decay of French influence in all others. **From quarrelling with the Court, they began to complain of Monarchy itself; as a system of Government too variable for any regular plan of national aggrandizement.**
…

They had continually in their hands the observations of *Machiavel* on *Livy.* They had *Montesquieu's Grandeur & Décadence des Romains* as a manual; and they compared with mortification the systematic proceedings of a Roman senate with the fluctuations of a Monarchy. They observed the very small additions of territory which all the power of France, actuated by all the ambition of France, had acquired in two centuries. **The Romans had frequently acquired more in a single year.** They severely and in every part of it criticised the reign of Louis the XIVth, whose irregular and desultory ambition had more provoked than endangered Europe.

https://www.gutenberg.org/cache/epub/10827/pg10827-images.html

> Further, we find that those cities wherein the government is in the hands of the people, in a very short space of time, make marvellous progress, far exceeding that made by cities which have been always ruled by princes; **as Rome grew after the expulsion of her kings, and Athens after she freed herself from Pisistratus; and this we can ascribe to no other cause than that the rule of a people is better than the rule of a prince.**

https://archive.org/details/threelecturesde01kinggoog/page/n61/mode/2up?view=theater

That sense of justice which allowed privileges, when they were as strictly official privileges as the salary of a judge, or the immunity of a member of the House of Commons; when they were earned, as in the Middle Ages, by severe education, earnest labour, and life and death responsibility in peace and war, will demand the abolition of those privileges, when no work is done in return for them, with a voice which must be heard, for it is the voice of truth and justice.

But with that righteous voice will mingle another, most wicked, and yet, alas! most flattering to poor humanity—the voice of envy, simple and undisguised; of envy, which moralists hold to be one of the basest of human passions; which can never be justified, however hateful or unworthy be the envied man. And when a whole people, or even a majority thereof, shall be possessed by that, what is there that they will not do?

Some are surprised and puzzled when they find, in the French Revolution of 1793, the noblest and the foulest characters labouring in concert, and side by side—often, too, paradoxical as it may seem, united in the same personage.

https://archive.org/details/romanandteutonas003327mbp/page/n277/mode/2up?view=theater

> A body of men acting in concert for a public purpose will do things which they would shrink from with disgust, if the same trick would merely put money into their private purses; and this is too often the case when the public object is a good one. **Then the end seems to sanctify the means, to almost any amount of chicanery.**
>
> So it was with those old monks. An abbey had no conscience. An order of monks had no conscience. **A Benedictine, a Dominican, a Franciscan, who had not himself a penny in the world, and never intended to have one, would play tricks, lie, cheat, slander, forge, for the honour and the wealth of his order;** when for himself, and in himself, he may have been an honest God-fearing man enough.

> “But here, for instance, is an incitement to destroy churches.”
>
> “And why not? You’re a sensible man, and of course you don’t believe in it yourself, but you know perfectly well that you need religion to brutalise the people. Truth is honester than falsehood…”
>
> “I agree, I agree, I quite agree with you, but it is premature, premature in this country…” said Von Lembke, frowning.
> …
>
> “It’s not so, not so at all,” he cried, carried away and more and more mortified in his amour-propre. “You’re young, and know nothing of our aims, and that’s why you’re mistaken. You see, my dear Pyotr Stepanovitch, you call us officials of the government, don’t you? Independent officials, don’t you? But let me ask you, how are we acting? Ours is the responsibility, **but in the long run we serve the cause of progress just as you do.** We only hold together what you are unsettling, and what, but for us, would go to pieces in all directions. We are not your enemies, not a bit of it. **We say to you, go forward, progress, you may even unsettle things, that is, things that are antiquated and in need of reform. <u>But we will keep you, when need be, within necessary limits, and so save you from yourselves</u>, for without us you would set Russia tottering, robbing her of all external decency, while our task is to preserve external decency.** Understand that we are mutually essential to one another. In England the Whigs and Tories are in the same way mutually essential to one another. Well, you’re Whigs and we’re Tories. That’s how I look at it.”

Lembke loses the argument by admitting to Verkhovensky that he does think religion is superfluous and that agitation can be, within certain bounds, a help to progress. **His only true belief is that Russia ought to be great, and that the agitations of the anarchists will discredit her. <u>He would welcome increased governing power and a republican revolution in which he might consolidate all the traditional governing bodies under his own rule.</u>**

https://archive.org/details/liberalismissin0000sard/page/76/mode/2up?view=theater

The moderate Liberal is just as bad as his extreme confrere, but he takes good care not to appear so. **Social conventionalities and good manners are everything to him; these points secured, the rest is of little importance.** Provided his iniquity is kid-gloved, it finds ready extenuation in his own mind. The niceties of polite society preserved, his Liberalism knows no bounds. **<u>He would not burn a convent—that would appear too brutal, but the convent once burned, he has no scruple in seizing upon the outraged property.</u> The cheap impiety of a**

penny paper grates on his well-bred nerves; the vulgar blasphemy of Ingersoll he deprecates; but let the same impiety and the same blasphemy appear in the columns of a so-called reputable journal, or be couched in the silken phraseology of a Huxley in the name of science, and he applauds the polished sin. It is with him a question of manner, not matter. At the mere mention of the name of a nihilistic or socialistic club, he is thrown into a cold sweat, for there, he declares, the masses are seduced into principles which lead to the destruction of the foundations of society; **yet, according to him, there is no danger, no inconvenience in a free lyceum where the same principles are elegantly debated and sympathetically applauded;** for who could dare to condemn the scientific discussion of social problems?

https://occidentaldissent.com/2023/08/08/american-history-series-intellectual-change-in-the-1930s/

The following excerpt comes from the chapter "The Intellectuals Abandon the Caste Establishment" in E. Digby Baltzell's book *The Protestant Establishment: Aristocracy & Caste in America*:
…

> Thus the concept of the conditional reflex was discovered before the First War when a brilliant and aristocratic Russian of the old regime, I.P. Pavlov, showed that dogs do not associate by rational thought or according to any inborn instincts, but largely as a result of their conditioning. At the same time, in this country, a rural South Carolinian, John B. Watson, who mistrusted philosophic introspection and the existence of any such thing as an inner conscience, founded Behaviorism which, by the end of the twenties, was not only the most fashionable school of psychology in this country but also became the central theory of human nature upon which the great industry of advertising was being built. **It was no wonder that Pavlov was threated with great deference and respect by the Bolshevik revolutionists, and that Watson eventually left John Hopkins to become a vice president of one of the nations most successful advertising agencies. Faith in conditioning became the basis of social control in the new manipulative society, composed of citizen comrades in the U.S.S.R. and citizen consumers in the U.S.A.**
> …
>
> The [1930s] witnessed the complete triumph of naturalistic relativism over transcendental absolutism; theology was replaced by anthropology; and the universalism of the inner consciences of men gave way before the particularistic conditioning of the external environment. **The popularity of Marxian socialism on the Left was quite understandable because it was, after all, only an extreme example of a naturalistic environmentalism which most educated men in the West adhered to anyway. For they now shared John Dewey's faith in the plasticity of human nature** and the possibility of progress if only the environment could be reformed or transformed through social engineering in order to allow the natural goodness of human nature to express itself fully, unfettered by the harmful conditioning of a competitive bourgeois culture.

But there are two sorts of Communist. The one, the credulous type, obsessed by doctrine or feminine sentimentality, remote from and hostile to the world, condemns the wealth of the wicked who prosper and also, at times, the poverty of the good who do not prosper. This lands him either in vague Utopias or throws him back upon asceticism, the monastic life, Bohemia, or vagabondism, which proclaims the futility of all economic effort. **But the other, the "worldly" type with the realist political outlook, hopes through its followers to destroy society,** either from envy or revenge, because of the low place assigned in it to their personality and talents, or, alternatively, to carry away the masses by some program or other for the satisfaction of his own will-to-power. But this, too, likes to hide itself under the cloak of some religion.

https://www.frontpagemag.com/fpm/244663/democratic-partys-civil-war-here-daniel-greenfield

There are really two Democratic parties.

One is the old corrupt party of thieves and crooks. Its politicians, black and white, are the products of political machines. They believe in absolutely nothing. They can go from being Dixiecrats to crying racism, from running on family values to pushing gay marriage and the War on Women. They will say absolutely anything to get elected.

Cunning, but not bright, they are able campaigners. Reformers underestimate them at their own peril because they are determined to win at all costs.

The other Democratic Party is progressive. Its members are radical leftists working within the system. They are natural technocrats and their agendas are full of big projects. They function as community organizers, radicalizing and transforming neighborhoods, cities, states and even the country.

They want to win, but it's a subset of their bigger agenda. Their goal is to transform the country. If they can do that by winning elections, they'll win them. But if they can't, they'll still follow their agenda.

Sometimes the two Democratic parties blend together really well. Bill Clinton combined the good ol' boy corruption and radical leftist politics of both parties into one package.

https://world.wng.org/2000/05/stoic_rules?

The 90-hour-a-week Wall Street and dot-com workers of business and technology, and the Janet Renos of the administration, are mainly stoics, doing what feels good according to their moral codes, sacrificing momentary pleasure for the longer-run satisfactions provided by disciplined endeavor to expand the reach of technology, business enterprise, or government. Even though Bill Clinton survived, hedonism in high places obviously has a limited appeal to those not in on the action, but stoicism has much longer legs. And so it is internationally. Communism has always appealed to covetous bullies who lust after power for the opportunity to crack open the heads of the rich. But it also has appealed to some stoics who declared their willingness to forsake worldly pleasures and work tirelessly to overturn a system that they believe breeds poverty and war.

https://archive.org/details/creationaphilos02blacgoog/page/n50/mode/2up?view=theater **[1712]**

But further; **since these gentlemen show so much industry in propagating their opinions, and are so fond of making proselytes to atheism; since they affect a zeal in countenancing, applauding, and preserving, those whom they have delivered from religious prejudices, and reformed and refined with their free, large, and generous principles: how comes it to pass, that they neglect to inform and improve their nearest relations?** Are they careful to instruct their wives and daughters, that they need not revere the imaginary phantom of a God; that religion is the creature of a timorous and superstitious mind, or of crafty priests, and cunning politicians; that, therefore, **they are free from all restraints of virtue and conscience, and may prostitute their persons in the most licentious manner, without any remorse, or uneasy reflection; that it is idle to fear any divine punishment hereafter; and as to the shame and dishonour that may attend the liberties they take, in case they become public, that scandal proceeds from the gross mistakes of people perverted with religion,** and misguided by a belief of a divine being, and of rewards and punishments in an imaginary life after this.

Do they take pains to inform their eldest sons, that they owe them no gratitude or obedience; that they may use an uncontrolled freedom in indulging all their appetites, passions, and inclinations; that, **if they are willing to possess their father's honour and estate, they may by poison or the poignard, take away his life;** and, if they are careful to avoid the punishment of the magistrate, by their secret conduct, they may be fully satisfied of the innocence of the action; and as they have done themselves much good, so they have done their father no injury, and therefore may enjoy in perfect tranquillity the fruits of their parricide? **Whatever they may affirm among their loose friends, I cannot conceive they can be guilty of so much folly, as to propagate these opinions in their own families, and instruct their wives and children in the boundless liberties, which, by the principles of atheism, are their undoubted right; for in all actions, where religion does not interpose and restrain us, we are perfectly, as has been said, free to act as we think best for our profit and pleasure.**

https://archive.org/details/cu31924100532054/page/112/mode/2up?view=theater

There is in every house something that is above the father himself. It is the domestic religion; it is that god whom the Greeks called the hearth-master, – *ἑστια δέσποινα*, – whom the Romans called *Lar familiaris*. This divinity of the interior, or, what amounts to the same thing, the belief that is in the human soul, is the least doubtful authority. This is what fixed rank in the family.
...

To indicate the power of the husband over the wife, the Romans had a very ancient expression, which their jurisconsults have preserved; it is the word *manus*. It is not easy to discover the primitive sense of this word. The commentators make it the expression of material force, as if the wife was placed under the brutal hand of the husband. It is quite probable that this is wrong. **The power of the husband over the wife results in no wise from his superior strength. It came, like all private law, from the religious belief that placed man above woman.**
...

This religion is in accord with nature; it says that the father shall be the chief of the worship, and that the son shall merely aid him in his sacred functions. **But nature requires this subordination only during a certain number of years; religion requires more. Nature brings the son to his majority; religion does not grant it to him, according to ancient principles;** the sacred fire is indivisible, and the same is true of property.
…

A son born of concubinage was not placed under the authority of the father. Between his father and himself there existed no community of religion; there was nothing, therefore, that conferred authority upon the one and commanded obedience of the other. Paternity, of itself, gave the father no rights.

> http://penelope.uchicago.edu/Thayer/E/Roman/Texts/secondary/SMIGRA*/Patria_Potestas.html
>
> **It was a condition of the *Patria Potestas* that the child should be begotten in *matrimonium legitimum*** (Gaius, I.55-107; Inst. 1 9-11). By the old law, the subsequent marriage of the parents did not legitimate a child born before the marriage. But it seems to have early become the fashion for the Emperor, as an act of grace, to place such child on the same footing as legitimate children. The legitimation *per subsequens matrimonium* only became an established rule of law under Constantine, and was introduced for the advantage of children who were born in concubinage [CONCUBINA.]

…

The old language had another word which properly designated the father, and which, as ancient as *pater*, is likewise found in the language of the Greeks, of the Romans, and of the Hindus (*gânitar*, *γενέτωρ*, *genitor*). The word *pater* had another sense. In religious language they applied it to the gods; in legal language to every man who had a worship and a domain. The poets show us that they applied it to every one whom they wished to honor. The slave and the client applied it to their master. It was synonymous with the words *rex*, *ἄναξ*, *βασιλεύς*. **It contained in itself not the idea of paternity, but that of power, authority, majestic dignity.**

Yoram Hazony on X: **Locke never had children. Neither did Descartes, Hobbes, Spinoza, or Kant.** Rousseau had children but gave them all up for adoption. In other words, Enlightenment rationalism was the construction of men who had no real experience of family life or what it takes to make it work.

Most of Western political thought today revolves around the theory of the free, atomic individual, taking on obligations only when he or she consents.

This theory was invented by men who did live more or less this way. But anyone who has raised children knows this theory isn't true. I'm not free to choose my children and they aren't free to choose me. Very often obligation has little or nothing to do with consent.

The same is true of political society more generally. If my country is attacked, my obligation to defend it arises not from consent but from bonds of loyalty to family and neighbors and to a way of life I've inherited. This isn't true for everyone, but it's true for most.

How long will these simple, obvious truths be suppressed? Enlightenment rationalism teaches a political theory made in the image of unmarried, childless individuals.

But no nation can endure this way. The freedom of unmarried, childless philosophers isn't something that the people in a real nation can actually have.

https://archive.org/details/theprovinciallet00pasciala/page/278/mode/2up?ref=ol&view=theater

The only thing to which I can venture to allude, out of all the books which he showed me, and these in French, too, is a passage which you will find in Father Bauny's Summary, p. 165, relating to certain little familiarities, which, provided the intention is well directed, he explains "*as passing for gallant*;" and you will be surprised to find, at p. 148, a principle of morals, as to the power which daughters have to dispose of their persons without the leave of their relatives, couched in these terms: **"When that is done with the consent of the daughter, although the father may have reason to complain, it does not follow that she, or the person to whom she has sacrificed her honor, has done him any wrong, or violated the rules of justice in regard to him; for the daughter has possession of her honor, as well as of her body, and can do what she pleases with them, bating death or mutilation of her members." Judge, from that specimen, of the rest.** It brings to my recollection a passage from a Heathen poet, a much better casuist, it would appear, than these reverend doctors; for he says, "that the person of a daughter does not belong wholly to herself, but partly to her father and partly to her mother, without whom she cannot dispose of it, even in marriage." **And I am much mistaken if there is a single judge in the land who would not lay down as law the very reverse of this maxim of Father Bauny.**

It was, however not Spinozism but Cartesianism which produced the first systematic theory arguing for the equality of women. It was, moreover, precisely one of the philosophically most problematic features of Descartes's system, his rigid dualism, which, for the first time, made it possible to circumvent traditional ideas affirming the natural subordination, dependency, and weaker character of the female sex. Cartesian dualism did this by postulating a wide gulf between body and mind and by denying all possibility of interaction between these distinct substances.

https://plato.stanford.edu/entries/francois-barre/

Poulain was born in Paris in 1648, as the third child to wealthy Catholic parents. As many younger sons he was destined for a church career and he earned his bachelor's degree in theology at Sorbonne in 1666. This lower degree was generally considered sufficient for priesthood, but Poulain did not at this point of his life seek to be ordained and this decision, though temporary, is often connected with his growing interest in Cartesian philosophy (Stuurman 2004: 30). In his second main work *De l'éducation des dames* [On the Education of Ladies] (1674), a set of five conversations between a Cartesian teacher, a young man and two young women, Poulain describes how the teacher Stasimachus became a follower of René Descartes' philosophy. Stasimachus tells his young interlocutors how, one day, when he found

> all the sciences of the Schools particularly distasteful, by a great stroke of luck I allowed myself to be taken off by a friend to hear a Cartesian lecturing on a subject concerning the human body. (TTen 245; TTfr 281)

…

Scholars also agree that after leaving university, Poulain was teaching literature and a textbook on translating Latin into French, published anonymously in 1672, has been attributed to him (Stock 1961: 19-20; Welch 2002a: 9). In the following year he published *De l'égalité des deux sexes* [On the Equality of the Two Sexes] (1673), the first and most widely known of his three feminist treatises. One year later it was followed by *De l'éducation des dames* and in the next year by *De l'excellence des hommes, contre l'égalité des sexes* [On the Excellence of Men, against the Equality of the Sexes] (1675). Despite its name the third treatise continues Poulain's defense of equality between the sexes by overturning his rhetorically presented arguments on the behalf of the excellence of men. **This treatise is less Cartesian than the two earlier ones and more engaged with theological arguments. In this respect it resembles earlier treatises participating in the Renaissance *querelle des femmes*,** the debate about the superiority of women versus men, such as Cornelius Agrippa's *De nobilitate et praecellentia foeminei sexus* [On the Nobility and Preeminence of the Female Sex] (1509/1529).

At some point after publishing his three feminist treatises, Poulain returned to theology and he was ordained a Catholic priest in 1679. His decision to take up a church career after having written treatises heavily critical of Scholastic philosophy might seem odd. There is no doubt that Poulain used Cartesian arguments as a basis for his feminist claims and that he was critical of Scholasticism, but we must also note that his third treatise is in many respect a reconciliation between his feminism and theology.

…

In Picardy Poulain witnessed the persecution of Protestants and this is often interpreted as paving the way for his own conversion from Catholicism to Calvinism. He left his parish in 1688 and after a short stay in Paris, where his conversion is assumed to have taken place, he moved to Geneva, where he received the status of *habitant* in December 1689 (Stuurman 2004: 242-243).

…

In 1693, and again in 1696, Poulain was accused for being a Socinian, an accusation that was related to his rationalistic approach to theology, which did not draw a strict distinction between theology and philosophy (Stuurman 2004: 248-249).

…

At the very beginning of the preface to *De l'égalité des deux sexes*, Poulain writes that the

> best idea that may occur to those who try to acquire genuine knowledge, if they were educated according to traditional methods, is to doubt if they were taught well and to wish to discover the truth themselves. **As they make progress in this search for truth, <u>they cannot avoid noticing that we are full of prejudices, and that it is necessary to get rid of them completely in order to acquire clear and distinct knowledge.</u>** (T1en 119; TTfr 53)[1]

This paragraph is an excellent summary of Descartes' method for the search for truth as it is presented in all his major works. In the *Discours de la méthode*, for example, Descartes writes that

> since I now wished to devote myself solely to the search for truth, **I thought it necessary to […] reject as if absolutely false everything in which I could imagine the least doubt, in order**

> **to see if I was left believing anything that was entirely indubitable.** (CSM I, 126-127; AT VI, 31-32)

…

The egalitarian aspect of Descartes' method is also emphasized and Stasimachus points out that "almost all of us have enough reason and good sense to seek the truth", which is found when "we have formed clear and distinct ideas" (ibid.). Poulain's text is a very close echo of the first paragraph of Descartes' *Discours de la méthode*, where he famously claims that

> **the power of judging well and of distinguishing the true from the false—which is what we properly call 'good sense' or 'reason'—is naturally equal in all men.** (CSM I, 111; AT VI, 2)

…

Descartes famously compares the whole of philosophy, which is here understood as including all different forms of knowledge, to a tree, where the

> **roots are metaphysics, the trunk is physics, and the branches emerging from the trunk are all the other sciences,** which may be reduced to three principal ones, namely medicine, mechanics and morals. (CSM I, 186; AT IXB, 14)

…

Poulain puts less emphasis than Descartes on the hierarchical structure of sciences implied by the original metaphor of a tree, but he does adopt Descartes' emphasis on physics and in *De l'égalité* **he uses the idea of the unity of the sciences in order to argue that women are as able as men to master all forms of knowledge.** Here Poulain is arguing against those who claim that women are unable to hold civil offices and to rule over others and he points out that these people

> fail to notice that the mind needs only discernment and accuracy in all its actions, and that anyone who displays these qualities in one context is capable of applying them as easily and in the same way to everything else. Morality and social science do not change the nature of our actions; the latter always remain physical, […] **Once someone understands the laws of motion in natural philosophy, they can apply them to all changes and all variations that occur in nature. Similarly, if someone has once understood the true principles of the social sciences, they do not experience a new challenge when applying them to novel situations that occur.** (T1en 174; TTfr 116-117)

…

His argument criticizes the Scholastic tradition in two ways. First, he argues against the common view (originally presented by Aristotle) that since women's deliberative faculty lacks sufficient authority, women have difficulties governing themselves and therefore cannot govern others (Aristotle, *Politics* 1260a12-14). Second, **Poulain criticizes the idea, dominant among the Scholastics, that different forms of knowledge require different methods and that theoretical reasoning does not as such ground practical judgment (see Aristotle, *Nicomachean Ethics* 1140b1-7, for the distinction between practical reason (*fronesis*) and theoretical knowledge).** Defenders of women, who, like Christine de Pizan, wrote within the Aristotelian tradition, found it necessary to argue separately that women are as capable as men in their practical judgment as in their theoretical reasoning (see in particular *Livre de la Cité des Dames* [The Book of the City of Ladies], 1405, part I, chap. 43). **Poulain's argument is novel in its emphasis on the unity of science, from which it follows that if women are capable of theoretical reasoning, which was a less controversial claim, they are also capable of practical judgment.** This argument is directly based on the criticism of Scholastic science that Descartes develops in the preface to the French translation of *Principia philosophiae* and which culminates in the idea of the unity of all the sciences (CSM I, 185-186; AT IXB, 12-14).

…

In the second part of *De l'égalité*, Poulain claims that "the mind has no sex" and loosely connects his claim to Descartes' dualism (T1en 157-158; TTfr 99-100). The claim in itself was not new—**we find it already in the theological doctrine of Augustine, who holds that the rational souls of women and men are equally created in the image of God** (*De trinitate* XII 7.12), and in Poulain's time it had recently been stated, with strong feminist emphasis, by Marie le Jars de Gournay (G-EMW 65; G-OC 978). **Still, many of Poulain's contemporaries as well as modern scholars agree that Descartes' dualism strengthened the idea that the mind has no sex** (different positions have been argued by Hoffmann 1969; Perry 1985; Harth 1992: 81-86; Atherton 1993; O'Neill 1999 and 2011; Broad 2002: 4-12 and 2017; Pellegrin 2011: 28-37 and 2019: 568-569; Reuter 2013 and 2019: 38-41; Detlefsen 2017). It might seem surprising that Poulain does not make more out of Descartes' dualism than he actually does.

…

Again, Poulain proceeds directly to a study of the mind-body union and here his reference to the distinction between mind and body is even more fleeting than in *De l'égalité*.

The lack of any explicit discussion of the soul as a distinct substance has led Desmond Clarke to argue that Poulain rejected Descartes' notion of the soul as a substance and held this notion to be a mere Scholastic residue. According to Clarke, Poulain defended the view that the

> union of the body and the soul and their reciprocal interdependence was a more fundamental datum of human experience than the speculative distinction of the soul as a scholastic substance. (Clarke 2013: 43)

Following the same line of inquiry Marie-Frédérique Pellegrin argues **that for Poulain "anthropology is more decisive than metaphysics"** (Pellegrin 2019: 576).
…

Right at the beginning of the first part of *De l'égalité*, Poulain compares prejudice concerning the sexes to other equally persistent, but unjustified beliefs. First, he points out that apart

> from a few scholars, **everyone thinks that it is indubitable that the Sun moves around the Earth,** despite the fact that what we observe in the revolutions of the days and the years leads those who examine it to believe that it is the Earth that moves around the Sun. (T1en 122; TTfr 59)

Second, **he refers to people, who imagine that animals are intelligent beings guided by reason,** just

> like primitive people who suppose that there are little souls inside the clocks and machines that they are shown though they know nothing about their construction or their inner springs. (T1en 122-123; TTfr 59)

Finally, and perhaps most interestingly, Poulain refers to social prejudices, which cause people to believe that their own country is the best, because it is most familiar, and

> **that the religion in which they were reared is the true religion that must be followed, even if they may never have thought of examining it or comparing it with other religious traditions.** (T1en 123; TTfr 60)

These social prejudices also include beliefs concerning wealth and rank, and Poulain points out that "the unequal distribution of goods and offices causes many people to conclude that human beings are not equal to each other" (ibid.).
…

When discussing prejudices about the inferiority of women, Poulain emphasizes that these are particularly difficult to overcome because they are shared by both men and women. He writes that these beliefs, though unjustified, seem

> all the more convincing when one considers how women themselves tolerate their condition. They accept it as if it were natural to them, either because they do not think at all about what they are or because, having been born and reared in dependency, they think about it in the same way as men. (T1en 126; TTfr 63)

…

In *De l'égalité* he points out that "[s]elf-knowledge is absolutely necessary in order to address [the equality of the sexes] properly" and following his emphasis on the bodily aspect of the human condition, he adds that this concerns "especially knowledge of the body" (T1en 155; TTfr 97). In *De l'éducation*, Poulain devotes the whole fourth conversation to the topic of self-knowledge and though he does not in this context explicitly address the question of the equality of the sexes, he makes several important remarks on how our self-knowledge is affected by the prejudiced opinions of others. Stasimachus explains:

> We are prejudiced about nearly everything that exists, and most of all about ourselves. We are not only the authors of the prejudice but also its theater and its victims. As far as the things that touch us most closely are concerned, we immolate ourselves to our ghosts, so to speak. […] **Although we are made in a certain way, and nature makes us realize that and protests constantly against our own imagination, we still try to be the way people tell us we are.** (TTen 212; TTfr 243)

…

He was clearly aware of the ongoing French discussion of self-knowledge, where Neo-Augustinian thinkers such as Pierre Nicole and Blaise Pascal questioned its possibility, and he combined a defense of the achievability of self-knowledge against those who claim that knowing oneself is

> **like moving mountains and that we will never get to the end of it, that man is hidden from himself, that there are countless hidden recesses of the heart he can never uncover** (TTen 211; TTfr 242)

…

He explains that we need to trace the prejudiced opinion about women "back to its origin" and that would

> **involve evaluating what was done in earlier times by reference to current practices, and judging ancient customs by comparison with those that we see developing in our own day.** If we had followed that rule, we would not have fallen into so many mistakes in innumerable judgments. And, in respect of the current condition of women, **we would have recognized that they were dominated only by the law of the strongest,** and that it was not because of a lack of natural capacity or merit on their part that they failed to share the advantages that give men a superior position in society. (T1en 126; TTfr 6364)

According to Poulain, the law of the stronger (*la Loi du plus fort*) is in several respects arbitrary. He emphasizes that with the exception for the dependence of children upon their parents, dependence "is a purely physical or civil relation" and it should be "considered only as an effect of change, violence, or custom" (T1en 153; TTfr 95). As argued by Stuurman, **Poulain can have been influenced by Thomas Hobbes' views about the artificial nature of political power** (Stuurman 2004: 177-178). Inequality is not natural and neither is the male sex oppressive by nature. Poulain explicitly rejects the idea that men, when they usurped power over women, were "driven by some hidden instinct—that is, by a general command of the author of nature—to act in this way" (T1en 126; TTfr 63). God has not made men oppressive. **From the arbitrary nature of the power relation between the sexes follows also that "women might have [favored their sex] had they been in a similar situation"** (T1en 152; TTfr 95). Neither sex is by its nature oppressive or submissive.

Poulain does not deny that men are, on an average, physically stronger than women or that "the interruptions of pregnancy and its after-effects reduced the strength of women for periods of time" and made them dependent on "their husbands' assistance" (T1en 127; TTfr 65). **This was not a problem, though, as long as "families consisted of just a mother, a father, and a few small children" but it became problematic when families expanded into larger units, when household chores became more diversified and all family members submitted to the rule of the father** (T1en 127-128; TTfr 65).

Poulain is committed to the idea of an original golden age, preceding the present diversified society, and he emphasizes the idea of original liberty in particular in his third treatise *De l'excellence des hommes*, where he also describes the process through which natural liberty was lost. **He explains that when**

> **some men took advantage of their strength and their leisure to try to subjugate others, the golden age of liberty gave way to an iron age of servitude. Self-interest and wealth were so bound together through domination that it became impossible not to have to depend on others.** This combination increased in proportion to the distance from the state of innocence and peace, giving rise to greed, ambition, vanity, extravagance, idleness, pride, cruelty, tyranny, deceit, schisms, wars, chance, worries—in short, all the infirmities of mind and body that afflict us. (TTen 313; TTfr 392)

…

In *De l'égalité* Poulain describes how **the original voluntary dependence between husband and wife becomes subjugation when wars forced women "to accept as husbands unknown strangers who considered them merely as the most beautiful part of their booty"** (T1en 128; TTfr 66).

…

In *De l'excellence* he compares political society and the "society of marriage [which] is composed only of two persons, of whom one, therefore, cannot use authority and coercion towards the other" (TTen 280; TTfr 313). Poulain argues that marriage does not require a hierarchical division of power because it is "not founded on fear, but on love" (ibid.). **Marriage can thus be based directly on the natural equality of wife and husband, without either of them usurping power over the other, whereas a society of three or more people, where one is "able to join forces with another to force the third to abide", requires submission to laws and sovereigns, otherwise people will "be**

constantly at war” (ibid). In order to avoid war and tyranny established through war, political society requires sovereign power, **but like Hobbes, Poulain emphasizes that the right to command**

> **does not belong naturally to any one person more than to another, since it consists in the voluntary submission of those who give it to the one who is vested with it.** (ibid.)

…

Poulain’s criticism of a scholastic notion of ‘nature’ is most explicit in a passage where he argues against **“Lawyers’ opinions”, which carry “a lot of weight for many people because they profess specifically to give everyone their due”** (T1en 152; TTfr 94). **These Scholastic lawyers, among whom scholars claim that Poulain includes Hugo Grotius** (Stuurman 2004: 166-167), **say “that it is nature that assigns women to the lowest functions in society and removes them from public offices”,** but they would, according to Poulain,

> be hard pressed if they were required to explain intelligibly what they mean by ‘nature’ in this context, and to explain how nature distinguished the two sexes, as they claim. (T1en 152; TTfr 94-95)

…

Poulain argues:

> **It is easy to see that sexual differences apply only to the body.** Since, strictly speaking, the body alone is involved in the reproduction of human beings and the mind merely gives its assent and does so in the same manner in everyone, **it follows that the mind has no sex.** (T1en 157; TTfr 99-100)

Here, Poulain is primarily concerned with the nature of the mind, but the way he connects reproduction and assent is also noteworthy and corresponds to his emphasis, in *De l’excellence*, that when a woman and a man “agree to live together it is purely voluntary” (TTen 280; TTfr 313; see also *De l’égalité*, T1en 153; TTfr 95). **From his claim about equal consent, Poulain draws the conclusion that if “the mind is considered in itself, it is found to be equal and to have the same nature in all human beings, and to be capable of every kind of thought”** (T1en 158; TTfr 100; see also section 2.2).

The equality of independent minds is not enough, though, since human beings are compounds of minds and bodies. Minds are constantly affected by bodies. Therefore Poulain continues by arguing that the bodies of the sexes are also similar in all cognitively relevant respects. He claims that this is particularly true of the brain:

> [The fact that the mind functions no differently in one sex than in the other] is even clearer if one considers only the head, which is the unique organ of scientific knowledge and in which the mind exercises all its functions. Even with the most detailed anatomical investigations, we cannot observe any difference in this organ between men and women. The brains of the latter are completely similar to ours; they receive and combine sensory impressions there in the same way as we do, and they store them for the imagination and memory in exactly the same way. (T1en 158; TTfr 101)

…

In *De l’égalité*, Poulain writes that **“dependence and servitude are contrary to the law of nature which makes all men equal”** (TTen 78; TTfr 95) **and a few pages later he points out that when humans are imagined separate from civil society, they are found “completely free and equal, with only a desire for self-preservation and an equal right to everything that would be necessary to achieve it”** (T1en 164; TTfr 106). Poulain does not elaborate on what he means by the law of nature or by the state of nature preceding civil society. It is not clear to what extent he is relying on the Scholastic tradition of natural law, which he would have known from his studies at Sorbonne, and to what extent he is inspired by more recent developments, such as the natural law theory of Hugo Grotius and Thomas Hobbes.

Both passages cited above are situated in contexts that do have Hobbesian connotations: in the first case Poulain is distinguishing natural equality from the arbitrary nature of dependence in the civil state (see also section 3.2) and in the second case he continues:

> **But [the woman studying law and politics] would also notice that this equality would involve them in war or a permanent state of mutual distrust, which would be inconsistent with their objective, and that the natural light of reason would dictate that they could not live in peace unless everyone surrendered their rights and made contracts or conventions.** She would also see that, in order to validate these decisions and to protect people from anxiety, it would be necessary to have recourse to a third party who would have authority to

> force everyone to observe what they had promised to others. (T1en 164; TTfr 106; see also Hobbes, *Leviathan*, part I, chap. 13-15)

On these grounds, and considering which works were available in Poulain's intellectual context, Stuurman concludes that "Hobbes is his most likely source" (2004: 177). The probable influence of Hobbes is very illuminating, in particular when we consider Poulain's view of the arbitrary nature of power, but Stuurman seems to overemphasize the Hobbesian nature of Poulain's views when he indicates that Poulain rejects natural sociability (Stuurman 2004: 178). Poulain does indeed emphasize the role of fear as a motive for political society in *De l'égalité* (T1en 164; TTfr 106) as well as *De l'excellence* (TTen 280; TTfr 313), **but it is crucial to note that he does not consider fear to be a necessary aspect of the natural condition of humankind. The description of "the golden age of liberty", which Poulain gives in *De l'excellence*, is a description of natural sociability:**

> **At the dawn of the world, traces of which are still to be seen in the innocent loves of shepherds and shepherdesses and in the pleasures of the rustic life, which is untroubled by the fear of powers or enemies, all men were equal, just, and sincere, since their only rule and law was that of good sense. (**TTen 313; TTfr 392)

…

Poulain's discussions of natural equality and liberty in *De l'excellence* are framed by theological references, including a reference to "St. Augustine, who claims that man should place nothing above himself save God alone" (TTen 279; TTfr 312; also Wilkin 2019: 234-236). Poulain may have in mind a passage in *De civitate Dei* (book XIX, chap. 15), where Augustine writes:

> **God wanted rational man, made to his image, to have no dominion except over irrational nature. He meant no man, therefore, to have dominion over man, but only man over beast. So it fell out that those who were holy in primitive times became shepherds over sheep rather than monarchs over men,** […]. (Augustine 413-427 [2008: 223])

Kinch Hoekstra, among others, has emphasized that this chapter from *De civitate Dei*, as well as a passage in *De doctrina Christiana* (book I, chap. 23), where Augustine states that human beings are naturally equal, influenced discussions about natural equality and liberty well into the seventeenth century (Hoekstra 2013: 95). When we look for the normative basis of Poulain's claim that all humans are equal (shepherds and all), this theological origin, deriving equality from the creation of humankind, is at least as probable as Hobbes' account of equality (for an influential interpretation of the normative nature of the latter, see Hoekstra 2013).

16. If the Nature of man were not to be morally governed by proposed *Truth* and *Good*, his *Reason* and *Will* were vain; he should not be ruled as a men but as a stone or beast: sense must do all: all humane government were impossible or evil, for want of capable subjects: no Villany must be controlled: **folly must bear equal sway with wisdom: children must not obey their Parents, any more than Parents their children. Yea by the Principles of this *Maledictus Spinosa* and his tribe, the children that can but conquer natural instinct, and escape humane punishment, may as lawfully kill their Parents to get the inheritance, as Love and Honour them: and the Parents may as lawfully murder all their children, to avoid the trouble of keeping them, as to nourish them.**

> https://books.google.fi/books?id=6qHLEAAAQBAJ&lpg=PP1&hl=fi&pg=PT649#v=onepage&q&f=false

> **Rejecting humility, repentance, and pity, arguing we should be benevolent towards others on the basis of reason and justice, not pity,** are typical *exempla* of Spinoza's applied moral mechanics, a moral relativity pivoting, as Nietzsche recognized, seeing this as a point where his own uncompromising naturalism converges with Spinoza's, on wholly eliminating the concept of unmitigated or innate "evil."31 **The elementary principle of Spinoza's morality, that "evil" does not exist while "cheerfulness" [hilaritas] cannot be excessive and is always "good," recalled in the minds of the theologians of his time the impiety of ancient heretical sects like the Pelagians whose rejection of Original Sin was universally condemned.** Unlike Hobbes, Spinoza proposed a naturalist doctrine of good and bad, a relativity existing prior to the forming of states that seemed shamelessly "evil" to most readers by suggesting the supreme "Christian" virtue of humility is inherently bad **and that extra-marital intercourse, homosexuality, and love of wine – and even very occasionally assassination – are variously good or bad depending on circumstances, while melancholy, self-denying abstinence, and self-abasement are always intrinsically "bad"** (*Ethics* IV, Prop. 42).32

> https://books.google.fi/books?id=6qHLEAAAQBAJ&lpg=PP1&hl=fi&pg=PT768#v=onepage&q&f=false

> Informal oligarchy being as damaging as monarchy and formal aristocracy, the well-ordered democratic republic must ensure all adult men are eligible "to vote in the supreme council and serve in offices of state." **This then poses the question: "is it by nature or by institution that women are under the power of men [foeminae ex natura an ex instiuto sub potestate virorum sint]? For if this happens merely through institutional practice, then there is no compelling reason for us to exclude women from the government."** This point brings the reader to the last surviving page of the *Tractatus*, often called Spinoza's "black page," where he breaks off shortly before his death.124 **Hugely disappointing to the modern reader after all the inspiring insights just preceding it, neither a pointer to modernity nor at all inspiring,** this last page reflects what all human history thus far seemed to show. Woman's "weakness," argues Spinoza, is what prevents men and women governing the state together: "wherever in the world men and women are found, we find men ruling and women being ruled and both sexes thus living in harmony." **He barely considers the possible objections to this,** merely adding: "if women were naturally equals of men and equally endowed with strength of mind and ability – abilities wherein human power and therefore human right consist – **then surely so many and such a wide variety of nations would have produced instances where men are ruled by women and are brought up to be inferior in ability.** Since one sees such instances nowhere, one may conclude that women do not naturally possess equal right with men and necessarily give way to men."125 The most that can be said in Spinoza's defence here is that in his age rampant tyrannizing over women was indeed universal.

https://books.google.fi/books?id=tSE6DwAAQBAJ&lpg=PT281&hl=fi&pg=PT254#v=onepage&q&f=false

In one fashion or another, all premodern polities depended for legitimacy on popular trust in the wisdom and virtue of the surrogate fathers ordained to rule by nature or nature's God. Even in our own age, governments owe rather more of their authority than anyone will openly admit to the all-too-human longing, bred of childhood experience, for paternal protection and guidance.
…

To establish the premise of his argument, Locke had to debunk a species of political thinking with deep roots in the human soul **and substitute an entirely different understanding supported by man's less deeply rooted passion for mastery, freedom, and dominion.** Thus, where his less astute political associates were content to defend the Whig cause by attacking patriarchal government alone, Locke embedded in his *Two Treatises* a general assault on the patriarchal family and took great pains in *Some Thoughts Concerning Education* to make clear what it would mean for domestic society to be organized for the purpose of preparing children to be masters of their own destiny; self-reliant **and, in a new and thoroughly modern sense, rationally free.**4
…

To render persuasive Hobbes's account of the state of nature and his own doctrine of revolution, Locke had to overcome the powerful instinct, instilled by childhood experience and reinforced by revelation and the voice of inherited reason, that leads men to entrust their fate to surrogate fathers. In this process he had to disprove God's provision for man and nature's endowment without scaring off or making dispirited the great mass of supporters he wished to enlist in freedom's cause.
…

His immediate task was made easier by the fact that, in their desperation, the champions of Stuart absolutism had adopted an explicitly patriarchal and providentialist justification of authority in its most extreme and least palatable form.16

>
> This is the proper place for considering a question of very considerable importance in civil society, and concerning which there has been much diversity in the sentiments of writers, and in the laws and practice of states: has a state a right to prohibit the emigration of its members? may a citizen dissolve the connexion between him and his country?
> …
>
> The notion of natural, perpetual, and unalienable allegiance from the citizen to the society, or to the head of the society, of which he was born a member, has, by some writers and in some countries, been carried very far indeed: and their practice has been equally rigorous with their principles. **The well known maxim, which the writers upon the law of England have adopted and applied to this case is,l "Nemo potest exuere patriam."6 It is not, therefore, as is holden by that law, in the power of any private subject to shake off his allegiance, and to transfer it to a foreign prince.** Nor is it in the power of any foreign prince, by naturalizing or employing a subject of Great Britain, to dissolve the bond of allegiance between that subject and the crown.
> …

The sentiments of Mr. Locke on this subject go much further. "'Tis plain," says he,q "by the law of right reason, that a child is born a subject of no country or government. He is under his father's tuition and authority, till he comes to the age of discretion; and then he is a freeman, at liberty what government he will put himself under; what body politick he will unite himself to."

"O glorious regulations!" says Cicero,r "originally established for us by our ancestors of Roman name; that no one of us should be obliged to belong to more than one society, since a dissimilitude of societies must produce a proportioned variety of laws; that no one, contrary to his inclination, should be deprived of his right of citizenship; **and that no one, contrary to his inclinations, should be obliged to continue in that relation. The power of retaining and of renouncing our rights of citizenship, is the most stable foundation of our liberties.**"

In the digest of the Roman law,s it is laid down as a rule, that every one is at liberty to choose the state, of which he wishes to be a member.

q. On Civ. Gov. s. 118. r. Pro. Balb. c. 13. s. Dig. l. 49. t. 15.

https://books.google.fi/books?id=tSE6DwAAQBAJ&lpg=PT281&hl=fi&pg=PT281#v=onepage&q&f=false

Thus, if, in the *Second Treatise*, **Locke eschewed the traditional moral vocabulary and failed or very nearly failed even to mention charity, the soul, sin, ethics, morality, virtue, nobility, honor, gallantry, duty, valor, country, patriotism, loyalty, friendship, and love,** he had good reason.96
…

In repudiating divine right, in asserting that magistrates have no business enforcing outward piety or even suppressing the propagation of heresy, and in intimating that the public authority should concern itself with virtue and vice only to the degree necessary for the material welfare and preservation of mankind, **Locke turns his back on nearly all previous regimes – pagan, Jewish, Christian, and Muslim alike.** In contending that absolute monarchy is "inconsistent with Civil Society," he denies the legitimacy of virtually every polity then existent on the European continent and elsewhere.98 **In rejecting the notion that conquest is a legitimate mode of acquisition, he condemns the ordinary practice of the ancients and that of Europe's martial aristocracy in the more recent past;** and in arguing that victory, even in a just war, can confer on a conqueror no lasting right to govern, he justifies not just Greek resistance against Ottoman rule but – as his close friend William Molyneux was quick and, in Locke's judgment, imprudent in pointing out – Irish unwillingness to be bound by the decisions of England's unrepresentative Parliament. Moreover, as Gershom Carmichael and Francis Hutcheson soon made evident, in asserting that **it would be right and proper to enslave those who have launched a war of aggression but unjust similarly to subjugate their wives and children,** Locke, in effect, denounces as tyrannical the system of slavery introduced by Europeans into the New World in the sixteenth century and maintained there since.100 **Finally, in making consent the foundation of all relationships between adults, he not only condemns the patriarchal family;**101 **in the face of the clear teaching of the Gospels, he defends divorce and treats it as a perfectly normal event.**102

https://books.google.fi/books?id=tSE6DwAAQBAJ&lpg=PT200&hl=fi&pg=PT405#v=onepage&q&f=false

Since I find in Locke a towering ambition to reshape all human institutions, extraordinary political cunning, and a keen insight into the social import of fashion, I am less certain than most scholars that, when he composed his *Two Treatises of Government*, he paid no attention to the ultimate implications of his argument for the question of Negro slavery. Much has been made of the fact that Locke owned stock in the Royal African Company; never have those who are so quick to convict him of hypocrisy noted that he sold his stock in 1675 – **some years before he is known to have begun wrestling with the questions of political principle that occasioned his addressing the problem of slavery in his *Two Treatises of Government*.**
…

It typifies Locke's rhetoric that he should initially insist (I.vi.52-53) that paternal power should properly be called parental power and then cover his tracks (II.vi.71-76, xv.170, 173-74) by reverting to the traditional terminology. **There is no reason to suppose that he would have been shocked by Josiah Tucker's contention that the logic of his argument required conceding the franchise to women:** *A Treatise Concerning Civil Government*, 25-27, 34-35.

102. Cf. Locke, *TTG* Lv.44-49 (esp. 47), II.vii.78-83, xvi.183 with Matt. 5:31-32, Mark 10:4-12, Luke 16:18. **In 1667, Locke listed "polygamy and divorce" among the "things indifferent" that "have a title … to toleration."** See Locke, "An Essay Concerning Toleration" 86, 94-95. In the journal he kept in 1678, under the rubric *Atlantis*, he wrote, "He that is already married may marry another woman with his left hand. … **The ties, duration and conditions of the left hand marriage shall be no other than what is expressed in the contract of marriage between the parties.**"

https://oll.libertyfund.org/title/sidney-discourses-concerning-government

Sidney proves to be closer to the Greek and Roman classics than Locke is. **It is characteristic that Sidney quotes frequently from the ancients while Locke hardly ever does.**
…

Characteristically, Sidney never calls the pre-civil state the "state of nature" as Locke does even when it degenerates into a state of war. Lockean man exists naturally in this state, which is one of poverty, danger, and insecurity. **He becomes political by escaping nature, not by following it. Reason, for Locke, is the device by which man escapes and conquers nature, by constructing government and by engaging in capitalist industry.** For Sidney, man's nature is reason, as he constantly repeats. Sidney calls the Hobbesian state of nature—the war of all against all—"epidemical madness," which men would fall into only if God abandoned the world (I.17). Man is born free, but Sidney does not think it natural for man to live without law. **Without using Aristotle's formula, Sidney continues to think of man as a political and rational animal by nature.**

Sidney's law of nature goes beyond the conditions of self-preservation and includes the several virtues that the rational life comprises. This conception continues the natural law tradition stemming from the ancients. However, **Locke's doctrine of natural law breaks with the tradition in its being grounded in the individual's fundamental right to life and liberty. In Locke's moral universe the center is no longer man's end, but man or man's freedom.** In this he follows Hobbes.12

The two men view commerce quite differently. **For Locke, commerce is a principal means by which man escapes the privation that unimproved nature condemns him to. Sidney too praises wealth as an end of statesmanship, but only because of its contribution to a nation's fighting strength** (a consideration similar to Hamilton's in *Federalist* 11); moneymaking he otherwise rejects as corrupting (II.22, 23).

Sidney never questions the right of the father to rule in the family. **But Locke speaks of *honoring,* not obeying, the father *and mother.* Civil society for Sidney is still an association of fathers as heads of families** (II.4). **Locke's more radical individualism throws into question the traditional family, which is based on the different purposes, by nature, of male and female.**

> But there are solid defects in “Télémaque”—indicating corresponding defects in the author’s mind—which would have, in any case, prevented its doing the good work which Fénelon desired; defects which are natural, as it seems to me, to his position as a Roman Catholic priest, however saintly and pure, however humane and liberal. **The king, with him, is to be always the father of his people; which is tantamount to saying, that the people are to be always children, and in a condition of tutelage; voluntary, if possible: if not, of tutelage still.** Of self-government, and education of human beings into free manhood by the exercise of self-government, free will, free thought—of this Fénelon had surely not a glimpse. **A generation or two passed by, and then the peoples of Europe began to suspect that they were no longer children, but come to manhood;** and determined (after the example of Britain and America) to assume the rights and duties of manhood, at whatever risk of excesses or mistakes: and then “Télémaque” was relegated—half unjustly—as the slavish and childish dream of a past age, into the schoolroom, where it still remains.

https://archive.org/details/enlightenmentint0000gayp/page/30/mode/2up?view=theater

The old clean-cut social hierarchies retained much of their prestige, but they were on the defensive in the face of powerful social aspirations and a growing desire for social mobility. **Especially in the middle ranges of Western European society, the father’s power over his children and the husband’s power over his wife markedly declined. The patriarchal family, still the pattern in the seventeenth century, was giving way to the nuclear family, with its well-defined boundaries against the community and its growing intimacy and equality.** Within certain limits, still rather rigid but distinctly expanding, young girls were being permitted to choose their partners. Eighteenth-century fiction suggests that the tension between parental demands for obedience and young lovers’ demands for freedom was unresolved, but – witness the novels of Richardson – it was becoming old-fashioned if not contemptible to force girls into an uncongenial connection for the sake of parental prestige or profit.
…

In the seventeenth century – as Milton’s portrayal of Adam and Eve made plain to all – no one had doubted that women were inferior to men. But then, at the end of the 1690s, Daniel Defoe, who was always a pioneer, sharply took his fellowmen to task for their scurvy treatment of women; **had women the education of men, he argued in his *Essay upon Projects*, their supposed inferiority would soon vanish.** And it as Defoe, not Milton, whom the eighteenth century was to follow.
…

David Hume insisted, in good progressive fashion, that “marriage is an engagement entered into by mutual consent,” and he opposed the “male tyranny” which “destroys that nearness of rank, not to say equality, which nature has established between the sexes.” Deeply appreciative of female company, he noted, rather winningly, that “our free commerce with the fair sex, more than any other invention, embellishes, enlivens, and polishes society.”62 Yet even Hume could not quite escape traditional prejudices: the essays he explicitly addressed to women have an unwonted coyness, and he could still resort to the well-worn platitude that women were a subject “little to be understood.”63 *The Encyclopédie* displays the same ambivalence: it delineated its womanly ideal as the pious, thrifty, gentle, orderly – and submissive – housewife, and described woman, rather as Hume had described her, as everything man was not: touching, charming, invaluable – and mysterious. At the same time, it vigorously criticized the legal disabilities on women for violating the natural equality of all human beings and for disregarding the well-established fact that women often proved more energetic, competent, and intelligent than men. **Much of the supposed inferiority of women, the *Encyclopédie* argued, was merely the evil consequence of male dominance.** In a sensible essay “Sur les femmes,” Diderot expressed the same view.

https://www.britannica.com/biography/Marie-Jean-Antoine-Nicolas-de-Caritat-marquis-de-Condorcet#ref272130

Condorcet, wholly a man of the Enlightenment, sought to extend the empire of reason to social affairs. He advocated economic freedom, religious toleration, legal and educational reform, the abolition of slavery, and—unusually for his time—equal rights for women, including woman suffrage. **He rejected the almost-universal prejudice, even among “enlightened” thinkers, that women were intellectually inferior to men, regarding it as an illegitimate excuse for excluding women from public life as well as from many forms of education.** Women’s intellectual and supposed physical inferiority were also misused as an irrelevant bar to most occupations, he held. In his essay *Sur l’admission des femmes au droits de la cité* (1790; *On the Admission of Women to the Rights of Citizenship*), Condorcet argued that the widely shared assumption that the natural rights of men are based on their capacities for reason and moral action logically implies that women possess the very same rights:

> **The rights of men stem exclusively from the fact that they are sentient beings, capable of acquiring moral ideas and of reasoning upon them.** Since women have the same qualities,

> they necessarily also have the same rights. **Either no member of the human race has any true rights, or else they all have the same ones; and anyone who votes against the rights of another, whatever his religion, colour or sex, automatically forfeits his own.**

https://books.google.fi/books?id=GulESADToWsC&lpg=PA1&hl=fi&pg=PA208#v=onepage&q&f=false

The political Stoicism of the French Revolution was an undoubtedly masculine affair.35 But if, finally, we step outside the scaffolding provided by Lenin's argument and cross over to the other side of the English Channel, **we can find Stoic philosophy being creatively appropriated by women for their own political projects** in the era of the Revolution. Catharine Macaulay had used Elizabeth Carter's edition of Epictetus extensively when she was writing her *Treatise on the Immutability of Moral Truth*, published in 1783, which offered an explicit defence of Stoicism against the arguments of Hobbes and Hume.36 **When Mary Wollstonecraft reviewed Macaulay's 1790 *Letters on Education*, she specifically commended the sympathetic exposition of Stoic principles: 'the doctrines of the Stoics are clearly stated by Mrs. M. and some unjust aspersions wiped off, which bigotry and ignorance have industriously propagated, to render doctrines ridiculous or odious, which deserve respect.'**37 This favourable orientation to Stoicism is also visible in the argument of Wollstonecraft's *Vindication of the Rights of Woman*. **There we find relentless appeals to reason and nature as trumps over mere social convention, however widespread; we find the Stoic denigration of emotion deployed to rescue women from their identification as passionate creatures, thereby to restore them to rationality, and therefore to equality with men; and we find the critique of appearance and reputation,** which draws on Stoic elements discernible in Rousseau.38 And if this book opened with Ernst Cassirer's opinion that Thomas Jefferson was 'speaking the language of Stoic philosophy' when he drafted the Declaration of Independence, it can appropriately close with perhaps the finest example of Mary Wollstonecraft doing the same:

> **Would men but generously snap our chains, and be content with rational fellowship instead of slavish obedience,** they would find us more observant daughters, more affectionate sisters, more faithful wives, more reasonable mothers – **in a word, better citizens.** We should then love them with true affection, because we should learn to respect ourselves.39

Above all, so far from being stiff with orthodox religion, it was almost the first irreligious home in all human history. **Theirs was the first generation that ever asked its children to worship the hearth without the altar.**
...

I remember one, who locked up his daughters like prisoners; and one of them said to me, "You see he thinks nobody else can think at all, except himself and Herbert Spencer." I remember another who was an extreme Radical, a champion of liberty everywhere except at home. The point is of some historic importance. Tyrants, religious or irreligious, turn up anywhere. **But this type of tyrant was the product of the precise moment when a middle-class man still had children and servants to control; but no longer had creeds or guilds or kings or priests or anything to control him. He was already an anarchist to those above him; but still an authoritarian to those below.**

> https://oll.libertyfund.org/title/pollock-the-genius-of-the-common-law#lf1381_label_059
>
> **There was the medieval stage in which every man was supposed to have his proper state of life, and the law had to see that he was kept in it.** We cannot fix a point of time when this conception of social welfare ceased to be officially accepted. Official and judicial opinion are rather apt to lag behind the general movement of ideas, but they do move, and older and younger colleagues are not likely to move at the same pace: just as, in dating a manuscript, one has to remember that an ancient scribe may be writing the hand of the last generation at the same time that a young one is eager to display the very newest graces of penmanship. **We shall not be far wrong in placing the period of transition between the beginning of the nineteenth century and the reforms of 1832. Next came the reign of utilitarian individualism, under which unlimited competition was to be the universal regulator, and it was thought that the State ought not to hinder this beneficent operation of human nature and could do nothing to help it beyond removing artificial obstacles. In the faith of that doctrine our fathers (I mean the fathers of men now growing old) lived through their active years, and their sons were brought up in its atmosphere. It prevailed for approximately half a century.** Then, well within the memory of men not much past the prime of life, it became a tolerated, indeed a probable or plausible, opinion, that the State was abdicating its functions by remaining passive, and should not only leave the road open for ability, but give active assistance in suppressing unfavourable external conditions and equalizing opportunities. **The present generation is full of this spirit, [1911]** and its power seems likely to increase for some time yet.

> > 2. Titanic Individualism derives the value of personality from the assertion that there is no God. **It is not to be confused with the Individualism of Luther or Calvin or Rousseau, the Individualism prescribed under its different aspects in the rise of Capitalism. It is the atheist Individualism of Kierkegaard's Seducer, of Stirner's Only One, of Nietzsche's Superman, the philosophy of a short transition period in which Liberal Capitalism was triumphant.**

---

https://www.garynorth.com/freebooks/docs/pdf/baptized_patriarchalism.pdf

Sometime in the early 1960's, R.J. Rushdoony wrote the following critique of the Roman family. It was published in 1971, but he had written it years earlier when he was a fulltime employee of the William Volker Fund in California.

> In early Greek and Roman cultures, paternal power was religious power, a power continuous with all being and essentially divine, requiring duties of the father and conferring him with authority. The father, as Fustel de Coulanges has shown, in *The Ancient City*, was under law; but, it must be added, he was not only under law but a part of that law and continuous with it in the chain of being. He was thus to a degree the law incarnate, in that he possessed a measure of the ultimate law in his person. **This manifestation of law moved steadily from the father to the state, so that the state, originally the creature of the family and of the fathers, made itself the father,** and the source of law, with the family turned into its creature.2

The Roman state steadily absorbed the Roman family under the Empire. This is the perpetual threat to all patriarchalism. **The patriarchal system begins with almost total loyalty to the father, but eventually this loyalty is transferred to the state because the state takes over the family's welfare functions and its sacramental office.** Bread and circuses are provided by the state. Copulating priestesses replace the father's lustral rites.
...

The family is not an agency of public law enforcement, for it cannot lawfully impose sanctions outside its own boundaries. The ability of the state to tax away the wealth of the family makes the state the primary agency in society if it is a question of family vs. state. The family will always lose the contest. **Only by converting the family into a mini-state – warlordism – can patriarchalism reverse the drift into centralized statism.**

https://archive.org/details/in.ernet.dli.2015.55010/page/n71/mode/2up?view=theater

Achaean society is a patriarchal despotism tempered with the beauty and anger of woman, and the fierce tenderness of parental love.* Theoretically the father is supreme: he may take as many concubines as he likes,† he may offer them to his guests, he may expose his children on the mountaintops to die, or slaughter them on the altars of the thirsty gods. Such paternal omnipotence **does not necessarily imply a brutal society, but only one in which the organization of the state has not yet gone far enough to preserve social order; and in which the family, to create such order, needs the powers that will later be appropriated by the state in a nationalization of the right to kill. As social organization advances, paternal authority and family unity decrease, freedom and individualism grow.**

https://archive.org/details/cu31924100532054/page/110/mode/2up?view=theater

The family did not receive its laws from the city. If the city had established private law, that law would probably have been different from what we have seen. It would have established the right of property and the right of succession on different principles; for it was not for the interest of the city that land should be inalienable and the patrimony indivisible. **The law that permitted a father to sell or even to kill his son – a law that we find both in Greece and in Rome – was not established by a city. The city would rather have said to the father, "Your wife's and your son's life does not belong to you any more than their liberty does. I will protect them, even against you; you are not the one to judge them, or to kill them, if they have committed a crime; I will be their judge."** If the city did not speak thus, it is evident that it could not. Private law existed before the city. When the city began to write its laws, it found this law already established, living, rooted in the customs, strong by universal

observance. **The city accepted it, because it could not do otherwise, and dared not modify it, except by degrees.**

https://archive.org/details/cu31924100532054/page/338/mode/2up?view=theater

At Thebes and at Corinth it was still in vigor in the eighth century. At Athens legislation still showed some preference for the oldest. At Sparta the right of primogeniture continued until the triumph of democracy. There were cities where it disappeared only after an insurrection. **At Heraclea, Cnidus, Istros, and Marseilles the younger branches took up arms to destroy at the same time the right of primogeniture and the paternal authority.**1 **From that time Greek cities that had not before counted more than a hundred men enjoying political rights, could count five or six hundred.** All the members of aristocratic families were citizens, and magistracies and the senate were open to them.

https://archive.org/details/cu31924100532054/page/418/mode/2up?view=theater

The code of Draco was written when the struggle of the two classes was at its height, and before the Eupatrids were vanquished. Solon prepared his at the moment when the inferior class gained the upper hand. The difference between these codes, therefore, is great.

Draco was a Eupatrid; he had all the sentiments of his caste, and was "learned in the religious law." **He appears to have done no more than to reduce the old customs to writing without in any way changing them.** His first law is this: “Men should honor the gods and heroes of the country, and offer them annual sacrifices, without deviating from the rites followed by our ancestors.”
…

A curious article of this legislation which has been preserved shows in what spirit it was made.2 It grants the right of prosecution for a murder only to the relatives of the dead and the members of his gens. **We see by this how powerful the gens still was at that period, since it did not permit the city to interfere in its affairs, even to avenge it. A man still belonged to the family more than to the city.**
…

In opposition to Draco, who permitted only the family of the victim to prosecute one for a crime, Solon granted this right to every citizen.2 Here was one more old patriarchal right abolished.
…

Athens still had its archons, and Rome its consuls. Nor was anything changed in the ceremonies of the public religion; the repasts of the prytaneum, the sacrifices at the opening of the public assembly, the auspices and the prayers, – all were preserved. **It is quite common with man, when he rejects old institutions, to wish to preserve their exterior forms.**

In reality all was changed. Neither institutions, nor laws, nor beliefs, nor manners were in this new period what they had been in the preceding.
…

The regulating principle from which all institutions now derive their authority – the only one which is above individual wills, and which obliges them all to submit – is public interest. What the Latins call *res publica*, the Greeks *τό κοινόν*, replaces the old religion. This is what, from this time, establishes institutions and laws, and by this all the important acts of cities are judged. In the deliberations of senates, or of popular assemblies, when a law is discussed, or a form of government, or a question of private right, or a political institution, no one any longer asks what religion prescribes, but what the general interest demands.

A saying is attributed to Solon which well characterizes this new *régime*. Some one asked him if he had given his country the best constitution. "No," he replied, "but the one which is the best suited to it." **Now it was something quite new to expect in forms of government, and in laws, only a relative merit. The ancient constitutions, founded upon the rules of a worship, were proclaimed infallible and immutable. They possessed the rigor and inflexibility of the religion.** Solon indicated by this answer that, in future, political constitutions should conform to the wants, the manners, and the interests of the men of each age. There was no longer a question of absolute truth; the rules of government were for the future to be flexible and variable. **It is said that Solon wished at the most that his laws might be observed for a hundred years.**

> https://www.gutenberg.org/cache/epub/46333/pg46333-images.html#CHAPTER_VIIId
>
> At first men had no kings save the gods, and no government save theocracy. They reasoned like Caligula, and, at that period, reasoned aright. **It takes a long time for feeling so to change**

> **that men can make up their minds to take their equals as masters, in the hope that they will profit by doing so.**

https://archive.org/details/in.ernet.dli.2015.87543/page/n123/mode/2up?view=theater

> I have been told, however, by some of those who have observed the formation of these rules, that they do not purport to emanate from the personal authority of their author or authors; nor do they assume to be dictated by a sense of equity; **there is always, I am assured, a sort of fiction, under which some customs as to the distribution of water are supposed to have existed from all antiquity,** although in fact no artificial supply had been even so much as thought of. It is further stated that, though it is extremely common among English functionaries to speak of the distribution of water as regulated by the agreement of the villagers, yet no such idea really enters the mind of the community or of its representatives as that there can be or ought to be an express or implied contract among the cultivators respecting their several shares. **And it is added that, rather than have a contract or agreement, it would appear to them a much more natural and reasonable arrangement that the distribution should be determined by casting lots. Authority, Custom, or Chance are in fact the great sources of law in primitive communities as we know them, not Contract.**

https://archive.org/details/B-001-015-424/page/n223/mode/2up?view=theater

To the rationalist thinkers of the seventeenth and eighteenth centuries primitive man appeared as a completely free agent following the caprices of his own will. It was only when he had bowed his neck beneath the social yoke that forbidden fruits, defined as such by the law, made their appearance. And a pious fraud gave to this same law the semblance of a divine revelation. **It followed that Power was the author of every prohibition and rule of conduct, with religion acting as Power's ghostly policeman.**

Today's view of the subject is very different. **The further we seek to know primitive men, the more struck we are, not by the extreme liberty of their behaviour, but, on the contrary, by its extraordinary strictness.** In very backward societies the life of man consists of an extremely narrow cycle of actions which are always alike. **Far from this regularity being the work of a lawgiver, it may be seen even in communities in which there is a minimum of government.**

The savage derives an obvious satisfaction from conformity. **To all attempts to impel him into an uncustomary activity he evinces a repugnance which soon reaches the point of panic.** It is easily explained. Every novelty arouses emotions of indistinct fear. The "things that are not done" make up an enormous mass in which the distinctions with which we are familiar—the immoral, the illegal, the shocking, the dangerous—have not yet been drawn.
…

A whole structure of such tales supports a structure of rites, ceremonies, and practices which are of an entirely obligatory character, **and in regard to which the savage is infinitely less capable of insubordination than we are in regard to laws which are known to us to be of human origin and to be maintained by human constraints.**
…

What seems to us to be the highest expression of authority, that of saying what should and what should not be done, of distinguishing the lawful from the unlawful, becomes an attribute of political Power only at a very late stage of its development.

This fact is of capital importance. **For a Power which lays down the good and the just is, whatever form it takes, absolute in a quite different way from one which takes the good and the just as it finds them already laid down by a supernatural authority.** A Power5 which regulates human behaviour according to its own notions of social utility is absolute in a quite different way from one whose subjects have had their actions prescribed for them by God. And here we glimpse the fact that the denial of a divine lawgiving and the establishment of a human lawgiving are the most prodigious strides which society can take towards a truly absolute Power. So long as a supernatural origin was ascribed to law, this step remained untaken.

> 5. A more or less late stage according to the particular people and civilization. **We know that at Rome the secularization of the law was especially precocious.**

…

So it was with the least religious peoples in history, the Greeks and the Romans.6 No doubt the principles of Roman law quickly lost any tincture of religious connotation. But their civil ordinances and

institutions are, as Ihering has shown, the exact reproduction of ancient ordinances and institutions which had a sacred character.7
…

On the other hand, **fresh activities and contacts throw up new problems, rendering necessary new patterns of behaviour.** How are these new rules to be formulated? For a truly religious people there is but one way. The divine law is the one foundation of morality and the sole basis of jurisprudence; as questions are put, the doctors of religion formulate the answers, basing themselves on the principles of the Book. In that way a nation, trusting to ecclesiastical jurisprudence, can do without a legislature at all. **The Jewish people, for instance, could, even though dispersed, settle in this way the most embittered disputes. This example of practical legislation formulated in the absence of any duly constituted state seems not to have received the attention it should have from political thinkers.** In the Islamic world the jurisprudence based on the Koran has played a similar role.9

In these instances, then, laws are not made. Interpretation of the law provides the necessary answers to all particular cases. **Legislation becomes no more than a jurisprudence, and jurisprudence a casuistry.**
…

It cannot be too much emphasized that at the root of these two interventions two very different principles are at work, the one moral or religious and the other social or expedient. Nor should it be overlooked that the second principle comes into play only through a deficiency of the religious sense, by reason that the gods of Western man are conceived as having only a limited circle of interests. **The Romans are, perhaps, the least mystical people ever seen on the face of the earth. And that is the reason why they so soon distinguished from the *fas*, which is what the gods enjoin, the *jus*, which is the work of men's brains.**
…

Note the slow, timid pace at which this power develops. **At first there is nothing more than a restatement of custom.**17 **Then, by slow degrees, innovating laws are introduced, which are, however, deliberately presented as returns to good old customs.** Through the practice of legislation the idea gains ground little by little that the laws or law may not only be restated but created —by formal proclamation.

> 17. **The idea of anyone whatsoever being able to make laws which are repugnant to custom is completely foreign to the Middle Ages.** For instance, when St. Louis issues an ordinance (1246), in what language does he do it? He says that he has summoned to Orleans the barons and the notables of the country that they may determine what the custom of the country is, as now declared by the king and commanded by him for observance:
>
> "**Nos volentes super hoc cognoscere veritatem et quod erat dubium declarare,** vocatis ad nos apud Aurel baronibus et magnatibus earundem terrarum, habito cum eis tractatu et consilio diligenti, communi assertione eorum, didicimus de consuetudine terrarum illarum, quae talis est. …
>
> "Haec autem omnia, prout superius continentur, de communi consilio et assensu dictorum baronum et militum volumus et praecipimus de coetero in perpetuum firmiter observari." Cited by Carlyle, Vol. V, p. 54.
>
> **We here see legislation to be a matter of determining and authenticating custom.** Hence the presence of the "barons and magnates," who are there as a jury of fact. It would therefore be a mistake to regard the assemblage of barons and king as a joint legislative body, of which the king in Parliament would be the modern equivalent. **But it is easy to see that these meetings of the king and his *curia* to determine what is custom came in the end to be a means of dictating it. And it is easy to imagine how this happened. It was by giving out for customary and constant what was in fact new.** Cf. in this connection what Maine said about the supply of water in India.
>
> https://archive.org/details/B-001-015-424/page/n99/mode/2up?view=theater
>
> An example given by Sumner Maine° shows how great is the repugnance felt by uncivilized peoples to government by deliberative decisions. While he was a civil servant in India, the government constructed irrigation channels with a view to providing the village communities with water: it was left to the communities to distribute the water. What happened? Once all was in train and the delicate task of apportionment had been done, the villagers decided to forget that a human authority had allotted to each his water! **They persuaded themselves into the fictitious belief that their portions of additional water had been assigned them by a very ancient custom, at the back of which lay a primitive ordinance!**28

…

There comes a time when, just because of the vitality given to it by its folkways, a people expands and comes into contact with a number of very different societies; at first it mocks them in derision, then it takes to examining more attentively beliefs and modes of conduct which are different from its own. “The just and the unjust are mainly a matter of geography. A change of three degrees in elevation shatters an entire jurisprudence.”18

On the one hand, **these contacts affect favourably minds which are capable of rising above outward forms and perceiving the underlying unity of laws, as was the case with the Jesuit missionaries in China;** on the other, they are dangerous to baser minds, which, through failure to realize the inner coherence of the entire scheme of a society’s beliefs and customs, regard themselves as free to adopt at random some way of life or other, and then take to wondering whether any way of life is really necessary.

Finding that one of their beliefs is not universally held, they conclude that neither is it necessary, without stopping to think that as regards their own society it may be necessary.
…

In Greece, for instance, **whereas the Pythagoreans had affirmed the divine origin and nature of law**19 **and the immutability of customary laws,** the philosophers started to represent laws as being purely the work of men’s hands, which had been maintained by the device of a fictitious intervention from above.20

https://archive.org/details/in.ernet.dli.2015.231118/page/n441/mode/2up?view=theater

In general, however, the power of the father declined as that of the government rose; democracy entered the family when it left the state. In the early Republic the fathers had been the state; the family heads formed the Curial Assembly, and the clan heads probably constituted the Senate. Rule through family and clan diminished as population became more abundant and diverse, and life more mobile, commercial, and complex; **kinship, status, and custom were replaced by contract and law.**[4] Children won greater freedom from their parents, wives from their husbands, individuals from their groups. Trajan compelled a father to emancipate a son whom he had maltreated; **Hadrian took from the father the right of life and death over his household and transferred it to the courts;** Antoninus forbade a father to sell his children into slavery.[5]

> https://biblehub.com/john/18-31.htm
>
> **Then said Pilate unto them, Take ye him, and judge him according to your law. The Jews therefore said unto him, It is not lawful for us to put any man to death:**

https://archive.org/details/humanalltohuman033380mbp/page/n297/mode/2up?view=theater

How many organising forces have already been seen to die out! For example, that of the *gens* or clan which for millennia was far mightier than the power of the family, and indeed already ruled and regulated long before the latter existed. We ourselves see the important notions of the right and might of the family, which once possessed the supremacy as far as the Roman system extended, always becoming paler and feebler. In the same way a later generation will also see the State become meaningless in certain parts of the world,—an idea which many contemporaries can hardly contemplate without alarm and horror.

https://archive.org/details/dailylifeinancie035465mbp/page/n107/mode/2up?view=theater

IN THE second century of our era the ancient law of the *gens* had fallen into disuse ("*totum gentilicium ius in desuetudinem abisse*"); and nothing but the memory – the "archaeological memory" one might almost say – remained of the principles on which the patriarchal family of ancient Rome had been based: relationship through the male line (*agnatio*) and the unlimited power of the *pater familias*.1

> https://books.google.fi/books?id=dj9H5lbB6zwC&lpg=PR1&hl=fi&pg=PA185#v=onepage&q&f=false
>
> 17. If there be no agnate, the same law of the Twelve Tables calls to the inheritance the *gentiles*:2 **and who the *gentiles* are we have informed you in the first Commentary. And since we told you there that the whole of the laws relating to *gentiles* had gone into disuse, it is superfluous to treat in detail of the same matter here.**
>
> https://books.google.gr/books?id=qlU37xo9LeUC&lpg=PP1&hl=fi&pg=PA4#v=onepage&q&f=false
>
> The family, so loose and feeble during the last centuries of the Roman Empire, became increasingly tightly knit from the sixth century on, functioning as the nucleus of society. **The ancient *gens*, or clan, lost any significance, and even the usage of the *nomen gentile*, or family name, was abandoned. Practically, the nuclear family was the essential social**

microstructure, but ideologically the Byzantines went even further, proclaiming celibacy and virginity as the highest social ideal.

…

According to the ancient code of the Twelve Tables, a mother had no right of succession to a son who had died intestate. Under Hadrian, the *senatus consultum Tertullianum* admitted her as a legitimate heir **on the condition that she possessed the *ius liberorum*, which rested on her having had three children (four, if she was a freed woman). Then, by the *senatus consultum Orphitianum* passed under Marcus Aurelius, children were entitled to inherit from their mother, whatever the validity of the union from which they sprang, and to take precedence of other relatives in this matter.**2

This completed the development which had undermined the ancient system of civil inheritance, wrecking the fundamental conception of the Roman family and recognising instead the claims of "blood" in the sense in which our modern societies have accepted them. The Roman family is henceforth based on the *coniunctio sanguinis*, because, according to the lofty conception of Cicero in the *De Officiis*, this natural tie was the best qualified to bind human beings in affection and mutual goodwill: "*et benevolentia devincit homines et caritate.*"3

During the same period the two essential weapons of the *patria potestas* were gradually blunted: the father's absolute authority over his children, and the husband's absolute authority over the wife placed "in his hand" (*in manum*) as if she were one of his daughters (*loco filiae*). By the second century of our era they had disappeared completely. The *pater familias* had been deprived of the right of life or death over his children which had been granted him by the Twelve Tables and the sacred, so-called Royal Laws.4 But until the beginning of the third century, when abandoning a child was considered the equivalent of murder,5 he might expose his new-born child to perish of cold and hunger or be devoured by dogs on one of the public refuse dumps, unless it was rescued by the pity of some passer-by.6

…

Having once spared the infant at its birth, however, the *pater familias* had no power afterwards to get rid of his child, either by selling him (*mancipatio*) into slavery – **the *mancipatio* was now tolerated only as a legal fiction for the contradictory objects of adoption or manumission** – or by putting him to death. A father's right to slay his child was still recognized in the 1st century B.C., as is proved by the case of Aulus Fulvius, an accomplice of Catiline;9 but had later become a capital crime. Before Constantine equated with parricide the murder of a son by his father,10 Hadrian had punished by banishment to an island a father who had slain his son in the course of a hunt, though the son was guilty of having committed adultery with his father's second wife;11 **and the emperor Trajan had compelled another father, guilty only of having maltreated his son, to emancipate the youth forthwith, and when the boy died, did not allow the father to share in his estate.**12

Similarly, after the end of the republic, the emancipation of a child had entirely changed in significance and effect. **In ancient days it was a punishment, less drastic than death or slavery, but nevertheless severe enough, for in breaking the ties that bound the child to the family, it condemned him to an exclusion from the family which inevitably resulted in his being disinherited.** Now, emancipation had become a benefit. Thanks to the praetorian legislation of the *bonorum possessio* introduced at the beginning of the empire, it enabled a son to acquire and administer his own property without being deprived of his paternal inheritance. **Fathers were reluctant to have recourse to emancipation as long as it had the appearance of a punishment. But as soon as it became an advantage to the son, the cost falling only on the parent, fathers began to practise it as a matter of course. The laws had once more adapted themselves to public feeling which, condemning the atrocious severities of the past,** asked in the days of Trajan and of Hadrian nothing more of paternal authority than that natural affection with which a jurist of the third century finally identified it: "*patria potestas in pietate debet, non atrocitate consistere.*"13

This was enough completely to alter the atmosphere of the Roman home, and to imbue the relationship between father and son with a tenderness which was far removed from the coldness and rigorous discipline that Cato the Elder had maintained in his family.

…

Pliny the Younger preached a tolerance or, if the word is preferred, a liberalism which appeals to us. **But, unhappily, the Romans failed to strike the happy mean. They were not content to lessen the old severity; they yielded to the impulse to become far too complaisant.** Having given up the habit of controlling their children, they let the children govern them, and took pleasure in bleeding themselves white to gratify the expensive whims of their offspring. The result was that they were succeeded by a generation of idlers and wastrels like the Philomusus, whose misadventure Martial recounts.

…

And it would not have been possible if the women had not been emancipated, as much or even more than the children, from the family solidarity which the exercise of the *patria potestas* had imposed of old; the two perished together.

https://archive.org/details/newscienceofgiam030174mbp/page/n357/mode/2up?view=theater

996 Because of the humanity of the times (as displayed in the affection of popular commonwealths for their sons and the desire of monarchies to see fathers devoted to their sons), **since the cyclopean authority of the family fathers over the persons of their children had already vanished, the emperors sought to do away also with the authority they still had over their acquisitions.** To this end, they introduced first the *peculium castrense* to attract young men to war, then extended it to the *peculium quasi castrense* to attract them to the imperial service, and finally, to satisfy the sons who were neither soldiers nor clerks, introduced the *peculium adventitium*. They deprived the paternal power of its influence over adoptions, now no longer restricted to a few close relations. They universally encouraged formal adoptions (*adrogationes*), which were somewhat difficult in that citizens who were family fathers in their own right thereby became subordinate members of others' families. **They counted emancipations as benefits. They gave to legitimation by a subsequent marriage all the efficacy of solemn nuptials. But above all, since the *imperium paternum* seemed to detract from their own majesty, they directed that it should be called the *patria potestas*.** This was in accordance with their own example, introduced with great sagacity by Augustus; for in order not to arouse the jealousy of the people, who might want to take from him some part of his *imperium*, he assumed the *tribunicia potestas*, thus declaring himself the protector of Roman liberty. **In the tribunes of the plebs this had been a *de facto* power, for they had never held *imperium* in the republic.**
…

997 Hence the free Roman commonwealth was entirely conceived in the triple formula: ***senatus auctoritas, populi imperium, tribunorum plebis potestas*.** And the two terms *imperium* and *potestas* retained in the laws this original exactness of meaning, the former being ascribed to the major magistrates, **such as consuls and praetors, and extended to all who had the right to impose the death penalty,** and the latter being ascribed to the minor magistrates such as the aediles, as it was supported by but modest powers of coercion—*modica coërcitione continetur*.

https://www.ccel.org/g/gibbon/decline/volume2/chap44.htm#fathers

The law of nature instructs most animals to cherish and educate their infant progeny. The law of reason inculcates to the human species the returns of filial piety. But the exclusive, absolute, and perpetual dominion of the father over his children, is peculiar to the Roman jurisprudence, (102) and seems to be coeval with the foundation of the city. (103) The paternal power was instituted or confirmed by Romulus himself; and, after the practice of three centuries, it was inscribed on the fourth table of the Decemvirs. **In the forum, the senate, or the camp, the adult son of a Roman citizen enjoyed the public and private rights of a *person*: in his father's house he was a mere *thing*;** confounded by the laws with the movables, the cattle, and the slaves, whom the capricious master might alienate or destroy, without being responsible to any earthly tribunal.
…

The Roman father, from the license of servile dominion, was reduced to the gravity and moderation of a judge. The presence and opinion of Augustus confirmed the sentence of exile pronounced against an intentional parricide by the domestic tribunal of Arius. Adrian transported to an island the jealous parent, who, like a robber, had seized the opportunity of hunting, to assassinate a youth, the incestuous lover of his step-mother. (110) **A private jurisdiction is repugnant to the spirit of monarchy; the parent was again reduced from a judge to an accuser;** and the magistrates were enjoined by Severus Alexander to hear his complaints and execute his sentence. **He could no longer take the life of a son without incurring the guilt and punishment of murder;** and the pains of parricide, from which he had been excepted by the Pompeian law, were finally inflicted by the justice of Constantine. (111)
The same protection was due to every period of existence; **and reason must applaud the humanity of Paulus, for imputing the crime of murder to the father who strangles, or starves, or abandons his new-born infant;** or exposes him in a public place to find the mercy which he himself had denied.
…

If the father could subdue his own feelings, he might escape, though not the censure, at least the chastisement, of the laws; and the Roman empire was stained with the blood of infants, till such murders were included, by Valentinian and his colleagues, in the letter and spirit of the Cornelian law. **The lessons of jurisprudence** (113) **and Christianity had been insufficient to eradicate this inhuman practice, till their gentle influence was fortified by the terrors of capital punishment.** (114)

> 113. The opinion of the lawyers, and the discretion of the magistrates, had introduced, in the time of Tacitus, some legal restraints, which might support his contrast of the *boni mores* of the Germans to the *bonae leges alibi*—that is to say, at Rome (de Moribus Germanorum, c. 19.). **Tertullian (ad Nationes, l. i. c. 15) refutes his own charges, and those of his brethren, against the heathen jurisprudence.**

>
> For if we are infanticides in one sense, you also can hardly be deemed such in any other sense; because, **although you are forbidden by the laws to slay new-born infants, it so happens that no laws are evaded with more impunity or greater safety,** with the deliberate knowledge of the public, and the suffrages[4] of this entire age.[5]

https://digitalcommons.law.uga.edu/cgi/viewcontent.cgi?referer=https://www.google.com/&httpsredir=1&article=1836&context=fac_artchop

A ruling, a rescript, of the Emperor Antoninus Pius (died 161), though given for an individual situation, was treated as of general importance. It is discussed in the *Institutes of Gaius* 1.53 and is even quoted in the *Institutes of Justinian* 1.8.1:

> Slaves are in the power of their masters **(which power, indeed, comes from the law of nations: for we can observe that among all nations alike masters have the power of life and death over their slaves)** and anything acquired through a slave is acquired by his master. **But nowadays, no one who is subject to our sway is allowed to treat his slaves with severity other than for a cause recognized by the laws. For, by a constitution of the divine Antoninus Pius, anyone who kills his own slave without cause is to be punished in the same way as one who kills the slave of another.** And even excessive harshness of masters is controlled by a constitution of the same Emperor. For, on being consulted by certain provincial governors about those slaves who flee to a sacred temple or to a statue of the Emperor, he ruled that, if the severity of the masters appear insupportable, they are bound to sell the slaves on favorable terms and the price is to be given to the masters – and rightly: **for it is in the interest of the state that no one should abuse his property.** These are the words of the rescript dispatched to Aelius Marcianus: 'The power of masters over their slaves should be unlimited nor should any man's rights be detracted from. But it is in the interest of masters that relief against cruelty, starvation or unbearable savagery should not be denied to those who rightly complain. Adjudicate, therefore, on the complaints of those of the household of Julius Sabinus who take refuge at the statue and, if you find them treated more harshly than is seemly or affected by shameful harm, bid them be sold so that they do not return to the power of their master. And, if he seeks to circumvent my constitution, let this Sabinus know that, on my learning of it, I shall be severe with my dealing with him.7
>
> https://www.reddit.com/r/AskHistorians/comments/5qbuee/by_the_second_century_ad_killing_your_slaves_was/
>
> **To summarize, the only thing that ever *was* illegal with regard to your own slaves, was, from the 1st and 2nd centuries on, either killing someone just for being unable to work, or killing your slave without 'sufficient' reason.** And whatever that sufficient reason was would be for a court of law from the master's peers to find out, if a lawyer could be find to bring the case to trial on behalf of the dead slave.
>
> https://digitalcommons.law.uga.edu/cgi/viewcontent.cgi?referer=https://www.google.com/&httpsredir=1&article=1836&context=fac_artchop
>
> Another rescript of 376 of the Emperor Valens, Gratian and Valentinian suggests that the reality of the protection offered to slaves was grim:
>
> > When slaves thunder forth as accusers of their masters, none of the judges is to await the outcome; it is settled that no inquiry is to be made, no investigation to be held, but the authors of the wicked accusations are to be burnt along with the statements of the accusations, with all the instruments of the writing and of the intended criminal charge. **We make an exception of attempted high treason, in which betrayal is honorable even for slaves, for this crime too is directed against domini (i.e., the emperors).**10

https://penelope.uchicago.edu/Thayer/E/Gazetteer/Places/Europe/Italy/_Texts/HODIHI/2d_edition/2/2*.html#ref:Pyrrhus_and_Fabricius

As both Maximin and Priscus seem still to have adhered to the worship of Olympian divinities, we are driven, however reluctantly, to the conclusion that by this time the traitors, the time-servers, and the hypocrites had ranged themselves on the side of successful Christianity, and that when the Emperor wanted a man of indisputably high character and sterling honesty to mask by his innocence a dark and nefarious design, his thoughts naturally turned to the few remaining Pagan statesmen, who probably held at his court a position not unlike that of the Roman Catholics under Queen Elizabeth or the Huguenots under Louis XIII.

https://faculty.georgetown.edu/jod/texts/priscus.html

"The creators of the Roman republic," I said, "who were wise and good men, in order to prevent things from being done at haphazard **made one class of men guardians of the laws, and appointed another class to the profession of arms, who were to have no other object than to be always ready for battle,** and to go forth to war without dread, as though to their ordinary exercise having by practice exhausted all their fear beforehand. **Others again were assigned to attend to the cultivation of the ground, to support both themselves and those who fight in their defence,** by contributing the military corn-supply.
...

The Romans treat their servants better than the king of the Scythians treats his subjects. They deal with them as fathers or teachers, admonishing them to abstain from evil and follow the lines of conduct whey they have esteemed honourable; **they reprove them for their errors like their own children. They are not allowed, like the Scythians, to inflict death on them.** They have numerous ways of conferring freedom; they can manumit not only during life, but also by their wills, and the testamentary wishes of a Roman in regard to his property are law."

https://en.wikisource.org/wiki/Ante-Nicene_Fathers/Volume_III/Apologetic/Apology/Chapter_VI

The laws, too, your fathers in their wisdom had enacted concerning the very gods themselves, you their most loyal children have rescinded. The consuls, by the authority of the senate, banished Father Bacchus and his mysteries not merely from the city, but from the whole of Italy. The consuls Piso and Gabinius, no Christians surely, forbade Serapis, and Isis, and Arpocrates, with their dogheaded friend,[3] admission into the Capitol—in the act casting them out from the assembly of the gods—overthrow their altars, and expelled them from the country, being anxious to prevent the vices of their base and lascivious religion from spreading. These, you have restored, and conferred highest honours on them. What has come to your religion—of the veneration due by you to your ancestors? **In your dress, in your food, in your style of life, in your opinions, and last of all in your very speech, you have renounced your progenitors. You are always praising antiquity, and yet every day you have novelties in your way of living.** From your having failed to maintain what you should, you make it clear, that, while you abandon the good ways of your fathers, you retain and guard the things you ought not. Yet the very tradition of your fathers, which you still seem so faithfully to defend, and in which you find your principal matter of accusation against the Christians—I mean zeal in the worship of the gods, the point in which antiquity has mainly erred—**although you have rebuilt the altars of Serapis, now a Roman deity, and to Bacchus, now become a god of Italy, you offer up your orgies,**—I shall in its proper place show that you despise, neglect, and overthrow, casting entirely aside the authority of the men of old.

---

https://en.wikisource.org/wiki/The_Women_of_the_Caesars/Woman_and_marriage_in_Ancient_Rome

"Many things that among the Greeks are considered improper and unfitting," wrote Cornelius Nepos in the preface to his "Lives," "are permitted by our customs. **Is there by chance a Roman who is ashamed to take his wife to a dinner away from home? Does it happen that the mistress of the house in any family does not enter the anterooms frequented by strangers and show herself among them? Not so in Greece: there the woman accepts invitations only among families to which she is related, and she remains withdrawn in that inner part of the house which is called the *gynaeceum*, where only the nearest relatives are admitted.**"

https://droitromain.univ-grenoble-alpes.fr/Anglica/NL48_Scott.htm

I do not know why the ancient authorities, without having thoroughly considered the subject, conferred upon women the right of acting as witnesses. It was, indeed, well known, and they themselves could not fail to be aware that it was dishonorable for them to appear frequently before the eyes of men, and that those who were modest and virtuous should avoid doing so. For this reason, as I have previously stated, I do not understand why they permitted them to be called as witnesses, a privilege which resulted in their frequently being associated with great crowds of men, and holding conversation with them of a character very unbecoming to the sex. Did they think that in public matters the statements of women should be heard,

> ***when they had been admitted to give evidence as men do; like the Scythian women who We know were in the habit of arming themselves in company with their husbands, for the purpose of making war?***

This passage, one of the most significant in all the little work of Nepos, draws in a few, clear, telling strokes one of the most marked distinctions between the Greco-Asiatic world and the Roman. Among ancient societies, the Roman was probably that in which, at least among the better classes, woman enjoyed the greatest social liberty and the greatest legal and economic autonomy. **There she most nearly approached that condition of moral and civil equality with man which makes her his comrade, and not his slave**—that equality in which modern civilization sees one of the supreme ends of moral progress.

The doctrine held by some philosophers and sociologists, that military peoples subordinate woman to a tyrannical régime of domestic servitude, is wholly disproved by the history of Rome. If there was ever a time when the Roman woman lived in a state of perennial tutelage, under the authority of man from birth to death—of the husband, if not of the father, or, if not of father or husband, of the guardian—that time belongs to remote antiquity.

When Rome became the master state of the Mediterranean world, **and especially during the last century of the republic, woman, aside from a few slight limitations of form rather than of substance, had already acquired legal and economic independence,** the condition necessary for social and moral equality. As to marriage, the affianced pair could at that time choose between two different legal family régimes: marriage with *manus*, the older form, in which all the goods of the wife passed to the ownership of the husband, so that she could no longer possess anything in her own name; or marriage without *manus*, in which only the dower became the property of the husband, and the wife remained mistress of all her other belongings and all that she might acquire. **Except in some cases, and for special reasons, in all the families of the aristocracy, by common consent, marriages, during the last centuries of the republic, were contracted in the later form;** so that at that time married women directly and openly had gained economic independence.

During the same period, indirectly, and by means of juridical evasions, this independence was also won by unmarried women, who, according to ancient laws, ought to have remained all their lives under a guardian, either selected by the father in his will or appointed by the law in default of such selection. **To get around this difficulty, the fertile and subtle imagination of the jurists invented first the *tutor optivus*, permitting the father, instead of naming his daughter's guardian in his will, to leave her free to choose one general guardian or several, according to the business in hand, or even to change that official as many times as she wished.**

https://www.ccel.org/g/gibbon/decline/volume2/chap44.htm#kindred

The degrees of kindred (146) are numbered by the civilians, ascending from the last possessor to a common parent, and descending from the common parent to the next heir: my father stands in the first degree, my brother in the second, his children in the third, and the remainder of the series may be conceived by a fancy, or pictured in a genealogical table. In this computation, a distinction was made, essential to the laws and even the constitution of Rome; **the *agnats*, or persons connected by a line of males, were called, as they stood in the nearest degree, to an equal partition; but a female was incapable of transmitting any legal claims; and the *cognats* of every rank, without excepting the dear relation of a mother and a son, were disinherited by the Twelve Tables, as strangers and aliens.** Among the Romans a *gens* or lineage was united by a common *name* and domestic rites; the various *cognomens* or *surnames* of Scipio, or Marcellus, distinguished from each other the subordinate branches or families of the Cornelian or Claudian race: **the default of the *agnats*, of the same surname, was supplied by the larger denomination of *gentiles*; and the vigilance of the laws maintained, in the same name, the perpetual descent of religion and property.** A similar principle dictated the Voconian law, (147) which abolished the right of female inheritance. As long as virgins were given or sold in marriage, the adoption of the wife extinguished the hopes of the daughter. **But the equal succession of independent matrons supported their pride and luxury, and might transport into a foreign house the riches of their fathers. While the maxims of Cato** (148) **were revered, they tended to perpetuate in each family a just and virtuous mediocrity: till female blandishments insensibly triumphed; and every salutary restraint was lost in the dissolute greatness of the republic. The rigor of the decemvirs was tempered by the equity of the praetors. Their edicts restored and emancipated posthumous children to the rights of nature; and upon the failure of the *agnats*, they preferred the blood of the *cognats* to the name of the gentiles whose title and character were insensibly covered with oblivion.** The reciprocal inheritance of mothers and sons was established in the Tertullian and Orphitian decrees by the humanity of the senate. **A new and more impartial order was introduced by the Novels of Justinian, who affected to revive the jurisprudence of the Twelve Tables.** The lines of masculine and female kindred were confounded: the descending, ascending, and collateral series was

accurately defined; **and each degree, according to the proximity of blood and affection, succeeded to the vacant possessions of a Roman citizen.** (149)

https://archive.org/details/newscienceofgiam030174mbp/page/n355/mode/2up?view=theater

993 However, **the jurisconsults of the last [period of Roman] jurisprudence, by estimating the things of the unknown earliest times by those of their own quite late times,** which is the source of innumerable errors noted in this work, **believed that the Law of the Twelve Tables had called the daughters of families to the inheritances of their fathers who had died intestate,** in virtue of the word *suus* [in the phrase *sui heredes*], following the rule that the masculine gender includes women also. But heroic jurisprudence, of which we have had so much to say in this work, took the words of the laws in their strictest meaning, so that the word *suus* meant only the son of a family. Invincible proof of this is afforded by the formula for the institution of posthumous children, introduced many centuries later by Gallus Aquilius, which is phrased *Si quis natus natave erit*, lest from the word *natus* alone it should not be understood that a posthumous daughter is included. **Because of his ignorance of these matters, Justinian in the *Institutes* affirms that the Law of the Twelve Tables by the use of the word *adgnatus* had called male and female agnates alike, but that later the middle jurisprudence had made the law more rigid by restricting it to sisters of the same blood.** Thus by chance and yet happily this jurisprudence came to be called middle for the reason that, beginning with these cases, it mitigated the rigors of the Law of the Twelve Tables, whereas the ancient jurisprudence which preceded it had guarded its words with the greatest scrupulousness.
...

Finally Justinian abolished the distinction between legacies and trusteeships, merged the Falcidian [i.e. Pegasian] fourth [part of an estate reserved to the heir] with the Trebellian, minimized the distinction between testaments and codicils, and put agnates and cognates on precisely the same footing as regards inheritance *ab intestato*. And the latest Roman laws went to such lengths in favor of last wills that, **whereas in ancient times they were declared invalid on the slightest pretext, nowadays they must always be interpreted in such a way as to favor their validity.**

https://archive.org/details/newscienceofgiam030174mbp/page/n249/mode/2up?view=theater

671 **Wives were bought with heroic dowries,** a usage which survived as a solemnity in the nuptials of the Roman priests, which were contracted *coemptione et farre*, "by mutual [mock] sale and spelt" [-bread offering]. (This was also the custom among the ancient Germans, according to Tacitus, and we may therefore assume the same of all the earliest barbarous peoples.) Wives were maintained as a necessity of nature for the procreation of children. In other respects they were treated as slaves, as is [still] the custom of nations in many parts of our [old] world and almost everywhere in the new. **When the wife brings the dowry, it purchases the liberty of her husband and is a public confession on his part of inability to bear the expense of marriage, which is perhaps the reason for the many privileges with which the emperors favored dowries.**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Strabo/3D*.html#ref118

Now such traits as these would indicate a certain savageness; and yet there are other things which, although not marks of civilisation perhaps, are not brutish; **for instance, it is the custom among the Cantabrians for the husbands to give dowries to their wives, for the daughters to be left as heirs,** and the brothers to be married off by their sisters. The custom involves, in fact, a sort of woman-rule—but this is not at all a mark of civilisation.

https://www.gutenberg.org/files/44884/44884-h/44884-h.htm#Footnote_1253

> 1253. We must remark that so far from the dowry given by men to their wives being an evidence of civilization, it is a custom common amongst barbarous people, and indicative of nothing so much as the despotic power of the man over the wife. **These dowries were generally a sum of money from the husband to the father of his intended, on the payment of which he acquired the same power over her as over a slave.** Aristotle, speaking of the ancient Greeks, tells us expressly that they bought their wives, (Polit. ii. c. 8,) and observing that amongst barbarous nations women were always regarded in the same light as slaves, **he cites the example of the Cyclopes, who exercised, according to Homer, sovereign authority over their families** (Odyss. l. ix. 114). This custom was so well established amongst the Greeks at the time of the poet, that he does not hesitate to introduce it amongst the gods (Odyss. viii. 318). It was not unknown among the Jews, and Strabo, in his fifteenth book, tells us that the Indians bought their wives.

http://laurabetzig.org/pdf/RomanMonogamy.pdf

But these notorious women had another thing in common: their dowry was, or approximated, the Roman empire. Marcus was most explicit about it. Reminded of various indiscretions, he responded, "'If we send our wife away, we must also return her dowry.' And what was her dowry? The Empire, which he had inherited from his father-in-law" (SHA, *Marcus Antoninus*, xix.7-9). Everybody played by these rules. Juvenal's sixth satire, an apotheosis of misogyny, says "she brought him three million; in exchange he calls her chaste" (*Satires*, vi.137). **Martial had a horror of rich women, "Why have I no desire to marry riches? / Because, my friend, I want to wear the breeches"** (*Epigrams*, viii.12). **Theophrastus might have put it best: "It is difficult to support a poor wife, and torture to put up with a rich one"** (in Jerome, *Adversus Iovinianum*, i.47, translated in Treggiari 1991a, 192). To the extent that a wife's riches raise his own, and his heir's, reproductive prospects, a husband might let her be promiscuous (cf. Betzig 1992b).

http://attalus.org/translate/valerius8a.html#c3

[3.3] **Hortensia, the daughter of Q. Hortensius, when the order of wives was too heavily taxed by the triumvirs, and none of the men dared undertake to speak on their behalf, pleaded the wives' case before the triumvirs, not only with boldness, but with success.** By reviving the image of her father's eloquence she obtained, that the greatest part of the imposition was remitted. Q. Hortensius then lived again in the female sex, and breathed in the words of his daughter. **If his male descendants had copied her force and vigour, so great an inheritance of Hortensian eloquence would not come to an end in the speech of a woman.**

http://penelope.uchicago.edu/Thayer/E/Roman/Texts/Appian/Civil_Wars/4*.html#ref:No_taxation_without_representation

33 1 "**Why should we pay taxes when we have no part in the honours, the commands, the state-craft,**[b] for which you contend against each other with such harmful results? 'Because this is a time of war," do you say? When have there not been wars, **and when have taxes ever been imposed on women,** who are exempted by their sex among all mankind?

> [b] Students of American history will recognize one of the grounds of the American Revolution: "No taxation without representation!" *Nihil novi sub sole*.

Borkowski's Textbook on Roman Law by Paul J. du Plessis (Oxford University Press, 2015).

4.4.2.2. Women

> Papinian, *Questions, book 31*: There are many points in our law in which the condition of females is inferior to that of males. (D. 1.5.9.)

Disarming honesty from Papinian – and, yet, the position of women in Roman law and society was favourable compared with other ancient societies (some modern ones too). For example, **Roman wives achieved a degree of legal emancipation that would have been the envy of married women in many European legal systems prior to the late-nineteenth century.**

https://books.google.fi/books?id=6kVLH5gGZVYC&lpg=PP1&hl=fi&pg=PA231#v=onepage&q&f=false

> **Carcopino makes the improbable claim that during the first and second centuries A.D., Roman women "enjoyed a dignity and an independence at least equal if not superior to those claimed by contemporary feminists":** Jérôme Carcopino, *Daily Life in Ancient Rome* (New Haven: Yale University Press, 1940, 1968), 85.

https://archive.org/details/dailylifeinancie035465mbp/page/n115/mode/2up?view=theater

In Hadrian's day a married woman did not need a guardian even to draft her will, and a father no more dreamed of forcing his daughter to marry against her will than of opposing a marriage on which she had set her heart, for, as the great jurist Salvius Iulianus maintained, a marriage could not be made by constraint, but only by consent of the parties thereto, and the free consent of the girl was indispensable: "*nuptiae consensu contrahentium fiunt; nuptiis filiam familias consentire oportet*."27

It can be understood that this new definition of marriage revolutionised its nature. There are certain causes which inevitably entail certain consequences. In our own days we have seen the French legislator first minimise and finally abolish all obstacles to the triumphant wishes of a marrying couple. **All remnants of parental authority disappeared with the parents' right to oppose a match desired by their children.** The same phenomenon occurred in the Roman empire. Having shaken off the

authority of her husband by adopting the marriage *sine manu*, the Roman matron was freed from the leading strings of guardianship by the free choice the times allowed her in contracting a union. She entered her husband's home of her own free will and lived in it as his equal.

Contrary to general opinion – which colours the conditions existing under the empire with memories of the early days of the republic and of long-lapsed republican customs – it is certain that the Roman woman of the epoch we are studying enjoyed a dignity and an independence at least equal if not superior to those claimed by contemporary feminists. More than one ancient champion of feminism under the Flavians, Musonius Rufus for one, had claimed for women this dignity and independence on the ground of the moral and intellectual equality of the two sexes.28

28. Cf. Favez, *Bull. Soc. Ét. des Lettres de Lausanne* (Oct. 1933) 1-9.

https://en.wikipedia.org/wiki/French_Union_for_Women%27s_Suffrage

During World War II (1939-45) the UFSF was inactive. General Charles de Gaulle granted women's suffrage in 1944, and Brunschwicg therefore chose not to revive the UFSF.[1]

https://archive.org/details/in.ernet.dli.2015.231118/page/n415/mode/2up?view=theater

Having been wed for property or politics rather than for love, some women considered their duty fulfilled if they surrendered their dowries to their husbands and their persons to their lovers. “Did we not agree,” an adulteress in Juvenal explained to her unexpected husband, “that we should both do as we liked?”[45] **The “emancipation” of women was as complete then as now, barring the formalities of the franchise and the letter of dead laws. Legislation kept women subject, custom made them free.**

https://www.gutenberg.org/files/25012/25012-h/25012-h.html#noteref_8

4. I shall once more relate the history of the “Ring”. This is its proper place. It is also the history of a salvation except that in this case it is Wagner himself who is saved—**Half his lifetime Wagner believed in the *Revolution* as only a Frenchman could have believed in it.** He sought it in the runic inscriptions of myths, he thought he had found a typical revolutionary in Siegfried.—“Whence arises all the evil in this world?” Wagner asked himself. From “old contracts”: he replied, as all revolutionary ideologists have done. In plain English: from customs, laws, morals, institutions, from all those things upon which the ancient world and ancient society rests. **“How can one get rid of the evil in this world? How can one get rid of ancient society?” Only by declaring war against “contracts” (traditions, morality).** *This Siegfried does.* He starts early at the game, very early—his origin itself is already a declaration of war against morality—he is the result of adultery, of incest... Not the saga, but Wagner himself is the inventor of this radical feature, in this matter he *corrected* the saga... Siegfried continues as he began: he follows only his first impulse, he flings all tradition, all respect, all *fear* to the winds. Whatever displeases him he strikes down. He tilts irreverently at old god-heads. **His principal undertaking, however, is to emancipate woman,—“to deliver Brunnhilda.”... Siegfried and Brunnhilda, the sacrament of free love, the dawn of the golden age, the twilight of the Gods of old morality—*evil is got rid of*... For a long while Wagner's ship sailed happily along this course.** There can be no doubt that along it Wagner sought his highest goal.—What happened? A misfortune. The ship dashed on to a reef; Wagner had run aground. The reef was Schopenhauer's philosophy; Wagner had stuck fast on a *contrary* view of the world. What had he set to music? Optimism? ...

Brunnhilda, who according to the old plan had to retire with a song in honour of free love, **consoling the world with the hope of a socialistic Utopia in which “all will be well”;** now gets something else to do. She must first study Schopenhauer. She must first versify the fourth book of “The World as Will and Idea.”

https://books.google.fi/books?id=6xFarBgmCcMC&lpg=PP1&hl=fi&pg=PA67#v=onepage&q&f=false

Without Wagner’s music there would have been no *Birth of Tragedy*; however, once in existence, the philosophy that Nietzsche formulated based on Wagner’s music was quite capable of going on without him. Indeed, it had to, because Wagner in *Parsifal,* his final work, returned more to the ambivalence he had expressed in *Tannhäuser* than to the paean to free love and adultery that had inspired Nietzsche so much in *Tristan*.

https://archive.org/details/bub_gb_X-UROGF6ZcUC/page/45/mode/2up?view=theater

The vices of men, tolerated by the law, and rather justified than energetically condemned by the morality of philosophers, were made into excuses for the vices of women.69 **After the time in Greece and Rome when ancient austerity was relaxed, and political virtues gave place to individual egoism, married women themselves broke free from the ties to which they**

submitted in the interest of the Republic, and hastened in the path of unruly emancipation, where they followed the *hetaerae* and courtesans. They acquainted themselves with the art and literature of Greece, which instead of forming their taste only familiarised them with vice. The time had gone by when the Romans, less corrupted than now, forbade their wives and daughters to read the poets and philosophers of Greece, in the fear that instead of learning wisdom they would find only lessons in libertinism.70
…

Divorce was in complete accord with the spirit of ancient society. **Marriage, deprived of all moral character, was no longer a sacred bond, an alliance of souls, although a Roman jurisconsult had defined it as a community of things human and divine.**83
…

This license, which powerless laws and corrupt morality allowed to women, along with the disuse of the ancient more solemn forms of marriage, ended in complete annihilation of the husband's power, which existed only in name under the Empire.92 Marriage thus lost the last remnant of its importance in public opinion. The depravity of woman and of all society increased at a rate to which no human law could oppose a sufficiently strong barrier. **Woman in freeing herself from the tyranny of ancient institutions, had also emancipated herself from the external laws of morality; she had freed herself only to increase her burden of vice, for which the civilization of the pagan world provided no remedy.**

https://archive.org/details/bub_gb_X-UROGF6ZcUC/page/193/mode/2up?view=theater

Christianity could never have proclaimed an emancipation of woman as it was carried out by the Roman ladies of the decadence, or as it is taught by modern socialism. With marvellous intelligence of the needs of nature and life, two domains are divided between husband and wife, so as to claim the whole activity of each. **Human life has two sides, public and private; God has given to each sex the limits which none pass without penalty.** Neither men nor women ever leave their own sphere without wounding the universal conscience of the human race.

https://archive.org/details/ancientlaw030840mbp/page/n153/mode/2up?view=theater

These three ancient forms of marriage fell, however, gradually into disuse, **so that, at the most splendid period of Roman greatness, they had almost entirely given place to a fashion of wedlock—old apparently, but not hitherto considered reputable—which was founded on a modification of the lower form of civil marriage.** Without explaining the technical mechanism of the institution now generally popular, I may describe it as amounting in law to little more than a temporary deposit of the woman by her family. The rights of the family remained unimpaired, and the lady continued in the tutelage of guardians whom her parents had appointed and whose privileges of control overrode, in many material respects, the inferior authority of her husband. The consequence was that the situation of the Roman female, whether married or unmarried, became one of great personal and proprietary independence, for the tendency of the later law, as I have already hinted, was to reduce the power of the guardian to a nullity, while the form of marriage in fashion conferred on the husband no compensating superiority. But Christianity tended somewhat from the very first to narrow this remarkable liberty. **Led at first by justifiable disrelish for the loose practices of the decaying heathen world, but afterwards hurried on by a passion of asceticism, the professors of the new faith looked with disfavour on a marital tie which was in fact the laxest the Western world has seen. The latest Roman law, so far as it is touched by the constitutions of the Christian Emperors, bears some marks of a reaction against the liberal doctrines of the great Antonine jurisconsults.** And the prevalent state of religious sentiment may explain why it is that modern jurisprudence, forged in the furnace of barbarian conquest, and formed by the fusion of Roman jurisprudence with patriarchal usage, has absorbed, among its rudiments, much more than usual of those rules concerning the position of women which belong peculiarly to an imperfect civilisation.
…

The principal and most powerful solvent of the revived barbarism of Europe was always the codified jurisprudence of Justinian, wherever it was studied with that passionate enthusiasm which it seldom failed to awaken. It covertly but most efficaciously undermined the customs which it pretended merely to interpret. But the Chapter of law relating to married women was for the most part read by the light, not of Roman, but of Canon Law, **which in no one particular departs so widely from the spirit of the secular jurisprudence as in the view it takes of the relations created by marriage. This was in part inevitable, since no society which preserves any tincture of Christian institution is likely to restore to married women the personal liberty conferred on them by the middle Roman law,** but the proprietary disabilities of married females stand on quite a different basis from their personal incapacities, and it is by keeping alive and

consolidating the former that the expositors of the Canon Law have deeply injured civilisation. There are many vestiges of a struggle between the secular and ecclesiastical principles, but the Canon Law nearly everywhere prevailed.
…

The systems however which are least indulgent to married women are invariably those which have followed the Canon Law exclusively, or those which, from the lateness of their contact with European civilisation, have never had their archaisms weeded out. The Scandinavian laws, harsh till lately to all females, are still remarkable for their severity to wives. And scarcely less stringent in the proprietary incapacities it imposes is the English Common Law, which borrows far the greatest number of its fundamental principles from the jurisprudence of the Canonists. Indeed, the part of the Common Law which prescribes the legal situation of married women may serve to give an Englishman clear notions of the great institution which has been the principal subject of this chapter. **I do not know how the operation and nature of the ancient Patria Potestas can be brought so vividly before the mind as by reflecting on the prerogatives attached to the husband by the pure English Common Law,** and by recalling the rigorous consistency with which the view of a complete legal subjection on the part of the wife is carried by it, where it is untouched by equity or statutes, through every department of rights, duties, and remedies. **The distance between the eldest and latest Roman law on the subject of Children under Power may be considered as equivalent to the difference between the Common Law and the jurisprudence of the Court of Chancery in the rules which they respectively apply to wives.**

> https://www.bl.uk/sisterhood/timeline
>
> The Married Women's Property Act was first introduced in 1870. It allowed women to be the legal owners of money they earned, and to inherit property. **Prior to this Act, everything a woman owned or earned became her husband's property when she married.**
>

>
> While the Roman clergy did real good to Europe, **in preserving the scientific elements of Roman law, they did harm by preserving therewith other elements**—Roman chicane, and Roman cruelty. In that respect, as in others, 'Rome conquered her conquerors;' **and the descendants of those Roman lawyers, whom the honest Teutons called adders, and as adders killed them down, destroyed, in course of time, Teutonic freedom.**
>
> But those descendants were, alas! the clergy.
> …
>
> Looking on the world, and on the future of the human race, through a medium compared with which the darkest fancies of a modern fanatic are bright and clear, they did not shrink from inflicting penalties, the very mention of which makes the blood run cold. **Suspecting, if not alternately envying and despising, all women who were not nuns; writing openly of the whole sex (until unsexed) as the snare and curse of mankind; and possessed by a Manichæan belief in the power and presence of innumerable demons, whose especial victims were women; they erected witch-hunting into a science;** they pandered to, and actually formalized, and justified on scientific grounds, the most cruel and cowardly superstitions of the mob; and again and again raised literal crusades against women, torturing, exposing, burning, young and old, not merely in the witch-mania of the 17th century, but through the whole middle age. It is a detestable page of history. I ask those who may think my statement exaggerated, to consult the original authorities. Let them contrast Rothar's law about the impossibility of witchcraft, with the pages of the Malleus Maleficarum, Nider's Fornicarium, or Delrio the Jesuit, and see for themselves who were the false teachers. And if they be told, that the cruelties of the Inquisition were only those in vogue according to the secular law of the day, let them recollect that the formulizers of that law were none other than the celibate Roman clergy.

https://books.google.gr/books?id=qlU37xo9LeUC&lpg=PP1&hl=fi&pg=PA100#v=onepage&q&f=false

A comparison of Byzantine laws with those of Western Rome again indicates the importance of the nuclear family in the East. **In Rome divorce in accordance with the wish of either party was still allowed in the ninth century.**65 **In Byzantium, the ancient practice of free divorce had been abolished by the eight century.** The independence of the property of the spouses, acknowledged in the Justinianic code, gave way to the notion of familial property, formed of the dowry and the pre-nuptial gift, as an indivisible whole.66 Only after the husband's death was property divided. It had to be shared equally by the wife and the children. The concept of primogeniture was unknown.

https://books.google.fi/books?id=KzmlBQAAQBAJ&lpg=PP1&hl=fi&pg=PA116#v=onepage&q&f=false

However, the most significant alterations occur in divorce law. **In classical Roman law, marriage, as a simple private contract based on affection, could be easily dissolved unilaterally or conjointly.** Throughout late antiquity, influenced primarily by Christianity, emperors had limited this, so that divorce by mutual assent was forbidden, and a strict set of conditions were given for unilateral divorce. However, **E.2.9. represents stringency beyond precedent,** and indeed is seldom repeated by later Byzantine emperors. Only adultery by the wife, impotence of the husband, or a spouse either plotting against the other or becoming a leper were considered legitimate grounds for divorce.
…

Echoing the *prooimion*, the wisdom of the creator educates mankind on a seminal issue, here the indissolubility of marriage. **This distinctly un-Roman statement is justified through reference to both God the Father in the Old Testament, and Jesus Christ in the New, with the Isaurians and their law code fulfilling and following the heavenly legislators.**
…

It then proceeds to delineate the only grounds permitted to break the sacrament of marriage, permission couched as a form of economy given *in extremis*. Having done so, E.2.9.4 concludes that even insanity was not legitimate grounds for divorce and that:

> Except on these known grounds it is not possible to dissolve a marriage, for as it is written, 'whom God has joined let not man put asunder' (Mt. 19.6)166

Hence the word of God was cited to complete this radical tightening of divorce law, vividly conveying the mindsets of the Isaurians. It was Scripture and its commandments that dominated utterly their rhetoric and motivated change. Overall then, the marriage law of the *Ecloga* evinces both considerable continuity with Justinianic law and important alterations. However, the fundamental shift is rhetorical and conceptual, the transforming of marriage into a Christian sacrament ordained by God, and therefore protected by the pious emperors.

https://www.gutenberg.org/cache/epub/46333/pg46333-images.html#Footnote_7_48

> [7] Marriage, for instance, being a civil contract, has civil effects without which society cannot even subsist. **Suppose a body of clergy should claim the sole right of permitting this act,** a right which every intolerant religion must of necessity claim, is it not clear that in establishing the authority of the Church in this respect, **it will be destroying that of the prince, who will have thenceforth only as many subjects as the clergy choose to allow him?** Being in a position to marry or not to marry people, according to their acceptance of such and such a doctrine, their admission or rejection of such and such a formula, their greater or less piety, **the Church alone, by the exercise of prudence and firmness, will dispose of all inheritances, offices and citizens, and even of the State itself, which could not subsist if it were composed entirely of bastards.**

https://archive.org/details/worshippingstate0000wike/page/180/mode/2up?view=theater

Rousseau ends his *Social Contract* with a stab and then a flourish of his rhetorical sword.

As for the stab – one with a point relevant to our current dispute over who will define marriage, the church or the state – **Rousseau makes it clear that the clergy cannot retain power over marriage. That is, there must be civil marriage, marriage redefined as a "civil contract."** If the priests retain power to make marriages, they retain the power to define marriage – a significant power that would not be in the hands of the civil sovereign.28 With Rousseau, as with the proponents of gay marriage (and even "civil unions") today, the aim is to drive the Christian understanding of marriage into extinction. **The Christian view of marriage is the product of what Rousseau calls an "intolerant religion,"** and therefore it violates his civil religion's one negative dogma: thou shalt not be intolerant.

https://ccel.org/g/gibbon/decline/volume2/chap44.htm#freedom

The dignity of marriage was restored by the Christians, who derived all spiritual grace from the prayers of the faithful and the benediction of the priest or bishop. The origin, validity, and duties of the holy institution were regulated by the tradition of the synagogue, the precepts of the gospel, and the canons of general or provincial synods; (121) and the conscience of the Christians was awed by the decrees and censures of their ecclesiastical rulers. **Yet the magistrates of Justinian were not subject to the authority of the church: the emperor consulted the unbelieving civilians of antiquity,** and the choice of matrimonial laws in the Code and Pandects, is directed by the earthly motives of justice, policy, and the natural freedom of both sexes. (122)

https://books.google.fi/books?id=w6cwDwAAQBAJ&lpg=PR1&hl=fi&pg=PA31#v=onepage&q&f=false

Late in 1790, the Père Duchesne most colorfully expressed his "indignation aganst the 'indissolubricité' [a pun: indissol-lust-ibility] of marriage." After describing several stormy marriages ending in bizarre murders, he called for

legalizing divorce and ending arranged marriages: “Here’s what our fucking marriage is … **it’s held together only by chains; it was okay when we were fucking slaves. <u>But now we are free: it’s not money, fuck, which should make marriages; it’s no longer fathers’ authority, it’s inclination and taste.</u>**”

https://books.google.fi/books?id=ztMuAAAAMAAJ&hl=fi&pg=PA203#v=onepage&q&f=false

You know that marriage is here a civil contract only, which I have seen entered into at the *bureau* of the municipality, and which consists merely in the parties declaring, before certain witnesses, their wish to be united, and entering their names in a register; **but of late all but flaming republicans have thought it necessary to strengthen the engagement, by privately superadding the ceremony of the church.**

https://oll.libertyfund.org/title/canavan-select-works-of-edmund-burke-vol-3#lf0005-03_head_005

Other Legislators, knowing that marriage is the origin of all relations, and consequently the first element of all duties, have endeavoured, by every art, to make it sacred. **The Christian Religion, by confining it to the pairs, and by rendering that relation indissoluble, has, by these two things, done more towards the peace, happiness, settlement, and civilization of the world, than by any other part in this whole scheme of Divine Wisdom.** The direct contrary course has been taken in the Synagogue of Antichrist, I mean in that forge and manufactory of all evil, the sect which predominated in the Constituent Assembly of 1789. Those monsters employed the same, or greater industry, to desecrate and degrade that State, which other Legislators have used to render it holy and honourable. By a strange, uncalled-for declaration, they pronounced, **that marriage was no better than a common civil contract.**

> P. 128, l. 12. *common civil contract.* Here again Burke goes back to the early legislation of the Revolution. Subsequent legislation, in European countries least to be suspected of revolutionism, has justified the advocates of the measure.

It was one of their ordinary tricks, to put their sentiments into the mouths of certain personated characters, which they theatrically exhibited at the bar of what ought to be a serious Assembly. One of these was brought out in the figure of a prostitute, whom they called by the affected name of “a mother without being a wife.” **This creature they made to call for a repeal of the incapacities, <u>which in civilized States are put upon bastards.</u>** The prostitutes of the Assembly gave to this their puppet the sanction of their greater impudence. In consequence of the principles laid down, and the manners authorised, bastards were not long after put on the footing of the issue of lawful unions. Proceeding in the spirit of the first authors of their constitution, succeeding assemblies went the full length of the principle, and gave a licence to divorce at the mere pleasure of either party, and at a month’s notice. With them the matrimonial connexion is brought into so degraded a state of concubinage, that, I believe, none of the wretches in London, who keep warehouses of infamy, would give out one of their victims to private custody on so short and insolent a tenure. There was indeed a kind of profligate equity in thus giving to women the same licentious power. **The reason they assigned was as infamous as the act; declaring that women had been too long under the tyranny of parents and of husbands.**

> https://www.marxists.org/archive/lenin/works/1919/nov/06.htm
>
> Enlightenment, culture, civilisation, liberty--**in all capitalist, bourgeois republics of the world all these fine words are combined with extremely infamous, disgustingly filthy and brutally coarse laws in which woman is treated as an inferior being,** laws dealing with marriage rights and divorce, with the inferior status of a child born out of wedlock as compared with that of a "legitimate" child, laws granting privileges to men, laws that are humiliating and insulting to women.
>
> The yoke of capital, **the tyranny of "sacred private property",** the despotism of philistine stupidity, the greed of petty proprietors – these are the things that prevented the most democratic bourgeois republics from infringing upon those filthy and infamous laws.
>
> The Soviet Republic, the republic of workers and peasants, promptly wiped out these laws and left not a stone in the structure of bourgeois fraud and bourgeois hypocrisy.

…

In Rome, whilst Rome was in its integrity, the few causes allowed for divorce amounted in effect to a prohibition. They were only three. The arbitrary was totally excluded; and accordingly some hundreds of years passed, without a single example of that kind. **When manners were corrupted, the laws were relaxed; as the latter always follow the former, when they are not able to regulate them, or to vanquish them. <u>Of this circumstance the Legislators of vice and crime were pleased to take notice, as an inducement to adopt their regulation:</u>** holding out an hope, that the permission would as rarely be made use of.

http://attalus.org/translate/valerius2a.html#c1

[1.4] **There was no divorce between man and wife until five hundred and twenty years after the city was founded.** The first was Spurius Carvilius, who divorced his wife for being barren. Though he appeared to have a good excuse for what he did, yet there were those who blamed him enough, **being such as believed that conjugal loyalty was to be preferred above desire for children.**

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Cambac%C3%A9r%C3%A8s,_Jean_Jacques_R%C3%A9gis_de

CAMBACÉRÈS, JEAN JACQUES RÉGIS DE, duke of Parma (1753-1824), French statesman, was born at Montpellier on the 18th of October 1753. He was descended from a well-known family of the legal nobility (*noblesse de la robe*). He was designed for the magistracy of his province; and in 1771, when for a time the provincial parlement was suppressed, with the others, by the chancellor Maupeou, he refused to sit in the royal tribunal substituted for it. **He continued, however, to study law with ardour, and in 1774 succeeded his father as councillor in the court of accounts and finances of his native town.**

https://en.wikipedia.org/wiki/Jean-Jacques-R%C3%A9gis_de_Cambac%C3%A9r%C3%A8s#Private_life

Cambacérès was a homosexual, his sexual orientation was well-known, and he does not seem to have made any effort to conceal it. He remained unmarried, and kept to the company of other bachelors. Napoleon is recorded as making a number of jokes on the subject.[12]

http://www.cambaceres.org/vie-poli/code-civ/cod-civi.htm

Lawyer of formation and man of the Lights, **Cambaceres seems according to Vialles to have taken as a starting point three principles in the drafting of the first civil law:**

> ***- to approach the natural right as much as possible, because the natural laws are higher than all the others.***
> ***- to maintain a unit complete in the legislation, because the truth is one and indivisible.***
> ***- to bring most extreme simplicity in the legal regulations, because few laws are enough for the honest men.***

…

The ideas of the Lights are illustrated in particular in the definition of the relationship between the parents and the children: *Monitoring and protection here are rights of the parents; to nourish, raise, establish their children, here are their duties. The children will be equipped by learning, as of their tender childhood, a trade of agriculture or mechanical art. (...) The children of the fatherland will show their harvests, their cultures, their work and they will say emulously astonished: here are our treasures."* (Cambaceres).

The text removes, for the same reasons, the concept of illegitimacy and reform the principles of the adoption: *"The adoption is the foreign branch graft on an ancient trunk; it revives the sap of it; it embellishes its stem of new kids; and, by this happy insertion, it crowns the tree of a new harvest of flowers and fruits.* ***Admirable institution that you had the glory to renew*** *and which binds so naturally to the Constitution of the Republic,* ***since it brings without crisis the division of great fortunes."***

> https://en.wikipedia.org/wiki/Adoption#Middle_ages_to_modern_period
>
> **The nobility of the Germanic, Celtic, and Slavic cultures that dominated Europe after the decline of the Roman Empire denounced the practice of adoption.**
> [14] **In medieval society, bloodlines were paramount; a ruling dynasty lacking a "natural-born" heir apparent was replaced, a stark contrast to Roman traditions.** The evolution of European law reflects this aversion to adoption. English common law, for instance, did not permit adoption since it contradicted the customary rules of inheritance.

…

All the children share the family inheritance equally, except for a negligible share whose head of household can lay out with his own way.

…

The Convention begins the reading and the discussion of the various articles. **The discussion stumbles on the equality of the husbands, and under the impulse of Merlin of Douai, the conventional ones reject the article instituting the joint management of the goods of the household.** Some articles are then voted, in particular on the divorce, but the Montagnards taken along by Levasseur and

Fabre d'Eglantine find too much the project inspired by the spirit of the men of law and make vote a decree establishing a commission of 6 philosophers charged to reform the project.
…

On August 26, 1796, Cambaceres goes up again to the platform to defend his civil code law: ***"Today that all is changed in the political order, it is essential to substitute for the old laws a code of simple laws."*** (Cambaceres). **He is attacked by the conservatives of Five hundreds, which considers certain provisions immoral (divorce, rights granted to the children born except marriage and the principle of equality of the heirs).**
…

On September 9, 1802, the discussion is resumed with the Council of State, the meetings are chaired by the First Consul or the Second Consul in his absence. Cambaceres prepares all work by communicating the documents relating to the agenda, as well as the extracts of his three codes, which is worth to him some criticisms on behalf of the advisers of State who find these preceding projects too impregnated of the ideas of the Lights or the Revolution. **It carries out practically all the debates, Bonaparte known as of him: *"Cambaceres makes the lawyer general; it speaks sometimes for, sometimes against"*.** On the 109 meetings of the Council of State necessary to the discussion of the Civil code, 52 are chaired by Cambaceres. **The influence of the First Consul results in a very Mediterranean design of the family subjected to the authority of the father of family, while the influence of Cambaceres allows the introduction of the divorce by consent and a recognition of the adoption in conformity with the preceding projects.**

http://www.cambaceres.org/vie-poli/redde/redde.htm

On May 15, Cambaceres argues against heredity: *"That there is not this stupid institution, anachronistic and destroying, which entrusts the capacity to that which by chance was born the first"* then it resigns of its functions of Second Consul. The following day, Bonaparte convenes Cambaceres with Saint-Cloud to try to make it change opinion. He proposes the station of Archchancellor to him (station created on the councils of Talleyrand who coveted it). Cambaceres accepts and to cross short to the rumours of dissensions between the two men, **it is Cambaceres, president of the Senate, which proclaims the Empire on May 18 in Saint-Cloud.**

https://archive.org/details/DiscussionsOfRobertLewisDabneyVol.3Philosophical/page/n25/mode/2up?view=theater

If the Jacobin theory be true, then woman must be allowed access to every male avocation, including government, and war if she wishes it, to suffrage, to every political office, **to as absolute freedom from her husband in the marriage relation as she enjoyed before her union to him, and to as absolute control of her property and earnings as that claimed by the single gentleman, as against her husband.**

https://www.covenanter.org/reformed/2016/5/22/womens-rights-women

"Women's Rights" mean the abolition of all permanent marriage ties. We are told that Mrs. Cady Stanton avowed this result, proclaiming it at the invitation of the Young Men's Christian Association of New York. **She holds that woman's bondage is not truly dissolved until the marriage bond is annulled.** She is thoroughly consistent.
…

Such a co-partnership of equals with independent interests must be separable at will, as all other such co-partnerships are. The only relation between the sexes which will remain will be a cohabitation continuing so long as the convenience or caprice of both parties may suggest; and this, with most, will amount to a vagrant concubinage.

https://archive.org/details/romanlawinmoder01shergoog/page/n35/mode/2up?view=theater

Moreover it was the majestic and beneficent Roman law which more than any other single element brought civilization back to Europe following the barbaric deluge of the Dark Ages.2 From Rome we have inherited our conceptions of law, the State, and the family.3 **The high, firm, secure legal position of woman in European and American civilization, which makes our civilization superior to all other types, is a legacy from the Roman law. The Civil Law was the first to work out and recognize the equality of women with man.**4

> 3. See Chamberlain, *The foundations of the nineteenth century*, London, 1911, whose work has already gone through eight editions.

…

More than this. **As a country we are now repeating the activity of Rome in legislation.** The development of our American law into jurisprudence has been, especially during the last century and a half, most usually by a return to the

Civil Law of Rome. And this returning is still in progress. The most striking illustrations—and there are many—are these three. (1) **The feudal Common Law ideal that husband and wife are one and that one is the husband, has been repudiated in nearly all American states. Married women now have restored to them the power to control their separate property independently of their husbands. And this is simply the re-enactment of the doctrine of Roman law as to the freedom of married women.** (2) Every American state has laws of inheritance similar to those of Rome.

https://books.google.fi/books?id=IRkMm73NCEUC&lpg=PR1&hl=fi&pg=PA233#v=onepage&q&f=false

There is not a word in Roman Law that upholds the doctrine of indissoluble marriage. The clergy in the time of Justinian persuaded him to curtail in many ways the unlimited right of divorce, but the restrictions that Justinian imposed were swept away again by his successor104 within a few months after Justinian's death. It is the doctrine of the Canon Law that marriage cannot be terminated by divorce,105 and that doctrine became dominant in medieval Europe, but such was never the doctrine of the Roman Law. In fact, under the Roman Law a covenant between parties to a marriage that the marriage should never be dissolved by divorce **was held invalid as depriving the parties of their vested rights.**106

Moreover, what is sometimes called a limited divorce, a divorce mensa et thoro, (from board and bed), which is nothing but a legal separation and called a limited divorce in distinction from absolute divorce, a vinculo matrimonii, (from the bond of marriage), was not known to the Roman Law. **Divorces in Roman Law were all absolute. The marital separation known as divorce a mensa et thoro, which is recognized in some states, but which is not divorce at all since the parties still remain married, was the creation of the Canon or Ecclesiastical Law.**107
…

In modern Civil Law countries the doctrines of the Church or Canon Law that marriage is sacred and the tie indissoluble, remained the law for a long time. In fact, it was also the law of England till the Divorce Act of 1858.

http://penelope.uchicago.edu/Thayer/E/Roman/Texts/secondary/BURLAT/23*.html#ref33

The history of the law of divorce may be considered separately, for the legislation on this subject under the autocracy forms a remarkable and unpleasing exception to the general course of the logical and reasonable development of Roman jurisprudence. Here ecclesiastical influence was active, and the Emperors from Constantine to Justinian fluctuated between the wishes of the Church on one side, and on the other common sense and Roman tradition.
…

Roman law recognised two ways in which a marriage could be dissolved—divorce by mutual consent, and the repudiation of one spouse by the other.[35] **Divorce by mutual consent was always regarded as a purely private matter and was never submitted to a legal form, and even the Christian Emperors before Justinian did not attempt to violate the spirit of the Roman law of contract by imposing any limitations.** It was reserved for Justinian to prohibit it, unless the motive was to allow one of the spouses to embrace a life of asceticism.[36] This arbitrary and rigorous innovation was intolerable to his subjects, and after his death his successor was assailed by numerous petitions for its repeal. The domestic misery resulting from incompatibility of temper was forcibly represented to him, and he restored the ancient freedom as a concession owing to the frailty of human nature.[37]
…

One-sided divorce had been equally unfettered; Augustus only required that the partner who decided to dissolve the marriage should make a formal declaration to this effect in the presence of seven citizens. **Constantine introduced a new and despotic policy. He forbade one-sided divorce entirely except for a very few specified reasons.**
…

The general tenor of these enactments of Justinian, **though they were temporarily set aside in the eighth and ninth centuries,** remained in force throughout the later period of the Empire, and the ecclesiastics never succeeded in bringing the civil into harmony with the canonical law which pronounced marriage indissoluble, and penalised a divorced person who married again as guilty of adultery.

https://www.bloomsburycollections.com/book/roman-law-and-the-idea-of-europe/ch2-exiled-romanists-between-traditions-pringsheim-schulz-and-daube

The third and final book (Schulz's main works are books) was *Classical Roman Law* (1951). In it, Schulz continued to deepen the thesis of classicism, humanism and liberalism as the great foundations of the Roman legal tradition. In all of the books, the great uniting factor is (beyond the continuing belief in interpolationary research) **the separation between law and politics:** of the harmfulness of needless legislative inputs and the interference of political power in the law.

Within the praise of the Roman legal achievement, there were still elements that may be understood through the background of Nazi racial laws, for example, his exaltation of the Roman law of marriage:

> **The classical law of marriage is an imposing, perhaps the most imposing, achievement of the Roman legal genius. For the first time in the history of civilization there appeared a purely humanistic law of marriage, viz. a law founded on a purely humanistic idea of marriage as being a free and freely dissoluble union of two equal partners for life.** (Schulz 1951, 103)

Recent scholars have questioned the accuracy of Schulz's idealistic interpretation (Urbanik 2016: 483). While the Nazi legal machinery regulated marriage with the aim of the preservation of racial purity and the continuation of the race through procreation, **Schulz's Roman marriage was its complete opposite, a radical alternative to not only the Nazi marriage laws that forbade marriage between unsuitable partners such as Jews and 'Aryans' but also the modern European laws that were founded on the legal oppression of women and the obstacles placed on divorce.**

https://www.marxists.org/archive/trotsky/1936/revbet/ch07.htm#ch07-1

The marriage and family laws established by the October revolution, once the object of its legitimate pride, are being made over and mutilated by vast borrowings from the law treasuries of the bourgeois countries. And as though on purpose to stamp treachery with ridicule, the same arguments which were earlier advanced in favor of unconditional freedom of divorce and abortion – "the liberation of women," "defense of the rights of personality," "protection of motherhood" – are repeated now in favor of their limitation and complete prohibition.

The retreat not only assumes forms of disgusting hypocrisy, but also is going infinitely farther than the iron economic necessity demands. To the objective causes producing this return to such bourgeois forms as the payment of alimony, there is added the social interest of the ruling stratum in the deepening of bourgeois law. **The most compelling motive of the present cult of the family is undoubtedly the need of the bureaucracy for a stable hierarchy of relations, and for the disciplining of youth by means of 40,000,000 points of support for authority and power.**

While the hope still lived of concentrating the education of the new generations in the hands of the state, the government was not only unconcerned about supporting the authority of the "elders", and, in particular of the mother and father, but on the contrary tried its best to separate the children from the family, in order thus to protect them from the traditions of a stagnant mode of life. Only a little while ago, in the course of the first five-year plan, the schools and the Communist Youth were using children for the exposure, shaming and in general "re-educating" of their drunken fathers or religious mothers with what success is another question. At any rate, this method meant a shaking of parental authority to its very foundations. In this not unimportant sphere too, a sharp turn has now been made. **Along with the seventh, the fifth commandment is also fully restored to its rights as yet, to be sure, without any references to God. But the French schools also get along without this supplement, and that does not prevent them from successfully inculcating conservatism and routine.**

Concern for the authority of the older generation, by the way, has already led to a change of policy in the matter of religion. **The denial of God, his assistance and his miracles, was the sharpest wedge of all those which the revolutionary power drove between children and parents.** Outstripping the development of culture, serious propaganda and scientific education, the struggle with the churches, under the leadership of people of the type of Yaroslavsky, often degenerated into buffoonery and mischief. The storming of heaven, like the storming of the family, is now brought to a stop. The bureaucracy, concerned about their reputation for respectability, have ordered the young "godless" to surrender their fighting armor and sit down to their books. **In relation to religion, there is gradually being established a regime of ironical neutrality. But that is only the first stage. It would not be difficult to predict the second and third, if the course of events depended only upon those in authority.**

> Nor could they then regard
> The general good, nor did they know to use
> In common any customs, any laws:
> **Whatever of booty fortune unto each**
> **Had proffered, each alone would bear away,**
> **By instinct trained for self to thrive and live.**
> And Venus in the forests then would link
> The lovers' bodies; for the woman yielded
> Either from mutual flame, or from the man's
> Impetuous fury and insatiate lust,
> Or from a bribe – as acorn-nuts, choice pears,
> Or the wild berries of the arbute-tree.
> ...
>
> Afterwards,
> When huts they had procured and pelts and fire,
> And when the woman, joined unto the man,

Withdrew with him into one dwelling place,
... ...

Were known; and when they saw an offspring born
From out themselves, then first the human race
Began to soften. For 'twas now that fire
Rendered their shivering frames less staunch to bear,
Under the canopy of the sky, the cold;
And Love reduced their shaggy hardiness;
And children, with the prattle and the kiss,
Soon broke the parents' haughty temper down.

Lahontan's Amerindians also regulate sexual life and marriage more rationally than the whites. **Young women are left entirely free to choose, or agree to, their own husbands without any tyranny of the family.** Divorce, as Jean-Frédéric Bernard reminded readers, recycling Lahontan's material in his great compendium on the world's religions of 1723, is readily available but rarely required since their marriages, being better founded, last longer and develop more satisfactorily than those of Europeans.55 Whereas European men boast of their sexual exploits but impose on women an exacting code of chastity and modesty, and a ruthless surveillance of reputations, a double standard entailing a heavy stigma where women are suspected of extramarital intercourse, **the Canadian Indians, allegedly, made no fetish of virginity or chastity, leaving young women and men free to experiment sexually both before and after marriage.**

I know the Humour of the Savages better than a great many *French* People that have liv'd among 'em all their Life-time; for I study'd their Customs so narrowly and exactly, that all their Conduct of Life is as perfectly well known to me, as if I had been among 'em all my Life-time: **And 'tis this Exact Knowledge that prompts me to say, That they are altogether Strangers to that Blind Fury which we call Love.**
…

The Savages never quarrel among themselves, neither do they reproach or affront one another; One man among them is as good as another, for all are upon the same Level. They have no Disorders occasion'd by a Girl or a Wife, for the Women are Wise, and so are their Husbands: The Girls indeed are a little foolish, and the Young Men play the fool with them not unfrequently: But then you must consider that a Young Woman is allow'd to do what she pleases; let her Conduct be what it will, neither Father nor Mother, Brother nor Sister can pretend to controul her. **A Young Woman, say they, is Master of her own Body, and by her Natural Right of Liberty is free to do what she pleases.** But on the other hand the Married Women being allow'd the Priviledge of quitting their Husbands when they please, had as good be dead as be guilty of Adultery. In like manner, the Husbands being entituled to the same Priviledge, would look upon themselves as infamous, if they were faithless to their Wives.
…

You must take notice, that forasmuch as the Savages are Strangers to *Meum* and *Tuum*, to Superiority and Subordination; and live in a State of Equality pursuant to the Principles of Nature; they are under no apprehension of Robbers or Secret Enemies, so that their Huts are open Night and Day. You must know farther, that Two Hours after Sun-set, the Old Superannuated Persons, or the Slaves (who never lie in their Masters Huts) take care to cover up the Fire before they go. 'Tis then that the Young Savage comes well wrapt up to his Mistress's Hut, and lights a sort of a Match at the Fire; after which he opens the Door of his Mistresses Apartment, and makes up to her Bed: If she blows out the Light, he lies down by her; but if she pulls her Covering over her Face, he retires; that being a Sign that (he will not receive him. **The Young Women drink the Juice of certain Roots, which prevents their Conception, or kills the Fruit of the Womb; for if a Girl proves with Child, she'll never get a Husband.**
…

This People cannot conceive that the *Europeans,* who value themselves upon their Sense and Knowledge, should be so blind and so ignorant as not to know that Marriage in their way is a source of Trouble and Uneasiness. To be ingag'd for one's Life time, to them is matter of Wonder and Surprise. **They look upon it as a monstrous thing to be tied one to another without any hopes of being able to untie or break the Knot.** In fine, in spite of all the Reasons and Arguments that that Subject affords, they lay down this for a firm and unmoveable Truth, that we *Europeans* are born in Slavery, and deserve no other Condition than that of Servitude.
…

‘Tis allowable both for the Man and the Woman to part when they please. Commonly they give one another eight Days Warning; sometimes they offer Reasons to justifie their Conduct, but for the most part the usual Plea is, that they are sick and out of order, and that Repose is more proper for them than the fatigue of a married Life. Then the little pieces of the Rod that were distributed among the Relations of the married Persons, are brought into that Hut in which the Marriage was Solemniz’d, and burnt in their Presence. You must observe that this Separation is accomplish’d without any Dispute or Quarrel. Both the Men and the Women thus unmarried may be marry’d again to whom they please: But commonly they lie bye three or six Months before they consummate their second Marriage.
…

The Savages go always by the Mothers Name. To make this plain by an example: the Leader of the Nation of *Hurons*, who is called *Sastaretsi*,1 being Married to a Daughter of another *Huron* Family, by whom he has several Children, that General’s Name is extinct at his Death, for that his Children assume the Name of the Mother. Now, it may be ask’d how **the Name of *Sastaretsi* has been kept up for the space of Seven or Eight Hundred Years among that People,** and is likely to continue to future Ages? But the Question is easily Answered, if we consider, that the Sister of this *Sastaretsi* being Married to another Savage, whom we shall call *Adario*, the Children Springing from that Marriage, will be called *Sastaretsi* after the Mother, and not *Adario* after this Father. When I asked them the Reason of the Custom, they replyed, that the Children having received their Soul from their Father, and their Body from their Mother, ‘twas but reasonable that the Maternial Name should be perpetuated. I represented to them I do not know how often, that God alone was the only Creator of Souls, **and that it was more reasonable to derive the original of that Custom from the certainty that they had of the Mother beyond that of the Father;** but they possitively affirmed that this reason was absurd, without offering any proof.1
…

I observ’d before, that if once a Girle proves with Child, she never gets a Husband; but I ought to have added that some young Women will not hear of a Husband, through a principle of Debauchery. That sort of Women are call’d *Ickone ne Kioussa*, i.e. Hunting Women: for they commonly accompany the Huntsmen in their Diversions. To justify their Conduct, they alledge that they find themselves to be of too indifferent a temper to brook the Conjugal yoak, to be too careless for the bringing up of Children, and too impatient to bear the passing of the whole Winter in the Villages. Thus it is, that they cover and disguise their Lewdness. Their Parents or Relations dare not censure their Vicious Conduct; on the contrary they seem to approve of it, **in declaring, as I said before, that their Daughters have the command of their own Bodies and may dispose of their Persons as they think fit; they being at their liberty to do what they please. In short, the Children of these Common Women are accounted a Lawful Issue, and intitled to all the Privileges of other Children;** abateing for one thing, namely, that the noted Warriours or Counsellours will not accept of ‘em for their Sons in Law, and that they cannot enter into Alliance with certain Ancient Families; though at the same time these Families are not possessed of any peculiar Right or Preheminence. **The *Jesuits* do their utmost to prevent the Lewd Practices of these Whores, by Preaching to their Parents that their Indulgence is very disagreeable to the Great Spirit,** that they must answer before God for not confineing their Children to the measures of Continency and Chastity, and that a Fire is Kindled in the other World to Torment ‘em for ever, unless they take more care to correct Vice.

To such Remonstrances the Men reply, *That’s Admirable*; and the Women usually tell the Good Fathers in a deriding way, *That if their Threats be well grounded, the Mountains of the other World must consist of the Ashes of souls*.

https://archive.org/details/newvoyagestonor00paltgoog/page/n236/mode/2up?view=theater

Once more, I’ll take the liberty to mention another piece of Madness practis’d among you, which indeed is down right Cruelty to my Mind. Your Marriages are indissolvable, and yet a Youth and a Girl that burn in the mutual flames of Love, can’t marry without the consent of their Parents. Both the one and the other must marry who their Fathers please, in opposition to their own Inclination, tho' their Aversion to the Person propos’d be so great, that they hate him mortally. **The inequality of Age, Estate and Birth is the source of all these Inconveniences; they overrule the mutual Love of the two Parties that like one another.** What Cruelty! What Tyranny! and that practis’d by a Father upon his own Children. Do you meet with such things among the *Hurons*? **Among them every one’s as Rich and as Noble as his Neighbour; the Women are entitled to the same Liberty with the Men, and the Children enjoy the same Privileges with their Fathers. A young *Huron* may marry one of his Mother's Slaves, and neither Father nor Mother are impower’d to hinder him.** This Slave by so doing becomes a free Woman; and since her Beauty pleases, why should not the Youth prefer her to the great General’s Daughter that is not so handsome? To continue the faults of your Constitution: Is it not a piece of Injustice among you who abhor a community of Goods, **that a Nobleman or Gentleman should give his eldest Son almost all that he has, and force the other Brethren and Sisters to rest satisfied with a Trifle, tho’ perhaps that eldest Son is not a Lawful Child, and all the rest are? The Consequence of this is, that they throw their Daughters into perpetual Prisons,** with a sort

of Barbarity which is not suitable to the Christian Charity that the Jesuits preach up. **As for the other Sons, they are forc'd to turn Priests and Monks, in order to live by the fine Trade of praying to God against their will, of preaching what they do not practise, and of persuading others into the belief of what they disbelieve themselves.** If any of 'em take up a Military Profession, they design the pillaging the Nation more than the guarding off her Enemies. The *French* do not fight for the Interest of their Country as we do; 'tis their own Interest and preferment to higher Posts that they have in view. The Love of their Country and of their Fellow-Citizens does not prevail so much with them as Vanity, Ambition and Riches. In fine, my dear Brother, I conclude this Discourse in assuring thee, That the Christians Self-love is a piece of Folly that the *Hurons* will ever condemn; **and that Folly which tinctures all your Actions is remarkable in a distinguishing manner in the way of your Amours and Marriages;** which, I must say, is as unaccountable as the People are who suffer themselves to be catch'd in that Noose.
…

That Liberty which the *Hurons* preach up occasions dismal Disorders. **In their way the Children are Masters as well as the Fathers; and Wives who ought naturally to be subject to their Husbands are invested with an equal Authority.** The Daughters scorn the Advice of their Mothers when there's a Lover in the case. In a Word, all this scene of Liberty reduces the way of Life to a continued course of Debauchery, **by granting to Nature, in Imitation of the Brutes, an unlimited satisfaction to all its Demands.** Your single Women place their Wisdom in concerting and concealing their lewd Adventures. To run with *a Match in your Villages, is the same thing as strolling after a Whore in ours. All your young Men roll from Hut to Hut upon such Adventures while the Night lasts.
…

If there's any thing of Wantonness and Debauchery amongst our Wenches, there is at least this difference, that the Rule is not General, as it is amongst yours; and besides they don't go so brutishly to work with it.

https://archive.org/details/newvoyagestonor00paltgoog/page/n230/mode/2up?view=theater

What is the reason that the Women-Savages, being so rarely Fruitful, have the Increase of their Nation so little in view, that a Woman shall make her self Miscarry when the Father of the Child dies, or is kill'd, before she is brought to Bed? You'll tell me, she do's it to save her Reputation; because, without that Precaution she would never have another Husband. But it would seem the Interest of the Nation, which lies in its Increase and Multiplication, is but little regarded by your Women. Now, it is not so with ours, for, as you said t'other day, our *Coureurs de Bois* and many others, find very often new Children in their Houses, at their return from their Journeys: But they are not much dissatisfied, upon the consideration, **that this adds so many Bodys for the Nation, and so many Souls for Heaven:** Tho' after all, their Women undergo as much disgrace upon such occasions as yours do, and sometimes are Imprisoned for Life, while yours are allow'd to entertain as many Gallants as they please afterwards. **'Tis a most abominable piece of Cruelty for a Woman to make away with her Child: A Crime which the Author of Life will never pardon: And this is one of the greatest Abuses to be reformed among you.** You ought to discountenance Nakedness too; for the liberty which your Boys have of going Naked, makes a terrible Hurricane in the Minds of your young Girls; as they are not made of Brass, so the view of those parts which decency forbids me to name, can't but call up the Amorous Fire, especially when the young Wantons shew that Nature is neither dead nor untrue to the Adventures of Love.

Adario. **I take it, you account for the Barrenness of our Women admirably; for I perceive how that may come to pass: And as for the Criminal Practice of our young Women in taking Potions to make themselves Miscarry; I find your Reflexions upon it are very just. But what you say of Nakedness do's not stand to Reason.** I allow that in a Nation where distinctions of Property are acknowledged, you are very much in the right of it, to cover not only such parts as ought not to be nam'd, but even all the parts of the Body. What use would the *French* make of their Gold and their Silver, if they did not imploy it in providing themselves with fine Cloaths? **Since in your Country Men are valued according to their Dress, is it not a great advantage to be able to cover any Defect in Nature with a handsome Habit? In earnest, Nakedness ought not to offend any but such as allow Property.** A deform'd or decrepit Man among you has found the Secret of appearing Handsome or well Dress'd, in a Beau Perriwig and fine Cloaths; under which 'tis impossible to distinguish Artificial Shapes from such as are Natural.

> https://archive.org/details/cityofsaintsacro00burt/page/107/mode/2up?view=theater
>
> The ancient Persians taught their progeny archery, riding, and truth-telling; **the Prairie Indian's curriculum is much the same, only the last of the trio is carefully omitted.**
> …

> **The children, "born like the wild ass's colts," are systematically spoiled with the view of fostering their audacity;** the celebrated apophthegm of the Wise King – to judge from his notable failure at home, he probably did not practice what he preached – which has caused such an expenditure of birch and cane in higher races, would be treated with contempt by the Indians. The fond mother, when chastening her child, never goes beyond dashing a little cold water in its face – for which reason to besprinkle a man is a mortal insult – a system which, perhaps, might be naturalized with advantage in some parts of Europe. **The son is taught to make his mother toil for him, and openly to disobey his sire; at seven years of age he has thrown off all parental restraint; nothing keeps him in order but the fear of the young warriors. At ten or twelve he openly rebels against all domestic rule, and does not hesitate to strike his father;** the parent then goes off rubbing his hurt, and boasting to his neighbors of the brave boy whom he has begotten.
>
> http://sino-platonic.org/complete/spp207_germani_xiongnu.pdf
>
> **For according to Sima Qian, amongst the Xiongnu it is the custom for "the young and strong to eat the fatty and delicious food and the elderly to eat what is left over. Thus they value the strong and healthy and despise the elderly and weak":** (*Shiji* 110. 2879). When a Chinese envoy accuses the Xiongnu of what, in his eyes, is a barbaric and despicable practice, **Zhonghang Yue retorts that this custom is in fact in the best interests of the elderly:** (*Shiji* 110. 2899–2900)
>
> > The elderly [of the Xiongnu] are unable to fight. Therefore we give their fatty and delicious food to the young and strong, and thus the elderly may be protected and defended. In this way are both able to protect one another for a long time. So how can you say that the Xiongnu do not respect the elderly?
>
> As with the Germani, Xiongnu society's defining activity is warfare, and in their case it is so important as to dictate familial relations – **resulting in an inversion of what the Chinese would have considered to be the civilized, hierarchical arrangement mandated by Confucianism, adherence to which was held up as the absolute barometer of moral cultivation and virtue.**

https://www.gutenberg.org/cache/epub/46333/pg46333-images.html#Footnote_4_63

They ceased to fall asleep under the first tree, or in the first cave that afforded them shelter; they invented several kinds of implements of hard and sharp stones, which they used to dig up the earth, and to cut wood; they then made huts out of branches, and afterwards learnt to plaster them over with mud and clay. **This was the epoch of a first revolution, which established and distinguished families, and introduced a kind of property, in itself the source of a thousand quarrels and conflicts.** …

The first expansions of the human heart were the effects of a novel situation, which united husbands and wives, fathers and children, under one roof. The habit of living together soon gave rise to the finest feelings known to humanity, conjugal love and paternal affection. Every family became a little society, **the more united because liberty and reciprocal attachment were the only bonds of its union. The sexes, whose manner of life had been hitherto the same, began now to adopt different ways of living. The women became more sedentary, and accustomed themselves to mind the hut and their children, while the men went abroad in search of their common subsistence.**

https://archive.org/details/moraldarwinismho0000wike/page/174/mode/2up?view=theater

To put it in a slightly different perspective, if society should follow Rousseau, and define what is natural by his Lucretian analysis of human origins, then that society would come to view heterosexual intercourse as one option among many for releasing sexual tension and enjoying sexual pleasure. **No option would have any precedence over any other, for no option would be any more natural than any other.**

To return to our analysis of Rousseau, it is clear that society would not be natural; that is, **human beings are naturally asocial, and society was one more accident brought about in the slow meandering of human evolution.** How did it come about? According to Rousseau, the desire of man to relieve himself of the pain of exposure to the elements brought him to build crude shelters, the first great "revolution" in the "almost imperceptible progress from beginnings," **where the "habit of living together gave rise to the sweetest sentiments known to men: conjugal love and paternal love." Oddly enough, it was only then "that the first difference was established in the way of life of the two sexes, which until this time had had but one."**59

Not only were conjugal and paternal love not natural – however sweet they may be – but the distinction of the sexes was for the most part artificial. **Rousseau thereby radicalized the homogeneity of the atomic**

presocial individuals: the original condition of human beings was nearly genderless, that is, with little or no distinction between the sexes. (Or to offer the same assertion in a contemporary form, male and female are naturally equal, but society has artificially created distinctions, or exaggerated distinctions, between them.)

It followed that love and marriage, whatever pleasures may come from them, were strictly speaking unnatural, and their development was deleterious. In this assertion, Rousseau duplicated Lucretius's argument exactly. In the state of nature, there was *only* sexual desire: "Everyone [male and female alike] peaceably waits for the impulsion of nature, yields to it without choice with more pleasure than frenzy; and the need satisfied, all desire is extinguished." Falling away from this natural state created all the anxiety and passion of romance, and our natural tranquillity is thereby lost. "It is therefore incontestable that love itself, like all the other passions, has acquired only in society that impetuous ardor which so often makes it fatal for men."60 Jealousy was unknown to the purely natural human being; "free love" is our natural condition. **The 1960s was not the origin of the free love movement; it was simply the popular flowering of a seed planted before the birth of Christ and revivified by Rousseau.**

https://archive.org/details/10booksthatscrew0000wike/page/44/mode/2up?view=theater

What, then, did Rousseau imagine? If we might be a bit glib, **whereas Hobbes's men in the state of nature were gorillas – nasty, brutish, and curiously short – Rousseau's primitive men were suave, peaceful, innocent, carefree, and cheerfully libidinous bonobos.** Rousseau therefore gave us a new Adam, a carefree, make-love-not-war ancestral archetype who became the societal ideal of the "free love" movements.
...

Rousseau goes so far in his imaginative destruction of love and the family that he denies even the love of mother and child. "**The mother nursed her children at first for her own need;** then, habit having endeared them to her, she nourished them afterward for their need. As soon as they had the strength to seek their own food, they did not delay in leaving the mother herself; and as there was practically no other way to find one another again than not to lose sight of each other [in the jungle or forest], they were soon at a point of not even recognizing one another."6
...

Because man is so primitive, he has no idea of beauty: "any woman is good for him."7 As for his string of offspring, given that he's off into the trees once his "need" is "satisfied," "he did not recognize his children"8 even if he happened to stumble upon them later on.

There you have it: Rousseau's paradise, his new and improved Adam and Eve. **Sex entirely devoid of all the unpleasant duties and entanglements of love!** A mere "blind inclination, devoid of any sentiment of the heart," that produces "only a purely animal act," satisfying a passing brute desire. And when the desire is quenched, "the two sexes no longer recognize each other, and even the child no longer meant anything to his mother as soon as he could do without her."9 **Every cad's paradise! Paternity without strings!** No pestiferous pangs of conscience!

There were no twinges of conscience for natural man, Rousseau assured the reader, because "the moral element of love is an artificial sentiment born of the usage of society."10 Since neither the love of husband and wife, or parent and child, is natural, then neither are the moral duties that rise from marriage and childbearing. (Rousseau added, with more than a little hint of autobiography, that the moral element of love is an artificial sentiment **"extolled with much skill and care by women in order to establish their ascendancy and make dominant the sex that ought to obey."**11)

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n553/mode/2up?view=theater

Let not the reader be imposed upon by the term *Patriarchal life*. **The illuminizing Hierophant speaks of Abraham and of the Patriarchs, of the father *priest and king*, sole *sovereign* over his family.** He is not to expect to see the father surrounded by his children, exercising the sweetest of all dominions, and each child, docile to the dictates of nature, revering the orders and anticipating the will of a beloved father. No; this empire is as imaginary as his priesthood. **We have seen in the degree of *Mage*, that the illuminized Patriarch can no more pretend to the acknowledgement of a God than can an Atheist. We must then begin by withdrawing from the Patriarchal life that interesting sight of the father offering up to heaven the prayers of his children, sacrificing in their name, and exercising in the midst of them the functions of the priest of the living God.** In the next degree of the mysteries all his dominion over his children is to disappear, as his priesthood has already done. Nor was I afraid to assert in the beginning of this work, *If Jacobinism triumphs—your very children shall be torn from you*. I now repeat it; **all this pretended sovereignty of the father is but a conspiracy against the paternal authority.** The proofs are extant in the codes of the Sect.

Here again is Weishaupt deprived of the glory of the invention. **Rousseau and the Encyclopedists had long since told us, that *the authority of the father ceased with the wants of the son*; this was one of their principles of rebellion.** The man who invented his Illuminism only to convert it into the common sewer of every antichristian and antisocial error, could not leave your children in the dark as to

these lessons of independence, though under the sanctuary of the paternal roof; **nor with respect to the pretended right of governing themselves, and of acknowledging no other law than that of their reason, as soon as they were strong enough to disobey, or no longer needed your assistance.** Tell the illuminizing Hierophant, that your children belong to you; it will be useless, for he has already answered, "***The paternal authority ceases with the wants of the children; the father would wrong his children, should he pretend to any authority over them after that period.***" This is but a principle laid down in the lesser mysteries. Follow up the consequences, or rather leave it to the revolution to develope such a principle. The reader will soon see to what this authority of the father is reduced. **Scarcely can the child lisp the words Equality and Liberty, or that of Reason, when the commands of his parents become the most horrid despotism, oppression, and tyranny.—Nor is the Patriarchal sovereign to expect any more affection than obedience from his subjects or his children. In imparting the doctrines of Equality and Liberty, the Hierophant had taught them to blaspheme the *love of one's family* even still more than *the national love, or the love of one's country*, as being the more direct and immediate principle of the most disastrous *Egoism*.** Let the father then enquire by what bonds his children still remain united to him, or how they are subjected to him, when, without fear, **they may openly resist his Patriarchal power as soon as their feeble arms have acquired sufficient strength to gather the fruits which were to serve them as food.** No, this hellish Sect acknowledges no ties. All those of nature, as well as those of government or religion, were to be dissolved in Weishaupt's last mysteries. **The child, like the savage tyger of the forest, was to abandon his parents when strong enough to go alone in quest of his prey. And this is what the Sect calls restoring man to his primitive state of nature, to the Patriarchal life,** to those days when filial piety compensated for all the necessary laws of civil society.

https://archive.org/details/FoundationsOfNineteenthCenturygrundlagenDesNeunzehntenJahrhunderts/page/n207/mode/2up?view=theater

The Romans did not invent marriage, they did not invent law, they did not invent the constitutional freedom-giving State; all that grows out of human nature and is found everywhere in some form and to some degree; but what the Aryan races had conceived under these notions as the bases of all morality and culture had nowhere been firmly established till the Romans established it.*

* For the Aryan peoples in particular, *see* Leist's excellent *Gräco-italienische Rechtsgeschichte* (1884) and his *Altarisches Jus civile* (1896), also Jhering's *Vorgeschichte der Indoeuropäer*. **The ethnical investigations of the last years have, however, shown more and more that marriage, law and State exist in some form everywhere, even among the savages of least mental development. And this must be strongly emphasised, for the evolution mania and the pseudo-scientific dogmatism of our century have brought into most of our popular books absolutely invented descriptions,** which are very difficult to remove from them, in spite of the sure results of exact research; and from here these descriptions also force their way into valuable and serious books. **In Lamprecht's famous *Deutsche Geschichte*, vol. i., for instance, we find what is supposed to be a description of the social conditions of the old Teutonic peoples, sketched "under the auspices of comparative ethnology"; here we are told of a time when among these peoples a "community of sex limited by no differences of any kind prevailed, all brothers and sisters were husbands and wives to each other and all their children brothers and sisters, &c:"; the first progress from this state, as we are to suppose, was the establishment of the mother's right, the so-called *Matriarchate* – and so the tale continues for pages; one fancies one is listening to the first stuttering of a new mythology.** As far as the mother-right is concerned (*i.e.*, family name and right of inheritance after the mother, as the fatherhood was always a common one), Jhering has convincingly shown that even the oldest Aryans, before the breaking off of a Teutonic branch, knew nothing of it (*Vorgeschichte*, p. 61 ff.), and the very oldest parts of the Aryan language point already to the "supreme position of the husband and father of the household" (Leist, *Gräco-ital. Rechtsgeschichte*, p. 58); that supposition therefore lacks every scientific basis. [This was meantime confirmed by Otto Schrader, *Reallexicon der indogermanischen Altertumskunde*, 1901, p. xxxiii.] It is still more important to establish the fact that the "comparative ethnography" appealed to by Lamprecht has found community of sex nowhere in the world among human beings. In the year 1896 a small book appeared which summarises in strictly objective fashion all the researches that refer to this, Ernst Grosse's *Die Formen der Familie und die Formen der Wirtschaft*, **and there we see how the so-called empirical philosophers, with Herbert Spencer at their head, and the so-called strictly empirical anthropologists and ethnologists, honoured as "authorities" (with praiseworthy exceptions like Lubbock), simply started from the *à priori* supposition that there must be community of sex among simpler peoples, since the law of evolution demands it, and**

then everywhere discovered facts to confirm this. But more exact and unprejudiced investigations now prove for one race after the other that community of sex does not exist there, and Grosse may pat down the apodictic assertion: **"There is, in fact, no single primitive people whose sexual relations approached a condition of promiscuity or even hinted at such a thing. The firmly knit individual family is by no means a late achievement of civilisation, it exists in the lowest stages of culture as a rule without exception"** (p. 42). Exact proofs are to be found in Grosse; besides, all anthropological and ethnological accounts of recent years testify how very much we have undervalued the so-called savages, how superficially we have observed and how thoughtlessly we have drawn conclusions about primitive conditions, of which we know absolutely nothing with surety. [Lately Heinrich Schurtz, in his *Altersklassen und Männerbunde, eine Darstellung der Grundformen der Gesellschaft*, 1902, **has fully shown that the arguments for promiscuity in early times, which are wont to be drawn from phenomena of "free love" to-day, are to be interpreted quite differently, and that, on the contrary, "with the most primitive races marriage, and in connection with it the formation of society on a purely sexual basis, is more strongly developed"** (p. 200).] As this subject is essentially of the greatest importance and throws a peculiar and very noteworthy sidelight upon scientific modes of thought and power of thought in our century, I should like to add one more instinctive example. The original inhabitants of central Australia are, as is well known, supposed to belong to the most backward, intellectually, of all peoples; Lubbock calls them "wretched savages, who cannot count their own fingers, not even the fingers of one hand" (*The Prehistoric Age*, Germ, trans., ii. 151). One can imagine with what contempt the traveller Eyre wrote of the "remarkably peculiar cases where marriage is forbidden" in this wretched race, "where a man may not marry a woman who has the same name as he, even though she be by no means related to him." Strange! **And how could these people come to have such inexplicable caprices when it would have been their duty, according to the theory of evolution, to have lived in absolute promiscuity?** Since that time two English officials, who lived for years among these savages and gained their confidence, have given us a detailed account of them (*Royal Society of Victoria*, April 1897, summary in *Nature*, June 10, 1897), and it appears that their whole intellectual life, their "conceptive life" (if I may say so) is so incredibly complicated that it is almost impossible for one of us to comprehend it. **These people, for example, who are supposed not to be able to count up to five, have a more complicated belief than Plato with regard to the transmigration of souls, and this faith forms the basis of their religion.** Now as to their marriage laws. In the particular district spoken of here there lives an ethnically uniform race, the Aruntas. Every marriage union with strange races is forbidden; thereby the race is kept pure. But the extremely baneful effects of long-continued inbreeding **(Lamprecht's Teutons would long have become Cretins before ever they entered into history!)** are prevented by the Australian blacks by the following ingenious system: they divide (mentally) the whole race into four groups; for simplicity I designate them *a b c d*. A youth from the group *a* may only marry a girl from group *d*, the male *b* only the female *c*, the male *c* only the female *b*, the male *d* only the female *a*. The children of *a* and *d* form once more the group *b*, those of *b* and *c* the group *a*, those of *c* and *b* the group *d*, those of *d* and *a* the group *c*. I simplify very much and give only the skeleton, for I fear my European reader would otherwise soon reach the stage of likewise not being able to count up to five. That such a system imposes important restrictions on the rights of the heart cannot be denied, **but I ask, how could a scientifically trained selector have hit upon a more ingenious expedient to satisfy the two laws of breeding which are established by strict observation, namely, (1) the race most be kept pure, (2) continuous inbreeding is to be avoided?** (*see* chap, iv.). Such a phenomenon calls for reverence and silence. When contemplating it one gladly keeps silent regarding such systems as those already mentioned as belonging to the end of the nineteenth century. But what must we feel when we turn our glance from the extremely laboured efforts of these worthy Australian Aruntas to Rome and behold here, in the middle of a frightful world, the sacredness of marriage, the legal status of the family, the freedom of the head of the household rising up out of the heart of the people, for it was at a much later period that it was engraved on bronze tables?

https://thenewutopian.com/2022/11/02/understanding-carl-schmitts-political-theology/

Oh, and as a random aside, Schmitt saw the calls for a return of matriarchy and the longhouse far before Bronze Age Pervert. **“Anarchists today see in the patriarchal family and in the monogamy the actual state of sin,” (for they believed God and theology to be the only sin), “and… they preach the return of matriarchy, the supposedly paradisiacal original state…”**

https://majorityrights.com/weblog/comments/curbing_the_appetites_of_women

It was the creation of [the role of the father]—only a few thousand years ago—which made patriarchal civilization possible. Prior to that, mankind had to muddle through the million years of the Stone Age with the female-headed reproductive arrangements of the ghetto, the barnyard and the rain forest.
…

In the Matriarchal System the reproductive unit consists of the mother and her offspring, the father playing a marginal role, wandering into and out of the "family," subject to dismissal at the mother's bidding. The central fact about this kind of family is its naturalness. **Roman jurists spoke of maternity as a natural fact, "natura verum," and of paternity as merely a matter of civil law. "In all but a few species," writes Sarah Hardy, "females are permanent residents in social groups, males mere transients." This is the reproductive arrangement of all lower mammals.** It has been the reproductive arrangement of the human race itself until recently.

https://www.marxist.com/origin-of-the-family-engels-morgan.htm

"Bachofen finds evidence in support of these propositions in countless passages of ancient classical literature, which he had assembled with extraordinary diligence," states Engels. Bachofen's interpretation of the *Oresteia* of Aeschylus shows the struggle between the declining mother right and the rising victorious father right in the Heroic Age. Today, such valuable insights and evidence would be treated as "unscientific" by many anthropologists. However, it is with such observations, carefully interpreted that a real picture can be built up. **Engels himself states that "ancient classical literature teems with traces of a condition that had in fact existed before monogamy among the Greeks and the Asiatics, in which not only a man had sexual intercourse with more than one woman, but a woman had sexual intercourse with more than one man, without violating the existing custom."**
…

Following the "promiscuous" stage, **in the earliest "consanguine family", humans banned sexual relations between parents and children, but permitted relations between brothers and sisters and cousins within the gens.** This was later prohibited in the "punaluan family", where joint marriage was practiced between groups and between different kin groups. "It is thus clear that", wrote Engels, "wherever group marriage exists, descent is traceable only on the maternal side, and thus the female line alone is recognised."
…

"**This gentile constitution is wonderful in all its childlike simplicity! Everything runs smoothly without soldiers, gendarmes or police; without nobles, kings, governors, prefects or judges; without prisons, without trials.** All quarrels and disputes are settled by the whole body of those concerned – the gens or the tribe or the individual gentes among themselves… Although there are many more affairs in common than at present – the household is run in common and communistically by a number of families, the land is tribal property, only the small gardens being temporarily assigned to the household – still, not a bit of our extensive and complicated machinery of administration is required...

> "There can be no poor and needy – the communistic household and the gens know their responsibility towards the aged, the sick and those disabled in war. All are free and equal – including the women. There is as yet no room for slaves or, as a rule, for subjugation of alien tribes…
>
> "This is what mankind and human society were like before class divisions arose."[17]

…

Those who attempt to ascribe the idea of a matriarchy to Engels – which seems a common accusation – are barking up the wrong tree. This also applies to those who broadly accept Engels' analysis, such as Evelyn Reed, the feminist anthropologist who fiercely defends the existence of matriarchy. **Engels never held this view or even mentioned the term. What he and Morgan believed was not in matriarchy, but that matrilineal descent at one time was universal.** From the point of view of method, and also current information, everything tends to point in this direction.
…

This view was built largely upon the evidence of Morgan and his close association with the Iroquois. This tribal society was certainly matrilineal, the descent through the mother, and had an exceptionally high regard for women. **Women had a large say in the government of the longhouse or household of the matrilocally extended family.** However, this does not mean that this society was the mirror opposite of a patriarchal, male dominant, male oppressive society. As already stated, Engels was not even happy with the concept of "mother right", but accepted it as a term of shorthand. **Nevertheless, it is certain that there was no female oppression in these early societies. This arose with the development of private property and the division of society into classes and, in the words of Engels, "the world historical defeat of the female sex."**

https://books.google.fi/books?id=JDtNDwAAQBAJ&lpg=PR2&hl=fi&pg=PA9#v=onepage&q&f=false

Through a detailed discussion of a wide range of relevant passages in Chap. 4, *The Metaphysical Insignificance of Gender*, **I show that Stoic metaphysics considers gender to be insignificant (*adiaphoron*). On the level of rationality, which for the Stoics is the most essential human feature, there is no difference between men and women.** Furthermore, I scrutinize the position of gender in the categories of Stoic metaphysics, and posit that genderedness should be understood as a "common quality" (*koinos poion*), in other words, something that all human beings have, but whether one is of a specific gender, for example, a woman, is to be understood as an individual quality (*idios poion*). According to the Stoics, the reproductive capacity is one of the rational capacities of the human soul, which makes gender appear as comparable to the senses. **Thus, one's gender is as irrelevant for human rationality as, say, eye color is for the sight.**
…

Chapter 8, *The Stoics on Equal Educability of Girls and Boys, and the Origin of Gendered Characteristics*, **shows how in Stoicism, childhood is considered, for the most part, a gender-neutral phase of human life.** The assumption in the discussion is that girls and boys are equally educable for the highest purpose of life, which is to become fully rational, virtuous, and happy (which go together in Stoicism). **The Roman Stoic Musonius argued that girls and boys should be educated in exactly the same manner. I show that this position follows naturally from premises commonly accepted by Stoic thinkers from Zeno to the Romans.**

It is also crucial to examine critically the goal of Stoic philosophy, that is, the character of the sage, and whether this ideal is gendered or not. As I show in Chap. 9, *To Become Properly Manly – Gender, Happiness, and the Figure of the Sage*, **the Ancient sources often contrast the Stoic "masculinity" with Epicurean "femininity,"** and thus these two different styles of philosophy with their respective goals (rationality versus pleasure) are presented in gendered terms. I suggest that the Stoic sage must indeed get rid of certain "effeminate" characteristics (given that characteristics such as vanity are classified as feminine), but that it does not follow from this that it was easier for men to become sages than it does for women. On the contrary, **I will show that both and women to undergo several radical changes in Stoic philosophical therapy in order to become happy, and that the Stoic position is also critical about several traditional traits of masculinity.**
…

In Chap. 12 *"Holding Women in Common" – Gender in Early Stoic Utopias* I propose that the arguments concerning the utopian state should be read as a thought experiment of what a perfectly virtuous society would be like. **One significant result of this experiment is the realization that many of the traditional customs and institutions, such as institutionalized marriage and the external control of sexual relations, are irrelevant to true happiness and would not exist among perfectly virtuous individuals.** There are also potential problems arising from the exclusively male perspective of the Stoic proposal (as well as of Plato, who famously promoted the "common ownership of wives" in his *Republic*). **My analysis shows, however, that even though the early Stoics did not explicitly promote gender equality this idea follows naturally from some generally accepted Stoic premises.** In fact, the idea of a rational and equal community of male and female sages is inbuilt in the utopian ideal.

https://books.google.fi/books?id=JDtNDwAAQBAJ&lpg=PR2&hl=fi&pg=PA203#v=onepage&q&f=false

Ignoring the case of Thrasonides, who was expressly in love with a woman, Inwood comments on the Diogenes Laertius passage by stating: "By and large, it seems, the young people in question [i.e. the young people a Stoic sage will fall in love with] will be men – i.e. the assumed form of *erôs* is homosexual."3 **However, after this remark, he admits that there is no textual evidence that would suggest that the "noble *erôs*" could not similarly apply to women, as well. Inwood concludes: "(T)he official Stoic theory did not make much fuss over the issue of homosexual versus heterosexual love, for philosophical purposes."** (1997: 59).

> 3. A.W. Price claims that, like Plato, the early Stoics preferred pederastic relationships for pedagogic purposes (with the exception of the utopias which, in Price's words, "feature educational equality between the sexes" in both Plato and the Stoics). (2002: 170-199).

I agree with Inwood's conclusion, since, as I see it, **it follows from the doctrine of *adiaphora* that the gender of the sexual partner is a matter of indifference. Indeed, the sources do not give any clear indication that the Stoic arguments could not apply similarly to both men and women.** The general principle of Stoic ethics is that the moral evaluation is directed toward the person's character, not toward the act itself. **A good erotic subject would be able to**

do the right choices, behave in the right way, and build the right kind of a relationship with his or her partner. This is what matters, not one's gender, or the gender of the beloved one. Thus, what is at stake in the Stoic distinction of between good and bad *erôs* is not simply a hierarchic preference of one type of erotic relation over another, or classifying certain types of sexual acts as good and other ones as bad.4

> 4. However, this attitude somewhat changes when we get to the Roman Stoics who often prefer male-female relations and sometimes even express harsh criticism against same-sex relationships. For example, **Musonius Rufus' lecture about sexual matters states that neither adultery nor "relationships in which males relate to males" should be tolerated because they are "contrary to nature."** In Cynthia King 2011: 55-56.

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/secondary/BURLAT/23*.html#ref63

Unnatural vice was pursued by the Christian monarchs with the utmost severity. Constantius imposed the death penalty on both culprits, and Theodosius the Great condemned persons guilty of this enormity to death by fire.[65]
Justinian, inspired by the example of the chastisement which befell "those who formerly lived in Sodom," and firmly believing that such crimes were the immediate causes of famines, plagues, and earthquakes, was particularly active and cruel in dealing with this vice. In his laws,[66] he contented himself with imposing the penalty of death, but in practice he did not scruple to resort to extraordinary punishments. It is recorded that senators and bishops who were found guilty were shamefully mutilated, or exquisitely tortured, and paraded through the streets of the capital before their execution.[67]

The disproportion and cruelty of the punishments, which mark the legislation of the autocracy in regard to sexual crimes, and are eminently unworthy of the legal reason of Rome, were due to ecclesiastical influence and the prevalence of extravagant ascetic ideals. That these bloodthirsty laws were in accord with ecclesiastical opinion is shown by the code which a Christian missionary, **untrammelled by Roman law,** is reported to have imposed on the unfortunate inhabitants of Southern Arabia.

We saw how in the reign of Justin, Christianity was established in the kingdom of the Himyarites by the efforts of the Christian king of Ethiopia. When Abram was set upon the throne, Gregentius was sent from Alexandria to be the bishop of Safar, the chief city of the Himyarites.[68] The laws which Gregentius drew up in the name of Abram are preserved. **Doubts of their authenticity have been entertained; but even if they were never issued or enforced, they illustrate the kind of legislation at which the ecclesiastical spirit, unchecked, would have aimed. It is characteristic that sexual offences occupy a wholly disproportionate part of the code.** Fornication was punished by a hundred stripes, the amputation of the left ear, and confiscation of property. If the crime was committed with a woman who was in the *potestas* of a man, her left breast was cut off and the male sinner was emasculated. Similar but rather severer penalties were inflicted on adulterers. Procurers were liable to amputation of the tongue. Public singers, harp-players, actors, dancers, were suppressed, and any one found practising these acts was punished by whipping and a year's hard labour. To be burned alive was the fate of a sorcerer. Severe penalties were imposed for failing to inform the public authorities of a neighbour's misconduct. **On the ground of St. Paul's dictum that the man is the head of the woman, cruel punishments were meted out to women who ventured to deride men.[69]**

Le Beaumelle, who spent much time at the Procope during 1750, recalled witnessing a heated debate between Boindin and an adversary over the execution of homosexuals, a highly vexed issue at the time in Holland and England as well as France. On that occasion, **Boindin maintained that sodomy is no more evil than masturbation** and that were it 'contrary to nature,' it would have been roundly condemned by all ancient and modern peoples who have respected and venerated the voice of nature, including the Greeks, Persians, and Romans, **whereas, actually, homosexuality has been severely condemned and punished only by Christians.**110

https://archive.org/details/enlightenmentcon0000isra/page/666/mode/2up?view=theater

Laurent François's *Preuves de la religion de Jésus-Christ contre les Spinosistes et les Déistes* (4 vols., Paris, 1751), for instance, rightly identifies Spinoza's moral thought as the underpinning of contemporary French materialism, but construes it as just a levelling of men to the status of animals and plants. **By eliminating absolute good and evil Spinoza allegedly provided a purely libertine creed which legitimizes fornication, homosexuality, adultery, murder, and robbery.**
…

Spinoza invokes intellectual love of God but what his morality really amounts to, held François, is some "cruels paradoxes' legitimizing antisocial behaviour, even the most horrendous crimes.14 **Love of God here is no more than 'la cupidité ou l'amour des biens sensibles.' Are not sensuality, licentiousness, and adultery matters of complete indifference to the *esprits forts*?**

https://en.wikipedia.org/wiki/Napoleonic_Code#Other_French_Napoleonic-era_codes

In 1791, Louis Michel le Peletier de Saint-Fargeau presented a new criminal code to the National Constituent Assembly.[22] **He explained that it outlawed only "true crimes", and not "phony offences created by superstition, feudalism, the tax system, and [royal] despotism".[23] He did not list the crimes "created by superstition". The new penal code did not mention blasphemy, heresy, sacrilege, witchcraft, incest, or homosexuality, which led to these former offences being swiftly decriminalised.** In 1810, a new criminal code was issued under Napoleon. As with the Penal Code of 1791, it did not contain provisions for religious crimes, incest, or homosexuality.

From the end of the second century BCE, however, many philosophers were active propagandists for antisemitism.[1] One might have expected that Stoicism, with its cosmopolitism and rational humanism, would have avoided this kind of attitude. **In fact, as we can see in Posidonius, Seneca, or Chaeremon, Stoic antisemitism was a product not of racism, but of an erroneous understanding of rationalism and universalism.** For these men, the Jews were a very superstitious nation, blemished by strange habits and strong animosity towards foreigners.

> https://archive.org/details/in.ernet.dli.2015.55010/page/n643/mode/2up?view=theater
>
> The Greeks, perceiving their failure to Hellenize the Jews, feared for their own future in a state where the majority remained persistently Oriental, and bred so vigorously. **Forgetting the legislation of Pericles, they complained that the Jewish law forbade mixed marriages, and that the Jews for the most part kept to themselves.**
>
> http://www.attalus.org/translate/diodorus34.html
>
> [1] King Antiochus [VII Sidetes] besieged Jerusalem. The Jews withstood the siege for some time; but when all their provisions were used up, they were forced to send ambassadors to him, to seek terms for a truce. **Many of his friends urged him to storm the city, and to root out the whole nation of the Jews; for they only of all people hated to mix with any other nations, and treated them all as enemies.**
> …
>
> When Antiochus' friends had spoken about all these things, they earnestly advised him **to root out the whole nation, or at least to abolish their laws, and compel them to change their former manner of living.** 5 But the king, being of a generous spirit and mild disposition, received hostages and pardoned the Jews: but he demolished the walls of Jerusalem, and took the tribute that was due.

https://en.wikisource.org/wiki/Nicene_and_Post-Nicene_Fathers:_Series_I/Volume_II/City_of_God/Book_VI/Chapter_11

Seneca, among the other superstitions of civil theology, also found fault with the sacred things of the Jews, and especially the sabbaths, affirming that they act uselessly in keeping those seventh days, whereby they lose through idleness about the seventh part of their life, and also many things which demand immediate attention are damaged. The Christians, however, who were already most hostile to the Jews, he did not dare to mention, either for praise or blame, lest, if he praised them, he should do so against the ancient custom of his country, or, perhaps, if he should blame them, he should do so against his own will. When he was speaking concerning those Jews, he said, **"When, meanwhile, the customs of that most accursed nation have gained such strength that they have been now received in all lands, the conquered have given laws to the conquerors."** By these words he expresses his astonishment; and, not knowing what the providence of God was leading him to say, subjoins in plain words an opinion by which he showed what he thought about the meaning of those sacred institutions: **"For," he says, "those, however, know the cause of their rites, whilst the greater part of the people know not why they perform theirs."**

https://en.wikisource.org/wiki/Ante-Nicene_Christian_Library/Dialogue_with_Trypho

WHILE I was going about one morning in the walks of the Xystus,[1] a certain man, with others in his company, having met me, said, "Hail, O philosopher!" And immediately after saying this, he turned round and walked along with me; his friends likewise followed him. And I in turn having addressed him, said, "What is there important?"

And he replied, **"I was instructed," says he, "by Corinthus the Socratic in Argos,** that I ought not to despise or treat with indifference those who array themselves in this dress,[2] but to show them all kindness, and to associate with them, as perhaps some advantage would spring from the intercourse either to some such man or to myself. It is good, moreover, for both, if either the one or the other be benefited. On this account, therefore, whenever I see any one in such costume, I gladly approach him, and now, for the same reason, have I willingly accosted you; and these accompany me, in the expectation of hearing for themselves something profitable from you."

"But who are you, most excellent man?" So I replied to him in jest.[3]

Then he told me frankly both his name and his family. **"Trypho," says he, "I am called; and I am a Hebrew of the circumcision, and having escaped from the war[4] lately carried on there, I am spending my days in Greece, and chiefly at Corinth."**

> https://ccel.org/g/gibbon/decline/volume1/chap16.htm#tole
>
> Notwithstanding these repeated provocations, the resentment of the Roman princes expired after the victory, nor were their apprehensions continued beyond the period of war and danger. **By the general indulgence of Polytheism, and by the mild temper of Antoninus Pius, the Jews were restored to their ancient privileges,** and once more obtained the permission of circumcising their children, with the easy restraint that they should never confer on any foreign proselyte that distinguishing mark of the Hebrew race. (4)
>
> > 4. It is to Modestinus, a Roman lawyer (1. vi. regular.), that we are indebted for a distinct knowledge of the edict of Antoninus. See Casaubon ad Hist. August. p. 27.

Fr. 20

[So it is obvious that wrong-doers, given that they do not fear the penalties imposed by the laws, are not] afraid of [the gods.] This [has to be] conceded. For if they were [afraid, they] would not [do wrong]. As for [all] the others, [it is my opinion] that the [wise] are not [(reasoning indicates) righteous] on account of the gods, but on account of [thinking] correctly and the [opinions] they hold [regarding] certain things [and especially] pains and death (for indeed invariably and without exception human beings do wrong either on account of fear or on account of pleasures), and that ordinary people on the other hand are righteous, in so far as they are righteous, on account of the laws and the penalties, imposed by the laws, hanging over them. But even if some of their number are conscientious on account of the laws, they are few: only just two or three individuals are to be found among great segments of multitudes, and not even these are steadfast in acting righteously; for they are not soundly persuaded about providence. **A clear indication of the complete inability of the gods to prevent wrong-doings is provided by the nations of the Jews and Egyptians, who, as well as being the most superstitious of all peoples, are the vilest of all peoples.**
…

Fr. 30

… time … and we contrived this in order that, **even while [sitting at] home, [we might be able to exhibit] the goods of philosophy, not to all people here [indeed], but to those of them who are civil-spoken; and not least we did [this] for those who are called «foreigners,» though they are not really so. For, while the various segments of the earth give different people a different country, the whole compass of this world gives all people a single country, the entire earth, and a single home, the world.**

https://books.google.fi/books?id=8ZnFAAAAQBAJ&lpg=PP1&hl=fi&pg=PA9#v=onepage&q&f=false

But widespread pagan antisemitism is a myth. Whereas Greek and Roman writers did provide some material taken by Catholics to use against the Jews, **nowhere among the pre-Christians do we find the elemental hatred of the Jewish spirit that we discover among early Catholic writers and Christianized Roman officials.**
…

Out of 161 Greek and Roman authors who discussed Jews, only 28 disparaged them.1 **Even in an extreme case, when the Jews of Judea revolted against the Romans in the first and second centuries C.E., the Romans treated them no more savagely than any other seditious people of the empire.** The Greeks and Romans found many reasons to respect the Jews: their antiquity, their well-documented history, and their great sacred literature. Up to the fourth century CE, many non-Jews, both pagan and Catholic, also admired the Jews' family and community life, their monotheism, their rejection of images, their elevated moral code, and their emphasis on the inherent value of human life. Considerable numbers of God-fearing Gentiles, although not properly converted to Judaism, worshipped at the gates of the synagogues. Roman and Catholic law and custom early on recognized the Jews as a *gens* (a people) and Judaism, according to Church Father Tertullian, as "a most distinguished and undoubtedly legal religion."2
…

The contrast between the almost incidental pagan aversion to Jews and the fundamental Catholic bitterness is striking. Even among this minority of non-Christian Greek and Roman writers who were inimical to the Jews, we do not find attempts to restrict Jewish civil liberties or segregate Jews from the rest of society. **What there was of pagan hostility had no theological basis and no Church to sanction anti-Jewish policies.**

> https://books.google.fi/books?id=8ZnFAAAAQBAJ&lpg=PP1&hl=fi&pg=PA2#v=onepage&q&f=false
>
> Pulzer's point is similar to that of Tal's: "I am more strongly convinced than I was when I wrote the book that a tradition of religiously-inspired Jew hatred … was a necessary condition for the success of antisemitic propaganda, **even when expressed in non-religious terms and absorbed by those no longer religiously observant.**"8
> …
>
> **Some protective Roman legal traditions, some Catholic feelings of charity, and the Jews' ambivalent role as suffering examples of the consequences of offending God provided Jews with a precarious place within Catholic society.** But until their emancipation in the eighteenth and nineteenth centuries – and to this day, for some – Jews had only a very tenuous legal and moral right to exist, let alone act as citizens.

>
> From an early date some, and, since the Edict of Caracalla all, had been full Roman citizens, suffering from no disabilities. **But when authority passed into the hands of the zealous and jealous daughter-religion, with its theories of exclusive salvation, the position of Judaism changed.** Its adherents, from being in a position almost of privilege, were now reduced to one of inferiority, which ultimately extended not only to the political but also to the economic field. In the end, **they were brought down to the level of social outcasts and, in our own day, the attempts made to redress the balance caused the reaction which led to the phenomenon of antisemitism with all its appalling results.**
>
> It is true that Constantine, contrary to what is popularly believed, did not himself embrace Christianity at the time of the Edict of Milan; it is true, too, that for some time to come there was no actual legislation against Judaism as such, its position under the pagan emperors being nominally maintained. Nevertheless, **the changed atmosphere soon became apparent in the administrative vocabulary, which by now had in mind the Jews of the Diaspora – including Italy – more than those of half-deserted Palestine. The "highly distinguished religion, of indubitable legality" did not become illegal, but it began to be referred to in imperial enactments as a "sacrilegious gathering" or "nefarious sect"** – a change of attitude which the executive faithfully maintained. In 315, its adherents were threatened with burning if they dared to persecute those who had deserted their fold for "the faith of the true God." The old imperial legislation against seduction to the monotheistic faiths was renewed, but against them alone, converts and those who won them over being threatened with the death penalty. **Even intermarriage between Jews and Christians, unless of course the former abandoned their faith, became a capital offense.**

https://books.google.fi/books?id=NagdhSUgB9oC&lpg=PP1&hl=fi&pg=PA30#v=onepage&q&f=false

Pagan and Christian anti-Jewish attitudes were mixtures, often strikingly inconsistent mictures, of benevolent and malevolent elements. Christian hostility to Jews, similarly, cannot be seen as a single entity but rather as something that notably evolved in history; significant differences may be traced from the ancient times up through the Reformation. So too, with paganism over the years: **The pagan beliefs of the Nazis cannot be plausibly linked with the paganism of Plato, Aristotle, Seneca, or Marcus Aurelius.**

https://en.wikipedia.org/wiki/Peter_Gay

Born Peter Joachim Fröhlich to a Jewish family in Berlin,[5] he was educated as a child at Berlin's Goethe-Gymnasium. He and his family fled Nazi Germany in 1939, when he was 15 years old.[6]

https://archive.org/details/enlightenmentint0000unse_i6k5/page/8/mode/2up?view=theater

In speaking of the Enlightenment as pagan, therefore, I am referring not to sensuality but to the affinity of the Enlightenment to classical thought.1 Words other than pagan – Augustan, Classical, Humanist – have served as epiphets to capture this affinity, but they are all circumscribed by specific associations: they illuminate segments of the Enlightenment but not the whole.

> 1. **It is worth emphasizing that the philosophes did not lay claim to all possible varieties of paganism.** Before the eighteenth century was over, the philosophes were under severe pressure from a Germanic ideology, a strange mixture of Roman Catholic, primitive Greek, and folkish Germanic notions – a kind of Teutonic paganism. Its inspiration was the *Nibelungenlied*, not Vergil's *Aeneid*; German folk songs, not Horace's *Odes*. **Sometimes the benevolent critic, more often the implacable adversary of the Enlightenment, this Teutonic paganism, quite as much as traditional Christian doctrine, was to become a formidable rival to the Mediterranean paganism of the philosophes.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/168/mode/2up?view=theater

Diderot called the intolerant man not merely a bad citizen but a bad Christian as well; he argued that Jesus, Paul, Origen and other Church Fathers had preached peace, not a sword, and had taught pious Christians to win over their erring brothers by persuasion, not constraint. Voltaire took the same unexceptionable line in his polemics. But such adroit posturing barely concealed the philosophes' conviction that Christianity was the worst of fanaticisms. Writing to Voltaire in 1762, Diderot asked rhetorically, "Isn't this mania for granting probity only to the members of your own sect peculiar to Christianity?"9 Voltaire knew the answer. **The Church Fathers, he wrote, thought "that the whole world should be Christian. They were therefore necessarily the enemies of the whole world, until it was converted."**1 **In one of his rare kindly observations about the Jews, prompted not by kind feelings toward the Jews but by hostility to the Christians, Voltaire notes that "the Jews didn't want the statue of Jupiter in Jerusalem; but the Christians didn't want it in the Capitol."**2

https://books.google.fi/books?id=w39m4aohL9gC&lpg=PP1&hl=fi&pg=PA88#v=onepage&q&f=false

Nothing is more revealing than an analysis of Voltaire's main work, the *Dictionnaire philosophique*. Of its 118 articles,37 **thirty or more attack the Jews, "our masters and our enemies, whom we believe and whom we detest"** (art. "Abraham"), "the most abominable people in the world" (art. "Anthropofagi"), "whose laws do no say a word about spirituality and the immortality of the soul" (art. "Soul"), and so on from "Torture" down to Z. "Job" who finds favor in Voltaire's eyes is not a Jew at all, but an Arab.39
…

But the great anti-Semitic fervor reflected in his writing dates from the last period of his life. These were the fifteen years of his old age when the Calas and La Barre affairs had endowed him with a prophetic grandeur and he undertook to remake contemporary society and became the undisputed Messiah of the Century of Enlightenment.
…

"I have done more in my time than Luther or Calvin." So said Voltaire in this period of eschatological expectation. He was the head of a new deist church, which was hoping for a messianic era on the morrow, established as a result of his words and his "little band" of apostles, and which dreamt of enrolling the enlightened despots75 in its crusade. **This was the Voltaire who exclaimed in letters and writing: "A small reform was made in the sixteenth century, a new one is loudly called for."**76 "A beautiful century is in preparation. … A new revolution is beginning. …"77 "Two or three years would be enough to make an eternal epoch."78 **D'Alembert, his favorite disciple, was the man "of whom Israel expects the most."**79

https://books.google.fi/books?id=BratRq-06SsC&lpg=PP1&hl=fi&pg=PA18#v=onepage&q&f=false

Isaiah Berlin has observed that when Herder visited France he 'suffered that mixture of envy, humiliation, admiration, resentment and defiant pride which backward peoples feel towards advanced ones' (Berlin, 1976, p. 180). However that may be, Herder caricatured the spirit of French cosmopolitanism with a fine spirit of irony:

> All national characters, thank God, have become extinct! We all love one another, or, rather, no one feels the need of loving anyone else. We all associate with one another, all are completely equal cultured, polite, very happy! **We have, it is true, no fatherland, no one for whom we live; but we are philanthropists and citizens of the world. Most of the rulers already speak French, and soon we all shall do so. And then – bliss! The golden era is dawning again when all the world has one tongue and one language! There shall be one flock and one shepherd!** (Quoted in Ergang, 1931, p. 96)

https://books.google.fi/books?id=NagdhSUgB9oC&lpg=PP1&hl=fi&pg=PA160#v=onepage&q&f=false

Nineteenth-century socialists were self-consciously heirs of the Enlightenment and through it of pagan antiquity. They were thus universalistic, humanitarian, and egalitarian.
...

Socialist opposition to anti-Semitism did not entail sympathy for Jewish religion, nationalism, or ethnic particularism, each of which were viewed as divisive, as hostile to human solidarity. Judaism was, indeed, particularly guilty in the eyes of many socialists: **As heirs of Enlightened paganism, they rejected the Jewish sense of enduring specialness,** what socialists considered the stubbornly irrational attachment of Jews to absurd rituals and taboos. More to the point, socialists frowned at what they believed to be the refusal of Jews to accept equal membership in *humanitas*, the human family.

https://archive.org/details/greeks-romans-germans/page/321/mode/2up?view=theater

In *Mein Kampf*, Hitler coldly explained the propagandistic and political utility of reducing multiple opponents into a single common denominator: "It belongs to the genius of a great leader to make even adversaries far removed from one another seem to belong to a single category, **because in weak and uncertain characters the knowledge of having different enemies can only too readily lead to the beginning of doubt in their own right.**"183

As the depravity of our materialistic culture deepens and the concrete results of rejecting faith and reason become more painfully obvious, the lazy will search for scapegoats. **Instead carefully analyzing the intellectual heritage of contemporary heresies, some will blindly lay blame on whole tribes and nations.**
...

Right-wing Jew haters blame Jewish people for every facet of modernity that offends them. They will cherry-pick lists of genuine villains throughout history and trot out the Jews who took part in mostly Gentile movements.

https://www.theoccidentalobserver.net/2010/08/26/pryce-klages/

From A Letter Re: "Anti-Semitism"

I've never endorsed the claim that the Nazi Bonzes [big-wigs] belonged to a superior race. However, I must also add that I have consistently refused to accept the claim of a certain other race to be the "chosen people." The arrogance is identical in both cases, but with this significant distinction: after waging war against mankind for more than three thousand years, Jewry has finally achieved total victory over all of the nations of the earth.

Therefore, I will have nothing to do with the contemporary kowtowing on the part of almost the entire civilized world before **the haters of all mankind (Tacitus spoke of Christians, but he certainly meant the Jews, as will be obvious to every alert reader of his works).** I despise all this kowtowing to the Jews as an utterly mendacious tactical ploy. (*GL*, 1350)

https://pages.vassar.edu/pharos/2018/08/03/stoic-philosophy-masking-hate/

Lurking behind *Stoicschool.org*'s deployment of technical Stoic terminology like *apatheia*, *logos*, and *epignosis*, images of classicizing statuary and architecture, and a comparison of ancient and modern notations for the final, formal, material, and efficient causes for God, one finds a relentless drumbeat of every imaginable form of hate, **all in apparent ignorance or willful avoidance of ancient Stoicism's core belief in the equality of all human beings.**

---

https://www.academia.edu/18154555/Stoicism_and_the_Virtue_of_Toleration

Epictetus shifts the analysis of endurance from the more general sphere of that which befalls us to our verbal disagreements with others; in doing so, he frames toleration as the recognition that the beliefs of others are neither up to us nor do they matter for our individual happiness. Marcus Aurelius further emphasizes the other-regarding dimensions of such a conception of toleration; for Marcus, toleration is a part of justice—it is an obligation that we have towards other human beings by virtue of our shared rationality. Toleration is thus part of what it means to live well in the world with others.

As was mentioned in the introduction, Epictetus and Marcus Aurelius develop a conception of toleration as a personal and social virtue, and not as a political principle. This distinction is reflected by the fact that this Stoic conception of toleration emerges during the same period in which Christians are persecuted within the Roman Empire, and those persecutions are continued by Marcus Aurelius in his political role as emperor.98 **That Marcus may have believed that the persecution of Christians was justified need not dissuade us from considering Marcus' interpretation of Stoic endurance as entailing a conception of toleration—most conceptions of toleration set limits to what and who can be tolerated.**
…

There are elements of the Stoic conception of toleration that appear to anticipate later developments: for example, the Stoic insistence that the beliefs of others are ultimately up to them might be viewed as anticipating Locke's argument in *A Letter Concerning Toleration* that religious belief cannot be compelled; and the focus on our shared rationality might be viewed as anticipating certain Kantian and neo-Kantian approaches to toleration. Yet, the self-regarding dimension of toleration tends to be neglected within these approaches.
…

In this regard, it might be worth attending to the ways in which Seneca's use of *tolerantia* in situations involving the endurance of physical pain (though not itself a conception of toleration) informs the articulations of the concept we find in Epictetus and Marcus Aurelius. Epictetus emphasizes, in particular, the need to cultivate the ability to endure the criticisms of others,102 **and frames such cultivation as a type of *askēsis*.**103 These examples deal with mental, not physical, pain; yet they speak to the need to engage critically with others in order to learn how to endure the discomfort that often accompanies being confronted by disagreement and difference.

https://en.wikisource.org/wiki/The_Thoughts_of_the_Emperor_Marcus_Aurelius_Antoninus/Book_II

BEGIN the morning by saying to thyself, I shall meet with the busybody, the ungrateful, arrogant, deceitful, envious, unsocial. All these things happen to them by reason of their ignorance of what is good and evil. But I who have seen the nature of the good that it is beautiful, and of the bad that it is ugly, **and the nature of him who does wrong, that it is akin to me; not [only] of the same blood or seed, but that it participates in [the same] intelligence and [the same] portion of the divinity,** I can neither be injured by any of them, for no one can fix on me what is ugly, nor can I be angry with my kinsman, nor hate him. For we are made for co-operation, like feet, like hands, like eyelids, like the rows of the upper and lower teeth.[1] To act against one another, then, is contrary to nature; and it is acting against one another to be vexed and to turn away.

http://ambedkar.org/ambcd/38B1.%20Who%20were%20the%20Shudras%20PART%20I.htm#_msoanchor_99

The disabilities of the Pagans began with the advent of Christianity. Originally, when all the Romans followed the same Pagan worship, religion could occasion no difference in the enjoyment of civil rights. Under the Christian Emperors, heretics and apostates as well as Pagans and Jews, were subjected to vexatious restrictions, particulary as regards their capacity to succeed to property and to act as witnesses. Only orthodox Christians who recognised the decisions of the four oecumenical councils had the full enjoyment of civil rights.

https://ccel.org/g/gibbon/decline/volume1/chap23.htm#univ

He extended to all he inhabitants of the Roman world the benefits of a free and equal toleration; **and the only hardship which he inflicted on the Christians was to deprive them of the power of tormenting their fellow-subjects,** whom they stigmatised with the odious titles of idolaters and heretics. The Pagans received a gracious permission, or rather an express order, to open ALL their temples; (34) and they were at once delivered from the oppressive laws and arbitrary vexations which they had sustained under the reign of Constanine and of his sons. **At the same time, the bishops and clergy who had been banished by the Arian monarch were recalled from exile, and restored to their respective churches; the Donatists, the Novatians, the Macedonians, the Punomians, and those who, with a more prosperous fortune, adhered to the doctrine of the council of Nice.**

Julian, who understood and derided their theological disputes, invited to the palace the leaders of the hostile sects, that he might enjoy the agreeable spectacle of their furious encounters. The clamour of controversy sometimes provoked the emperor to exclaim, "Hear me! the Franks have heard me, and the Alemanni"; but he soon discovered that he was now engaged with more obstinate and implacable enemies; and though he exerted the powers of oratory to persuade them to live in concord, or at least in peace, he was perfectly satisfied, before he dismissed them from his presence, that he had nothing to dread from the union of the Christians. **The impartial Ammianus has ascribed this affected clemency to the desire of fomenting the intestine divisions of the church; and the insidious design of undermining the foundations of Christianity was inseparably connected with the zeal which Julian professed to restore the ancient religion of the empire.** (35)

> 4. 4. To Frederic, 8 Nov. 1773, Vol. 66, Let. 46, P. 112.

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Letters/Letter_41

I thought that the leaders of the Galilaeans would be more grateful to me than to my predecessor in the administration of the Empire. For in his reign **it happened to the majority of them to be sent into exile, prosecuted, and cast into prison, and moreover, many whole communities of those who are called "heretics"[2] were actually butchered, as at Samosata and Cyzicus, in Paphlagonia, Bithynia, and Galatia, and among many other tribes also villages were sacked and completely devastated; whereas, during my reign, the contrary has happened.** For those who had been exiled have had their exile remitted, and those whose property was confiscated have, by a law of mine received permission to recover all their possessions.[3] Yet they have reached such a pitch of raving madness and folly that **they are exasperated because they are not allowed to behave like tyrants or to persist in the conduct in which they at one time indulged against one another, and afterwards carried on towards us who revered the gods.**

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Letters/Introduction#Biographical_notes

But Gallus Caesar, Julian's half-brother, soon after his promotion in 351 and his appointment to govern the East, came under the influence of Aetius, who, for the next three years while he resided at Antioch, was his spiritual adviser. **When Gallus heard that Julian, then studying at Ephesus with Maximus the theurgist, was inclined to "Hellenism," he more than once sent Aetius to admonish his younger brother, who contrived to reassure them both.[40]** After the disgrace and execution of Gallus by Constantius at the end of 354, Aetius was exiled to Phrygia by the Emperor, partly because of his alarming influence and extreme Arianism, partly because of his intimacy with Gallus. Expelled from his office of deacon and repudiated by the Arians, he was still in exile on Julian's accession, when he was recalled to Constantinople and treated with peculiar favour. In spite of the title of Julian's letter of recall,[41] Aetius was not made a bishop until the reign of Valens. After Julian's death he retired to an estate in Lesbos which had been given him by Julian, but later he went to Constantinople, and in spite of his heresy was made a bishop, though probably without a see. **In the histories of the fourth-century Church, such as those of Socrates, Sozomen and Theodoret, he is the most important of all the heretics and apparently the most dangerous to the unity of the Church.**

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Letters/Letter_15

I have remitted their sentence of exile for all in common who were banished in whatever fashion by Constantius of blessed memory, on account of the folly of the Galilaeans.[2] **But in your case, I not only remit your exile, but also, since I am mindful of our old acquaintance and intercourse, I invite you to come to me.** You will use a public conveyance[3] as far as my headquarters, and one extra horse.

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Letters/Letter_55

Moreover the Emperor Julian, faithless to Christ, in his attack on Diodorus[2] *writes as follows to Photinus the heresiarch*:[3] **O Photinus, you at any rate seem to maintain what is probably true, and come nearest to being saved,** and do well to believe that he whom one holds to be a god can by no means be brought into the womb. But Diodorus, a charlatan priest of the Nazarene, when he tries to give point to that nonsensical theory about the womb by artifices and juggler's tricks, is clearly a sharp-witted sophist of that creed of the country-folk.

> 1. These fragments of a lost letter are preserved only in the Latin version of Facundus Hermianensis, who wrote at Constantinople about 546 A.D. For a partial reconstruction of the original see Neumann, *Contra Christianos*, Leipzig, 1880, p. 5. This letter may have been written at any time between Julian's arrival at

> Antioch in July 362 and his departure thence, in March 363. The Greek original is represented by curious and sometimes untranslatable Latin. **Photinus, bishop of Sirmium, where Constantius resided in 351, was tried, deposed and banished by a synod convened there by Constantius. According to Sozomen 4. 6, he wrote many Greek and Latin works in support of his heretical views on the divinity of Christ, which were opposed by both Arians and Nicaeans.**
>
> https://en.wikisource.org/wiki/Nicene_and_Post-Nicene_Fathers:_Series_I/Volume_II/City_of_God/Book_XIX/Chapter_23
>
> For they believe that they are by no means counter working their own hurtful craft by promoting belief in Christ, so long as their calumniation of Christians is also accepted; for they thus secure that even the man who thinks well of Christ declines to become a Christian, and is therefore not delivered from their own rule by the Christ he praises. **Besides, their praise of Christ is so contrived that whosoever believes in Him as thus represented will not be a true Christian but a Photinian heretic, recognizing only the humanity, and not also the divinity of Christ,** and will thus be precluded from salvation and from deliverance out of the meshes of these devilish lies.

https://core.ac.uk/download/pdf/155818899.pdf

The impact which the word *monogenes* had for the dogmatic specification of Christ as consubstantial with the Father is well known. **Much less is known of the impact which that word had on the development of the Christian view of the universe. The extent of such an impact may be surmised if we recall that with the Greeks and Romans the word *monogenes* (*unigenitus*) had the universe for its supreme reference point.** Examples of this can be found in the writings of Plato, Plutarch and Cicero, to mention only some major spokesmen of classical antiquity.3 **They referred to the universe as the entity that alone was "begotten" from the divine principle because they saw in it the only genuine emanation from the Supreme Good or Prime Mover.**

The gain that derived for the universe through its being most intimately united with the Supreme Good or Prime Mover was only apparent. **The divinization of the universe within Plato's or Aristotle's pantheism meant the destruction of the universe as a coherent entity. Permanence with no change, a chief attribute of divinity, could be grafted, not without some arbitrariness, only to the realm of the fixed stars. Already the realm immediately below it, the realm of the planets (including the sun and the moon) suggested by its changes a departure from divine, that is, unchanging rationality. This was implied in the word *planet*, which in its Greek form stands for an erratically wandering body. As to the terrestrial realm, not a few changes within it could easily appear the embodiment of partial irrationality.**
...

Of course, Arius claimed to retain the notion of the Father as a true Creator. But as far as can be reconstructed from his statements, he carefully avoided probing into the problem of whether Christ as a mere creature could still be the Father's instrument for creating out of nothing the universe of beings of which He was one. **The Christ of Arius could only be a *demiourgos* or a mere shaper of a matter yet unshaped but already existing.**

In view of Arius's strategy, that of careful concealment, he could not be expected to probe into the ulterior effect of his applying the expression *monogenes* to Christ as a mere creature. Still, because of the classic pagan use of that term, Arius's step should have seemed fateful. Its ultimate aim was to make Christianity acceptable to the Hellenistic world, a world still pagan for the most part. It was no accident that bishops eager to cozy up to Constantine's establishment, more pagan than Christian, tried to prevent the condemnation of Arius. **Yet, if that condemnation had been prevented, Christianity would have run a most serious risk of being transformed into a form of pantheism; first into its refined version already expounded by Plotinus, and then into its crudely animistic Porphyrian form.**

Harnack did not see beneath the surface when he stated that had Arius not been resisted Christianity would have quickly been reduced to an obscure Jewish sect. As such it would have remained monotheistic, for a while at least. **Most likely, Christianity would have become a welcome place for kabbalism with its pantheistic ramifications.** It was in monotheistic Jewish ambience, which so resolutely opposed God's self-revelation in Christ, that kabbala flourished from Patristic times on. **It is also a fact, acknowledged in standard Jewish encyclopedias,**20 **that Jewish intelligentsia has, by and large, espoused pantheism. Spinoza and Einstein were no accidents in that respect.**
...

Yet, whatever the paucity of sources about Arius, they strongly suggest that underlying his voluntarist scheme of salvation there was a Stoic cosmology with its succession of worlds as places for the soul's purification.

About such worlds the most important thing to note is that they cannot constitute a fully-ordered totality. Herein lies a fact long overlooked. **The pagan Greeks, who coined the word cosmos for the universe (*to pan*) failed to speak of the universe as a fully-ordered entity.** Order was conspicuously absent in Democritus's cosmology and in the cosmology of subsequent atomists, such as the Epicureans. **The universe of the Stoics was subject to periodic conflagrations, hardly a mark of orderliness. Plato's universe was perfect only in its heavenly sections.** The sublunary world was, according to Plato, only partly ordered. The same is true about Aristotle's universe. There is the more disorder in Plotinus's emanationist universe the farther it leads from the One.

https://www.gutenberg.org/files/18377/18377-h/18377-h.htm#CHAPTER_I

It is only the philosophy of the day put into a Christian dress. It starts from the accepted belief that the unity of God excludes not only distinctions inside the divine nature, but also contact with the world. **Thus the God of Arius is an unknown God, whose being is hidden in eternal mystery.** ...

The Holy Spirit bears to the Son a relation not unlike that of the Son to the Father. Thus the Arian trinity of divine persons forms a descending series, separated by infinite degrees of honour and glory, resembling the philosophical triad of orders of spiritual existence, extending outwards in concentric circles.

Indeed the system is heathen to the core. **The Arian Christ is nothing but a heathen idol invented to maintain a heathenish Supreme in heathen isolation from the world. Never was a more illogical theory devised by the wit of man.** Arius proclaims a God of mystery, unfathomable to the Son of God himself, and goes on to argue as if the divine generation were no more mysterious than its human type. He forgets first that metaphor would cease to be metaphor if there were nothing beyond it; then that it would cease to be true if its main idea were misleading. He presses the metaphor of sonship as if mere human relations could exhaust the meaning of the divine; and soon works round to the conclusion that it is no proper sonship at all. **In his irreverent hands the Lord's deity is but the common right of mankind, his eternity no more than the beasts themselves may claim. His clumsy logic overturns every doctrine he is endeavouring to establish. He upholds the Lord's divinity by making the Son of God a creature, and then worships him to escape the reproach of heathenism, although such worship, on his own showing, is mere idolatry.** He makes the Lord's manhood his primary fact, and overthrows that too by refusing the Son of Man a human soul. **The Lord is neither truly God nor truly man, and therefore is no true mediator. Heathenism may dream of a true communion with the Supreme, but for us there neither is nor ever can be any.** Between our Father and ourselves there is a great gulf fixed, which neither he nor we can pass.

https://www.gutenberg.org/files/18377/18377-h/18377-h.htm#CHAPTER_IV

Arius had long ago laid down the absolute unlikeness of the Son to the Father, but for years past the Arianizers had prudently softened it down. Now, however, 'unlike' became the watchword of Aetius and Eunomius, and their followers delighted to shock all sober feeling by the harshest and profanest declarations of it. The scandalous jests of Eudoxius must have given deep offence to thousands; but the great novelty of the Anomœan doctrine was its audacious self-sufficiency. **Seeing that Arius was illogical in regarding the divine nature as incomprehensible, and yet reasoning as if its relations were fully explained by human types, the Anomœans boldly declared that it is no mystery at all. If the divine essence is simple, man can perfectly understand it. 'Canst thou by searching find out God?' Yes, and know him quite as well as he knows me.**

https://www.gutenberg.org/files/18377/18377-h/18377-h.htm#CHAPTER_V

The Sirmian manifesto is the turning-point of the whole contest. **Arianism had been so utterly crushed at Nicæa that it had never again till now appeared in a public document.** Henceforth the conservatives were obliged in self-defence to look for a Nicene alliance against the Anomœans. Suspicions and misunderstandings, and at last mere force, delayed its consolidation till the reign of Theodosius, **but the Eusebian coalition fell to pieces the moment Arianism ventured to have a policy of its own.**

https://en.wikipedia.org/wiki/Moral_influence_theory_of_atonement

It was not until Anselm, with his satisfaction theory of atonement, that a theory of atonement was specifically articulated.[5] The moral influence theory was developed, or most notably propagated, by Abelard (1079-1142),[1][2][note 1] as an alternative to Anselm's satisfaction theory.[1]

Abelard not only rejected the idea of Jesus' death as a ransom paid to the devil,[3][2] which turned the Devil into a rival god,[2] but also objected to the idea that Jesus' death was a "debt paid to God's honor."[3] He also objected to the emphasis on God's judgment, and the idea that God changed his mind after

the sinner accepted Jesus' sacrificial death, which was not easily reconcilable with the idea of "the perfect, impassible God [who] does not change."[3][8] **Abelard focused on changing man's perception of God as not offended, harsh, and judgmental, but as loving.[3] According to Abelard, "Jesus died as the demonstration of God's love,"** a demonstration which can change the hearts and minds of the sinners, turning back to God.[3][4]
...

A related theory, the "moral example theory," was developed by Faustus Socinus (1539-1604) in his work *De Jesu Christo servatore* (1578). He rejected the idea of "vicarious satisfaction."[note 2] According to Socinus, Jesus' death offers us a perfect example of self-sacrificial dedication to God."[4]
...

During the 18th century, versions of the moral influence view found overwhelming support among German theologians, most notably the Enlightenment philosopher Immanuel Kant.[12]
...

A strong division has remained since the Reformation between liberal Protestants (who typically adopt a moral influence view) and conservative Protestants (who typically adopt the penal substitution theory).

http://shell.cas.usf.edu/~thomasw/abelard.htm

The *quaestio* on the Atonement, found early in Book II, has been the target of both scholarly study and theological polemic ever since Bernard of Clairvaux's energetic propaganda war against Abelard. **In his *Letter to Pope Innocent Concerning Certain Heresies of Peter Abelard* Bernard charged Abelard with exemplarism and Pelagianism.** By 'exemplarism' I mean the view that the Passion has redemptive efficacy only as an unparalleled example of divine love. **There is no "objective transaction" in the Atonement (as Swinburne calls it): no penal substitution, in which Christ undergoes on our behalf the punishment for our sins,** no payment of a ransom to deliver us from the power of the Devil, but simply a manifestation of divine love that awakens an answering love in the believer.(3) By 'Pelagianism' I mean the view that human beings do not need divine grace in order to act rightly. Bernard argues that Pelagianism follows from exemplarism. If our redemption consists in some change of heart brought on by our response to Christ's loving example, then it is we who accomplish our own redemption. **Abelard, according to Bernard, "makes the glory of our redemption and the pinnacle of our salvation consist, not in the power of the Cross or the price of Christ's blood, but in the improvement of our own way of life (*in nostrae ... conversationibus profectibus*)."(4)**

Bernard, as Philip Quinn dryly noted, "was far from being a fair-minded philosophical critic,"(5) and his recounting of Abelard's views is full of the pervasive misunderstandings of one who has been blinded by partisanship. But if Bernard was led astray because he was too keen on condemning Abelard as a heretic, other readers have been misled because they were too keen on commending Abelard as a hero. For example, **Hastings Rashdall praised Abelard lavishly for at last stating the doctrine of the Atonement "in a way which had nothing unintelligible, arbitrary, illogical, or immoral about it"(6)--precisely *because* Abelard was an exemplarist and eschewed such bizarre notions as penal substitution and the ransom paid to the Devil.**
...

Whether Abelard is a Pelagian will largely depend on how we characterize Pelagianism. If we define it as the view that one can act rightly apart from grace, Abelard is (as I have already argued) no Pelagian. **But then one might worry that he escapes Pelagianism only on a technicality, since he considers our natural powers gifts of grace--they even fit his definition of grace as "a gift not conferred on the basis of prior merits"** (60). **So suppose instead that we define Pelagianism as the view that human beings in their present state can will rightly through an unaided exercise of their power of free choice. On that definition Abelard is indeed a Pelagian.** In the *Sententie Hermanni* he says that "unless we say that man from himself through free choice from his nature has the ability to love God and cleave to him, we cannot avoid the conclusion that grace predetermines our merits."(26) In other words, if we are so enervated by the sickness of sin that we cannot, on our own, either accept or refuse the medicine of divine grace, some patients will be lost solely because the Great Physician gratuitously withholds treatment. Such caprice, Abelard thinks, cannot be reconciled with the divine charity that is both manifested and made effective in the Passion of Christ.

> 13. **The ransom theory was the dominant theory of the Atonement for the first millennium or so of Christian thought.** Unlike the theory of penal substitution, it can claim some basis in the words of Christ himself. In Matthew 20:28 and Mark 10:45, Jesus says, "The Son of Man did not come to be served, but to serve, and to give his life as a ransom for the sake of many." **In his attack on Abelard Bernard clearly regards the ransom theory as a non-negotiable element of orthodoxy, but no less a figure than Anselm of Canterbury had denied it:** see *Cur Deus Homo* I.7.

https://www.theopedia.com/atonement-of-christ

- ***The Recapitulation Theory:*** Originated with Irenaeus (125-202 AD). He sees Christ as the new Adam, who systematically *undoes* what Adam did. Thus, where Adam was disobedient concerning God's edict concerning the fruit of the Tree of Knowledge, Christ was obedient even to death on the wood of a tree. Irenaeus is the first to draw comparisons between Eve and Mary, contrasting the faithlessness of the former with the faithfulness of the latter. In addition to reversing the wrongs done by Adam, **Irenaeus thinks of Christ as "recapitulating" or "summing up" human life.**
- ***The Satisfaction (or Commercial) Theory:*** The formulator of this theory was the medieval theologian Anselm of Canterbury (1034-1109), in his book, *Cur Deus Homo* (lit. *Why the God Man*). In his view, God's offended honor and dignity could only be satisfied by the sacrifice of the God-man, Jesus Christ. "Anselm offered compelling biblical evidence that the atonement was not a ransom paid by God to the devil but rather a debt paid to God on behalf of sinners."[1] **Anselm's work established a foundation for the Protestant Reformation,** specifically the understanding of justification by faith.
- ***The Penal-Substitution Theory:*** This view was formulated by the 16th century Reformers as an extension of Anselm's Satisfaction theory. **Anselm's theory was correct in introducing the satisfaction aspect of Christ's work and its necessity, however the Reformers saw it as insufficient because it was referenced to God's honor rather than his justice and holiness and was couched more in terms of a commercial transaction than a penal substitution.** This Reformed view says simply that Christ died for man, in man's place, taking his sins and bearing them for him. The bearing of man's sins takes the punishment for them and sets the believer free from the penal demands of the law: The righteousness of the law and the holiness of God are satisfied by this substitution.
- ***The Moral-Example Theory (or Moral-Influence Theory):*** Christ died to influence mankind toward moral improvement. This theory denies that Christ died to satisfy any principle of divine justice, but teaches instead that His death was designed to greatly impress mankind with a sense of God's love, resulting in softening their hearts and leading them to repentance. **Thus, the Atonement is not directed towards God with the purpose of maintaining His justice, but towards man with the purpose of persuading him to right action. Formulated by Peter Abelard (1079-1142) partially in reaction against Anselm's *Satisfaction theory*, this view was held by the 16th century Socinians.** Versions of it can be found later in F. D. E. Schleiermacher (1768-1834) and Horace Bushnell (1802-1876).
- ***The Governmental Theory:*** **God made Christ an example of suffering to exhibit to erring man that sin is displeasing to him.** God's moral government of the world made it necessary for him to evince his wrath against sin in Christ. Christ died as a token of God's displeasure toward sin and it was accepted by God as sufficient; but actually God does not exact strict justice. **This view was formulated by Hugo Grotius (1583-1645) and is subsequently found in Arminianism, Charles Finney, the New England Theology of Jonathan Edwards (the younger), and Methodism.**

https://www.academia.edu/299389/Rousseaus_Political_Philosophy_Stoic_and_Augustinian_Origins

Bouwsma was swift to concede that these were rather imprecise labels, but he emphasised that they did usefully serve to “designate antithetical visions of human existence”8 that were peculiarly relevant to the understanding of humanism. **For too long, he contended, scholars had thought of Renaissance humanism as an attempt to recover an authentic classicism embodied in the works of Plato and Aristotle, whereas it was the philosophy of the Stoics and of Augustine that represented “genuine alternatives for the Renaissance humanists to ponder.”**9

This opposition between “Stoicism” and “Augustinianism” had many dimensions.10 **A Stoic, for example, would emphasise that the human being partook of the substance rather than of the image of God, whereas for an Augustinian it is the other way around.** A Stoic would insist that careful study of the natural world would render it intelligible to us, and help us to discover how we should live, and would be optimistic about the possibilities of a natural theology. However, for the Augustinian the truths of religion are revealed in Scripture, not discovered in Nature. **A Stoic would hold to the Socratic teaching that it is impossible to know the good and not to do it,** that virtue is a kind of knowledge, that we come to virtue through reason; but an Augustinian would stress the frailty of human reason and its capacity to be led astray in the absence of divine illumination.

https://www.garynorth.com/freebooks/docs/pdf/the_failure_of_american_baptist_culture.pdf

The myth of neutrality is obviously the *theological first-cousin* of the myth of free-will, so ably destroyed by Martin Luther in his debates with Erasmus over the *Bondage of the Will*. Because so many in the "Religious Right" are governed by an Arminian, rather than Augustinian, theology, they easily fall prey to the myth of neutrality. **The presumptuous claim of the unbeliever is that he *could* become a Christian if he wanted to; that he *could* agree with the teachings of Scripture if he chose to, but just hasn't been persuaded for lack of evidence. The Arminian agrees. The unbeliever tells himself and the world that his thinking processes are just fine. Not just in the area of "religion" or "spiritual" matters,**39 **but in every subject, and every discipline. And there is no dissent from the Arminian.** In fact, the Arminian would be the first to tell the natural, unregenerate man that, if he

> wanted to, he could see the Kingdom (John 3:3), understand the Christian system (I Cor. 2:14), objectively hear the Word of God (John 8:43), and receive its truth (John 14:17). Following this fair-minded and non-partisan examination of the truths of Christianity, the unregenerate man could then submit to the Lordship of Christ (but only if *he* made the decision - I Cor. 12:3), and then subject himself to the whole law of God, surely becoming a great Christian statesman (Rom. 8:7). Clearly, the Arminian, in affirming the sovereign will of unsaved man over the sovereign grace of the Triune God, runs pell mell against the Word of God.

And again taking up Father Bauny, he pointed to the same place he had before quoted, exclaiming, “Look now – see the ground on which he establishes his opinion! I was sure he would not be deficient in good proofs. **Read what he quotes from Aristotle, and you will see that, after so express an authority, you must either burn the books of this prince of philosophers or adopt our opinion.** Hear, then, the principles which support Father Bauny: Aristotle states first, *‘that an action cannot be imputed as blameworthy, if it be involuntary.’”*
…

The Jesuit seemed to be confounded more with the passage from Aristotle, I thought, than that from St. Augustine; but while he was thinking on what he could reply, a messenger came to inform him that Madame la Mareschale of ——, and Madame the Marchioness of ——, requested his attendance. So taking a hasty leave of us, he said: “I shall speak about it to our fathers. They will find an answer to it, I warrant you; we have got some long heads among us.”

Henri de Lubac, who was in fact a solid defender of the sincerity and orthodoxy of Erasmus's theological mission, may have been nodding when he claimed that Erasmus “was not much of a philosopher.”[1] This at least seems to be Dealy's primary thesis.
…

Erasmus's *De taedio Iesu* and the *Enchiridion* are not, as previous scholarship has thought, “mere rehashes of traditional views. They are radical books in that they lay out a new way of looking at oneself and at larger issues.” The new way is aided by the truth Erasmus found in Stoic philosophy that was adapted for Christian purposes. As in Stoic philosophy, “intention” is a crucial factor in the virtuous action. An act carried out with a virtuous disposition is a right action, whereas the same one done without a virtuous disposition is not virtuous. The Christian takes over where Stoicism left-off. It is a fault, then, to perform even religious ceremonies that lack a spiritual purpose.

Dealy argues that no humanist prior to Erasmus ever truly grasped the Stoic two-dimensional but unitary (*katorthoma/kathekon, honestum/indifferens, honestum/utile, decretal/praecepta*) mindset. Certainly no Christian thinker before Erasmus applied this mindset to the surrounding world. Although I do not profess any particular expertise in Stoic philosophy, Dealy's arguments strike me as thorough and sound. Dealy reasons that Erasmus's debt to Stoic philosophy is seen in particular in his grasp, aided by Stoicism, of universal biological instincts. Erasmus saw this exemplified in Jesus's distress in Gethsemane. **According to Dealy, by carefully editing Cicero's *De officiis*, Erasmus had come to see what his humanist predecessors had not seen clearly, namely the core way of thinking of the Stoics.**
…

Everyone knows that Hubert Jedin, the famous historian of the Council of Trent, and Joseph Lortz, the leading Catholic Church historian of the twentieth century, dismissed Erasmus as one who allegedly utterly repudiated Scholasticism, and indeed dogma altogether. Dealy's book will not contribute to lending credence to such retrograde views.

https://archive.org/details/historyofchurch0003hugh/page/466/mode/2up?view=theater

In 1516 Erasmus was close on fifty, and he had reached that position as an influence in European life which no man of letters before, and none since—not even Voltaire—has ever attained.3
…

Erasmus attacked the German unsparingly, but with what weapons? Here was a philosophical question, and the humanist had done nothing about philosophy, all his life, but ridicule the miserable philosophers of his experience.

"Caught unprovided with any such technical formation," says a theological historian,1 of the controversy about Free Will, "[these humanists] had only their personal tastes to trust to, and their own powers of initiative, **seeking shelter, for good or ill, behind such Greek writers as Origen and St. John Chrysostom, whose scattered views had never been formed into a systematic theory about these problems, nor enjoyed any appreciable prestige in the Church.** The intervention of such improvised theologians had the effect of creating, inside the theological system of Catholicism, a new antithesis whose consequences were to be far reaching indeed. ..." **And Mandonnet instances Erasmus**1 **who; "without any study of the classical theology of the Church, improvises solutions, and despite his circumspection he comes to affirm such enormities as this '<u>That nothing comes about without the will of God, I readily allow; but, generally, the will of God depends on our will.</u>'"**2
...

In the hands of Erasmus, Catholic dogma thins out until it vanishes to nothing; and he would meet the problem of the real need, of even the most ordinary of mankind, for knowledge of the mysteries appropriate to the level of their intelligence, by scrapping technical language on all sides. **Precision in these matters, he thought, was not worth what it cost; and even, for example, such a vitally necessary tool as the term *homoousion* ought to go, ought never to have been devised.**
...

Upon Catholic theology Erasmus, then, left no lasting mark; nor did his failure to appreciate its importance do any damage or lessen its prestige. Here the contemptuous blows he struck fell upon the air. For one thing the revival had begun; and next, theology had already become what it has since remained, a technique that only interested theologians and clerics. **The sole effect of his excursions into theology was to discredit Erasmus with the theologians for ever.**

https://beggarsallreformation.blogspot.com/2010/05/erasmus-was-wrong-luther-was-right-says.html

While Father McSorley doesn't agree with all of Luther's argumentation in the *Bondage of the Will*, he does stand with Luther in condemning the position argued by Erasmus.
...

> Secondly, and more unfortunately, we find the leading scholar of the Roman Church doing a bad job in presenting the Church's teaching on free will. **Erasmus defines free will as "*the power of the human will by which man can apply himself toward or turn himself away from the things which lead to eternal salvation*."** This is a seriously defective definition of free will. Instead of defining free will in terms of the ability to choose between certain alternatives, Erasmus defines free will in terms of salvation--without mentioning grace. Erasmus gives no hint in his definition that man the sinner is enslaved to sin until he is liberated by grace. **The definition is surely one of the "extraordinary blunders" which, according to P. Hughes, characterize *De libero arbitrio*** (p.112).
> ...
>
> Now, several years after his excommunication, Luther finds the leading Catholic intellectual saying that the following Neo-Semipelagian position is a tenable option: "... [H]*aving not yet received the grace which forgives sin, man can, by his natural powers, perform works which, as they say are morally good, by which justifying grace is merited not de condigno but de congruo* ..." (p.113).
>
> Erasmus reveals his total unawareness of the Church's rejection of Semipelagianism in the *Hyperaspistes*, his lengthy response to Luther's reply to him in *De servo arbitrio*. Of the Ockham-Biel opinion, Erasmus says that as far as he knows it has not been rejected by the Church (p. 113).
>
> Further, developing the concept of "natural" or "common" grace that he had mentioned in *De libero arbitrio*, Erasmus distinguishes a "human faith," which is "a type of knowledge preparatory to the light of faith, "*from a "faith which through grace justifies." Then he explains: "... as there are degrees of justice, so there are degrees of gifts until you reach that which is merely natural. But even this is grace, since God is the author of nature. Thus Augustine is needlessly afraid of saying that the initium gratiae arises from man.*" **Erasmus seems completely unaware that Pelagius had said exactly the same thing to Augustine: <u>free will is a *donum Dei*; therefore no other donum is necessary!</u> In this sense Pelagius could also say as Erasmus does: "We ascribe everything to God's goodness"** (p. 113-114).

https://beggarsallreformation.blogspot.com/2010/05/erasmus-as-problem-not-reformation.html

Lortz saw Erasmus as the threat to the Church, not Luther. Lortz explains that this view is not new: during the sixteenth century the papal nuncio Aleander recognized it also:

> “There was only one man on the Catholic side who in some measure recognized in time the danger embodied by Erasmus. This was the papal nuncio, Aleander, himself a humanist of some standing... [he

> said] **‘God forbid that we see fresh papal briefs to Erasmus couched in the same tone as that printed at the beginning of his New Testament and containing an approving explanation by the pope of a work in which he expresses views on confession, indulgences, divorce, papal authority, etc., which Luther has simply to take over. But the poison of Erasmus works even more dangerously…’**”
>
> “Erasmus at length came into contact with Luther. But Catholics did not see the true Erasmus even in this controversy. They applauded his book on free will, because it contradicted Luther; but they failed to see that **the primary aim of the book was to propose an optimistic morality that left little room for grace, sin and redemption**" [Catholic Scholars Dialogue With Luther (Chicago: Loyola University Press, 1970), p. 7]

...

Lortz though clarifies this in regard to Erasmus:

> "Though he did not deny the reality of grace and talked of the insufficiency of man despite his free will in a most orthodox manner, he did preach Christianity primarily as morality. **In the practical order he so emphasized man's own powers of intellect and will that he came dangerously close to moralism.**
>
> -snip-
>
> In his disputation on freedom of will, any number of times we are told in the most orthodox fashion, at times quite emphatically, that all of man's powers and gifts come from God, that man must beware of pride and self-sufficiency, that everything a man can do with his intellect and will belongs to God (Diatribe, 75). But for one thing, this Diatribe was written by Erasmus as a proof of his orthodoxy, and secondly, the picture of man which Erasmus gives us in his pedagogical and moral tracts, in his letters and by his example, is more to the point. **The answer is not too encouraging.** At the very least we are forced to assert that he did not draw the practical consequences from his statements that attribute everything to God and His Grace. (p. 73)

...

Lortz states,

> **[Erasmus] has no more concept of dogma as an exact statement of Christian teaching than did the men of the Enlightenment or modern liberal Protestants.** No one recognized this fact more clearly and made more of it than Luther in the First Preface to his work *Vom geknechteten Willen*" (p. 71-72).
>
> -snip-
>
> We must say something more on the adogmatism mentioned before. **If, as Erasmus thought, dogma is something superfluous; if, as he thought, the doctrine of Christianity could and should be restricted to a few general points, Erasmus was quite near the erroneous interpretation which would equate Christianity with monotheism. When this is done, Christianity becomes indistinguishable from the other higher religions and thus, relativism is just around the corner.**
>
> If all this is true, then we have to agree that Erasmus constituted a grave threat to the Church—not because of the frequently frivolous and mocking criticism he directed at it, but because of his adogmatism, moralism, and relativism.
>
> The pope at the time was the humanist Leo X who had a great regard for Erasmus and was quite unaware of the threat which the latter constituted for the Church. **Thus we find the papal delegate Alexander writing from the Diet of Worms in 1521: "For heaven's sake, don't send us any more privileges for Erasmus. The man is doing far more harm than Luther ever can."** Luther was precisely the one who recognized and rejected the danger from the quarter of the humanists. With all the violence of his characteristically one-sided approach, Luther turned from the cultural morality he found in the humanists to the religion of faith as he found it in St. Paul [pp. 73-74].

https://www.covenanter.org/reformed/2015/7/8/appendix-martin-luther-to-nicolas-armsdoff-concerning-erasmus-of-rotterdam

This is also a notable instance of the piety of Erasmus!—In his letter upon ‘Christian philosophy,’ which is published with his New Testament, and used in common throughout all the churches, when he had propounded the question,—**‘Why Christ, so great a teacher, descended from heaven, when there are many things taught even among the heathens which are precisely the same, if not more perfect;’—he answers, ‘Christ came (which I doubt not but he believed most Erasmianly) from heaven, that He might exemplify those things more perfectly and more fully than any of the saints before Him!’**

Thus, this miserable renewer of all things, Christ, (for so He reproaches the Lord of glory) has lost the glory of a Redeemer, and becomes only one more holy than others.—This sentiment could not be expressed in ignorance, but must have been designed and willful; because, even those who do not truly believe, know, and every where confess, that Christ descended from heaven to redeem us men from sin and death.

This was the sentiment that first alienated my mind from Erasmus. <u>From that moment, I began to suspect him of being a plain Democritus or Epicurus, and a crafty derider of Christ:</u> for he every where intimates to his fellow Epicureans, his hatred against Christ: though he does it in words so figurative and insidious, that he leaves himself a clue for raging most furiously against those Christians, who, from being offended at his suspicious and double meaning words, will not interpret them as standing in favour of their Christ.

https://www.ccel.org/g/gibbon/decline/volume2/chap54.htm#Reformation

Yet the services of Luther and his rivals are solid and important; and the philosopher must own his obligations to these fearless enthusiasts. (34)

> 34. "Had it not been for such men as Luther and myself," said the fanatic Whiston to Halley the philosopher, "you would now be kneeling before an image of St. Winifred."
>
> https://oll.libertyfund.org/title/roper-the-crisis-of-the-seventeenth-century#lf6114_label_337
>
> A philosopher, in a time of crisis, may have to put on a suit of armour. To that suit of armour he may owe his life, and his capacity to go on philosophizing. But that does not make the armour the source of his philosophy. Indeed, while it is being worn it may well impede free speculation, which can be resumed only when the battle is over and it has been put off. **The virtue of Calvinism, in respect of the Enlightenment, may perhaps be reduced to this.** As a suit of armour it proved serviceable in battle, and though more uncomfortable to wear, proved easier to discard than the archaic, ornamentally encrusted chain-mail which protected, but also stifled the philosophers of the rival Church.

…

Since the days of Luther and Calvin, a secret reformation has been silently working in the bosom of the reformed churches; many weeds of prejudice were eradicated; **and the disciples of Erasmus** (38) **diffused a spirit of freedom and moderation.**

> 38. **Erasmus may be considered as the father of rational theology.** After a slumber of a hundred years, it was revived by the Arminians of Holland, Grotius, Limborch, and Le Clerc; **in England by Chillingworth,** the latitudinarians of Cambridge, (Burnet, Hist. of Own Times, vol. i. p. 261 - 268, octavo edition.) Tillotson, Clarke, Hoadley, etc.

https://books.google.fi/books?id=1PnZ_FuYLnsC&lpg=PP1&hl=fi&pg=PA3#v=onepage&q&f=false

Much depended on this issue, as Leibniz above all perceived, because the fragile synthesis between Protestantism and Aristotelianism that had been put in place by Melanchthon in the sixteenth century (and since then maintained) relied for its coherence upon man being made in the image of God.4

https://books.google.fi/books?id=1PnZ_FuYLnsC&lpg=PP1&hl=fi&pg=PA83#v=onepage&q&f=false

> 33. Melanchthon was far less prejudiced against Aristotle's philosophical achievement than Luther, although he shared the latter's distaste for the tradition of scholastic commentary through which Aristotle had been assimilated to Catholic theology. **Faced with the task of prescibing the philosophical texts to be studied in Protestant universities, he decided to adopt for teaching purposes that portion of ancient philosophy which contained the greatest body of acceptable truths in all branches of the subject** ('… zum grossen Teil Wahres überliefert, die Wissenschaften nach wahren Grundsätzen aufbaut und am wenigsten Irrtümer hat': K. Hartfelder, *Philipp Melanchthon als Praeceptor Germaniae* (Berlin, 1889), p. 211). **Melanchthon was hostile on philosophical grounds to the Stoa, sceptics and Epicureans,** so it was likely that he would achieve a rapprochement with Aristotle, especially since the range of Aristotle's works was sufficiently comprehensive to cover all the branches of philosophy where instruction was required. Melanchthon edited the *Nicomachean Ethics* in 1528, and also produced compendia derived from the *Physics* and *Ethics*, which remained standard university handbooks for over a century. It was a basic contention of the *Epitome* **that divine *Logos* and Aristotle's natural law were identical:**
>
> > But moral philosophy is part of divine law. For it is the law of nature itself observed and explained by able men, just as able men detected the beginnings of Arithmetic in the minds of men, and afterwards arranged the variety of proportions into a method. **However there is agreement that the law of nature is the very law of God in respect of those virtues which reason comprehends. And no more appropriate of true definition can be devised than if we define moral philosophy as part of divine law or of the decalogue,**

> **insofar as reason suffuses it.** [P. Melanchthon, *Philosophiae Moralis Epitome* (Strasbourg, 1538), *praefatio*, pp. 2-3]

After Melanchthon it was almost impossible to criticise as aspect of Aristotelian ethics without incurring accusations of impiety, so closely (and ironically) had Aristotle been incorporated into the teaching of Protestant universities: 'The Aristotelian philosophy, as modified by Melanchthon, is seen by many as the essential correlate of protestant religious dogma, so that for them an attack on the authority of Aristotle is regarded as an attack on protestant belief' (Hartfelder, *Philipp Melanchthon*, p. 248).

https://researchportal.vub.be/en/publications/the-early-german-reception-of-spinozas-tractatus-theologico-polit

Luther was a hard-boiled determinist as we can read in his *De Servo Arbitrio* (1525) written against Erasmus of Rotterdam. On these issues concerning the freedom of the will any Lutheran philosopher was well aware of the theological determinism and *servum arbitrium* being essential to Lutheran anthropology. Lutherans were all determinists and they combatted libertarian views in action theory. **Now, these philosophers saw that an equally tough determinism was expressed in the works of the heretic and atheist Spinoza. This was a real problem for them since they also understood very well the consequences of Spinoza's determinism, namely so-called atheism.** This problem and the subsequent disintegration of Lutheran orthodoxy began in the late 17th century and came to a crisis in the 18th century, it was a process which took place in many fields at the same time, among them anthropology, practical philosophy and action theory. **Indeed, Spinoza precipitated this crisis through which Lutheran theologians and philosophers – whose teachers had been tough determinists – became libertarians and defended the freedom of the will. That's strange, isn't it? In the course of the 18th century practically all Protestant university theologians and philosophers were libertarians or even became Pelagians.** The conviction was that the free will is not able to make a righteous life possible for each individual, but that each individual can by a life according to the free will ultimately be judged in a righteous way by a righteous God. **Luther would have been enraged if he had known this.**

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Ochino,_Bernardino

OCHINO, BERNARDINO (1487-1564), Italian Reformer, was born at Siena in 1487. **At an early age he entered the order of Observantine Friars, the strictest sect of the Franciscans, and rose to be its general, but, craving a yet stricter rule, transferred himself in 1534 to the newly founded order of Capuchins, of which in 1538 he was elected vicar-general.** In 1539, urged by Bembo, he visited Venice and delivered a remarkable course of sermons, showing a decided tendency to the doctrine of justification by faith, which appears still more evidently in his *Dialogi VII.* published soon after. He was suspected and denounced, but nothing ensued until, at the instigation of the austere zealot Caraffa, the Inquisition was established at Rome, June 1542.
...

Escaping by way of Strassburg he found an asylum in England, where he was made a prebendary of Canterbury, received a pension from Edward VI.'s privy purse, and composed his chief work, *A Trajedy or Dialogue of the unjust usurped Primacy of the Bishop of Rome* (1549). This remarkable performance, originally written in Latin, is extant only in the translation of John Ponet, bishop of Winchester, a splendid specimen of nervous English. The conception is highly dramatic; the form is that of a series of dialogues. **Lucifer, enraged at the spread of Christ's kingdom, convokes the fiends in council, and resolves to set up the pope as Antichrist. The state, represented by the emperor Phocas, is persuaded to connive at the pope's assumption of spiritual authority; the other churches are intimidated into acquiescence; Lucifer's projects seem fully accomplished, when Heaven raises up Henry VIII. and his son for their overthrow. The conception bears a remarkable resemblance to that of *Paradise Lost*; and it is almost certain that Milton, whose sympathies with the Italian Reformation were so strong, must have been acquainted with it, and with some of his later works. In the *Labyrinth* (dedicated to Queen Elizabeth of England), a discussion of the freedom of the will, he covertly assailed the Calvinistic doctrine of predestination,** and showed that his views were tinged with Socinianism.

The accession of Mary in 1553 drove him from England, and he became pastor of the Italian congregation at Zürich. In 1563 the long-gathering storm of obloquy burst upon the occasion of the publication of his *Thirty Dialogues*, **in one of which his adversaries maintained that he had justified polygamy under colour of a pretended refutation. His dialogues on divorce and the Trinity were also obnoxious.** Ochino was banished from Zürich, and, after being refused a shelter by other Protestant cities, directed his steps towards Poland, at that time the most tolerant state in Europe. He had not resided there long when the edict of the 6th of August 1564 banished all foreign dissidents. Flying from the country, he encountered the plague at Pinczoff; three of his four children were carried off; and he himself, worn out by age and misfortune, died in solitude and obscurity at Schlakau in

Moravia, about the end of 1564. **His reputation among Protestants was at the time so bad that he was charged with the authorship of the treatise *De tribus impostoribus*, as well as with having carried his alleged approval of polygamy into practice.** It was reserved for Dr Benrath to justify him, and to represent him as a fervent evangelist and at the same time as a speculative thinker with a passion for free inquiry. The general tendency of his mind ran counter to tradition, **and he is remarkable as resuming in his individual history all the phases of Protestant theology from Luther to Socinus.**

https://en.wikisource.org/wiki/Dictionary_of_National_Biography,_1885-1900/Pucci,_Francesco

PUCCI, FRANCESCO (1540-1593?), theological writer, was born at Florence in 1540 (Gaspari). He was of the same family as the conservative cardinals Lorenzo Pucci (*a.* 1531), Roberto Pucci (*a.* 1547), and Antonio Pucci (*a.* 1544), but his own bent was towards literature and freethought. Following Tuscan custom, he began life in a mercantile house at Lyons.
…

He corresponded with Francesco Betti, a Roman of noble family, who advised him to come to Basle and lay his difficulties before the future heresiarch, Fausto Paulo Sozzini (Socinus). Pucci reached Basle about May 1577, and held a written disputation with Sozzini on the question of immortality. **Pucci regarded all creatures as imperishable; Sozzini denied the natural immortality of man, treating a future life as a conditional privilege.** On 4 June Pucci formulated his positions, under ten heads; Sozzini replied on 11 June; Pucci finished a rejoinder on 1 July. The discussion was interrupted by the expulsion of Pucci from Basle. **He had publicly maintained an extreme form of Pelagianism, printing theses, 'De Fide natura hominibus universis insita,' in which he claimed that all men are by nature in a state of salvation.**
…

His peculiar views exposed him to persecution and imprisonment; on his release he betook himself to Holland, **where he made the acquaintance of Justus Lipsius at Leyden.** In Holland he attached himself to a 'concilium peregrinantium Christianorum,' and invited the adhesion of Sozzini. He soon moved on to Antwerp. By 1585 he had resorted to Sozzini in Poland. **At Cracow he fell in with John Dee [q. v.] and Edward Kelley [q. v.], who passed for Roman catholics, and were bent on a new universal reformation.** They initiated Pucci into their angelic experiences, and about the middle of 1585, despite the strong remonstrances of Sozzini, he accompanied them to Prague. On his arrival there, an angelic voice bade him re-enter the Roman communion, which he at once did. He wrote to Sozzini and other friends, entreating them to follow his example.

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA103#v=onepage&q&f=false

If moralizing, irenicist, "unchurched" radically anti-theological Christianity flourished most, after 1600, in the Netherlands, while in Germany the confessionalization better succeeded in cutting back the radical tendency,16 **the earliest roots of the Radical Reformation, reaching back before Servetus, were to be found, as with Radical Renaissance, in Italy rather than Germany or the Low Countries.** Socinus – or, to give him his full name, Faustus Sozzini (1539-1604) – from Siena, first began preaching that Christ was not divine and rejecting immortality of the soul whilst at Lyon and Geneva a decade after Servetus' execution, in the early 1560s.
…

One who went still further and whose notion of a true Reformation led to his being denounced as an outrageous neo-Pelagian by Jesuits, Lutherans, Calvinists, and liberal Protestant opponents of Predestination alike was **the "Florentine beast," as Erastus called him,** the Italian humanist Protestant and early ally of Socinus, Francesco Pucci (1543-97).17 Horrified by the St. Bartholomew's Day massacre of the Protestants in Paris, in August 1572, Pucci abjured Catholicism and, from then on, devoted his energies to what he understood as the true Reformation of Christianity which both the "Anti-Christ in Rome," he believed, and Luther and Calvin, were obstructing. He strove to secure theological reconciliation among Christians and universal peace through political action – a program for which he tried to enlist the French king, Henri IV, while the latter struggled to reunite France amid the French Wars of Religion.

If all Christian independents within the seventeenth-century Radical Reformation, rejecting dogmatic theology, devoted their efforts to searching for universal truth and human betterment, and defended intellectual freedom, **appealing to all *omnibus veritatis studiosis* [searchers for the truth] to reduce Christianity's basic *fundamenta fidei* to as few and as rational doctrines as possible, Pucci boiled Christianity down to just one: rational belief in a God, creator of the universe, who is infinitely merciful toward all men. This, together with his extreme Pelagianism,** entailing the immortality of all souls, and the doctrine that "natural reason" alone suffices for Christian salvation without any sacramental or priestly intervention, **proved too much even for Socinus.** Anxious to rally especially Italian humanist exiles driven abroad by religious or political persecution, alongside the

residual dissident crypto-Protestant underground in Italy itself (found especially in Venice), Pucci published (in England) his *Informatione della religione christiana* (1580) in Italian. But for him, mobilizing Italian dissent was just an initial stage of the true universal Reformation.18
…

Allying with other foes of autocracy and anti-Medici exiles from Florence, Pucci represented a variant of Radical Reformation **that showed how Christianity could become conjointed with a basically philosophical and political standpoint.**
…

Radical anti-theological Christian universalist rationalism of which Pucci was such a striking example, **the tendency later encompassing the Dutch Collegiants, developed gradually into a pan-European underground which, though very different in some respects from the underground Neo-Epicureanism of the sixteenth century, was equally a founding element of what, after 1650, developed into the "Radical Enlightenment."**20

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Socinus

I. Lelio Francesco Maria Sozini (1525-1562) was born at Siena on the 29th of January 1525. His family descended from Sozzo, a banker at Percena, whose second son, Mino Sozzi, settled as a notary at Siena in 1304. **Mino Sozzi's grandson, Sozzino (d. 1403), was ancestor of a line of patrician jurists and canonists, Mariano Sozzini senior (1397-1467) being the first and the most famous, and traditionally regarded as the first freethinker in the family.** Lelio (who spells his surname Sozini, latinizing it Sozinus) was the sixth son of Mariano Sozzini junior (1482-1556) by his wife Camilla Salvetti, and was educated as a jurist under his father's eye at Bologna. **He told Melanchthon that his desire to reach the *fontes juris* led him to Biblical research,** and hence to rejection of "the idolatry of Rome."
…

II. Fausto Paolo Sozzini (1530-1604) was born at Siena on the 5th of December 1539, the only son of Alessandro Sozzini, "princeps subtilitatum," by Agnese, daughter of Borghese Petrucci, a descendant of Pandolfo Petrucci, the Cromwell of Siena.
…

To the able women of his family he owed the strong moral impress which marked him through life; **his early intellectual stimulus came from his uncle Celso, a nominal Catholic, but an *esprit fort*, founder of the short-lived *Accademia dei Sizienti* (1554), of which young Fausto was a member.** In 1556 his grandfather's will, leaving him one-fourth of the family estates, made him independent. Next year he entered the *Accademia degli intronati*, the centre of intellectual life in Siena, taking the academic name "Il Frastagliato," his badge *Un mare turbato da venti*, his motto *Turbant sed extollunt*. About this time Panzirolo (*De claris legg. interpp.*, first published 1637) describes him as a young man of fine talent, with promise of a legal career; but he despised the law, preferring to write sonnets.
…

In Sozzini's scheme of doctrine, terms in themselves orthodox were employed in a heretical sense. Thus Christ was God, though in nature purely human, namely as ***un Dio subalterno, al quale in un dato tempo il Dio supremo cedette il governo del mondo*** (Cantù). In matter of worship Sozzini distinguished between *adoratio Christi*, the homage of the heart, imperative on all Christians, and *invocatio Christi*, the direct address of prayer, which was simply permissive (Blandrata would have made it imperative); though in Sozzini's view, prayer, to whomsoever addressed, was received by Christ as mediator, for transmission to the father.
…

Of his non-theological doctrines the most important is his assertion of the unlawfulness, not only of war, but of the taking of human life in any circumstances. Hence the comparative mildness of his proposals for dealing with religious and anti-religious offenders, though it cannot be said that he had grasped the complete theory of toleration. Hence, too, his contention that magisterial office is unlawful for a Christian.

https://scholarship.richmond.edu/cgi/viewcontent.cgi?article=1167&context=masters-theses

Fausto, who actually had no formal training in the field of theology, ignored the authority and traditions of the existing creeds and set to work to form his doctrines rationally, objectively, and independently of traditional sources. **E. M. Wilbur describes this approach stating that Fausto "went to Scripture as to a corpus juris, explored its teaching inductively, and built up his system out of those."**12
…

In comparing Fausto Sozzini and his methods with the theologians of his time, Dr. Harnack makes this observation:

> It is not that Christ is the revelation in the book, but in the book God has made manifest Himself, His will, and the way of salvation. If we recall here the fact that similar expressions are to be found in Calvin, we must not forget that as little as any other of the reformers did Calvin ever leave it out of view, that the Bible is given to faith. **But of that we find nothing in Faustus. There is not even an approach made to discovering lines of connection between the outward revelation contained in the Bible and the nature of religion; what we have rather, is – on the one hand, – the book, on the other hand the human understanding.**13

http://contra-gentes.blogspot.com/2008/04/doctrinal-chaos-argument-one-of.html

Some Christians, **having been influenced by autonomous philosophy,**10 **have forced Scripture to say whatever their rationalistic epistemology dictates. This is not sola Scriptura but partim Scriptura/partim philosophia.** Take free-will in the early church, for example:

> "The earlier patristic period represents the age of the exploration of concepts, when the proclamation of the gospel within a pagan culture was accompanied by an exploitation of both Hellenistic culture and pagan philosophy as vehicles for theological advancement… Indeed, by the end of the fourth century, the Greek fathers had formulated a teaching on human free will based upon philosophical rather than biblical foundations. **Standing in the great Platonic tradition, heavily influenced by Philo, and reacting against the fatalisms of their day, they taught that man was utterly free in his choice of good or evil… It is quite possible that the curious and disturbing tendency of the early fathers to minimize original sin and emphasize the freedom of fallen man is a consequence of their anti-Gnostic polemic… Justin's anti-fatalist arguments can be adduced from practically any of the traditional pagan refutations of astral fatalisms, going back to the second century B.C.**"11

This form of epistemology arose again within Protestant circles during the Arminian Remonstrance. For an example of this, see Walls and Dongell's *Why I am Not a Calvinist* **where they admit that the Arminian idea of libertarian free-will is derived not from Scripture but from contested philosophical arguments.**

> https://archive.org/details/completeworksrie033168mbp/page/n255/mode/2up?view=theater
>
> 288. ***Morality regarded as an attempt at establishing human pride.*—The "Free-Will" theory is anti-religious.** Its ultimate object is to bestow the right upon man to regard himself as the *cause* of his highest states and actions: it is a form of the growing *feeling of pride*.

https://oll.libertyfund.org/title/roper-the-crisis-of-the-seventeenth-century#lf6114_label_313

Arminianism or Socinianism, not Calvinism, was the religion of the pre-Enlightenment. Calvinism, that fierce and narrow re-creation of medieval scholasticism, was its enemy: the last enemy which died in the last ditches of Holland, England, Switzerland, Scotland.
…

Indeed, Calvinism can be seen as an outgrowth of it, an obscurantist deviation from it, rather than *vice versa.* In order to see this, and to follow the two-hundred-years dialogue between the two movements, we must go back to the figure who stands at the source of both of them as of so much else: Erasmus.

V

If Arminianism is free will in theory, tolerance in practice, within a reformed, primitive, visible, Christian Church, Erasmus is the first Arminian; and indeed the Dutch Arminians recognized the fact. So did their English disciples: Erasmus was the inspiration not only of Arminius and Grotius but also of Grotius' disciples at Great Tew. **Equally if Socinianism is the application of critical, solvent human reason to religious texts and to religious problems, within a similar Church, Erasmus is the first Socinian, and this paternity was recognized too. The Swiss and Italian *émigrés* who founded the Socinian movement in Switzerland and carried it to Poland—Castellio, Acontius, Lelio Sozzini himself—were disciples of Erasmus.** Even in the narrow sense of the word, the sense in which its enemies used it, Socinianism derives from Erasmus. For the peculiar tenet of the early Socinians, the particular result of their application of reason to Scripture, was the rejection of the doctrine of the Trinity, and so of the divinity of Christ; and although Erasmus had not exposed himself on this topic, any more than many later Socinians were to do, it was his textual scholarship which was the basis of their rejection. He demonstrated, with a cogency that was proof against his own later half-hearted withdrawals, that the only biblical text which could be used to support that doctrine was spurious. **It can therefore be said that Sozzini and Arminius merely gave their names to particular developments of a philosophy which they had received from Erasmus.**
…

Erasmus himself preached his doctrines from the Right, to the Establishment. But he did not capture the Establishment, and in the generation after his death, his disciples had to reconsider their position. Either they must surrender to the Catholic Church which meant that they must give up their essential philosophy, or they must take up arms against that Church and, in so doing, accept radical leadership and the transformation of that philosophy. The choice was disagreeable, but could hardly be avoided—unless one were to seek a refuge outside the area of struggle, in distant Transylvania or anarchical Poland.
...

The same fear would bring them together again and again, whenever freedom had to be sacrificed to discipline, private criticism to common faith. **But whenever that fear was suspended the two parties to the alliance naturally drew apart.** In times of security why should the rational, sceptical, mystical heirs of Erasmus accept the leadership of intellectual reactionaries, scholastical bigots, blinkered Augustinians, Hebraic fundamentalists? They could afford to stand on their own.
...

The same threat would create a similar alliance in France; but there the fact of civil war, and the nice balance of forces, would enable many of the humanists to preserve a middle position between the Churches. **Those who in England and Holland were liberals within the Calvinist fold, in France might be Huguenots—but might equally be Catholic *politiques*.** In either case, their loyalty to their religious party was conditional.
...

If the years 1590–1625, in the Protestant world, are the age of Bacon and Selden and Grotius, in the Catholic world they are the age of Montaigne and de Thou, Davila and Sarpi. All these were recognized as precursors by the men of the Enlightenment. **Montaigne was the heir to the scepticism of Erasmus, the father of that seventeenth-century Pyrrhonism which relaxed the dogmas of the Churches and the Aristotelean cosmology behind them.**33 De Thou, Davila and Sarpi are named by Gibbon as the second founders, after Machiavelli and Guicciardini, of "philosophic history." Davila is indeed the Machiavelli of the seventeenth century, the favourite reading of "civil historians" and philosophic statesmen. **De Thou, the most Protestant of Catholic historians**—the founder, according to modern Catholic writers, of the persistent "Protestant bias" in sixteenth-century French historiography34—**was an admirer of Erasmus: indeed, his greatest crime in the eyes of the Church was that in his *History* he not only mentioned the forbidden name of Erasmus but described him as *grande huius saeculi decus,* "the great glory of this century."** And as for Sarpi, how can we think of that generation without him? At every turn we find ourselves faced by that indefatigable polymath: the Servite friar who corresponded with the Protestants of Europe in order to create a solid, non-doctrinal front against papal aggression; the historian who sought to show that European history had taken a false turn at the Council of Trent; **the statesman who insisted, alone among Catholics, on the Socinian doctrine of the separation of Church from State;** the social scientist whose analysis of the economic power of the Church improves upon that of Selden, foreshadows that of Giannone, and was hailed by Gibbon as "a golden volume" which would survive the papacy itself, "a philosophical history and a salutary warning."35

Most of these "Catholic Erasmians" of the early seventeenth century were heretics within their Church, just as the Arminians were heretics in the Protestant Churches.

https://www.gutenberg.org/files/44795/44795-h/44795-h.htm#Page_106

No impartial person, competently acquainted with the history of the Reformation, and the works of the earlier Protestant Divines, at home and abroad, even to the close of Elizabeth's reign, will deny that the doctrines of Calvin on Redemption and the natural state of fallen man, are in all essential points the same as those of Luther, Zuinglius, and the first Reformers collectively. These Doctrines have, however, since the re-establishment of the Episcopal Church at the return of Charles II., been as generally[72] exchanged for what is commonly entitled Arminianism, but which, taken as a complete and explicit Scheme of Belief, it would be both historically and theologically more accurate to call *Grotianism*, or Christianity according to Grotius. The change was not, we may readily believe, effected without a struggle. In the Romish Church this latitudinarian system, patronized by the Jesuits, was manfully resisted by Jansenius, Arnauld, and Pascal; in our own Church by the Bishops Davenant, Sanderson, Hall, and the Archbishops Usher and Leighton: and in the latter half of the preceding Aphorism the reader has a *specimen* of the *reasonings* by which Leighton strove to invalidate or counterpoise the *reasonings* of the innovators.

>
> We both disclaim alike every attempt to explain any thing *into* Scripture, **and every attempt to explain any thing *out of* Scripture. Or if we regard either with a livelier aversion, it is the latter, as being the more fashionable and prevalent. I mean the practice of both high and low *Grotian* Divines to *explain away* positive assertions of Scripture on the pretext, that the *literal sense* is not agreeable to reason, that is, THEIR *particular* reason.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/298/mode/2up?view=theater

Many tributaries, then, contributed to this pacific current, but as Wilhelm Dilthey showed half a century ago in a series of brilliant essays, its chief ingredient was Stoicism. Neo-Stoicism fertilized debate all through Western Europe, most fruitfully in the centers of internecine religious conflict. In the rebellious Netherlands, the center of learning and religious controversy, educated men turned to Stoicism as a cure for the disease of civil war.
…

The Arminians argued that the truths by which men must live are Christian truths; they are found in the loving teachings of the New Testament, and they remain true outside and without revelation. It was with this group that Hugo Grotius, the founder of modern international law and an admirer of Galileo, associated himself, to his cost and his glory. **Steeped in Seneca and Cicero, and explicitly their disciple, Grotius applied their philosophical method to impose order on a disordered world:** there are certain ideas common to all rational men, and these ideas are discovered by reason; they do not depend on theology. “Natural law,” he wrote in a famous passage, “is so unalterable that God himself cannot change it.” Assuming that God did not exist, he wrote in another, equally famous passage, the rules of natural law would retain their validity. **With these pronouncements, natural law, which had occupied a subordinate place in the Christian scheme of things, made its declaration of independence.**

This hypothetical construction of a natural law without God was not meant in any way to throw doubt on God’s existence: Grotius was an impressive historical critic of sacred texts, **a great Erasmian,** whose annotations on the Old and New Testaments long held the field and survived to become one of John Wesley’s favorite books, while Samuel Johnson could recommend Grotius’s religious writings to “every man whose faith is yet unsettled.” Grotius reduced Christianity to a few central tenets, rationalized the doctrine, and championed freedom of the will against Calvinist Predestination, but the Resurrection of Jesus remained for him an undisputed, indisputable truth.

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA105#v=onepage&q&f=false

If, as Machiavelli uniquely showed, there are concealed ways Neo-Epicureans could intervene effectively both politically and intellectually in the public sphere, to question the prevailing norms, without fully revealing the motivation and deep subversion lurking beneath, this was equally true of the Radical Reformation Nicodemites. No one more skillfully demonstrated this than Grotius.

Hugo Grotius (1583-1645), the sometimes bold, sometimes timid, heir of Erasmus, was a crypto-Socinian who accomplished much by way of denting the pillars of theocracy and sway of miracle-based theology while renewing the Christian ideal on the basis of unity and the universalism of the Christian message. A victim of the persecution unleashed by the Calvinist Counter-Remonstrant triumph over the Dutch Arminians, in 1618, he set out to prioritize Christianity’s moral content, in justice, and render its theology subordinate, problematic and secondary.24
…

Indeed, the Arminian-Grotian current came to form a vital part of the backcloth to the Western Socinian-Unitarian tradition **which full-frontally attacked and undermined Lutheran and Calvinist theology not least by referring “back to the *Consensus veterum sapientium*” and subtly absorbing “in a humanistic sense a pre-Christian ‘natural’ theology.”**
…

Abjuring all voluntarism, Grotius denied God is an absolute master over his creatures. They remain subject to His commands in a weak sense, but he answers the question how God should be thought of in relation to natural justice by stating that **God is a “rector” or “princeps” presiding over the moral community. When God punishes he is not enforcing His own will but that of the community,** upholding the moral order that men naturally embrace from the natural law. There is nothing arbitrary in his judgments of the kind of expects from a “dominus absolutus.” **“In this life,” as Jeremy Bentham later echoed this idea, “there are laws of nature which the Deity cannot or will not interrupt.”**36 For Grotius, as for Bentham, Natural Law would be valid “etsi Deus non daretur” [even if God did not exist].37 God, of course, is not subject to the law like a human judge but rather the ultimate supervisor, adjuster, and guardian of that law. But here lay a troubling dilemma from which Grotius could never really extricate himself: if God punishes wrongdoers not because they have offended Him but the Natural Law, a universal natural law is implied that exists beyond and independently from, and even in some sense above God. **It was a stance differing significantly from that of Pufendorf and Locke who viewed natural law as binding on men expressly by virtue of God’s command.**38
…

Yet, it was not the hints of Anti-Trinitarianism, or dissolving ties between the Old and New Testaments, that Socinians sufficiently radical to join ranks with Spinozism in the seventeenth and eighteenth centuries principally found appealing in Grotius, but rather insistence on the contiguousness and ultimate oneness of reason, natural theology, natural law, and Revelation. By unifying all reality and morality in this way, Grotius proved subversive with respect to all churches and even the Radical Reformation itself as a distinct religious bloc. Claiming Christianity's fundamental core consists of just a few principles acknowledged by all churches, with the residue of Christian doctrine being secondary and dispensable, powerfully reinforced the trend to marginalize all theology in favor of moral and political philosophy. **His was a universalism drawing pagan and Christian justice, and pagan and Christian piety, ultimately together, here once again sharing kinship with Socinianism and Anglo-American Unitarianism.**40
…

Grotius has often been deemed a vital link between "the Erasmian tradition" of the Renaissance and the Enlightenment.45 **But he was a crucial link also, the evidence shows, between Reformation and Radical Enlightenment. The connecting thread was a demythologized Christianity, shorn of theological doctrine that focused on a core of moral precepts compatible with pagan-classical natural-law ethics.** In this respect, Grotius was among the first movers, followed by Hobbes, Spinoza, and Bayle, of the seventeenth century's transfer of religious authority from theology to philosophy, and modernity's subordination of religious authority to individual liberty, freedom of thought and expression, and the common good of the human community understood in a secular, moral sense.

https://scholarship.richmond.edu/cgi/viewcontent.cgi?article=1167&context=masters-theses

MacLachlan, in his study of Socinianism in seventeenth century England, states that this steady flow of Socinian thought provided a "solvent to the harsh Calvinism of those times, with its rigorous views of Justification and Atonement, a corrective to irrational and intolerant dogmatism, a standing criticism of the Athanasian and scholastic dogma of the Trinity, **(and) this stream of Socinian ideas from abroad was to merge with native English protests against the prevailing orthodoxy and at length bear fruit in the rational Christianity of a John Locke and an Isaac Newton, and in the Unitarianism of a Joseph Priestley.**"

Trevor-Roper suggested that Falkland and his friends were searching for a solution to the bitter religious and theological warfare which surrounded them, and they found one in the ideal of concord and tolerance shared by Erasmus, Grotius and the Dutch Arminians. This irenic, rationalist position was dubbed by Trevor-Roper 'the wide Socinian tradition' and within its lineage Great Tew held an important place.2 On this reading, it was the

critical, even sceptical approach to Christianity adopted by the Socinians which commended them to this Oxfordshire set.

Trevor-Roper's account of Great Tew has not gone unchallenged, and an alternative reading was offered by Richard Tuck. **Tuck questioned the credentials of Falkland's circle as liberal and tolerant thinkers, and argued that in the 1640s they were responsible for some of the most trenchant defences of royal power and authority.** He noticed that several of the men of Great Tew actually held to very strong notions of sovereignty, and suggested that these political ideas were inseparable from their wider project.
…

Of all Falkland's friends, it was William Chillingworth (1602-1644) who felt most keenly the attractions of Socinianism and who travelled the most turbulent religious path.
…

When Chillingworth returned from Douai, he was in need of support and hospitality in England. Not long after his arrival in England, Falkland's Catholic mother, Lady Elizabeth Cary (1585-1639), took him into her household, offering him his board and a good supply of intelligent conversation. She, however, believed him still to be within the Roman fold. She was much mistaken; **not only had Chillingworth abandoned his Catholicism but he also entertained serious reservations about a range of doctrines, including the Trinity.** He made little effort to conceal his doubts and soon Lady Elizabeth became aware of his unusually sceptical stance. When she found out that he had been spreading the seeds of doubt among her children, she was horrified. Immediately, she threw him out of her house.4

Chillingworth soon found a far more congenial environment in which to work out his faith, in the house of Lady Elizabeth's eldest son Lucius, Lord Falkland. **Having inherited the house at Great Tew in 1625 from his maternal grandfather, Falkland settled there in around 1632 and put the house to good use.**5 His visitors included the playwright Ben Jonson (1572-1637), poets such as Edmund Waller (1606-1687), and the divines Henry Hammond (1605-1660), Gilbert Sheldon (1598-1677) and George Morley (1598-1684). John Aubrey recalled that 'all the excellent of that peaceable time' gathered there, and the civil war Royalist and historian Edward Hyde would immortalize this circle after the Restoration.6 Great Tew was clearly a scholarly place, but its visitors were not there simply to read and debate in the abstract. Falkland's friends tended to be men of action who sought to engage with questions they deemed important for themselves and for the commonwealth.7
…

Furthermore, Falkland's sister Lucy Cary (b. 1619) attributed her brother's disdain for the Catholic Church to the evil influence of Socinus. **She recalled that he was not hostile to Catholicism, nor settled on strong religious beliefs, until the early 1630s when 'meeting with a book of Sosinus his it opend to him a new way.'**14
…

Hugh Cressy (1605-1674), one-time fellow of Merton and friend of Hyde and Falkland, recalled that in refuting the papists Chillingworth had relied upon Socinus' '*Answer* to certaine *Theses Posnanienses*.'15 Socinus had twice replied to theses from the Jesuit College of Posnan in Poland, firstly in his *Assertiones theologicae de trino et vno deo* and then in the *Defensio Animadversionum Adversus Gabrielem Eutropium*, both published posthumously in 1618. Cressy is presumably referring to these texts. **He also claimed to have lent Falkland Socinian books; indeed, Cressy boasted that he was the first to bring them into England.**16
…

It was a position he continued to hold throughout the 1630s, **famously proclaiming that 'the BIBLE onely is the Religion of Protestants.'**35

Although Chillingworth shared the Socinians' approach to Christianity, he did want to distance himself from their specific theological doctrines. In his published writings he consistently maintained that he believed in the Trinity and the atonement – and denied that the label 'Socinian' could be applied to him.36
…

It was clear to Chillingworth that the scriptural evidence for the Trinity was not conclusive – and Chillingworth was careful to avoid the subject as far as possible. The only extensive discussion he undertook was in a private letter, and here he listed in great detail the patristic evidence for the Arian position in the second and third centuries AD. It had obviously been a subject of intense study for him and this study increased his doubts about the Trinity. His failure to integrate the Trinity into his conception of Christianity would be seized upon by his enemies.37 **More generally, the vision of Christianity set forth in Chillingworth's writings and sermons is not one in which the Trinity or the divinity of Christ play much part. Instead, he preferred to focus on the moral duties which all men lay under.**
…

And Falkland went on to say: **'I professe my self not onely to be an Anti-Trinitarian, but a Turk, whensoever more reason appeares to me for that, then for the Contrary.'** Falkland eschewed any such profession of anti-Trinitarianism or Turkism, and it seems that Falkland did not intend any irony here. Certainly his good friend Edward Hyde assumed that Falkland accepted the divinity of Christ.38 But Falkland did not

elaborate on the doctrine of the Trinity and it is not entirely clear where it fitted in to his understanding of Christianity.
...

More recently, however, the wise words of the Christian Fathers had become associated with a single heretical sect: the Socinians. Venting his disappointment and frustration upon his congregation, he sighed:

> **Among the ancient fathers, we find not only that Christ is a lawgiver, but that he hath published laws which were never heard of before; that he hath enlarged the ancient precepts, and enjoined new; and yet now it is socinianism to say but half so much.** Clemens Alexandrianus (3. Strom, in fine) saith, that Christ is more than a lawgiver; he is both Logos kai Nomos, and quotes St Peter for it.48

According to Chillingworth, the Fathers – particularly in the Greek world – saw Christ as the moral leader par excellence, whose ethical precepts outdid all the previous philosophers for the wisdom and virtue they contained.

When he interpreted the message of Christianity in terms of rules and laws, **Chillingworth stepped outside the world of Reformed exegesis and onto the sandy ground occupied at that time by the Remonstrants and the Socinians.** As suggested earlier, these groups emphasised Christ's commands at the expense of the Mosaic Law and even the natural law, and encouraged men to put Christ's words into practice.
...

In Poland and the United Provinces these questions had taken on a real urgency, where radical spirits emphasised the pacifist strand in Christ's teaching and refused to make Christianity compatible with human society. More moderate voices had been heard, **notably Episcopius, Grotius and Ruar, who pressed a version of Christianity less destructive of civil society as they knew it – and one less hostile to non-revealed principles of social life.** But all groups emphasised the importance of following the laws of Christ for those who wanted to reach heaven; and they played down the significance of any previous divine commands, whether known from the Old Testament or from natural reason, when it came to salvation.49
...

Falkland shared his friend's disdain for the claims of the Catholic Church, but his own understanding of Christianity differed significantly from Chillingworth's. His ideals were those of the great Dutch writer Desiderius Erasmus (c. 1466-1536) and the Christian humanists – and they had a rather different view of the relationship between Christianity and nature. **Erasmus, whom Falkland 'much esteemed,' drew on Platonic and Stoic traditions to portray the natural world as a place of concord, held together by a set of natural laws which regulated and maintained it.** Falkland was deeply attracted to Erasmus' version of this ideal of unity and it appears most strongly in the Platonic passages of Falkland's poetry.62
...

One of the fellows of The Queen's College, Oxford, Thomas Crosfield (1602-1663), remarked in his diary for 1636:

> That Socinianisme will never be received within our Kings dominions 'tis thought, because of these and the like positions thereby maintained w[hi]ch are repugnant to our State & government, as namely
>
> 1. **That noe magistrats are to be tolerated as we have them**
> 2. **That no warre either offensive or defensive is lawfull**
> 3. **That in Polonia onely is the pure form of Church government[.]**67

https://en.wikipedia.org/wiki/Roger_Williams#Early_life

Williams had a spiritual conversion at an early age, of which his father disapproved. **He was apprenticed as a teen under Sir Edward Coke (1552-1634) the famous jurist, and he was educated at Charterhouse School under Coke's patronage,** and also at Pembroke College, Cambridge (Bachelor of Arts, 1627).[10]

https://www.garynorth.com/freebooks/docs/pdf/the_failure_of_american_baptist_culture.pdf

Roger Williams, the Baptist founder of Rhode Island, was, as I understand it, a very gifted man, both in intellectual ability and personal presence. **Edward Coke, that famous British jurist, is said to have been so impressed with him that he sent him off to study at Cambridge University in England.** When Williams came to the American colonies, he was offered one of the principal teaching positions in the Massachusetts Bay area at only 28 years of age.
...

I'll try to stick to the particulars of Williams's own position. **He claimed that no individual or group could sit in judgment over another individual or group, because man is a fallen, natural creature.** He picked up some of this from the Calvinists, though as I understand them, he misunderstood what they were saying. He believed that man was so fallen into sin as to be incapable of making right decisions in religious matters. There

was no grace given to solve this problem sufficiently. The Reformed, or Calvinist theologians never believed that.
...

Here's what Williams said:

> The conscience is found in all mankind, more or less; in Jews, Turks, Papists, Protestants and pagans ... **I have fought against many several sorts of consciences; is it beyond all possibility that I have not persecuted Jesus in some of them?**

...

Convinced that all men are bound to err, Williams trusted no one. He became a "perfectionist." I'm sure you're somewhat familiar with the term. **He was satisfied with no one's judgments but his own and those who agreed with him in every detail – those who understood grace as truly as he did. He expected all or nothing.**

In search of the perfect church, I am told, Williams separated himself from the Church of England. It promoted some errant practices, and so he could be no part of it. Many others of his day, as well, were leaving that church. But his perfectionism then forced him to spurn the Boston church and the Puritan commonwealth of Massachusetts because it too, despite the ocean's distance, had not separated itself completely from the English church. The Puritans were not pure enough for him. He then separated himself from the Plymouth congregation (itself known for its perfectionism and separatism) because it had not proved as perfectionistic and separatistic as he had at first thought it to be. One account of this last situation I think you will find interesting. As Mr. Edmund Morgan records it: "**The cause of Williams's discontent, by his own account, was the fact that the Plymouth church had not proved as separatist as he first supposed it to be. When members of the church returned on visits to England, they attended Church of England services there, and were not cast out of the Plymouth church for doing so.** In this way the Plymouth church was communicating with the churches of England and by implication acknowledging them to be true churches. Williams, by remaining a member, shared in this acknowledgment; therefore he must leave them." **He ended up taking communion only with his wife.**

Williams did have some strange ideas on the nature of the Church. **Just as the individual was to be perfect, separated from the world into the mystical body of Christ, so the church also was to be separated from the natural, physical realm. It was so holy and perfect, so full of *grace*, that it could have no connection to the natural, fallible, material world.** It was a "spiritual" thing. He saw the New Testament as a repudiation of the Old, **and denied that there was any parallel between the fallible, historical, physical Israel of the Old Covenant, and the infallible, eternal, "holy mystic nation" of the New Covenant.**

This led him to deny the application of any Christian standards to any concrete area of life, especially politics. **The testament of Christ, he said, is "opposite to the very essentials and fundamentals of the nature of a civil magistracy, a civil commonwealth or combination of men, which can respect only civil things." There was no connection in his thinking between this world and the spiritual one, between nature and grace.** He also says, "civil weapons are improper in this business and are never able to reach the soul ... being of a material civil nature ... (they) cannot extend to spiritual and soul causes." **To tie the church to the state, he said, would be "to put God and Christ and Spirit out of heaven and subject them to natural, sinful, inconstant men ... and so, naturally, to Satan himself, by whom all peoples are guided."***
...

He wrote to one fellow, the governor of Massachusetts in fact, "abstract yourself from the dung heap of earth." As he saw it, the Christian and the church have no place in a sick, dying world. I can't help but think of the response which Jesus gave to just such a thought: "It is not those who are healthy who need a physician, but those who are sick; I did not come to call the righteous, but sinners."
...

But particularly annoying to me, K.D., is the low opinion which the "religious liberty" proponents have of the church, despite the accolades with which they praise it. Williams thought that the church was to be "pure," as he defined purity. But at the same time, he refers to the church as though it is irrelevant. Somehow, it seems, God would have been better off to leave the world alone, let it have its right to do what it pleases, without the life-giving influence of the preaching of the Word and communal prayer and praise. **As far as Williams and, it seems to me all those with him, are concerned, the church of Jesus Christ is completely unnecessary for social stability. The church, according to Williams is "... like a corporation ... (which) may dissent, divide, break into schisms, yea, wholly break UP ... and yet the peace of the city be not in the least measure impaired or disturbed. Because the essence ... of the city is essentially distinct. ... The city was before and stands entire when such a corporation ... is thrown down."** The one social institution through which grace is pre-eminently made available (through the preaching of the Word of God) now has no necessary connection to the properly functioning city. As I see it, that was Cain's attitude. Grace is not needed for nature. Society can function well without it. To me, K.D., this doesn't seem like Christianity. It seems like the religion of man apart from God. The world is "a dung heap" and the church and the Christian message are not really needed. Men are free to do what they want, and we don't make any effort to yank them from the dung. After all, our consciences might be mistaken about the truth.

...

Williams and his followers, and for that matter all those who support the "religious liberty" idea, all embrace the religion of Deism in principle and practice, if not also in name. I hope I don't sound too dogmatic to you, but this Deism is so slippery a notion that it could come into our thinking without our ever really knowing it. And frankly, K.D., that worries me.

As I understand it, one of the "fathers" of this religion was a fellow named Edward, Lord Herbert of Cherbury. Quite a name to carry around. Now Mr. Cherbury believed that despite the fact that man is in nature, a state removed from grace, he is a rational being. **Here's where I think Williams was contradictory in his thinking; man's conscience is so marred that he can't be assured of the legitimacy of any of his actions in a world that's a dungheap; yet he's not so unreasonable and not so covered with the soot that he can't make a proper society – a "city" as he called it. I think he was influenced by Mr. Cherbury or someone like him.**
...

In fact, one would have to conclude as Williams did (by implication), that Christianity is dispensable – it is only *one* religion among many in a pluralistic, yet reasonable world. The reason of enlightened men is enough. We can best facilitate religious concord among men by letting "Reason" dictate religious communal needs. A Christianity which is too distinctive will just get in the way.

I don't think that it is some fluke of history, K.D., that Williams postulated the success of a society without the Christian religion at its base at the same time that Mr. Cherbury was writing on these universal notions. By 1636, the year of the founding of Rhode Island, *De Veritate* was in its second edition, and soon to be coming out in its third edition in 1639. As I see it, Williams, like Cherbury, was a product of his times. All men were looking for a way to end the religious disputes and wars in Europe and it seemed like this idea of "Reason"/"Common Notions" could do the job.
...

In particular, it has to do with Williams's analogy of the church as a corporation. He said: "... the essence ... of the city ... is essentially distinct. ... The city was before and stands entire when such a corporation ... is thrown down." In support of his idea that the city can exist without the church, it seems to me that he has somewhat of a primitivistic attitude. I don't mean that he is bringing up an outmoded idea. But, he seems to be supporting his case from history, and primitive history at that. He seems to idealize the city, and I would guess the ancient ones at that – cities like Greece and Rome. **A number of Protestants in Williams's day looked up to those pagan cities as paragons.** One fellow in particular, Hugo Grotius, preferred the ancient cities as models of strength and stability; as illustrations from history they had great weight in discussions such as this because they were taken "from better times and better people." I see a great deal of Williams's "religious liberty"/"liberty of conscience" idea in Grotius, and I wouldn't be surprised if history ends up showing some connection between the two.
...

Williams, we could say, was a hyper-Calvinist who ended up having to abandon all his religion for a social peace based on reason.

Grotius, on the other hand, was an Arminian. He did not believe that man was really depraved at all. And just as Williams's view of man – irredeemably depraved – affected his view of the relationship of nature to grace, so Grotius's view affected his position on the Nature/Grace relationship. **For Williams, grace could not be found in nature. But that was no great problem. Reason was satisfactory. His reason was a bottom-line common denominator retreat zone; it was purely natural, but it would do the job.**

But for Grotius, man was not so depraved as to make grace really necessary for nature. Man and nature already had enough capabilities to exist as a well-functioning city. What strikes me is that when one has a dichotomy between the realms of nature and grace, he ends up doing away with grace altogether. Grotius, as an Arminian, believed in a "free" and undepraved will in man – he ended up denying the need for God's grace in the social realm. Natural man already had enough grace on his own. He still had some grace in him and so he could depend upon his own enlightened reason. **Just like the Greek and Roman cities, the modern city could be based on man's innate ability to reason. The church could add some good things, but they would just be "extras," nothing absolutely necessary.**

https://books.google.fi/books?id=8-9oAgAAQBAJ&lpg=PP1&hl=fi&pg=PA191#v=onepage&q&f=false

The clergy of the American founding era may indeed have preached a Lockeanized Protestantism, but Nussbaum argues that the message Williams brought to the colonies was a Stoicized Protestantism. Certainly she is right that early American thought was suffused with a reverence for Roman republicanism and Stoicism, especially Cato and Cicero. Besides the obvious formal influences (frequent artistic depictions of George Washington in toga and laurel wreath, calling the upper house of congress “the Senate”), Nussbaum argues for a more specific influence: **“The Stoics taught that every single human being, just by virtue of being human, contains a portion of the divine … Ethical capacity (often called ‘conscience’ in later followers of Stoicism) is therefore worthy of boundless reverence; it is in effect the person, the core of our humanity.”** Williams

does not cite Stoic thinkers directly but was likely familiar with them. More important for Nussbaum's case is that his religious thought was already influenced by the Stoics via its influence on Protestantism's emphasis on individual faith. "We should, then, hear Roger Williams's appeals to conscience in a stoic, as well as a Protestant, context, **or, rather, recognize that his Protestant context was steeped in Stoicism.**"72

https://static1.squarespace.com/static/591ccf16db29d6afe8606726/t/598023ae3e00be8e7b42ddf5/1501569967988/reyes.pdf

Whereas many legal scholars tend to focus on the ideas of the Framers themselves and their antecedents in the writings of John Locke, Nussbaum concentrates instead on the seventeenth-century writings of Roger Williams. "We should not focus only on the eighteenth-century arguments of the Framers, ignoring this prior, and distinctively American, tradition, quintessentially embodied in Williams's *The Bloudy Tenent of Persecution* (1644)" (p. 36). **Beginning with the idea of conscience itself, Nussbaum notes that Williams was strongly influenced by the Stoic idea "that all human beings are of equal worth in virtue of their inner capacity for moral striving and choice, and that all human beings, whoever and wherever they are, are owed respect"** (p. 45). Williams understands the faculty of conscience in much the same way that the Stoics understood the faculty of moral striving – i.e., "as a general power of choice, the directing capacity of our lives" (p. 52). **But Williams goes beyond the Stoics in adding emotional and imaginative elements to this capacity, and in emphasizing its susceptibility to harm.** "Williams ... sees that the conscience is not invulnerable: it can be damaged and crushed, and it needs space to unfold itself' (p. 53). Violation of a person's liberty of conscience is a terrible wrong, evocatively described by Williams as "Soule rape" (p. 37).

https://books.google.fi/books?id=bsXawgEACAAJ&lpg=PA64&hl=fi&pg=PA79#v=onepage&q&f=false

To get still clearer about this distinction, let's think of two memorable images used by seventeenth-century **philosopher Roger Williams, a creative and critical follower of the Stoics,** when he spoke of the deprivation of religious liberty. Some types of deprivation, he said, are like "imprisonment": those are the types that allow you to believe freely but prevent you from acting on your beliefs. But some types go deeper, and he called them "soul rape," thinking of the inner damage to character and integrity caused by being forced to affirm things you don't really believe. Respect for human dignity entails contending against both forms of insult.

https://chrisnavin.com/2008/09/01/martha-nussbaum-channels-roger-williams-in-the-new-republic-the-first-founder/

She tells the story of Roger Williams, founder of Rhode Island, who held deep religious beliefs, yet, Nussbaum argues, was someone who cast his moral thinking deeper than those beliefs, **drafting the Rhode Island charter on the idea *'individual human conscience:'***

"Conscience, for Williams, plays the role that the directive faculty of moral choice plays in the ancient Stoic authors whom he studied: it is a faculty of searching and choosing, although for Williams it includes imagination and emotion as well as ethical reasoning. It is, Williams holds, the main source of our identity as agents: it is "indeed the man.""

So, Williams tempered his religious beliefs with classical learning and a certain political pragmatism...**yet he also tempered that political pragmatism with his religious beliefs (avoiding a true, hard-hearted Stoicism).** Nussbaum further suggests that some of Williams' thinking even pre-saged Immanuel Kant:

"Just as Kant asks a person to test the principle of his or her conduct by asking whether it could without contradiction be made a universal law for all human beings, so Williams's critique of the leaders of Massachusetts and Connecticut is that their idea cannot pass a test of that sort: they love freedom–but only for themselves."

"For both, the source of moral principles, and of all moral worth, is ultimately in our own freedom, and that freedom must be respected."
...

Nussbaum goes on to contrast John Locke with Roger Williams, and points out how Williams was more sympathetic to the idea that:

"...different religious doctrines meet and overlap in a shared moral space. Each religious person will connect this moral space to his own higher religious goals and ends; ***but within that space we are all able to speak a common language and share moral principles.*** *As I have argued, this idea of overlap is ultimately more fruitful than the idea of separation."*

https://www.garynorth.com/freebooks/docs/21f2_47e.htm

Forty miles north of Providence, Rhode Island, another experiment was in progress in 1640. In Boston dwelled the Puritans, **the most self-consciously biblical people in history.** They had turned to the Bible in search of moral and political order. Their Body of Liberties (1641) served as their political charter, and that charter was biblical to the core, even citing specific Bible verses to justify its laws.

It was against the Puritans' vision of a New Israel in the New England wilderness that the citizens of Rhode Island rebelled, and in doing so, they led the world, step by step, into a political conspiracy against God.

Governor John Winthrop in 1630 had hoped that Massachusetts would serve the whole world as a city on a hill, a bright beacon of biblical Christianity that would persuade men to construct a biblical civil order in their lands. **But is was not Winthrop's beacon that illuminated the future; it was Roger Williams' beacon, a blinding light that promised autonomy from God for humanist political man.**

That light has blinded Winthrop's Christian heirs. The thought that a nation can and should be explicitly, publicly Christian is unacceptable to men and women who openly affirm the need for Christian families, Christian schools, and Christian everything else. **"There is no neutrality," they proclaim, until someone mentions civil government.**

https://www.garynorth.com/conspiracyinphiladelphia.pdf

The first skirmish in the struggle to create the modern world was in the winter of 1636, when Roger Williams fled Massachusetts and headed into the wilderness of what was to become Rhode Island. Williams successfully created a new colony, but it was far more than a new colony; it was a new concept of civil government. **It was a concept that has become dominant today—the distinguishing mark of political modernism.** He founded a colony that was openly secular; there would be no church-state connection, or even a religion-state connection.

In 1642, the General Court of Rhode Island organized a new government. It required an oath of office from magistrates to “walk faithfully” and taken “in the presence of God.”6 There was no other mention of religion.
…

In response, in 1647, acts and orders were agreed upon. **The colony was again identified as “democratical,” meaning “a government held by the free and voluntary consent of all, or the greater part of the free inhabitants.”**8 This supplemental document admitted the existence of “our different consciences touching the truth as it is in Jesus,” and affirmed “each man’s peaceable and quiet enjoyment of his lawful right and liberty. ...”9 It enacted civil laws and sanctions for various crimes, including murder, rebellion, misbehavior, witchcraft, adultery, fornication, perjury, kidnapping, whoremongering, etc. It did not, as had been done in Massachusetts, identify these crimes as crimes listed in the Old Testament, with passages cited (e.g., Massachusetts’ Body of Liberties, 1641). Instead, it made this statement:

> These are the laws that concern all men, and these are the penalties for transgression thereof, which, by common assent, and ratified and established throughout the whole colony; and otherwise than thus what is herein forbidden, all men may walk as their consciences persuade them, everyone in the name of his god. And let the saints of the most high walk in this colony without molestation in the name of Jehovah, their God for ever and ever, etc., etc.10

This meant, however, that non-saints had the same civil powers and immunities, that they, too, could walk in the colony without molestation, and more to the point covenantally, vote in all colonial elections, “everyone in the name of his god,” or lack thereof.

In 1663, Charles II, as a self-identified Christian monarch, granted to them in the name of “the true Christian faith,” a special dispensation: they would not have to worship God according to the Church of England, “or take or subscribe the oaths and articles made and established in that behalfe; ...” **The charter then adopted language that was to be repeated again and again in the next hundred years of chartergranting and constitution-making: “... noe person within the sayd colonye, at any tyme hereafter, shall bee any wise molested, punished, disquieted, or called into question, for any differences in opinione in**

matters of religion, and doe not actually disturb the civill peace of our sayd colony: …"11 This he called a "hopefull undertakeinge."12

The charter mentioned "the good Providence of God, from whome the Plantationes have taken their name,"13 but that was a mere formality; the heart of the experiment was judicial. **What is remarkable in retrospect—and what has become standard fare in making the case for modern Christian pluralism—was the King's express hope that by severing the colony's civil government from religion, the settlers "may bee in the better capacity to defend themselves, in theire just rights and liberties against all the enemies of the Christian ffaith, and others, in all respects."**14

https://digitalcommons.georgefox.edu/quakerstudies/vol14/iss1/2/

Ted Underwood's pioneering work *Primitivism, Radicalism, and the Lamb's War* (1997) finally established an understanding of early Quaker theology on its own terms. By investigating theological debates between Quakers and Baptists, Underwood argued that it was a profound, although abstract, commitment to primitive Christianity that fashioned Quaker perceptions of divine inspiration; **forming a theology that was non-Trinitarian, highly spiritual, and dismissive of Scripture and traditional doctrine. Quaker theology was less the product of revolution specifically and more 'the *fag-end* of the Reformation'.**22
…

Early Quaker conceptions of the Light within seemed to rest upon a Christology which tended towards a quasi-Unitarian position that emphasised the oneness of Christ and God the Father, largely disregarding the Holy Spirit (I use the term 'Unitarian' advisedly to refer to the belief in the unipersonality of the Godhead: this should not be confused with certain types of Unitarianism, such as Arianism and Socinianism, which stressed the humanity of Jesus rather than his divinity).31 **The terms Christ, God, and Holy Spirit were not denied, but appeared to have been used interchangeably to describe the Light, rather than to acknowledge the existence of distinct divine persons.** Early Quakers most commonly identified the Light with Christ, professing that the pre-incarnate and the incarnate Christ were the same. **Christ on earth was, therefore, not manifest in human form, but a celestial being in the vessel of a human body.**
…

On the eve of the Restoration, George Fox's epic apology *The Great Mistery of the Great Whore Unfolded* (1659) encapsulated the intensity and character of the theological war with anti-Quakers that had been raging during the 1650s. From scores of anti-Quaker tracts, Fox had selected particular accusations against Quakerism and rebutted them point by point. In referring to the Quakers' perception of Christ's human body, Richard Baxter (1615-1691) had asked, '*Do not they blasphemously make Christ an Idoll, that call our Temples, Idols Temples* [?]'; **Fox's riposte was that, 'Christ's body was and is the Temple of God, who ended all outward Temples made with hands, and so that is no idol, but others are Idols, held up by you and the Pope'.**44
…

In *The Sandy Foundation Shaken* (1668), which was partly a printed account of the oral debate, **Penn reasserted his belief that Scripture and 'right reason' affirmed 'ONE to be God, and God to be ONE', and that since satisfaction was 'dependant on the Second Person of the imagin'd Trinity', it was but a 'Vulgar Doctrine'.**93
…

It would appear that there was an assumption by many non-Quakers that the Quaker's denied the incarnate Christ and shirked away from his divinity. This was far from the case; however, it may be speculated that Quakers were able to use this erroneous theological assumption to their advantage. **By professing to believe in the deity of Christ in unity with God, Quakers might have been able convince non-Quakers of their Trinitarianism without actually undermining their quasi-Unitarian theology. While in prison, Penn wrote to Arlington, stating that he had 'always expressly own'd & maintain'd the eternall diety of Jesus Xt, and substantiall unity of Father, Word & Spirit'.**100 Penn subsequently made a similar, public declaration in *Innocency with Her Open Face* (1669).101 **Once set in the context of Quaker theology, Penn's comments can be construed as little more than a carefully worded affirmation of non-Trinitarian Quakerism;** yet it was reported that Stillingfleet, among others, was convinced that Penn 'is sensible of the Impiety & Blasphemy of his said Hereticall Opinions, and that he doth recant and retract the same'.102 A sober, apparently Trinitarian, confession of faith, rather than a clear and detailed recantation, was enough to see an order given for Penn's release on 28 July 1669.
…

The perception that the Quakers were cloaked antitrinitarians was as strong as ever: as an indignant Francis Bugg later claimed, **'They [the Quakers] tell you they own a Scripture Trinity, but mean not a word of it'.**104
…

Like many anti-Quakers, Leslie was convinced of an unholy alliance between Quakerism and Socinianism: a diabolic plot to uproot and destroy Christianity. **Such a view may initially seem unfathomable since early**

manifestations of the former pertained to a belief in Christ's total divinity, while the latter emphasised his humanity. However, the offence of antitrinitarianism lay not merely in its false description of the Godhead, but also in its theological implications. Hence, Leslie was able to allege that, 'the *Quakers* are direct *Socinians* for they positively deny the [doctrine of] Satisfaction'.136 Here then, both enthusiasts and rationalists were drawn together by their supposed blasphemy against the person of Christ: **the lie against the truth of atonement, whereby the implicit appeal to human perfectibility proved the state of pride necessary to maintain the delusion.** In one attack, Leslie noted that George Whitehead 'Runs on *Blaspheming*, and (with the *Socinians*) *Ridiculing* the Doctrin of *Satisfaction* by *Jesus Christ*, whom he Denies to be *God-Man* or the *Saviour* of the World'.137 **Penn was also denounced as a blasphemer for continuing 'the old *Socinian* Job Trot' that Christ's satisfaction was '*Irreligious* and *Irrational*'.**138
...

They observed that **George Fox had, in his seminal *Newes coming up Out of the North* (1653), dismissed the Scriptures as 'Carnal', describing how the 'GOSPEL IS BUT DUST, *MATTHEW*, *MARK*, *LUKE*, and *JOHN*, which is the Letter'.**151
...

For Faldo, the claim that 'there is no such thing as *Ordinances* now under the *Gospel*' was one of '*the* Capital *Errours and Blasphemies of the Quakers*'.167 He noted that, in 1655, James Parnell (bap. 1636, d. 1656) had dismissed baptism without to '*be formal imitation, and the invention of man, and so a meer delusion*', and the Lord's Supper to be nothing but '*Feeding upon the husk and shadow, which is carnal*'.168 **Emboldened, William Smith (d. 1673) had played the proverbial card of Reformation polemic by claiming that the ordinances of baptism and bread and wine '*rose from the Pope's invention*';**169 whereas, John Higgins (1633-1667) had claimed that '*Water-Baptism was but the administration of* John'.170

http://www.english.upenn.edu/~mgamer/Etexts/hume.superstition.html

On the other hand, our sectaries, who were formerly such dangerous bigots, are now become very free reasoners; **and the quakers seem to approach nearly the only regular body of deists[8] in the universe, the literati, or the disciples of CONFUSCIUS in CHINA.[9]**

https://archive.org/details/theologicalwork00blangoog/page/n272/mode/2up?view=theater

The only sect that has not persecuted are the Quakers; **and the only reason that can be given for it is, that they are rather Deists than Christians. They do not believe much about Jesus Christ, and they call the scriptures a dead letter.** Had they called them by a worse name they had been nearer the truth.

https://archive.org/details/in.ernet.dli.2015.218820/page/n433/mode/2up?view=theater

Although this is rather a jejune interpretation of the phenomenon of religion, **Schleiermacher's writings have inspired whole generations of Protestant theologians. He was also indubitably one of the first and most powerful dialecticians that Germany ever had. But fundamentally he was only a renegade disciple of the Enlightenment.** He possessed merely the will to believe, just as he also leaned pretty strongly, but not quite whole-heartedly, to pantheism, often treating God and the Universal as identical concepts, and evincing the highest possible respect for Spinoza.

http://www.bible-researcher.com/mathison.html

In his own effort to overturn orthodox Christianity, **Charles Beecher (1815-1900) denounced "creed power" and argued for "the Bible, the whole Bible, and nothing but the Bible."** The universalist minister A.B. Grosh (d. 1884) declared in a similar way, "In religious faith we have but one Father and one Master, and the Bible, the Bible, is our only acknowledged creed book."

The radical American version of "solo" Scriptura reached its fullest expression in the writings of the Restorationists as they applied the principles of Democratic populism to Enlightenment Christianity. In 1809, the Restorationist Elias Smith (1769-1846) proclaimed, "Venture to be as independent in things of religion, as those which respect the government in which you live." Barton Stone (1772-1844) declared that the past should be "consigned to the rubbish heap upon which Christ was crucified." Alexander Campbell (1788-1866) made his individualistic view of Scripture very clear, declaring, "I have endeavored to read the Scriptures as though no one had read them before me, and I am as much on my guard against reading them to-day, through the medium of my own views yesterday, or a week ago, as I am against being influenced by any foreign name, authority, or system whatever."

It is from the intellectual “mob,” **with the failures from all academic professions,** the spiritually unfit and morally inhibited, at its head, that the gangsters of Liberal and Bolshevist risings are recruited.
…

Among all these jurists, journalists, schoolmasters, artists, and technicians one is apt to overlook one type, the most sinister of all: the sunken priest. Religion is the personal relation to the powers of the world around us, expressed in a world view, in pious usages and the personal attitude of renunciation. A church is the organization of a priesthood which fights for its temporal power. It brings the forms of religious life, and therewith the people who cling to them, under its power, and it is therefore the born enemy of all other forms of power: State, rank, or nation. **During the Persian Wars the priesthood of Delphi agitated on behalf of Xerxes and against the national defence.** Cyrus was able to conquer Babylon and overthrow Naboned, the last king of the Chaldees, because the priesthood of Marduk was in league with him. The histories of ancient Egypt and ancient China are full of examples of the sort, and in the West there was only occasionally truce between monarchy and church, throne and altar, nobility and priesthood, when an alliance between them against a third party promised to be advantageous. **“My kingdom is not of this world” is the deep saying which is true of every religion and is betrayed by every church.**

4 **For there are certain men crept in unawares, who were before of old ordained** [*progegrammenoi*] **to this condemnation, ungodly men, turning the grace of our God into lasciviousness, and denying the only Lord God, and our Lord Jesus Christ.** … 8 **Likewise also these filthy dreamers defile the flesh, despise dominion,** [*kyriotēta*] **and speak evil of dignities.** [*doxas*] … 11 **Woe unto them! for they have gone in the way of Cain, and ran greedily after the error of Balaam for reward, and perished in the gainsaying** [*antilogia*] **of Core.** … 16 **These are murmurers, complainers, walking after their own lusts; and their mouth speaketh great swelling words, having men's persons in admiration because of advantage.**

https://www.researchgate.net/publication/228277490_Christian_Pacifism_Before_Constantine

The Tertullianists rejected the human body, sexuality, and bodily pleasures. Tertullian wanted virgins to be veiled, and condemned a second marriage by a widower as fornication. He censured every type of painting and sculpture. **He denounced Catholics as "Psychici" because of their affection for the natural world.**91

> 91. **It is perhaps not a coincidence that the only early Christian sects which were officially pacifist were heretical sects which hated the created world.** The hostility to Creation is directly opposed to Jewish and Christian doctrine from the first chapter of *Genesis* all the way through the New Testament.

…

In another book from this period, he argued that Christians should not flee from persecutors, even though Jesus had told the disciples to do so.94

…

Tertullian is the most famous pacifist of early Christian writers, but he cannot be considered representative of mainstream Christian thought. **His pacifism was the one of the products of a heresy founded on hatred of the material world, and a longing for human suffering.**

> http://anglicanhistory.org/england/jnfiggis/defects1917/13.html
>
> This brings me to the second point, the notion that all war is wrong. **That notion rests on the presupposition best expressed by the great Quaker orator, "Force is no remedy."** The ground is different from that discussed above, and in some respects inconsistent with it. The former rests on materialistic arguments; this, on the contrary, is a perverted spiritualism. So far

as I can understand it the claim that force is no remedy involves the notion that, since realities are spiritual, all attempts at achieving ends by material means are doomed to failure. **This argument, then, rests on the idea of the godlessness of all the world of Nature; ultimately it is Manichean, seeking spirituality purely in abstraction, logically destructive of the Incarnation and the Resurrection of the Body.**

https://www.gutenberg.org/cache/epub/2439/pg2439-images.html#link2HCH0004

If early fathers of the Church had occasionally used language which seemed to imply that they disapproved of all resistance, they had also occasionally used language which seemed to imply that they disapproved of all war and of all oaths. **In truth the doctrine of passive obedience, as taught at Oxford in the reign of Charles the Second, can be deduced from the Bible only by a mode of interpretation which would irresistibly lead us to the conclusions of Barclay and Penn.**

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Letters/Letter_40

I have behaved to all the Galilaeans with such kindness and benevolence that none of them has suffered violence anywhere or been dragged into a temple or threatened into anything else of the sort against his own will. **But the followers of the Arian church, in the insolence bred by their wealth,** have attacked the followers of Valentine[2] and have committed in Edessa such rash acts as could never occur in a well-ordered city. **Therefore, since by their most admirable law they are bidden to sell all they have and give to the poor that so they may attain more easily to the kingdom of the skies, in order to aid those persons in that effort, I have ordered that all their funds, namely, that belong to the church of the people of Edessa, are to be taken over that they may be given to the soldiers, and that its property[3] be confiscated to my private purse.[4] This is in order that poverty may teach them to behave properly and that they may not be deprived of that heavenly kingdom for which they still hope.**

https://archive.org/details/ecclesiasticalh02valogoog/page/188/mode/2up?view=theater

He moreover interdicted such as would not abjure Christianity, and offer sacrifice to idols, from holding any office the court: **nor would he allow Christians to be governors of provinces; "for," said he, "their law forbids them to use the sword against offenders worthy of capital punishment."**2

2. The emperor probably alludes to such passages as Matt. xxvi. 52, and John xviii. 11, which he throws in the teeth of Christians, as incapacitating them for civil office.

https://ccel.org/ccel/schaff/npnf214/npnf214.viii.v.iv.iii.html

Canon III.

If any one shall teach a slave, under pretext of piety, to despise his master and to run away from his service, and not to serve his own master with good-will and all honour, let him be anathema.

https://biblehub.com/kjv/1_timothy/6.htm

1 **Let as many servants as are under the yoke count their own masters worthy of all honour, that the name of God and his doctrine be not blasphemed.** 2 **And they that have believing masters, let them not despise them, because they are brethren; but rather do them service, because they are faithful and beloved, partakers of the benefit. These things teach and exhort.** 3 **If any man teach otherwise, and consent not to wholesome words, even the words of our Lord Jesus Christ, and to the doctrine which is according to godliness;** 4 **He is proud, knowing nothing, but doting about questions and strifes of words, whereof cometh envy, strife, railings, evil surmisings,** 5 **Perverse disputings of men of corrupt minds, and destitute of the truth, supposing that gain is godliness: from such withdraw thyself.**

https://www.gutenberg.org/files/47422/47422-h/47422-h.htm#Page_185

Even while the policy of the Roman Church and clergy was steadily directed to the extinction of feudal slavery in Western Europe, it does not appear that the doctors of that church assailed the master's rights or preached insubordination to the slaves. Why then did St. Paul judge it necessary to leave on record so startling a denunciation? **The question is answered by the events of our age: these words were written for us on whom these ends of the world have come. And we have here a striking proof that his pen was guided by omniscient foreknowledge.** The God who told Paul what to write, foresaw that though the primitive church stood in comparatively slight need of such admonitions, the century would come, after the lapse of eighteen ages, when the church would be

> invaded and defiled by the deadly spirit of modern abolitionism, a spirit perverse, blind, divisive and disorganizing, which would become the giant scourge and opprobrium of Christianity.

https://archive.org/details/pursuitofmillenn0000norm_i9m3/page/200/mode/2up?view=theater

It would be surprising if amongst the swarm of students of all sorts and classes who congregated at Oxford there had been none who snatched at such ideas and scattered them abroad, simplified into propagandistic slogans. **And indeed Langland, writing on the morrow of the great revolt, has told in *Piers Plowman* how speculations concerning the State of Nature penetrated from the universities to the common people,** and with what effect:

> **Envy heard this; and bade friars go to school,**
> **And learn logic and Law, and also Contemplation,**
> **And preach to men of Plato, and prove it by Seneca,**
> **That all things under heaven ought to be in common.**
> He lies, as I live, who to the unlearned so preaches,
> For God made to men a law, and Moses taught it,
> Thou shalt not covet any thing that is thy neighbour's.

https://archive.org/details/pursuitofmillenn0000norm_i9m3/page/234/mode/2up?view=theater

When he first comes clearly into view, in his early thirties, **Müntzer appears neither as a victim nor as an enemy of social injustice but rather as an 'eternal student,' extraordinarily learned and intensely intellectual.** After becoming a university graduate and then a priest he led a restless, wandering life, always choosing places where he could hope to further his studies.
…

What Müntzer needed if he was to become a new man, sure of himself and of his aim in life, was not indeed to be found in Luther's doctrine of justification by faith alone. It was to be found, rather, in the militant and bloodthirsty millenarianism that was unfolded to him when in 1520 he took up a ministry in the town of Zwickau and came in contact with a weaver called Niklas Storch. **Zwickau lies close to the Bohemian border, Storch himself had been in Bohemia and it was essentially the old Taborite doctrines that were revived in Storch's teaching.** He proclaimed that now, as in the days of the Apostles, God was communicating directly with his Elect; and the reason for this was that the Last Days were at hand. First the Turks must conquer the world and Antichrist must rule over it; but then – and it would be very soon – the Elect would rise up and annihilate all the godless, so that the Second Coming could take place and the Millennium begin. What most appealed to Müntzer in this programme was the war of extermination which the righteous were to wage against the unrighteous. **Abandoning Luther, he now thought and talked only of the Book of Revelation and of such incidents in the Old Testament as Elijah's slaughter of the priests of Baal, Jehu's slaying of the sons of Ahab and Jael's assassination of the sleeping Sisera.** Contemporaries noted and lamented the change that had come over him, the lust for blood which at times expressed itself in sheer raving.

By force of arms the Elect must prepare the way for the Millennium; **but who were Elect? In Müntzer's view they were those who had received the Holy Spirit or, as he usually called it, 'the living Christ.' In his writings, as in those of the Spiritual Libertines, a clear distinction is established between the historical Christ and the 'living' or 'inner' or 'spiritual' Christ who is imagined as being born in the individual soul;** and it is the latter who possesses redemptive power. Yet in one respect the historical Christ retains great significance: by submitting to crucifixion he had pointed the way to salvation. For he who would be saved must indeed suffer most direly, he must indeed be purged of all self-will and freed from everything that binds him to the world and to created beings. First he must voluntarily subject himself to an ascetic preparation and then, when he has become fit and worthy to receive them, God will impose further and unutterable sufferings upon him. These last afflictions, which Müntzer calls 'the Cross,' may include sickness and poverty and persecution, all of which must be borne in patience – but above all they will include intense mental agonies, weariness with the world, weariness with oneself, loss of hope, despair, terror. Only when this point has been reached, when the soul has been stripped utterly naked, can direct communication with God take place. This was of course traditional doctrine, such as had been held by many Catholic mystics of the Middle Ages; but when Müntzer comes to speak of the outcome he follows another and less orthodox tradition. For according to him when once 'the living Christ' enters into the soul it is for evermore; and the man so favoured becomes a vessel of the Holy Spirit – **Müntzer even speaks of him 'becoming God.'** Endowed with perfect insight into the divine will and living in perfect conformity with it, such a man is incontestably qualified to discharge the divinely appointed eschatological mission; and that is precisely what Müntzer claimed for himself. It was not for nothing that this *propheta* had been born within a few miles of Nordhausen, the centre of that underground movement in which the doctrine of the Free Spirit blended with that of the flagellants.
…

Yet all this does not – as has someties been suggested – necessarily mean that Müntzer cannot have imagined his Millennium as egalitarian, even as communistic. It could equally well mean that he regarded the existing order as irremediable until the catastrophes of the Last Days had run their course, and at the same time took it for granted that once that had happened the primal State of Nature would automatically be restored. Such phantasies, which had never lost their fascination since the days of the Taborites, are known to have been familiar in the circles which Müntzer moved. **According to a fairly reliable source Müntzer's first teacher,**

the weaver Niklas Storch, held views on these matters which are hardly to be distinguished from those of the Brethren of the Free Spirit; maintaining that God makes all men alike naked and so sends them into the world, that they may be all of the same rank and may share all things equally amongst them. Again, Müntzer knew the young Humanist Ulrich Hugwald; and Hugwald had written a work prophesying that mankind would return 'to Christ, to Nature, to Paradise,' which he defined as a state without war or want or luxury and in which every man would share all things as with his brethren. Moreover on the grounds that a peasant's life was nearest to that which God had appointed for Adam and Eve, Hugwald ended by turning himself into a peasant; and so did the Humanist Karlstadt, who was a close associate and even a disciple of Müntzer's.

> https://gameo.org/index.php?title=Hugwald,_Ulrich_(1496-1571)
>
> **Paul Burckhardt correctly says that in these pompous writings there is no trace of old-evangelical heresy. They are rather the ideas of Erasmus; i.e., a blending of humanism with the Gospel.**
> …
>
> He remained for a time an adherent of the Anabaptists, abandoned his scholarly career and took up turning and agricultural tasks, but then left them, became a schoolmaster at Burg and later professor at the University of Basel.

…

As for Müntzer himself, when he writes of the Law of God he certainly seems to equate it with that original and absolute Natural Law which was supposed to have known no distinctions of property or status.

http://www.godrules.net/library/luther/NEW1luther_d17.htm

You, and everyone else, must bear me witness that I have taught with all quietness, have striven earnestly against rebellion, and have diligently held and exhorted subjects to obedience and reverence toward even your tyrannous and ravenous rule. **This rebellion cannot be coming from me. But the murderprophets, who hate me as much as they hate you, have come among these people and have gone about among them for more than three years, and no one has resisted them save me alone.**

…

On the basis of what has been said, all your articles are easily answered; for even though all of them were right and proper according to the law of Nature, nevertheless you have forgotten the Christian law, since you have not put them through by means of patience and prayer to God, as Christian people ought, but have undertaken, with impatience and violence, to wrest them from the rulers, and extort them by force; and this is against the law of the land and against natural justice.

…

Again, it is not true when you declare that you teach and live according to the Gospel. **There is not one of the articles which teaches a single point of the Gospel, but everything is directed to one purpose; namely, that your bodies and your properties may be free. In a word, they all deal with worldly and temporal matters.**

> https://biblehub.com/jo26 hn/6-26.htm
>
> **Jesus answered them and said, Verily, verily, I say unto you, Ye seek me, not because ye saw the miracles, but because ye did eat of the loaves, and were filled.**

>
> But while at the time of their emergence the small-holding owners, **in their accord with society, in their dependence on natural forces and submission to the authority which protected them from above, were naturally religious,** now that they are ruined by debts, at odds with society and authority, and driven beyond their own limitations, they have become naturally irreligious.
>
> **Heaven was quite a pleasing addition to the narrow strip of land just won,** especially as it makes the weather; **it becomes an insult as soon as it is thrust forward as a substitute for the small holding.**
>
> https://www.marxists.org/archive/lenin/works/1913/jul/16c.htm

> Everywhere in Europe the peasant *was* revolutionary when he fought against the feudals, the serf-owners and landowners. **Once the peasant had obtained his freedom and a little piece of land he, as a general rule,**
> ***made his peace* with the landowners and priests and became a reactionary.** The development of capitalism, however, begins in its turn to pull the peasant out of the embraces of reaction and leads him to the Social-Democrats.

…

ON THE THIRD ARTICLE

"There shall be no serfs, for Christ has made all men free." <u>That is making Christian liberty an utterly carnal thing.</u> Did not Abraham and other patriarchs and prophets have slaves? Read what St. Paul teaches about servants, who, at that time, were all slaves. Therefore this article is dead against the Gospel. It is a piece of robbery by which every man takes from his lord the body, which has become his lord's property. For a slave can be a Christian, and have Christian liberty, in the same way that a prisoner or a sick man is a Christian, and yet not free. **This article would make all men equal, and turn the spiritual kingdom of Christ into a worldly, external kingdom; and that is impossible. For a worldly kingdom cannot stand unless there is in it an inequality of persons, so that some are free, some imprisoned, some lords, some subjects, etc.; and St. Paul says in Galatians 3:28, that in Christ master and servant are one thing.** On this subject my friend Urban Regius has written enough; you may read further in his book.

ON THE OTHER EIGHT ARTICLES

The other articles, about freedom of game, birds, fish, wood, forests; about services, tithe, imposts, excises, Todfall, etc., — **these I leave to the lawyers, for it is not fitting that I, an evangelist, should judge or decide them.** It is for me to instruct and teach men's consciences in things that concern divine and Christian matters; there are books enough about the other things in the imperial laws. I have said above that these things do not concern a Christian, and that he cares nothing about them. He lets anyone else rob, take, skin, scrape, devour, and rage, for he is a martyr on earth.

Therefore the peasants ought rightly let the name of Christian alone, <u>and act in some other name, as men who want human and natural rights, not as those who seek Christian rights.</u> This means that on all these points they should keep still, suffer, and make their complaints to God alone.

http://www.lutherdansk.dk/On%20war%20against%20Islamic%20reign%20of%20terror/On%20war%20against%20Islamic%20reign%20of%20terror1.htm

Even in our own times, what was Muenzer seeking, except to become a new Turkish emperor? He was possessed of the spirit of lies and therefore there was no holding him back; he had to go at the other work of the devil, take the sword and murder and rob, as the spirit of murder drove him, and he created such a rebellion and such misery.

…

It is part of the Turks' holiness, also, that they tolerate no images or pictures and are even holier than our destroyers of images. **For our destroyers tolerate, and are glad to have, images on gulden, groschen, rings, and ornaments;** but the Turk tolerates none of them and stamps nothing but letters on his coins. **He is entirely Muenzerian, too, <u>for he overthrows all rulers and tolerates no gradations of government, such as princes, counts, lords, nobles and other feudatories; but he alone is lord over all in his own land, and what he gives out is only pay, never property or rights of rulership.</u>**

https://www.marxists.org/archive/marx/works/1850/peasant-war-germany/ch02.htm

His theologic-philosophic doctrine attacked all the main points not only of Catholicism but of Christianity as such. **Under the cloak of Christian forms, he preached a kind of pantheism, which curiously resembles the modern speculative mode of contemplation,** and at times even taught open atheism. He repudiated the assertion that the Bible was the only infallible revelation. The only living revelation, he said, was reason, a revelation which existed among all peoples at all times. **<u>To contrast the Bible with reason, he maintained, was to kill the spirit by the latter, for the Holy Spirit of which the Bible spoke was not a thing outside of us; the Holy Spirit was our reason.</u> Faith, he said, was nothing else but reason become alive in man, therefore, he said, pagans could also have faith.** Through this faith, through reason come to life, man became godlike and blessed, he said.

> https://books.google.nl/books?id=X_1MAQAAMAAJ&hl=nl&pg=PA85#v=onepage&q&f=false
>
> Now that *something* by Vertue of which those *Atheists* dream men *Christians*, is, *Reason*. 'Tis precisely upon the Account of their being *Reasonable Creatures*, that they call Men *Christians*. They

> derive the Words, *Christians*, and *Christianity* from *Christ*, which signifying the being *Anointed* with *Reason*, according to them; they conclude, that whoever has *Reason*, is *Anointed* as *Christ* was, and consequently a *Christian*. **A *Reasonable* Creature, as such, is therefore what those Men understand by ther Term, *Christian*, and it is in this very Sense, that the Atheist *Spinoza* own'd himself a Christian.**
> …
>
> Agreeably hereunto, and in confirmation hereof, those men do include all Mankind, of what Sect, Denomination, or Belief soever, in their *Truly Universal*, *Catholick* and *Christian Church*.

…

Muenzer preached these doctrines mostly in a covert fashion, under the cloak of Christian phraseology which the new philosophy was compelled to utilise for some time. **The fundamental heretic idea, however, is easily discernible in all his writings, and it is obvious that the biblical cloak was for him of much less importance than it was for many a disciple of Hegel in modern times.**

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA99#v=onepage&q&f=false

Once the early Anabaptist groups' armed militant chiliasts, the Münsterites and Batenburgers, were suppressed by the authorities in the borderlands between Germany and the Netherlands, in the years 1535-8, Anabaptist currents in the Low Countries, Switzerland, and Germany developed mainly as pacifist clandestine communities using preaching, books, and concealed networks to stabilize their movement.3 Not only Catholics and Lutherans but also the first Calvinist missionaries **were appalled to find so many independent-minded Anabaptists, David-Jorists, insurgent ex-Lutherans, Nicodemists, "Libertines," and confirmed indifferentists, refusing to conform to any of the main confessions.**4

…

Many adherents of the fringe movements were in fact eventually absorbed and "confessionalized" into the "Lutheran," "Zwinglian," or Calvinist blocs, and eventually brought under ecclesiastical authority, direction by the clergy, and the sway of dogma. **But some Anabaptist and "Libertine" groups stalwartly resisted all catechisms, elaborate doctrine, and clergy,** continuing to reject ecclesiastical supervision of any kind, pushing Luther's maxim "sola Scriptura" to extremes he would not have dreamt of.

Sebastian Franck (1499-*c.* 1543), who joined the Reform party in 1525 and began propagating his vision of an invisible spiritual universal church from 1530, was among the earliest and purest examples of the type. He abhorred all theological polemics and rejected heresy-hunting.5 Guided by the "light" emanating from the Holy Ghost, he rejected all dogmatic theology, fomenting a religiosity based of a free conscience, heresies that resulted in his expulsion from Strasbourg, in 1531, and Ulm in 1539.

https://en.wikisource.org/wiki/The_Encyclopedia_Americana_(1920)/Franck,_Sebastian

His liberal religious ideas, however, antagonized the authorities, and he removed from Nuremberg to Strassburg in 1529 where two years later he published his chief work, 'Chronica, Zeitbuch und Geschichtsbibel' (1531).

https://archive.org/details/pursuitofmillenn0000norm_i9m3/page/258/mode/2up?view=theater

In 1524 that old source of anarcho-communistic doctrine, the spurious Fifth Epistle of Clement, had been printed in Basle. **In 1531 the Humanist Sebastian Franck had summarized it in a lively, colloquial German which found many readers; and he had also added his own comments:**

> Shortly after that, Nimrod began to rule and then whoever could manage it got the better of the other. And they started dividing the world up and squabbling about property. **Then Mine and Thine began.** In the end people became so wild, they were just like wild beasts. Each wanted to be finer and better than the other, in fact wanted to be his master. **Yet God had made all things common, as today still we can enjoy air, fire, rain and sun in common, and whatever else some thieving, tyrannical man cannot get hold of and keep for himself.**

https://www.ccel.org/ccel/calvin/institutes.vi.xxi.html#fna_vi.xxi-p40.1

5. **Those who are desirous to introduce anarchy[683] object that, though anciently kings and judges presided over a rude people, yet that, in the present day, that servile mode of governing does not at all accord with the perfection which Christ brought with his gospel. Herein they betray not only their ignorance, but their devilish pride, arrogating to themselves a perfection of which not even a hundredth part is seen in them.**

[683] French, **“Ceux qui voudroyent que les hommes vesquissent pesle mesle comme rats en paille;”— Those who would have men to live pell-mell like rats among straw.**

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA101#v=onepage&q&f=false

Servetus’ execution was sanctioned by all the main rival churches, but outraged the clandestine underground of so-called “libertine” independents and adversaries of theocratic power. Particularly appalled and disgusted were Bernardo Ochino (1487-1564), a Siennese estranged from Catholicism who fell foul of Calvin and, after being expelled for Anti-Trinitarian leanings and other heresies from Zurich in 1563, died a hounded outcast in Moravia; David Joris (*c.* 1501-56), a Dutch ex-Anabaptist estranged from Menno besides Calvin and Luther who spent his last years at Basel as a “spiritualist” rejecting all external conformity; and Sebastian Castellio (1515-63), a Savoyard whom Calvin had brought to Geneva to head the municipal college and who became one of the established churches’ most learned and resolute foes. **For Castellio, Catholics and Protestants were equally remote from the truth; the true guide for mankind lies nowhere in theology or church doctrines but exclusively in following Christ’s example. A humanist deeply influenced by Erasmus and Franck’s “spiritualism,” Castellio upheld freedom of conscience, vigorously discounted everything ecclesiastical from doctrine to hierarchy, and, not unlike Spinoza later, presented Christianity as essentially just justice and love;** his *De Haereticis, an sint persequendi* (1554) comprehensively abjured the very concept of “heresy,” wholly denying the right of the Calvinist Church, or any church, to persecute.9 **No one more clearly represents the suppressed legacy of the Radical Reformation that later resurfaced in the seventeenth century and helped generate the Radical Enlightenment.** All Castellio’s writings, needless to say, were banned by Catholics and Protestants alike. Even so, something of his legacy lived on and, fostered in particular by Dirk Volckertsz Coornhert (1522-90), established lasting roots, especially in the Low Countries.10
…

Coornhert, for his part, firmly rejected Original Sin and Predestination, conceiving man as free and capable of improvement. **Son of an Amsterdam merchant, he remained nominally within Catholicism but preached toleration and individual liberty of conscience** while pouring reproaches on the David-Jorists, Schwenkfeldians, and other liberal Anabaptist groups seeking converts and influence within the Dutch, German and Swiss Radical Reformation, as well as on Calvinists, Lutherans, Zwinglians, and Catholics, wherever these seemed to him too hierarchical and fixated on the personalities and teachings of their spiritual leaders.15 **His campaign against intolerance,** the tyranny of religious persecution, and dividing Christianity into mutually hostile churches, sects, and factions, **was unrelenting and second in impact to none.**

https://en.wikipedia.org/wiki/Dirck_Coornhert

After learning Latin in 1552, Coornhert published Dutch translations from Cicero, Seneca and Boethius.[1] His 1562 translation of the first twelve books of Homer's *Odyssey* is one of the first major works of Dutch Renaissance poetry.

https://en.wikisource.org/wiki/Encyclop%C3%A6dia_Britannica,_Ninth_Edition/Theodore_Cornhert

Cornhert was also famous as a theologian. At thirty years of age, having become interested in theology, and being desirous of consulting St Augustine, he commenced the study of Latin. **He entered into controversy alike with Catholics and Reformers, with both of whom he refused to communicate.** Reformers, he said, were sadly wanted, but those who called themselves such were not the kind that the church required; what was needed was apostles directly inspired from heaven. **Till such were sent, he advised all churches to join together in an undogmatic communion.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/298/mode/2up?view=theater

Dirck Coornhert, who witnessed the start of the Dutch rebellion against Spain, was **the first in a distinguished line of Dutch Stoics to embody its ideal of public service and intellectual brotherhood:** he was a statesman and theologian, Humanist and Christian. **He knew the Romans well: he translated Seneca and Cicero’s *De Officiis* and drew from them the irenic message that all men are brothers.** The warring sects, he wrote, are not so deeply divided as narrow passions have led them to believe; the true Word of God is the healing Word of Christ and that alone.

Coornhert’s most important pupil was Jacobus Arminius, who came to preach against his heresies and stayed to preach for them. In Arminius’s sermons, Calvinism is softened to gentle instruction designed to lead sinful men toward a reform of their lives. **Through Dutch Arminianism, a growing and articulate minority in the seventeenth-century Netherlands despite its defeats at the hands of rigid Calvinists, Neo-Stoicism obtained a wide hearing.**

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA59#v=onepage&q&f=false

Another fundamental reason why the West's "Radical Enlightenment" found its initial sources and roots in the Republic rather than elsewhere was that the Radical Reformation of Servetus, Castellio, Socinus, and Coornhert acquired, through the Dutch Revolt of 1572, deeper roots and a far wider early following there than, for example, in England, Germany, or Scandinavia.103

https://biblehub.com/genesis/13-10.htm

10 **And Lot lifted his eyes and saw all the plain of Jordan, that it was well watered everywhere (before the LORD destroyed Sodom and Gomorrah) like the garden of the LORD, like the land of Egypt as you go toward Zoar.**

https://books.google.fi/books?id=6qHLEAAAQBAJ&lpg=PP1&hl=fi&pg=PT847#v=onepage&q&f=false

Due to far-reaching religious fragmentation, **more sects had surfaced in Holland than all the rest of Europe put together.** The contrast between Swiss and Dutch Protestantism, argued Stouppe, could hardly be greater. **Where the upright Swiss venerated Christ's divinity, devoutly debarring sectarianism and suppressing Anti-Trinitarians, the outrageous Dutch Republic refused to shield core Christian doctrine, so that now [1673] large numbers were questioning the "divinité de Jesus-Christ."** If this belief so central to Christianity should collapse, with it would lapse the entire structure of theological and church supremacy over morality, society, and education. **Where the Canton Geneva piously had "those two heretics [Michael Servetus and Scipio Gentilis]" burnt at the stake for their heinous "errours against the Divinity of Jesus Christ," as befitted the case, the contemptible Dutch refused to "put any Socinians to death, whatever their errours may be."**56 **So disastrous an influence were the Arminian Remonstrants that they were practically as bad as the Mennonites in harbouring Socinians and trampling the Holy Trinity under foot.** The "land of the States General is not of our [Reformed] religion"; Dutch toleration ravages Christianity.57

https://archive.org/details/enlightenmentcon0000isra/page/28/mode/2up?view=theater

The Lutheran theologian Heinrich Benthem who toured Holland in 1694, **while granting that not everything Dutch was bad, nevertheless compiled a remarkably long list of points that appalled him. He expressed revulsion at the relative freedom of women as well as servants and children,**59 **and horror at the weak position of the church authorities,** ascribing the licentiousness rife in Dutch cities to the public church's inability to compel city governments to close the 'music halls' for which Amsterdam's harbour area was notorious, as well as brothels and other dens of vice, and clamp down on prostitution.60 **He was shocked by the freedom enjoyed by Jews and Socinians as he was by the lack of deference of Dutch workmen for their social superiors and, more generally, the absence of any clearly defined social hierarchy.** Lack of clear social stratification in urban life seemed to him to be the root of the unprecedented latitude permitted, or at least not prevented, regarding personal lifestyle and dress. **Worst of all, though, in his opinion, the festering sore on which all the rest fed, was 'die grosse Religions-Freyheit' [great religious freedom] the regents allowed.**

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA102#v=onepage&q&f=false

Menno Simons (*c*. 1496-1561), **who did more than any other to stabilize and reinvigorate Low Countries Anabaptism after the crushing of the chiliastic militants,** arguably the foremost figure of the Dutch Reformation, had several toes in the Radical Reformation, being strongly committed to irenicism and toleration. Like other Mennonite leaders, he agreed governments should confine their attention to purely human affairs and not concern themselves with consciences.12 **However, he laid greater stress than the hard core Radical Reformation of the so-called "libertines" on the congregation as a force for discipline, and the need for submission to creed and communal norms.**13 It was those who rejected all strict congregationalism, including the Mennonite and Remonstrant creeds, as well as all Trinitarian theology, formal clergy, and intolerance, like the flock of Hubert Duifhuis (1531-81) at Utrecht, and Caspar Coolhaes (1536-1615) at Leiden, that strove hardest to keep the various strands of opposition to the main blocs "a-confessional," **forging a strand of "Radical Reformation" especially apt to contribute to the milieu from which Radical Enlightenment sprang.**

https://occidentaldissent.com/2019/12/19/luther-and-liberalism/

Martin Luther was not a proto-liberal. **It is a Catholic myth that the Reformation inexorably led to liberalism.** The Anabaptists were the most radical fringe group that came out of the Reformation.

Today, Anabaptists are the most socially conservative religious group with the highest birthrate in the United States. The Amish population **has exploded since the 1960s**.

>
> **The battle against Catholicism in Germany was nothing but a war begun by spiritualism when it saw that it carried merely the title of ruler and ruled only *de jure*, whereas sensualism, by a time-honored deception, was the true ruler and ruled *de facto*.** The indulgence sellers were chased away, the priest's lovely concubines were replaced by cold wives, the charming images of the Madonna were smashed, and here and there a Puritanism emerged with utmost hostility towards the senses. **The battle against Catholicism in France in the seventeenth and eighteenth centuries, on the other hand, was a war begun by sensualism when it saw that it ruled *de facto* and yet each of the acts of its rule was mocked as illegitimate and denounced in the harshest way by spiritualism, which claimed to rule *de jure*.**

…

The Reformation overlapped with the Age of Discovery, the Renaissance and the Scientific Revolution. There were other important things going on in Western Europe in the 16th century. **The roots of liberalism can be traced back to the rediscovery and translation of classical texts in this period that revived naturalism, skepticism and materialism and the development of modern science and technology that discredited the cosmology of the Medieval world which was based on Aristotle and Ptolemy.** It was making sense of these developments that inspired modern philosophy in the 17th century. The development of seafaring global commercial empires by England and the Netherlands led to population growth and made London and Amsterdam into the first large modern cities. **Luther was an Augustinian. John Locke was a Pelagian.** It wasn't Luther that led to Locke. It was the empiricism that was the foundation of his philosophy.

The Republic of Letters which was the forerunner of the Enlightenment wasn't Protestant or Catholic. It was a secular intelligentsia that developed long after Luther's time when the first scientific institutions like the Royal Society and the French Academy of Sciences were being established in the late 17th century. Liberalism was essentially an attempt to create a new moral paradigm that was grounded on the new science. In total contrast to Luther and Augustine, **it was based on an optimistic view of mankind that holds that man is born good and isn't tainted with Original Sin and is only corrupted by society and that reason and the will is capable of discerning and acting on the good or that we are sanctified through our works or that our society is progressing and becoming morally better all the time.**

TOLERATION

> Whilst we compose a catechism, we prescribe nothing to any man: whilst we declare our own opinions, we oppress no one. **Let every person enjoy the freedom of his own judgment in religion;** (*R.C.*, Preface, p. xcvi.)
>
> **It is not therefore within the province of any visible church, much less of the civil magistrate; to impose their own interpretations on us as laws, or as binding on the conscience; in other words, as a matter of implicit faith.** If however there be any difference among professed believers as to the sense of Scripture, it is their duty to tolerate such differences in each other, until God shall have revealed the truth to all. (*C.E.*, XVI, 267.)

This collation provides ample evidence of the influence which the well-formulated Socinian system exercised upon Milton's thinking. We have seen that Milton's doctrines are strikingly similar to those of the Socinians in all major respects.

https://books.google.fi/books?id=njn-dglZFHIC&lpg=PP1&hl=fi&pg=PA111#v=onepage&q&f=false

In presenting the bishops as the real underminers, Milton tries to outflank their defenders' political arguments and to situate himself as a defender of royal authority. To this extent he remains within the Foxean tradition of which sees the monarchy as reclaiming a lost balance between civil and ecclesiastical power; but for Milton the balance is by now very problematic. **In his private studies he had worked his way through the histories of Greece and Rome and was shocked when he moved on to the reign of Constantine, the first Christian emperor, to find a marked and steady process of decline in civility (*An Apology against a Pamphlet*, *MPW*, 1, 943-4). The ferocity of Milton's attack on Constantine would have shocked many Puritans, and marked a decisive break with the Foxean tradition.**

> https://www.exclassics.com/foxe/foxe135.htm

> Like as in the primitive age of the church, and in time of Dioclesian and Maximilian; when the devil saw that he could not prevail against the person of Christ which was risen again, he turned all his fury upon his silly servants, thinking by the Roman emperors utterly to extinguish the name and profession of Christ out from the earth; so in this latter age of the world Satan, being let loose again, rageth by the Turks, thinking to make no end of murdering and killing, till he have brought, as he intendeth, the whole church of Christ, with all the professors thereof, under foot. **But the Lord, I trust, will send a Constantine to vanquish proud Maxentius; Moses, to drown indurate Pharaoh; Cyrus, to subdue the stout Babylonian.**

Milton shares with Harrington a dark view of the relations between monarchy and papacy. **If the clergy extolled Constantine, it was because he extolled them,** and this sharply calls his judgement in question. Emperor and church become a corrupt mutual admiration society (*Of Reformation*, *MPW*, 1, 554), and this is because of structural connections between political inequality and corruptions of discourse. It is not just that monarchs are led astray by the corrupt blandishments of the clergy: if that were the case, once monarchs regained control of the church a proper balance would return. Milton's starting point is that even after the Reformation, with the monarchy notionally in charge of the church, corruption had continued. He does, it is true, insist that Presbyterian religion is perfectly consistent with civil obedience, **but the examples he gives are the Dutch and Swiss republics, and the French Huguenots who had been urged in the 1620s to take up arms against their king** (1, 609-10).

https://www.gutenberg.org/cache/epub/55901/pg55901-images.html#link2H_4_0014 **[August 1825]**

Some of the heterodox doctrines which he avows seemed to have excited considerable amazement, particularly his Arianism, and his theory on the subject of polygamy. Yet we can scarcely conceive that any person could have read the Paradise Lost without suspecting him of the former; nor do we think that any reader, acquainted with the history of his life, ought to be much startled at the latter. **The opinions which he has expressed respecting the nature of the Deity, the eternity of matter, and the observation of the Sabbath, might, we think, have caused more just surprise.**
...

Milton did not strictly belong to any of the classes which we have described. He was not a Puritan. He was not a freethinker. He was not a Royalist. **In his character the noblest qualities of every party were combined in harmonious union.** From the Parliament and from the Court, from the conventicle and from the Gothic cloister, from the gloomy and sepulchral circles of the Roundheads, and from the Christmas revel of the hospitable Cavalier, his nature selected and drew to itself whatever was great and good, while it rejected all the base and pernicious ingredients by which those finer elements were defiled. Like the Puritans, he lived

> "As ever in his great task-master's eye."

Like them, he kept his mind continually fixed on an Almighty Judge and an eternal reward. And hence he acquired their contempt of external circumstances, their fortitude, their tranquillity, their inflexible resolution. **But not the coolest sceptic or the most profane scoffer was more perfectly free from the contagion of their frantic delusions, their savage manners, their ludicrous jargon, their scorn of science, and their aversion to pleasure.** Hating tyranny with a perfect hatred, he had nevertheless all the estimable and ornamental qualities which were almost entirely monopolised by the party of the tyrant.
...

To this all his public conduct was directed. For this he joined the Presbyterians; for this he forsook them. He fought their perilous battle; but he turned away with disdain from their insolent triumph. He saw that they, like those whom they had vanquished, were hostile to the liberty of thought. **He therefore joined the Independents, and called upon Cromwell to break the secular chain, and to save free conscience from the paw of the Presbyterian wolf.**

https://en.wikisource.org/wiki/Dictionary_of_National_Biography,_1885-1900/Milton,_John_(1608-1674)

Milton had come to stand apart from all sects, though apparently finding the quakers most congenial. He never went to any religious services in his later years. **When a servant brought back accounts of sermons from nonconformist meetings, Milton became so sarcastic that the man at last gave up his place** (RICHARDSON).

"Umpire Conscience": Freedom, Obedience, and the Cartesian Flight from Calvin in "Paradise Lost" on JSTOR

I shall argue that Milton's contribution was forebodingly split. His stated aim was to assert Christian liberty, which we know was dear to his heart. **A second, unintended legacy, to which we shall return in due course, approaches Cartesian individualism. It might be called the dark double of Christian liberty, something Milton deeply feared, yet helped Descartes to unloose on the world.**

https://www.academia.edu/3758118/Against_Throne_and_Altar

For all his apparent piety, Milton did not share the disdain for music, the theater, and the pagan classics evidenced by the more radical and austere among his fellow Puritans, and he championed divorce, looked favorably on polygamy, argued on biblical grounds against the doctrine of the Trinity, depicted Christ as God's adoptive son, endorsed a free-will doctrine similar to that of Arminius, embraced materialism, rejected creation *ex nihilo*, affirmed the indissoluble union of body and soul, **and advocated a complete separation of church and state. By virtually any standard but his own, he must be judged a heretic.**3
…

How anyone as intent on the liberation of the multitude from clerical tutelage as was Milton could ever have imagined presbyterianism consistent with the division of responsibilities between minister and magistrate that he quite rightly regarded as its prerequisite is a genuine mystery. **That before long he felt compelled to redirect against the English presbyterians and their Scottish allies the ire that he had once reserved for the Roman Catholic Church and English episcopacy is certainly no wonder.**
…

And with Paolo Sarpi's great history in mind, he then warned, "But we do hope to find out all your tricks,/Your plots and packing wors then those of *Trent*,/That so the Parliament/May with their wholsom and preventive Shears/Clip your Phylacteries, though bauk your Ears/And succour our just Fears/When they shall read this clearly in your charge/*New Presbyter* is but *Old Priest* writ Large."124 **By this time, Milton was ready to denounce as disguised popery the religious settlement in nearly every corner of Protestant Europe** – though, even in his fury, he was not prepared to suggest as a punishment proper to its exponents the gruesome penalty exacted under Charles I on the English presbyterian leader William Prynne.
…

If, in the end, Milton came to think the Rump no better than the Long Parliament, it was not solely because of the ignorance and corruption that its members displayed. It was even more because in 1652, at the instigation of Owen and his colleagues, **the Council of State had suppressed *The Racovian Catechism,* which Milton in the course of his duties had licensed for publication, and because in February of that year a parliamentary committee had raked him over the coals for sanctioning the printing of that Socinian tract and had seen to it that the authority to license books and periodicals was placed in the hands of someone less friendly to the *libertas philosophandi*.**126 By the same token, if, eventually, Milton came to despise and loathe the Lord General victorious at Dunbar and Worcester, it was not solely because the latter had betrayed the republican cause. It was also because, in 1654, as Lord Protector, Cromwell had issued two ordinances implementing Owen's plan, establishing thereby a national church supported by a tithe enforceable at law, imposing upon its otherwise independent congregations a regime of centralized magisterial supervision, and providing for a qualified toleration of "gathered" churches outside the state system.127 In Milton's opinion, this amounted to the institution of "a state-tyranie over the church" and even to a species of "civil papacie." The Lord Protector had become, he implied, "no less antichrist in this main point of antichristianism" and "no less a pope ... than he at *Rome*." **In his considered judgment, "they who force, though professing to be protestants, deserve as little to be tolerated themselves" as the Roman Catholics, "being no less guiltie of poperie in the most popish point."**128
…

John Milton was either profoundly confused and at loggerheads with himself, as Blake contended. Or, like Marsilius of Padua, on whose political thinking he certainly drew, the author of *Areopagitica*, *Paradise Lost*, *Paradise Regained*, and *Samson Agonistes* was an Averroist of sorts, attempting to come to grips with the cultural hegemony of a revealed religion that he judged not only ill suited in its inherited form to the purpose of promoting secular ends such as moral virtue, domestic harmony, and devotion to the common good but incompatible with the well-being of philosophy as well.
…

If Milton really was an Averroist of sorts, the author of *Paradise Lost* was neither a devout Christian nor a genuine Socinian nor even, as some have supposed, a believing Arian. **He was a thoroughgoing and highly circumspect infidel instead.** He was a philosophical poet on the model of Vergil and Dante.135 He was an enlightened practitioner of *kalām*, who penned *De doctrina Christiana* not as a statement of his private creed but as the outline for a Christianity shorn, insofar as possible, of doctrines philosophically unsound and politically dangerous. If this hypothesis is true, Milton may well have regarded himself as a prophet on the lines envisaged by Alfarabi, the Arab *falāsifa*, and Maimonides. He was a man possessed of uncanny capacity to charm and persuade those wholly reliant upon the imagination for their understanding of the world, as he well knew, **and in the poetry he composed late in the 1650s and thereafter, he appears to have been intent on deploying his remarkable rhetorical gifts in verse for the purpose of reshaping in a politic fashion the superstition dominant in his own time.** If this hypothesis is true, if there really is more to Milton's commitment to "the reforming of Reformation it self" than immediately meets the eye, one would then cite his commitment to philosophy and the profound anticlericalism to which this gave rise if one were called

upon to explain **how a man seemingly so pious could have chosen as his "particular friend" and "crony" a figure so notorious for libertinism as was Marchamont Nedham**136 – the remarkable publicist to whose achievements as a popularizer and adaptor of Machiavellian political science we now must turn.

https://books.google.fi/books?id=FM0VBoVW8nEC&lpg=PP1&hl=fi&pg=PA10#v=onepage&q&f=false

Two of the most vital new intellectual forces of the 1650s were the theological ideas growing out of the religious movement known as Independency and the philosophy and religion of Thomas Hobbes. Oxford was one of the places where these two new forces were felt most strongly, and Stubbe was one of the principal innovators there on both fronts, engaged as he was in promoting Hobbes's philosophy and in championing the cause of extreme Independency in defiance of the Presbyterians. **Stubbe was in fact a Hobbesist and a radical Independent. On the surface nothing could appear more contradictory.**
…

By April 1656 Stubbe and Hobbes had become friends – and one may well ask how a young radical Independent and the theorist of absolute sovereignty could strike up a close relationship and even, as it turns out, an intellectual collaboration, for Stubbe had begun, with Hobbes's approval, if not at his instigation, to translate *Leviathan* into Latin.8 Nor was this the only occasion for collaboration. Since 1655 Hobbes had been engaged in a pamphlet feud with Dr John Wallis, the Presbyterian divine and Savilian Professor of Geometry at Oxford.
…

In a letter to Christian Huygens in 1659, Wallis made these purposes clear:

> **Our Leviathan is furiously attacking and destroying our Universities (and not only ours but all) and especially ministers and the clergy and all religion,** as though the Christian world had not sound knowledge … and as though men could not understand religion if they did not understand mathematics. Hence it seemed necessary that some mathematician should show him … how little he understands the mathematics from which he takes his courage.30

…

What is established, however, is that Stubbe saw no conflict between his dual attachment to Hobbes and to the Independents, that for him at least Hobbes's philosophy gave powerful support to the cause of radical Independency. **It is also clear that Hobbes, for whatever reason, did nothing to disabuse his young admirer of this association and seems to have done a great deal to encourage it.**
…

The authority of ministers comes from the civil sovereign and thus they do not have, as Wallis claimed they did, any independent spiritual authority. The clergy does not possess any extraordinary supernatural sanction conveyed by Apostolic succession and the imposition of hands. There is no divine right of ministers. **Hence any layman might assume the office of a minister and even administer the sacraments should the civil sovereign appoint him to do so.**69 **In these matters Stubbe was in complete agreement with Hobbes, as the correspondence makes clear.**70 Indeed to the tract in which Hobbes set out his opposition to Wallis's ecclesiology, Stubbe contributed an anynomous attack on Wallis's knowledge of classical sources and grammar.71
…

Stubbe went to some lengths to maintain his anonymity in his collaboration with Hobbes in order to protect himself from attack or, as he put it, **'that my zeal to serve you be not my ruin & undoing.'**73

https://books.google.fi/books?id=FM0VBoVW8nEC&lpg=PP1&hl=fi&pg=PA56#v=onepage&q&f=false

In an important discourse written in 1665 or 1666109 and published twenty years later as *A Free Enquiry into the Vulgarly Received Notion of Nature* (1686), [Robert Boyle] claimed that there is (presumably in England):

> **a sect of men, as well professing Christianity, as pretending to philosophy, who (if I am not misinformed of their doctrine) do very much symbolize with the ancient heathens, and talk much indeed of God,** but mean such a one as is not really distinct from the animated and intelligent universe, but is on that account very differing from the true God that we Christians believe and worship.110

…

'In fine,' Stubbe wrote, 'without prejudicing this age … **he seemed to me by his faith and by his charitableness to include in his soul some grains of the Golden Age and to be a relic of those**

times when piety and miracles were sincere.’131 Before 1660 Stubbe had argued for a return to primitive Christianity. Now in 1666 he is espousing the same ideal.
…

For Stubbe Greatrakes’s cures were so many emblems of this pure Christianity, **this lay religion in which spiritual power is democratized because immanent in nature. For Stubbe, Greatrakes was *The Miraculous Conformist*, ‘a relic of those times when piety and miracles were sincere’ (and every man his own priest) and an omen that such a church might be restored.** Not only then is *The Miraculous Conformist* Hobbesist in the sense that the spiritual world (if not God himself) is subsumed into the material order; it is also Hobbesist in the conclusion it draws from this, namely, in its denial of the clergy’s claim to possess a monopoly of spiritual authority on earth.

7 **For many deceivers are entered into the world, who confess not that Jesus Christ is come in the flesh. This is a deceiver and an antichrist.** … 10 **If there come any unto you, and bring not this doctrine, receive him not into your house, neither bid him God speed: For he that biddeth him God speed is partaker of his evil deeds.**

https://books.google.fi/books?id=6qHLEAAAQBAJ&lpg=PP1&hl=fi&pg=PT921#v=onepage&q&f=false

As if Oldenburg and Boyle would not be sufficiently outraged by this, Spinoza discloses his thoughts also on Oldenburg's third point, namely the nature of Jesus Christ: **"I say that it is completely unnecessary for salvation to know Jesus Christ according to flesh. Rather we should take an entirely different view of God's eternal son, namely as God's eternal wisdom as manifested in all things, and especially the human mind, above all that of Christ Jesus. For no one can reach the state of beatitude without this, given that [such philosophical wisdom] alone teaches what is true and what is false, what is good and what is bad."** Such wisdom as humans possess is manifested most perfectly through Jesus Christ and exactly this, "as he revealed it to them, was what his disciples preached," **so that they could pride themselves above all others in the spirit of Christ.**

Finally, "as for what certain churches add to this – that God assumed a human nature [naturam humanam] – I warned expressly that I do not understand what they mean. **Indeed, to confess the truth, they seem to me to speak no less absurdly than if someone was to tell me that a circle had assumed the nature of a square,**" implying that Socinian Collegiants and other Anti-Trinitarians were far less irrational here than mainstream Christians.83
…

"Your assertion that Christ's passion, death and burial, is to be believed literally but his resurrection allegorically," [Oldenburg] complains in this his last surviving letter to Spinoza, "is not supported by any argument that I can see. In the Gospels, Christ's resurrection seems to be narrated as literally as the rest – and on this article, the Resurrection, stands the entire Christian religion and its truth, and with its removal, the mission of Christ Jesus and his heavenly teaching collapse." **That of course was precisely Spinoza's point.**

> Such, for instance, was **Spinosa, the great leader of our modern infidels, in whom are to be found many schemes and notions much admired and followed of late years:—such as undermining religion under the pretence of vindicating and explaining it: the maintaining it not necessary to believe in Christ according to the flesh: the persuading men that miracles**

> **are to be understood only in a spiritual and allegorical sense:** that vice is not so bad a thing as we are apt to think: that men are mere machines impelled by fatal necessity.

https://www.newadvent.org/cathen/14217a.htm

The writings of the Arabian philosopher Al Farabi and of his commentator Ismail show striking similarities, even in the smallest details, with the later system of Spinoza.

> https://www.newadvent.org/cathen/02150c.htm
>
> St. Thomas Aquinas used the "Grand Commentary" of Averroes as his model, being, apparently, the first Scholastic to adopt that style of exposition; and though he refuted the errors of Averroes, and devoted special treatises to that purpose, **he always spoke of the Arabian commentator as one who had, indeed, perverted the Peripatetic tradition, but whose words, nevertheless, should be treated with respect and consideration.** The same may be said of Dante's references to him. **It was after the time of St. Thomas and Dante that Averroes came to be represented as "the arch-enemy of the faith".**

...

After the death of his father in 1654, Spinoza was almost completely cast off by his family and, having no means, taught in the private Humanistic school of the ex-Jesuit and freethinker Franz van den Enden. Here he perfected himself in Latin and continued his philosophical investigations by the study of St. Augustine, the Stoics, Scholasticism (in a somewhat superficial manner), the philosophy of the Renaissance and that of some modern writers, especially of Hobbes. His later psychology shows extraordinary similarities with the teachings of Marcus Marci and of Glisson. **Spinoza now frequented almost exclusively the society of Christians, i.e. of the free-thinking sort, and especially of Mennonites.**
...

Originally Spinoza seems to have had the intention to found a kind of philosophical world-religion. He believed that the basic ideas of his view of the world were to be found among the old Hebrews, in Christ, and in St. Paul. In his opinion this philosophy, without the Holy Scripture, sufficed for the truly wise. In order to understand his conception of the original Christianity it must be remembered that his acquaintance from the beginning had been among latitudinarian Christians, who emphasized the moral life, not dogma, that, with many of his Christian friends, **he regarded the Antitrinitarians as the most genuine Christians, that he found traces of his philosophy in the writings of Christian mystics, and finally that among the first writings which had introduced him to Christianity had been Hobbes's books "De cive" and "Leviathan".**

https://books.google.fi/books?id=me6ig1nqlKIC&lpg=PT557&hl=fi&pg=PT557#v=onepage&q&f=false

After the excommunication Spinoza apparently became briefly involved with the Quaker mission in Amsterdam. He probably helped translate into Hebrew a Quaker pamphlet by Margaret Fell that was intended to convert Jews to Quakerism. He worked with the English Quaker theologian Samuel Fisher, who was developing a lengthy critique of scriptural religion, arguing that true religion is found in the spirit, not in pieces of parchments, manuscripts, or books, all of which are man-made. Fisher's theory, published in English ten years before Spinoza's *Tractatus*, contains much of the biblical criticism later advanced by Spinoza.
...

A strange aspect of Spinoza's life is that from the moment he left the synagogue he was living with Christian millenarians. His patron, Peter Serrarius, was Spinoza's contact with the outside world. Letters to Spinoza from abroad were sent to Serrarius, who then had them delivered to Spinoza, and Spinoza sent his answers via Serrarius, who had contacts, such as Oldenburg, in other countries. Nothing in the belief systems of the two men indicates what they could have had in common or why this relationship kept on until Serrarius's death in 1669. Serrarius became a believer in the Jewish pseudo-messiah, whom Spinoza must have rejected out of hand. Other millenarian groups that Spinoza associated with, such as the Quakers and the Collegiants, were more spiritual, expecting a spiritual transformation of the world. Spinoza may have intellectually transformed their millenarian view of the kingdom of God on earth into the journey of the mind to being eternally with God, from which the world is seen from the aspect of eternity. This would be a spiritual kingdom, divine in a nonhistorical sense.

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA262&printsec=frontcover

Perhaps most crucial of all these close allies was the veteran bookseller Jan Rieuwertsz the Elder (*c.* 1616-87) whose home and bookshop was a gathering point of Socinian meetings or "conventicles" as well as lovers of dissident books, **that is books containing what a Catholic ecclesiastic later styled everything "bizarre and impious" contrived by "petulant and arrogant minds."** His shop stocked the finest array of Descartes' works in the vernacular as well as Latin then to be found anywhere. But he was also one of the main clandestine publishers of Collegiant pamphlets,

illicit pamphlets being one of the main channels by which Collegiants projected their universalism and irenicism to the outside world. **If no one in Holland did more to spur diffusion of Descartes' thought than this enterprising publisher, no one else did more to publicize Collegiant rejection of the commonly accepted notions of what Christianity is and how it needs to be fundamentally reformed to become at all authentic.**3

A member of the Amsterdam booksellers' guild since 1640, locally famed for his skills in clandestine diffusion of banned Socinian ideas denying the Holy Trinity, Christ's divinity, Original Sin and more, Rieuwertsz's bookshop "in't Martelaarsboek" (in the Martyrs' Book), was located near the homes of De Vries and Jelles in the long, narrow street now called the Dirk van Hasseltssteeg, then the Dirk van Assensteeg, running off the Nieuwezijds Voorburgwal, situated nearer the Nieuwendijk end.4 **It was a meeting place where "many Socinian persons go now and then to listen to lectures together," reported a Reformed pastor to the Amsterdam Reformed Church council, on 29 November 1657, "though no one can ascertain or discover whether any Socinian prayer gathering was held there. Every day Jan Knol disseminates his poison there."**5 That the ambience of Rieuwertsz's bookshop was informally intensely Socinian, the Reformed Church council knew for certain. Due to its suffused, whispered collective denial of Christ's divinity and the Trinity, Rieuwertsz's house, observes a pamphlet of 1655, was nicknamed "the School of Mockers."6

Jan Knol (d. 1672) was a prominent Amsterdam Collegiant preacher, resolutely anti-Trinitarian and averse to all conventional theology, eloquent and sharp-tongued, with a taste for pamphlet polemics and satirical humour – and greatly resented by the city's Reformed pastors. **He was an important supplementary influence on the *cercle Spinoziste* as it evolved at the end of the 1650s;** later the Koerbagh brothers were among those attending Socinian gatherings at his home.7 It was Knol who translated into Dutch the Polish Brethren's Socinian "Rakow Catechism" which appeared in 1659, published in Amsterdam but with its title-page falsely stating "Rakow" as place of publication.8 **In 1669, Knol's defiance of the world's principal churches reached its peak when he famously stated that "Christ never said he was the true God; if he had said that then the Jews were right to kill him."**9 Bigoted fury overflowed at this report, but despite an angry official inquiry by the city government, pressured by the Reformed consistory, Knol eluded serious consequences through the lack of witnesses willing to testify against him.
…

Jelles, Balling, Knol, and Rieuwertsz also had a regular association with Rijnsburg where Spinoza lived in 1661-3, a village with which Collegiants had special ties; **but they had no connection with the academic circles he frequented in and around Leiden,** or with his subsequent milieu in Voorburg or The Hague and its environs where he would spend the last stages of his life. So his life-long friendship with these personages must almost certainly have originated well before 1660.
…

In late 1658, Zwicker profited from his new-found freedom in Amsterdam to publish anonymously his *Irenicum Irenicorum*, one of the strongest pleas for universal peace and toleration of the era, **reconstructing early Christian teaching prior to the ecumenical Council of Nicaea (AD 325) to show how all the main churches had conspired in the fourth century AD to forge a gigantic web of fabricated theology, an edifice of religious fraud and superstition with the Holy Trinity at its core,** dating from three centuries after the crucifixion without any genuine ties to the New Testament or authentic early Christianity let alone the Old Testament.
…

Zwicker's insisting "I am neither a Lutheran, nor Calvinist, nor Remonstrant, nor Greek [Orthodox], nor papist, nor Mennonite, nor member of whatever sect of today," presented no difficulty for Comenius. Apart from resenting Zwicker's rather arrogant tone and manic zeal, the sole sticking point was the Trinity. There is not, Zwicker concurred with the Socinians, a word about the Trinity in the Gospels, **and firmly denying Christ's divinity is the sole way to restore Christian integrity.** It was here that Comenius fiercely dissented. Not that Zwicker, in reconstructing history of early Christianity and attempting to wrest it from the churches, was entirely at one with mainstream Socinian tradition either. **Socinians usually eschewed historical research, preferring to rely on deductive "reason" aided by the Holy Ghost.** Consequently, Zwicker felt disinclined to label himself a "Socinian," and to an extent stood alone against Comenius and those supposedly insisting on "reason" but avoiding the historical approach he favoured.

Forgetting they shared a common irenicist platform uniting all the Radical Reformation fringe groups, the initial friendship between Comenius and Zwicker erupted into bitterness and ferocious public dispute. So infuriated was Comenius by Zwicker's subordinating Scripture to historical research and reason, that he publicly denounced him in the most vehement terms, in early 1660, publishing a rebuttal of his plans for peace and unity among Christians entitled *De Irenico Irenicorum Admonitio*. He went so far as to denounce his erstwhile comrade to the Amsterdam Reformed consistory for illegal anti-Trinitarianism.18 **That even the most universalist, irenicist creeds lapse into unbridled hatred**

and fury the moment the Trinity and Christ's divinity are broached was a lesson not lost on Spinoza.
…

Originally from Harlingen, in Friesland, born around 1620 and a bachelor all his life, **Spinoza's close friend Jarig Jelles served, from 1653, as a deacon in the liberal Mennonite congregation of Galenus,** a group reportedly much drawn to Rieuwertsz's bookstore and closely allied with other Collegiants.
…

His liberal faction stalwartly opposed the strict Mennonites, rejecting the idea of any church being governed by elders laying down authority and spiritual guidance for individual members.23
…

Rather than selling his business, he seems to have continued to draw on its proceeds while his former assistant ran it, living off what he had gained, and entered into a world of discussion and study among the Collegiants, observed Bayle later,24 where, from early on, unlike Serrarius and Comenius, he figured among the zealous "Cartesians" and firm anti-Trinitarians.25 **His Christian fervour resolutely subordinated belief and faith to "reason," "true reason" in Jelles' eyes being "the spirit of Christ"; everything not firmly grounded on "reason," especially in the Old Testament which he heavily subordinates to the New, but in the New also, he firmly discarded.**

Despite lacking a higher education and Latin, Jelles was an outstanding example, notes Bayle, of a type to reinforce Spinoza's, Van den Enden's, and the Koerbaghs' **deep conviction that those lacking university degrees are not thereby debarred from insight, engaging with philosophy, and the search for truth,** and that what they lack constitutes no barrier to reaching the highest level of discernment with a success many academics and ecclesiastics well-endowed with Latin and university degrees regularly fail to attain owing to "superstition." **That a person ignorant of Latin need not belong to what Spinoza termed the "multitude," whereas most of those possessing Latin and university degrees do, became a point fundamental to his outlook.**
…

Also crucial to Spinoza's life-story, and the close bond between Spinoza and his Collegiant friends, was their radically anti-Trinitarian naturalist conception of Christ, an approach fully embraced by Jelles who negated all the theological doctrines and mysteries of the main churches – the Trinity, Resurrection, Redemption, church sacraments, Ascension, Original Sin, and especially the "divinity of Christ." For Jelles, restoring God's unity and oneness meant reducing Christ to just a specially inspired, elevated man, an inspired Jew who became a supreme moral leader, but one lacking all supernatural status or quality, **making him the "Son of God," as Spinoza later concurred, only in the metaphorical sense of reaching "eternal wisdom" and God's awareness of himself.**27

> https://en.wikisource.org/wiki/The_International_Jew/Volume_3/Chapter_44
>
> **"No Jew," says the American Israelite, "will conceal his gratification when he finds Christians virtually admitting that liberal Christianity is practically an acceptance of the doctrine of liberal Judaism."**
>
> Unfortunately, this is true. Liberal Christianity and Liberal Judaism meet, but only by the surrender of all that is distinctively Christian in doctrine. **A liberal Christian is more Jewish than Christian.** The statement may sound harsh and arouse resentment, but it is a very simple matter for any liberal Christian to convince himself of this by reading the volume of liberal Jewish doctrine put out by Kaufman Kohler, president of the Hebrew Union College. **Liberalism is the funnel by which Christianity is expected to run into Judaism, just as liberalism so-called in other departments of life is expected to bring about certain other Jewish aims.**

…

Zealous to convert Jews, Serrarius merged that burning aspiration with encouraging them to dream of their future return to their ancient homeland, restoration of the Temple in Jerusalem, and resumption of Levitical rituals.37 Most contemporaries were horrified. Knowing Serrarius, Boreel, Leon Templo, and Menasseh shared a common project in part, one disgusted Calvinist theologian, Samuel Maresius (1599-1673), at Groningen, labelled the mystical Spiritualist Serrarius a *semi-Judaeus* despite him firmly supporting (unlike many other Collegiants) the doctrine of the Trinity.38
…

While everyone had agreed all along that main churches, Orthodox, Catholics, and Protestants alike, had got everything confused, and no clergy or dogmas were justified, Quakers fiercely repudiated Serrarius' and Galenus' claim that Christ left no instructions about the forming of a true Christian community **and**

the Collegiant notion that anyone truly cultivating the "spirit of Christ" is just as justified as another. Once they grasped its universalist, anti-sectarian character, the Quakers angrily opposed what in French has been termed the "anti-confessionalisme radical" of Galenus and his liberal Mennonite supporters including Balling and Jelles, and the Collegiant movement generally.75
…

Collegiants, less appalled by Quaker rejection of pending millennial redemption than Serrarius and Boreel, chiefly objected to the mystical wayward uses to which Quakers often put "the Light," their blank refusal to equate "the Light" with philosophical reason. Some "rationalists" close especially to Galenus joined in Serrarius' campaign, the leading figure among this "rationalist" faction of Rijnsburgers rejecting Quaker notions of "the Light" being Pieter Balling (d. 1664) **who, by 1662-3, we see from their correspondence, figured among Spinoza's closest friends and allies and was the translator of his book on Cartesian philosophy into Dutch.**

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA104#v=onepage&q&f=false

The post-1620 Collegiant movement emerging in Holland was a movement continually reinforced by outcasts from different main churches **as well as defecting Arminians and liberal Anabaptists appalled by the splits and relentless polemics embroiling mainstream conservative and progressive Mennonites.** If all Collegiants were "unchurched Christians," rejecting clergy and ecclesiastical authority and adhering to an open form of congregationalism, many or most remained indifferent or hostile to "philosophy"; **during the third quarter of the seventeenth century only a small but crucial fringe among them, combining abjuring clergy, congregational discipline, the Trinity, and sacraments with liberty of conscience and unrestricted theological rationalism, entered into alliance with Spinozism.** By the 1650s and 1660s, the combination of individual freedom of conscience and expression with stripping away congregational discipline and traditional theology had coaxed **a handful of remarkable Socinian Collegiants, inspired by Cartesianism, to the view that philosophical and theological "truth" is and must be identical, leading them into eager debate with members of the *cercle spinoziste* and alliance with Spinoza.**21

Collegiants convened on the basis of no clergy, no catechism, no congregational discipline and every individual free to express their own personal views and conscience.22 Full freedom of conscience inevitably meant Collegiants accommodated a wide variety of viewpoints, some of them retaining belief in the Trinity and other "mysteries."23 The vehement criticism directed against them by Calvinists, Lutherans, Catholics, Zwinglians, and strict Mennonites and the mainstream Remonstrant Church nevertheless chiefly highlighted their collective Anti-Trinitarianism and eventual rejection of virtually all traditional Christian theology, including immortality of the soul.
…

Only a minority fringe, much as among English Unitarians later, in Joseph Priestley's day, pushed their rationalizing principle to the point of merging of theology and philosophy, blending the light of reason in Bible criticism with the philosophical-scientific explanations of nature's laws, and philosophical reason.41

Prime representatives of this latter "philosophical" Collegiant current were Spinoza's friends Pieter Balling (d. 1669), author of *Het Licht op den Candelaar* [Light on the Candlestick] (Amsterdam, 1662), the translator who rendered much of Spinoza's early work into Dutch, Jarig Jelles (*c.* 1620-83), Spinoza's longstanding ally of over twenty years who composed the Preface to the *Opera Posthuma*, in 1677, and Jan Rieuwertsz (*c.* 1616-87), publisher of all Spinoza's books. **Balling may have diverged markedly from free-thinkers like Meyer in remaining zealous about winning his readers for the *light*, and pursuing spiritual truth and a pious life, but that does not make his abjuring dogma, rejection of "mysteries," comprehensive tolerance, and veneration of "reason" any less subversive.**42 Such men, and later also Jan Bredenburg (1643-91), who wrestled long and hard with the implications of Spinoza's philosophy, shaped a dissident wing of the Collegiant movement that before long found itself openly at war with the more conventional mainstream. "Philosophical" Collegiants found themselves under siege by the many Anti-Trinitarian Bible fundamentalists attending Collegiant meetings and amidst Socinianism generally. **In the 1680s and 1690s, prominent Collegiants like the influential preacher Frans Kuyper (Franciscus Cuperus, 1629-91) began denouncing philosophical "unchurched Christians" as a veritable plague, blighting the true Socinian Anti-Trinitarian movement. Proclaiming the reality of supernatural entities, spirits, devils, and satanic (as well as benign magical) powers, Kuyper denounced Bredenburg and his supporters as a disruptive Spinozistic betrayal from within.**43 This anti-philosophical trend tended to prevail in the end: most late eighteenth-century American Unitarians followed the latter tradition in taking the Bible narrative, *supernaturalia*, and miracles more literally than the philosophical independents; **in Britain too Priestley's version of Unitarianism tied to science, philosophy, and political emancipation was hastily abandoned after 1800.**

Only one particular narrow offshoot from the Radical Reformation ended up directly fusing with the Radical Enlightenment **by erasing all distinction between theology and philosophy and reducing the miraculous and belief in *supernaturalia* practically to nothing.**

https://archive.org/details/enlightenmentcon0000isra/page/128/mode/2up?view=theater

Balling's tract *Het Licht op den Kandelaar* [The Light on the Candlestick] of 1662, published under the name of the Quaker leader William Ames, has often been regarded as the first 'Spinozist' publication. But what is most significant about it is precisely the delicate, ambivalent, and also precarious ambiguity of its stress on the 'inner light' and unmistakable mysticism of its identification of 'the light' of reason as Man's true guide with Christ, the 'spirit' and 'the Truth,' with which it endeavours to reconcile Cartesian reason, and Spinozism, with Collegiant spirituality.63

https://archive.org/details/radicalenlighten0000isra/page/342/mode/2up?view=theater

According to Balling, at the time one of Spinoza's closest friends, mankind is adrift on a sea of confusion, scepticism, and perplexity and in dire need of rescue. Our hopes of salvation, he asserts, lie in finding the 'light of truth, the true light which enlightens every person who comes into the world,'9 for only this guide provides a 'principle which is certain and infallible and whereby growing and progressing one can ultimately reach a blessed state of salvation.'10 **Nevertheless, unlike the 'inner light' of Serrarius and the Quakers – the guidance of the Holy Spirit – Balling's 'true light,' however well clothed in spiritual terms, turns out, on examination, to be essentially the 'clear and distinct knowledge of truth in the intellect of every person by which he is so entirely convinced as to the nature and essence of things that it becomes impossible to doubt it,' in other words, the mathematical rationality of the Cartesians.**11

https://archive.org/details/radicalenlighten0000isra/page/204/mode/2up?view=theater

In the Dutch version [of *Philosophia S. Scripturae Interpres*] Meyer speaks contemptuously of the public Church whose 'fortresses' his arguments had like a conquering army, 'stormed and devastated,'48 **but more respectfully of the Socinian and anti-Trinitarian fringe whom he – albeit carefully differentiating his philosophical from their theological stance**49 **– summons to join him as friends in an unbreakable alliance against the common foe.** None the less, Meyer chides them for their unwillingness to interpret Scripture wholly in accordance with 'reason,' their invoking the Holy Ghost to assist and enlighten them, so that they too languish in confusion and theological strife of their own making. **What Socinians and such Remonstrants as truly revere the memory of Episcopius should do, he urges, is follow him in making philosophy the sole and 'infallible measure' of Scripture.**50 Meyer adamantly denies there is any divine inspiration, or 'inner light,' distinct from the 'natural light of reason,' to aid men in this quest.51
…

Ironically, Beelthouwer even invokes 'the most learned Spinoza' against the *Philosophia*, suggesting, as does other evidence, that Spinoza had been and remained extremely discreet and cautious in discussions and in his dealings with the Collegiants.

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA123#v=onepage&q&f=false

But one must bear in mind that Spinoza's circle consisted of two somewhat disparate groups, Collegiants like Jelles, Balling, and Rieuwertsz on the one side, and freethinkers sharply critical of even the most radical Collegiant fringe for being inconsistent in their rationalism, headed by Meyer, Koerbagh, and Van den Enden, on the other. The details of his life and letters show Spinoza went to considerable pains to mediate between, and bridge, these two not quite identical impulses which Meyer and Koerbagh identified as close allies but which did not entirely converge as regards "reason" and "faith."97 For Koerbagh, the spiritualists, Quakers, and Brownists were sometimes on the right track, like the most rational Socinians, but, equally, "are often simple, foolish people" who failed to embrace reason comprehensively enough.98 Jelles undoubtedly considered Spinoza's system a "Christian" philosophy,99 while Koerbagh states that "only the Socinians are free of religious fallacies,"100 and Spinoza pronounces Christ "the supreme philosopher." **But one must also remember that, for Spinoza, Scripture was intended only to teach the common people "obedience" to the moral and religious law and not correct their superstitious beliefs,** which, according to Spinoza and his following, Christ and the Apostles made no effort to do.
…

If the saving of a man's soul becomes, as Koerbagh expresses it, "salvation by which someone who is ignorant is guided through instruction to understanding, knowledge and wisdom, and through reason to the truth,"102 **then we have crossed the line from Radical Reformation to pure Radical Enlightenment.** If "to write inspired by the Holy Ghost is to write while endowed with an

enlightened mind, in accordance with reason and unchangeable laws,"103 then the Holy Ghost has effectively vanished, and been secularized.

The contention that "Spinoza's religious thought remains closer [...] to the Christians who rejected him than to the atheists of the Enlightenment who adopted him as their own,"104 **superficially presents a paradox enticing to some but hardly one that is cogent.** For Spinoza there are no miracles, and have never been, and the reason one finds so many narrated in the Old and New Testaments is simply that "it is not the intention of the Bible, as we have shown, to explain things in terms of natural causes but only to speak of things that commonly occupy people's imagination, and to do so in a manner and style calculated to inspire wonder about things and thus impress devotion upon the minds of the common people."105
...

"Miracles could not demonstrate to [the ancient Hebrews] that God cares equally for all men: only philosophy can teach this."106 In Spinoza's thought whether one believes in Christ or not is simply irrelevant to salvation and "blasphemy" is redefined as what is "contrary to reason."

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA442&printsec=frontcover

In the *Korte Verhandeling*, Spinoza calls God's eternal decree his "providence" **and employs also several other terms taken from Christian theology, such as "son of God" and "predestination," reflecting the Collegiant milieu within which his system originally arose. In the *Ethics*, by contrast, he dispenses with all such terms, including "creation,"** reflecting a conscious de-Christianizing of his terminology and way of expressing himself following his departure from Amsterdam.10

https://archive.org/details/leo-strauss-persecution-and-the-art-of-writing/page/170/mode/2up?view=theater

Spinoza asserts that the Biblical teaching regarding providence is identical with the philosophic teaching. **On the other hand, he asserts that only philosophy (and hence not the Bible) teaches the truth about providence; for only philosophy can teach that God cares equally for all men, i.e., that one fate meets the just and the unjust;**38 **in other words, that there is no providence at all.** This agrees with the implicit thesis that there is a fundamental antagonism between reason and faith. —Spinoza uses "prophecy" and "Bible" as virtually synonymous terms, and he asserts that the only source for our knowledge of the phenomenon of prophecy is the Bible. **But he also asserts that the augurs of the pagans were true prophets,**39 **and thus implies that the first book of Cicero's *De divinatione*, for example, would be as good a source for the study of prophecy as the Bible.**

The contradictions regarding Christianity, or the New Testament, require a somewhat more extensive treatment. **Spinoza asserts first that no one except Jesus (whom he regularly calls Christ) has reached the superhuman excellence sufficient for receiving, without the aid of the imagination, revelations of supra-rational content;** or that he alone—in contradistinction to the Old Testament prophets in particular—truly and adequately understood what was revealed to him. **He is therefore prepared to say that the wisdom of God has taken on human nature in Christ, and that Christ is the way of salvation.**40 **These statements must be understood, i.e., corrected, in the light of Spinoza's denial of supra-natural phenomena.** Since the laws of nature in general, and of human nature in particular, are always and everywhere the same, or since there is never anything radically "new," the mind of Jesus, who had a human body, cannot have been superhuman.41 In other words, since man has no higher faculty than reason, or since there cannot be supra-rational truths, Jesus cannot possibly have been more than the greatest philosopher who ever lived. The second of the two thematic treatments of Jesus which occur in the *Treatise* fully confirms this conclusion. **If Spinoza affirms "with Paul" that all things are and move in God, he can be presumed to have believed that his own doctrine of God as the immanent cause of all things goes back to Jesus himself.** He even proves that Jesus' knowledge was of necessity purely rational, because Jesus was sent to teach the whole human race and therefore he had to conform to the opinions common to the whole human race, i.e., to the fundamental principles of reason; whereas the Old Testament prophets had to conform merely to the opinions of the Jews, i.e., to a particular set of prejudices.42 Or, more precisely, whereas the Old Testament prophets were themselves under the spell of the popular prejudices, Jesus and the apostles only adapted freely the expression of their rational thoughts to the popular prejudices.43 Not indeed the exoteric teaching of the New Testament but its esoteric teaching is genuinely philosophic. This conclusion is, however, strikingly at variance with the chief purpose of the *Treatise*. The radical separation of philosophy and Bible would be a preposterous demand if the esoteric teaching of the New Testament were the peak of philosophic wisdom. **Besides, when Spinoza affirms "with Paul" that all things are and move in God, he adds that the same view was perhaps held by all ancient philosophers and by all ancient Hebrews.** He speaks with high regard of Solomon's teaching about God and he calls Solomon simply "the philosopher." Yet philosophy, as Spinoza conceives of it, presupposes the knowledge of mathematics, and Solomon had hardly any mathematical knowledge;

moreover, the people accepted Solomon's sayings as religiously as those of the prophets, whereas the people would deride rather than respect philosophers who lay claim to authority in religious matters. Thus it would be more accurate to ascribe to Solomon, not philosophy, but popular wisdom, and accordingly to apply the same description to the teaching of Jesus.44 This agrees with the facts that, according to Spinoza, the doctrine of "the Scripture," i.e., of both Testaments, contains "no philosophic things but only the most simple things," and that he probably regarded his teaching, i.e., the true philosophic teaching, about God as opposed to all earlier teachings.45 The rational teaching that Spinoza would seem to have seriously ascribed to Jesus, was hardly more than rational morality. Yet he does not consistently maintain that the true moral teaching was discovered, or preached for the first time, by Jesus. To say nothing of the fact that it is by nature accessible to all human beings at all times, it was certainly known to, and preached by, the prophets and wise men of the Old Testament.46 The teaching that is characteristic of Jesus or of the New Testament in general is not rational morality itself but its combination with such a "history" as permitted its being preached to the common people of all nations. In other words, the substance of the teaching of the two Testaments is identical. They differ only in this: the Old Testament prophets preached that identical teaching by virtue of the Mosaic Covenant, and therefore addressed it only to the Jews, whereas the apostles preached it by virtue of the passion of Jesus, and therefore addressed it to all men.47 Now the combination of rational morality with a "historical" basis of either kind implies that the rational morality is presented in the form of a divine command, and hence that God is presented as a lawgiver. Thus the New Testament demands obedience to God as does the Old, and therefore both Testaments are equally in conflict with the philosophic teaching according to which God cannot be conceived as a lawgiver. **"To know Christ according to the spirit" means to believe that God is merciful; but philosophy teaches that it does not make sense to ascribe mercy to God.**48 In short, the New Testament is not more rational than the Old. There is then no reason why the apostles, for example, should have been more emancipated from the prejudices of their age than the Old Testament prophets had been. **In defending his *Treatise* in one of his letters, if not in the *Treatise* itself, Spinoza admits that all apostles believed in the bodily resurrection of Jesus and hence were under the spell of popular prejudices.**49 There may be more of reasoning in the New Testament than in the Old, and the greatest Old Testament prophet may never have produced a single legitimate argument; but this does not mean of course that there are no illegitimate arguments in the New Testament.50 Philosophic statements occur especially in Paul's Epistles, but no more than in the writings ascribed to Solomon. Paul's philosophic utterances could be traced to his desire to be a Greek with the Greeks, or to make the Gospel acceptable to a multitude tainted by philosophy; the most philosophic utterances of the New Testament would thus appear to be simply borrowings from Greek philosophy. Furthermore, since these utterances were made in deliberate accommodation to the prejudices of their addressees, they do not necessarily agree with Paul's own views. **Above all, Paul's pedagogic use of philosophy seems to have laid the foundation for the fatal fusion of philosophy and theology against which the whole *Treatise* is directed. Certainly Paul's teaching of justification "by faith alone" contradicts what Spinoza considers the central and most useful teaching of the Bible.**51 One could think for a moment that by insisting on the universalistic character of the New Testament, as distinguished from the particularistic character of the Old, Spinoza denies the identity, which he elsewhere asserts, of the moral teaching of the two Testaments. Yet he quotes the statement "love thy neighbour and hate thine enemy" in order to prove, not the difference, but the basic identity of the teaching of the Sermon on the Mount with that of Moses. **The difference between the commands "hate thine enemy" (i.e., the foreigner) and "love thine enemy" is exclusively due to the changed political circumstances of the Jewish people: Moses could think of the establishment of a good polity, whereas Jesus (just as Jeremiah before him) addressed a people which had lost its political independence.**52 Spinoza does not consistently grant that what the New Testament teaches in regard to private morality is superior to the Old Testament teaching. But even if he did, **this would be outweighed in his opinion by the fact that Christianity, owing to the circumstances of its origin, offers much stronger support for the dualism of spiritual and temporal power, and therewith for perpetual civil discord,** than the Old Testament teaching, which was originated by Moses, who was king in fact if not in name. For the safety of the community is the highest law.53

Just when Spinoza was first finding his feet, in 1656-7, after leaving the synagogue, the indefatigable Jan Hendriksz Glazemaker (1620-82), collaborating closely with the elder Rieuwertsz, was zealously rendering the bulk of Descartes' sizeable oeuvre into Dutch. Glazemaker was indeed among the most remarkable of those playing a formative part in Spinoza's life.

A born Amsterdammer from a Frisian Mennonite family, living on the picturesque Brouwersgracht in central Amsterdam, married since 1651 to a daughter of a prominent Frisian Mennonite surveyor and mathematics teacher,47 Glazemaker's first occupation, before becoming a professional translator in the mid-1650s, was as a glass grinder (hence his surname). **Despite having a brother-in-law who was a leader of the conservative "Flemish Mennonite" wing, Glazemaker's sectarian background framing his early life and personal friendships evidently ceased shaping his personal outlook**

(aside from his life-long antipathy to Calvinists and Catholics) from around the time he became friendly with Spinoza.

The very first translations of Descartes into the vernacular, in the Netherlands, began appearing only in 1656 and these early translations were all the work of this one enthusiast and collaborator with Rieuwertsz, as were many later ones. **Glazemaker was a serious, indefatigable ideologue.** As a translator, he rarely bothered with polishing or embellishing his prose, and of the prodigious quantity of material he translated for publication during his post-1655 career little was literary in character. **Rather, it was always Glazemaker's unswerving purpose, in alliance with Rieuwertsz, to make a great quantity of precious knowledge available to the ordinary reading public possessing no Latin or French,** especially philosophy, science, and mathematics together with reliable information about distant parts of the world. He aimed to produce a lot fast but accurately, clearly and straightforwardly, always using current Dutch terms without importing into his prose unfamiliar terminology from Latin, Greek, or other tongues, to help readers to imbibe important new perspectives with relative ease.48 His, and his group's, aim was to transform the world by enlightening their brethren.

Glazemaker achieved fame by diffusing Cartesianism among the public in an accurate, easily accessible style winning local renown that lasted over half a century.49 During the crucial late 1650s, he stood out as the sole major translator of Descartes' works into Dutch and among the principal early volumes he and Rieuwertsz brought out was Descartes' *Proeven der wysbegeerte* (Amsterdam, 1659), a collection of Descartes' papers on astronomy, anatomy, animals, and measurement, **together with his *Letter to Voetius* rejecting that Calvinist fundamentalist's fierce criticism that perfectly illustrates Glazemaker's role as propagator of a popular Cartesianism lending particular emphasis to mathematical precision and repudiating Calvinist intolerance.** Significantly, a copy of the *Proeven* figured among the books in Spinoza's personal library when he died, among the very few in Dutch that he possessed.50
…

Several reports of the 1660s indicate also that Glazemaker was no longer a Collegiant or Socinian in any meaningful sense but now an "atheist," at least in seventeenth-century terms. In his case, this charge was solidly grounded. Research on his travel translations shows Glazemaker was a classic representative of the early "Radical Enlightenment" in its strict definition – that is a publicist tying rejection of religious authority to democratic republicanism while seeking to disabuse the ordinary public of their trust in old beliefs, authorities, and hierarchies, or what he calls delusions, ignorance, and "superstition." **He clearly reflects the ease with which a consistent thinker could shift from Socinian and Collegiant perspectives to a strictly secular Radical Enlightenment stance.**

Indications of Glazemaker's new outlook appear in his 1666 rendering of Marco Polo's travels where, in the wake of La Peyrère and Vossius, he shows avid interest in China and eagerness to demolish biblical chronology as well as insistence on "reason" as the key to understanding the world. Removing what he considered impurities from the French version (rendered from the original Italian) he was translating from, **he shows not just eagerness to delete all references to Christ being divine and to the Trinity, as one might expect from a Socinian, but an undisguised *anti-Christianisme* that stretches considerably further.** Not satisfied with removing all reference to saints, the Virgin Mary, the holy cross and relics, he erased from his version the original text's references to *supernaturalia* of whatever kind, including angels, devils, miraculous events, all references to religion as a divinely given guide and to revelation. In his translation, unlike the original text, no one is ever converted from one faith to another supernaturally or in a spiritually meaningful way. **With astounding boldness, Glazemaker even claims in his preface to the reader that "because the zeal of our first Christians largely destroyed the ancient sciences, not much is left that can be utilized by us, and what survives of [the ancients'] theology, history, law studies, medicine and philosophy fell into such contempt, and these sciences became all so decayed, that even in the case of principal ancient authors who were not taken from us, we cannot properly understand, let alone emulate, their marvelous and pre-eminent wisdom."**51 Christianity's role he apparently viewed as essentially destructive.

Since the early Christians did not assist the progress of humanity and human knowledge, according to Glazemaker, but rather massively set it back, it is pertinent to ask whether he still remained in any meaningful sense within the Collegiant fold at the time of Spinoza's exit from the synagogue or whether he was already reputed to be a "Cartesian atheist." In 1657 and again in 1658, he and Rieuwertsz published the first Dutch translation of the Koran (rendered from Du Ryer's 1647 French version) with some supplementary material about the life of Muhammed and early Islamic history. This, it has been suggested, reflects the greater tolerance and relative unconcern for Muslim rejection of Christ's divinity characteristic of Mennonites and Anabaptists generally, a feature seemingly fitting with Socinian views.52 But while Glazemaker does represent Islam as a false religion and illusory, claiming the Koran derives largely from the rabbinic Talmud, he discards the usual antagonistic attitude typical of earlier Anabaptist authors and Du Ryer, and altogether breaks with Christian tradition, including the Mennonite

approach, by attempting to expound Islamic teaching in a serious fashion without any slanderous comment.
…

Arguably, the most striking feature of the "true religion" Spinoza formulated and taught in the early 1660s is the use of his doctrine of God, and what he considered the veritable Christian message, to fuse in some respects mutually hostile strands incipiently attracted to his teaching – **that of individualist freethinkers of largely secularizing bent, like Glazemaker, Van den Enden, Bouwmeester, and Meyer, and that of the larger group of Collegiant background and devotion with which he had been connected possibly longer, Jelles, Balling, Rieuwertsz, and De Vries.** Among Spinoza's friends, the "rationalist" Collegiants were those most likely to act as human bridges between the worlds of dissident fringe Christian religious culture and Cartesianism, between Christ the teacher of men and zeal for freethinking philosophy.
…

The ancient (and early modern) Epicurean alternative was to foster a non-combative secret counter-culture content to cultivate its own garden concealed from the rest. **This is insufficient, explains Spinoza, at the close of Part II of the *Ethics*, because knowledge of the truth opens the door to much that is useful for the lives of all men and for society.** The true philosophy "besides assuring us complete peace of mind, also teaches us in what our greatest happiness, or blessedness, consists [in quo nostra summa felicitas sive beatitude consistit], assuredly exclusively in the knowledge of God which induces us to conduct ourselves in accordance only with what love and piety recommend." From this both the individual and society as a whole benefit **and we "clearly understand how far those stray from the truth who, in exchange for their virtue and most elevated actions, as if in exchange for the greatest servitude, expect to be honoured by God with the greatest rewards as if virtue itself, and serving God, were not happiness itself and the greatest freedom."**60
…

The circle around Van den Enden, wrote Borch, **now amending his previous remarks,** do "believe in God and are not really atheists since they believe in God albeit in another manner than has been accepted up to now – they conceive God to be the nature of things, the best of what is in nature, almost the quintessence of all virtue and perfection; the more they acquire both of these with enthusiasm, the closer they are to God [quam quo optatius obtinerent eo se esse Deo viciniores].71

> 71. Borch, *Itinerarium* ii, 102; Mertens, "Van den Enden and Religion," 65; "**nempe Deus esse naturam rerum et optimum quodque in natura,** atque quasi quintam essentiam omnium et optimum virtutem et perfectionem, quam quo optatius optinerent eo se esse Deo viciniores."

…

Where Maimonides amended Averroes by arguing that philosophical truth fundamentally pervades the words of Torah and biblical prophecy, and that the people should be taught selected key parts of philosophical truth but philosophical truth dressed in easily grasped parables and poetic terms for their benefit, that is that philosophical truth and science should be broadcast among the multitude via Scriptural "interpretation," but that ultimately philosophy and religion comprise the same fundamental truth, **Elijah Delmedigo, from whom Spinoza borrowed much of his appreciation of the Averroist riddle,** criticizes and reprimands Maimonides for mixing Scripture and philosophy. He reverted to a more strictly Averroist stance, **while claiming the barriers between the worlds of the "multitude" and that of the "select few" can be slowly shifted by the progress of science.**

Spinoza's approach of the early 1660s, though, more drastically reworks the Averroist conundrum, introducing a new element. While agreeing that truth cannot contradict truth, and with Elijah Delmedigo that Maimonides erred in contending that biblical prophecy mirrors the truths established by philosophy in poetic easily understood forms, he rejects Averroes', Maimonides', and Delmedigo's concurrence that revealed religious truth constitutes the essential foundation to which all society must adhere, **reversing the hierarchy so that philosophy and science are now the primary basis of truth to which all else must conform.**
…

Fusing the New and Old Testaments together (for philosophical purposes), but also pointing out that the Koran and other Scriptures should be included here, Spinoza concedes that a residue of truth is found in Scripture (in fact in all Scriptures) dressed up in parables that remain of vital importance to the many given that the multitude can never penetrate beyond this residue. But at the same time Spinoza held that by group cultivation of philosophy, science, and biblical criticism it is possible to radically alter the balance between the "select few" and the multitude, intellectually and politically, and in this way change the basic dynamics of the Averroist conundrum. **By means of clandestine networking and group formation, the "select few, the sages," can gradually encroach and gain the initiative and even perhaps eventually capture control of law-making (much as Maimonides hoped to do),** achieving moral and political leadership by subordinating

Scripture to reason, reforming religion no less than philosophy and wresting control of “true religion” from churchmen.

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA368&printsec=frontcover

Many times during his life Spinoza would be accused of being an “atheist” spreading “atheistic” philosophy, a charge that always angered and troubled him. He invariably rejected the accusation outright. **Yet, in rejecting the charge, instead of veiling or qualifying his claim that there is no knowing God who can change the immutable laws of Nature that govern all reality, guide the course of events, or perform miracles, or who rewards or punishes men, he invariably reacted, strikingly, by treating the accusation as a moral slur, wrongly implying he was purveying immorality.** When, for example, the Utrecht Cartesian Van Velthuysen accused him of being an “atheist,” in 1671, Spinoza rebuked him for being indifferent to “what manner of life I pursue”; saying that had he known “he would not so readily have been convinced that I teach atheism, at atheists are usually inordinately fond of honours and riches, which I have always despised as is known to all who are acquainted with me.”43 **Though entirely typical of Spinoza and his attitudes, it is a strange reply to the charge of not believing in the Christian God.**

https://archive.org/details/enlightenmentcon0000isra/page/236/mode/2up?view=theater

Hence, Dutch and later radical writers typically follow Spinoza, as Du Marsais does in *Le Philosophe*, **in redefining ‘piety’ and ‘religion’ to denote reverence for the law conceived not as the ruler’s will but as expression of the common interest, while simultaneously redefining ‘atheism’ and ‘godlessness’ to mean defiance of society’s laws and well-being.**

https://archive.org/details/enlightenmentcon0000isra/page/158/mode/2up?view=theater

Indeed, for Spinoza, whose explanation of this is surely one of the most astounding passages in his *oeuvre*, it matters not a whit whether one understands these doctrines theologically or philosophically: ‘whether God is believed to be everywhere actually or potentially, whether he governs things freely or by natural necessity; or lays down laws as a ruler or teaches them as eternal truths’ [deinde nihil etiam ad fidem si quis credat quod Deus secundum essentiam vel secundum potentiam ubique sit; quod res dirigit ex libertate, vel necessitate naturae].118

https://archive.org/details/worshippingstate0000wike/page/154/mode/2up?view=theater

The Bible, Spinoza argued, was written by and for the ignorant, the vulgar, and the superstitious. “Scripture does not contain grand theories or philosophical matters, but only very simple matters, which can be perceived even by the slowest.”19 In other words, the Bible is for dummies.

Needless to say, these dimwits aren’t philosophers or scientists. But they can at least appreciate a good, stirring moral tale. And that’s helpful. The simple-minded need to be taught how to behave. But they need to be taught in a way that suits their less-than-sharp intellectual abilities. **The Bible can be a useful tool for that purpose, as long as it doesn’t give the vulgar plebs any pretensions to knowledge of truths above reason.**

That’s the kind of thing that makes the plebs uppity. If they think they possess supernaturally revealed doctrinal or moral truths that stand above and judge the state, they’re actually dangerous. That’s why the Bible has to be reduced to the role of moral cheerleader.

All You Need Is Love

Vulgar people must be taught by the Bible, **but in way that makes them more, not less, obedient to the state.** For Spinoza, that means reducing the entire message of the Bible to one simple platitude: “obedience toward God consists only in love of neighbor…”20
…

The complete insignificance of belief in Spinoza’s version of Christianity is highlighted by the fact that Spinoza sets his view out as a complete antithesis of Luther’s view that we are saved by faith alone, not by works. For Spinoza, precisely the opposite is true: “We can judge no one to be faithful or faithless except on the basis of works. Namely, if the works are good, however he may dissent in his dogmas from the other faithful, he is still faithful. And on the contrary, if the works are evil, however he may agree in words, he is still faithless.”25

For Spinoza, differences in theology are utterly inconsequential. All that matters is that you are externally moral and hence law-abiding. And even atheists can be law-abiding citizens.
…

There’s a world of difference between respecting religious liberty because you believe that human beings have a fundamental need to be persuaded by truth, and hence to freely and sincerely assent to it, on the one hand, and, on the other, thinking with Spinoza that, since religion is irrational and based merely on one’s subjective feelings and desires, it should be confined to the realm of taste, “to each his own.”

If we’re honest, we have to admit the notion that we all have the right to define our own religious beliefs whatever way we please – a principle that so many of us modern Christians accept as an integral part of our Christianity – must actually come from somewhere else, rather than from Christianity. And wherever it may originally have arisen, we certainly find it in Spinoza.

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA1178&printsec=frontcover

Eventually, De Swaen discovered the probable clandestine publisher was the Collegiant bookseller Jan Rieuwertsz, and Neercassel went personally to see him, demanding to know point blank whether he was editing Spinoza’s manuscripts. **Rieuwertsz lied to his face, denying all knowledge of such a project.** Neither among the Christians nor the Jews of Amsterdam, reported Neercassel to Barberini on 25 November 1677, “have I found anyone who had seen this manuscript or knew anything about it.” He had uncovered some more facts, though, he added, naively passing on misinformation with which Rieuwertsz had fobbed him off. When Spinoza died “last summer,” Neercassel reported back to Rome, he left as “**heir to his writings a certain Mennonite or rather Socinian bookseller of Amsterdam. This publisher, named Jan Rieuwertsz, is accustomed to publish whatever is bizarre and impious thought up by impudent and arrogant minds.** This bookseller assured me that, among Spinoza’s belongings he found no writings apart from some manuscript meditations on the principles of Cartesian philosophy and that [apart from his Descartes book] no other book of Spinoza’s has appeared except for the *Tractatus Theologico-Politicus*.”48
…

When interrogated by Neercassel, Rieuwertsz hence lied outright. By then, the *Opera Posthuma* was already largely printed and almost ready for surreptitious distribution. **But it was a crucial moment, and Neercassel allowed himself to be put off the scent just when outright suppression might still have succeeded.** He was consequently responsible for the failure of Steno’s and the Inquisition’s effort.

https://web.archive.org/web/20101221043517/http://www.mcusa-archives.org/mhb/Plantenga-Plockhoyt.htm

New Amstel’s Sheriff Van Sweringen noted at the time that Carr almost succeeded in "destroying the quaking society of Plockhoy to a naile," and, in essence, erasing it from posterity’s pages. Alas, no journalists or photographers were present to document the tragedy. And so little remains of this proud man stripped of colony, country, and purpose. **Yet, Plockhoy survived, miraculously reappearing, blind and destitute, with his wife in the Mennonite town of Germantown, Pennsylvania, thirty years later.**
…

Young Plockhoy’s best friend, the physician Galenus de Haan, a few years Plockhoy’s senior, was to have an enormous influence on Plockhoy’s life and writings. **The two boys were part of the sizeable Mennonite community that had emigrated from Switzerland around 1570.** But now the Mennonites in Holland were undergoing severe sectarian fractures at this time.

De Haan’s father was the leader of the Mennonite congregation. **Meanwhile, the anti-sectarian Collegiants challenged the Mennonites to stop their internal bickering. Collegiants were basically progressive Mennonites who advocated replacing ministers, creeds, in effect, all organized churches with *collegia prophetica*, meetings in the round where people of various faiths could gather to read Scripture, sing psalms, and discuss the Bible and contemporary issues.** Both de Haan and Plockhoy became ardent Collegiants. They were convinced that these *collegia* were the "only way to abolish all lording over consciences." The Collegiants broke away – ironically – from the schismatics (a schism of a schism).
…

Plockhoy arrived in 1648 and wasted no time installing himself among Amsterdam’s intellectual circles, becoming involved in an ad hoc clique of writers, "lovers of the noble art of poetry," and artists known as the Parnassis of Y. [today spelled "Ij," the name of the river behind Amsterdam].

The Parnassians [or Reformateurs] were not some gaggle of sour academics or blithe band of bohemians but a serious "art school for the promotion of virtue." **They gathered frequently in an informal manner around a table in the Sweet Rest, an inn owned by the group’s "head poet," the irreverent Jan Zoet, to engage in heated discussions "of political and philosophical import." Other members included renowned artist-Mennonite, Govert Flinck and poets Karel Verloove and Jacob Steendam.**

They hoped to improve the moral tenor of Amsterdam through the "abolition of various customs," and advance the cause of the poor, which they did by establishing the Oranje-Appel orphanage together with the Mennonites.

Zoet usually commenced the evening by asking a "meaningful and soul-searching question" like "When a man by marriage is bound to a woman, may he sleep with his maid-servant without transgression?" To this Plockhoy replied "yes," claiming the Bible did indeed condone polygamy. Some of the Parnassis members, including Zoet, agreed. The versified repartees grew robust, perhaps fueled by small measures of gin. Plockhoy's poet-friends, Steendam and Verloove, offended by Plockhoy's arguments, issued bitter rebuttals. Steendam characterized Plockhoy and his supporters as "patriarchs of polygamy." In 1662 however, the two offered poems to support Plockhoy's elaborate settlement prospectus.
…

Plockhoy, however, thought it best to found an idealistic community somewhere removed from the sins of the rest of the world. **[It seems he failed to see the inconsistency with his universalist ideas.]** Other firebrands held sway over Plockhoy's development. Samuel Hartlib, a Polish progressive, was convinced the entire state needed transforming. Gerard Winstanley, of the Diggers, presented Cromwell with plans for communal utopias. Leveller Giles Calvert, advocated for the poor and probably published Plockhoy's *A Way Propounded* as well as activist and **Christian communalist, William Walwyn, who may have aided Plockhoy with the English wording in his pamphlets. They, in turn, were probably influenced by the German utopian, Johann Andreae's [1586-1654] blueprints for a geometrically fortified "republic of workers living in equality."**

Plockhoy set to work to win Cromwell's support for his plans. His first letter, dated June 24, 1658, addressed Cromwell as the "Mighty and (as I hope) Prudent Lord." **The letter, perhaps written with Hartlib assisting with the English, presented his essential ideas of equality in faith, religious tolerance, and the extension of the Lord's kingdom via the Collegiant's *collegia prophetica*.**
…

With Parliament back in session in January 1659, he redoubled his efforts sending letters to both Parliament and Cromwell's son – and successor – Richard.

That same month, Plockhoy published his pamphlet, *The Way to the Peace and Settlement of These Nations…* "to awaken Public Spirits" and foster interest among English citizens. The pamphlet, signed "Pieter Cornelius van Zurik-Zee, a lover of truth and peace," consisted of the two Cromwell letters **and one written to Parliament on the subject of the *collegia prophetica,* which encompassed his (and Hartlib's) ecumenical vision of religious tolerance and an all-embracing universal church which would finally empower the disinherited.**

Plockhoy's ideas, however, got lost in the bedlam that followed the Commonwealth's disintegration. Still this did not discourage him. Plockhoy was never content with mere what-if pipe dreams. **He wanted action, concrete results as his ideas drifted from religious to social activism to "give ear to the poor." There is evidence, however scant, that Plockhoy and his circle convinced some "well affected persons" to sanction the development of three cooperative communities** to "promote so good and pious a work." Donors offered 100 pounds each to bring the "little commonwealths" to fruition. **Some evidence hints that the communes *were* developed – one each in London, Bristol, and Ireland, with plans for more on the mainland.**
…

His 84-page *Korte Verhael van Nieuw Nederlants,* ("Brief Account of New Netherland…"), published in October, bundled the seven letters in one pamphlet and announced his intention to found a settlement for "the many poor and needy families." In it Plockhoy tried to allay the fears of more conservative parties who thought his insistence of communal equality would mean a loss of individuality. He also reassured sponsors that although his experimental community would be based on moral concerns, it would still be profitable and competitive in the marketplace.

His collaborative and not so brief *Kort en Klaer Ontwerp*… ("Brief and Concise Plan…") sounded more like a travel brochure meant to lure settlers to a mythical land of limitless abundance. "New Netherland is the flower, the noblest of all lands … birds obscure the sky, so numerous in their flight, the animals roam wild … fish swarm in the waters and exclude the light…" Poems by old Parnassis friends, Steendam and Verloove, encouraged Plockhoy and assured sponsors that his ideas were sound. **[Steendam who had lived in New Netherland, 1650-1660, wrote glowing reports from the New World, touting its many virtues – "the purity of the air…" – making him, arguably, not only the New World's first poet but also its first publicist.]**
…

Most notable among Plockhoy's neighbors in this sparsely populated area were the Lenni Lenape and Nanticoke tribes. **They were portrayed as tall, athletic, trustworthy, and curiously relaxed.** They settled local waterways where they fished, farmed, and hunted. **According to Dutch scholar, Claes Wassenaer, who, in the 1630s, wrote: "There is little authority known among these nations. They live almost all free."**
…

Plockhoy had been intent on avoiding the mistakes of the Puritans who had used their spiritual beliefs to justify wiping out the natives from their chosen land, and those of traders and hucksters inspired only by profit and power. But unforeseen circumstances forced Plockhoy to focus on agriculture, a comprehensive criminal code, and more extensive defenses, including the institution of sentry duty. **Plockhoy also discovered, to his disillusionment, that he had to coerce others into rotating decision-making responsibilities and new tasks.**

https://archive.org/details/radicalenlighten0000isra/page/176/mode/2up?view=theater

Essential components of Van den Enden's radical egalitarianism are the ideas of Plockhoy, who was closely associated with his first foray into the domain of political thought, the *Short Account* (1662) of 'New Netherland's situation, virtues, natural advantages and suitability for colonization,'13 a text which reflects the fervent commitment to settlement in North America prevalent among some fringe religious groups in Dutch society before the conquest of the colony by the English in 1664. A Zeelander from Zierikzee, who first made his mark among the Amsterdam Collegiants in the late 1640s, Plockhoy had long been an ardent advocate of equality and unrestricted religious toleration.14 **Attracted to the social radicalism which flourished briefly in England during and after the Civil War, he migrated there and, in 1659, published a pamphlet, *The Way to Peace and Settlement of these Nations*, imploring the new tottering Cromwellian regime to enact a fuller, more comprehensive religious freedom than it had yet been willing to countenance.** A second tract, published in May 1659, entitled *A Way Propounded to Make the Poor in these and other Nations Happy*, unveils plans for forming a new kind of co-operative society on the outskirts of London, with eventually a daughter community 'about Bristol, and another in Ireland where we can have a great deal of land for little money.'15

A pious Collegiant, Plockhoy taught Van den Enden no religion, philosophy, or political thought. But he undoubtedly contributed to his fervent egalitarianism and transmitted to him elements of his ideas on co-operative labour and lifestyle, concepts not without some significance in the history of socialism. **Thus, nearly three centuries later, the Manchester Co-operative Union in 1934 acknowledged that if 'our co-operative movement must have a father or a founder Peter Cornelius Plockhoy has an excellent claim to that distinction.'**16 Plockhoy's aim was to create a 'little commonwealth' separate from the rest of society, an élite of work and spiritual values **based on co-operative principles in order that 'we may the better eschue the yoke of the temporall and spirituall pharaohs, who have long enough domineered over our bodies and souls and set up again (as in former times) righteousness, love and brotherly sociableness, which are scarce any where to be found.'**17 The co-operative was to share ownership, risk, capital, and work, and no form of hierarchy or leadership of any kind would be allowed. Profits would be shared among the members equitably and because only a quarter of the women were required for cleaning and cooking when groups of families live together in communal complexes or settlements, over three-quarters of the women and girls, he urged, would be free to engage in the same manual labour as the men. It remained unclear, though, a feature exploited by Plockhoy's enemies, how concomitant erosion of family unit and strict monogamy would be prevented.18

In Plockhoy, the principle of equality plainly applies to women as much as men, though he does not stress this particularly, and derives from his fervent Collegiant, anti-Church convictions, **his insistence on Christ's 'abolishing amongst his disciples all preheminency or domineering of one over another,' so that the 'gifts and meanes of subsistence in the world (for necessity and delight) should be common.'**19 Van den Enden doubtless endorsed his requirement that clergy of whatever kind must be debarred from their ideal American commonwealth and that in its religious assembly there should be 'no preheminency, or sole privilege … of offering anything or of speaking first.'20 Consequently, such a co-operative would need to vet prospective new members to ensure only **'honest, rationall, impartiall persons,' that is, personalities free from rigid confessional allegiances as well as vice,** were admitted. Those too mired in ordinary confessional thinking to be suitable as full members were to receive wages, and find their own accommodation, 'till they are fitted and prepared to be members of our society.'21
…

Doubtless noble lineage 'puffeth up,' contends Plockhoy, but 'what else is it but a meer name, the vanity thereof who sees it not? The very foundation of it is nothing else but the noyse of the tongue and the report of others.'23 'For princes are not born on purpose,' he held, 'to reare up stately palaces, the

learned are not born for the writing of many unprofitable and for the most part frivolous books; the rich are not born to boast of their gold, silver and christal vessels; the rest of the people are not born for so many various unprofitable handy-crafts,' labouring so that the rich and powerful might enjoy a sweet life off their labour.24 **Honest, well-meaning, and unprejudiced men and women were to work in Plockhoy's utopia, sharing the fruits of their toil untroubled by rulers, nobles, lawyers, or clergy, an 'honest' week's work for members being fixed by him at thirty-six hours.**25

https://archive.org/details/radicalenlighten0000isra/page/360/mode/2up?view=theater

Anthonie van Dale (1638-1708) was one of the leading medical men of late seventeenth-century Haarlem, and the first dean of the civic medical college established by the city government in 1692 to regulate medical practice.20 **Raised among the Mennonite community,** he was an ardent for not just of medical quackery, but all types of superstition, and an avid scholar.
…

Besides his medical work and scholarly researches, **Van Dale, like many Mennonite doctors, also served his congregation as a lay preacher, albeit briefly, being unsuited to this role and tending to exasperate his congregation by dragging too much classical erudition into sermons.**22
…

The great merit of Van Dale's enterprise is his massive argumentation, buttressed by innumerable quotations from Greek and Roman texts, proving one by one that the renowned oracles of antiquity were all frauds artfully contrived to foment credulity and herd the superstitious masses in the interest of the few. Of course, Van Dale too had learnt from others **and, besides Vossius, acknowledged his debt to Boccalini, the sixteenth-century Englishman Reginald Scot, his Mennonite predecessor Abraham Paling, and the medieval Jewish philosopher Maimonides,** whom he repeatedly cites approvingly. Yet he could justly claim to the first to argue (at least in detail) that all ancient oracles and auguries were bogus and that the Greek oracles did not cease with Christ's coming.30
…

Medical scholars, he asserts, had incontrovertibly disproved all recent cases of 'possession' and shown, whatever the clergy may claim, that none of those reported is genuine.35 Likewise characteristic of Van Dale, as of Blount, is **the epic vision of a classical world gripped by unceasing intellectual and ideological strife between enlightened philosophers such as the 'Cynici, Academici en Sceptici, de Epicureen en Aristotelici,'** on one side, and on the other, priestly guardians of altars and sanctuaries. The former use reason-based philosophy to expose the craft and deceit of the 'Oracle-monks' who, **backed by their intellectual allies, the Platonists and Pythagoreans,** retaliate by denouncing their opponents as 'atheisten.'36
…

The only claim of Van Dale with which Baltus could agree was that no one before him had ever argued comprehensively that demons and spirits did not infuse the pagan sanctuaries; not even the 'atheist' Pliny had done that.73

https://archive.org/details/radicalenlighten0000isra/page/398/mode/2up?view=theater

But while granting that Bekker had had a greater impact than anyone else in this sector of German culture, Goldschmidt questioned whether intellectually he really transcended the Haarlem physician. If it seems so superficially, he averred, this is because Van Dale is more insidious: '**what Van Dale did furtively and under cover, Balthasar Bekker, as an outspoken Dutchman, broadcast with mouth wide open and uninhibitedly;** where Van Dale entered in felt-soled slippers, Bekker clattered wearing Polish boots so that his stamping could be heard in the streets.'181 But that is merely a difference of style. In essence, all Bekker's ideas were already worked out in the 'damned books' of Van Dale.

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Arnold,_Gottfried

His first work, *Die Erste Liebe zu Christo*, to which in modern times attention was again directed by Leo Tolstoy, appeared in 1696. It went through five editions before 1728, and gained the author much reputation. In the year after its publication he was invited to Giessen as professor of church history. The life and work here, however, proved so distasteful to him that he resigned in 1698, and returned to Quedlinburg**. In 1699 he began to publish his largest work, described by Tolstoy (*The Kingdom of God is within You*, chap, iii.) as "remarkable, although little known," *Unparteiische Kirchen- und Ketzerhistorie*,** in which he has been thought by some to show more impartiality towards heresy than towards the Church (cp. Otto Pfleiderer, *Development of Theology*, p. 277).

https://books.google.fi/books?id=megGDAAAQBAJ&lpg=PP1&hl=fi&pg=PA134#v=onepage&q&f=false

Gottfried Arnold and other 'enthusiastic' historians, however, who believed that all condemnation of heterodoxy was a sign of oppression by an established church, had to shift the decline of faith to an earlier stage. If they did not do so, it became impossible to explain why particular heresies had been persecuted as early as the age of Constantine the Great. Christian Hoburg, for example, believed that the accession of Constantine already marked the corruption of the early church: **'when the pagan emperor [that is, Constantine] with his pagan mores, laws and regulations entered the kingdom of Christ, Christianity became a Babel.'**23

>
> Des Apostaten Haß und Verdammnis ist dreizehn jahrhundertelang beinah ein Glaubensartikel der Christenheit gewesen. **Billiger und gerechter über ihn hat zuerst ein protestantischer Pietist, Gottfried Arnold, in seiner *Kirchen- und Ketzerhistorie* 1699,** dann ein halbes Jahrhundert später Mr. de Bletrie in der gründlichen Lebensbeschreibung Julians sich ausgesprochen. **Ihnen folgt der Marquis d'Argens, ein Günstling Friedrichs des Großen, in seiner Herausgabe der *Défense du paganisme par l'empereur Julien*, Berlin 1764,** worin er doch noch kirchlicher erscheint, als man von einem Freunde Voltaires erwarten sollte.

…

The suppression of so-called heretics was no more than another example of the suppression of the weaker by the stronger, which entered the world with Cain's murder of Abel.41 There was no self-evident Christian doctrine, especially in the first three centuries after Christ's death, when there was no agreement, which texts were to be included in the Bible, and no scriptural norm of faith existed.42 Faith at that time was measured in terms of the believer's spirituality. **God's works and thoughts, moreover, were often too profound and mysterious to be grasped by human reason.** The orthodoxy constructed by the 'Ketzermeister,' the 'masters of heresy,' mixed fallible human reason, pagan philosophy and human authority with Christian religion.43

https://books.google.fi/books?id=megGDAAAQBAJ&lpg=PP1&hl=fi&pg=PA145#v=onepage&q&f=false

As Peter Reill nicely put it, **Arnold's 'criticism was so intense that it surpassed anything written by the most thoroughly anticlerical eighteenth-century philosophe.'**7

…

Arnold's work was very influential in the development of eighteenth-century Pietism, virtually capturing church history for the Pietists and requiring later writers to situate themselves in relation to him. It has been called a 'Copernican Revolution' in the historiography of heresy.10 Christian Thomasius borrowed from him on many points, although he later distanced himself from Pietism and Arnold's 'enthusiasm.'11 The structure of Arnold's argument was also very attractive to many later misfits and would-be rebels, no matter what their religious sympathies. **Goethe used Arnold's pattern to cast his own *Philosophy of Color* of 1810 as a brave heresy unjustly persecuted by Newtonian orthodoxy.**12

…

It is clear that Spinoza was not very important to Arnold, since only seven out of the 2,690 quarto pages of the 1729 edition deal with Hobbes, Herbert of Cherbury, and Spinoza together.

…

Hobbes is accused of atheism by theologians because he criticized the clergy, but he really just wanted to bring unity to religion (1082-3).

…

Like Hobbes, Herbert of Cherbury was accused of atheism by the clergy because they felt threatened by his ideas. **He went too far because he jettisoned Christ from his vision of a unifying minimal religion, and Arnold does not hesitate to call this a 'miserable and perverted' means of achieving unity** (1084). **But, crucially, even this could be blamed on the clergy. The cause of such atheism or naturalism, Arnold says, is the criminal condition of the clergy, which could drive anyone to doubt the truths of Christian teaching** (1084).

…

Arnold surveys many refutations of Spinoza, concluding that if he did actually become an atheist, it was for the same reason as Herbert. The perverted teaching and praxis of so many clergymen that teach and indeed attempt to live their teaching, but then actually live by unrighteousness, drove him to it (1088). The implication of Arnold's 'impartiality' is that the bad behavior of the orthodox justifies any heretic whatsoever.

Arnold scholars have rightly noted that Arnold's work is a Nietzschean 'Umwertung aller Wertungen,' in which the orthodox are the true heretics and some of the heretics are the

truly orthodox.14 **This is conspiracy theory according to which certain kinds of players cannot do anything right.** It is stronger than the 'impartiality' of the Marxist, according to whom some members of the bourgeoisie can break away from their class and lead the working class: in Arnold's judgment no clergyman for an organized church can do anything right. It is stronger than the 'impartiality' of the post-colonialist, according to which at least the theorists of anti-colonialism are doing something good, even if they are European or American. **No sect theologian can do anything good for Arnold.** His is an 'impartiality' of victimhood in which the persecuted can blame everything on the orthodox.15

> 15. Parallel to the post-colonial claim that every evil that will ever befall Africa can be blamed on colonialism.

Although Arnold's 'impartiality' is radically antinomian and anarchistic in church affairs, it is quite compatible with authority in politics, on the ground that politics does not matter. This is one reason why the Pietists were appreciated by many German princes.

https://archive.org/details/radicalenlighten0000isra/page/406/mode/2up?view=theater

A Zeelander by origin, who studied theology in the 1660s, initially at Utrecht under Voetius, and then at Leiden under Cocceius, Leenhof began to be noticed in the Republic of Letters from the early 1680s when, as a still relatively young Reformed preacher at Zwolle, **he emerged as a fervent Cartesio-Cocceian in the fight against Voetian fundamentalism.**2 In 1684 he published a tract at Amsterdam, castigating the Frisian Reformed *classis* of Zevenwolden for their sweeping condemnation of Cocceian theology and, not least, their charge that out of Descartes' 'school come atheists and libertines.'3 The Voetians, complains Leenhof, habitually resort to smear tactics to try to discredit not only Descartes, whom they allege was given to 'unchastity and whoring,' but all respectable Cartesio-Cocceian authors by equating their writings with those of **'Averroes, Simplicius, Lucianus, Vaninus, Socinus, Koerbagh, Torrentius, Hobbes, Spinoza, etc.'**4
…

In the letters to Wittichius, **Leenhof holds that there can be no *creatio ex nihilo* (creation from nothing) and that the very notion involves contradiction since an infinitely perfect Being cannot act otherwise than perfectly.**9 If God's creation is perfect, the universe cannot ever have *not* existed, for God without the universe would be imperfect.
…

Wittichius, staggered that Leenhof should champion Spinoza against Descartes, refused to see any paralogism in the idea of creation out of nothing.11 On the contrary, he maintained **(rather like Rousseau in his *Émile* eighty-one years later),**12 that only the doctrine of two substances, and the impossibility of interaction between extension and thought, enables those who seek philosophical truth to circumvent the absurdities of scholasticism on one side, and the fatal trap of Spinoza's 'one substance' on the other.13

> https://archive.org/details/in.ernet.dli.2015.23766/page/n255/mode/2up?view=theater
>
> Young man, hear me with confidence. I will always be honest with you. If conscience is the creature of prejudice, I am certainly wrong, and there is no such thing as a proof of morality; **but if to put oneself first is an inclination natural to man, and if the first sentiment of justice is moreover inborn in the human heart, let those who say man is a simple creature remove these contradictions and I will grant that there is but one substance.**
>
> You will note that by this term *substance* I understand generally the being endowed with some primitive quality, apart from all special and secondary modifications. If then all the primitive qualities which are known to us can be united in one and the same being, we should only acknowledge one substance; but if there are qualities which are mutually exclusive, there are as many different substances as there are such exclusions. You will think this over; **for my own part, whatever Locke may say, it is enough for me to recognise matter as having merely extension and divisibility to convince myself that it cannot think, and if a philosopher tells me that trees feel and rocks think**1 **in vain will he perplex me with his cunning arguments; I merely regard him as a dishonest sophist, who prefers to say that stones have feeling rather than that men have souls.**

Although Leenhof published relatively little between 1682 and 1700, his reputation as a leading Cartesio-Cocceian apologist ineluctably dragged him into the morass of the Bekker affair. **For the Voetians, the Bekker imbroglio provided a unique opportunity to publicize the dreadful pitfalls of Cartesianism and Cocceianism,** and Leenhof was a perfect target.14 Henricus Brink, Bekker's chief antagonist in Friesland, published in 1691 his 768-page *Toetsteen der Waarheid* (The Touchstone of Truth), **a vitriolic attack on those who embraced 'Cartesian novelties' with, according to him, catastrophic consequences only now becoming apparent.** Brink assails Leenhof, alongside

Wittichius and Burman, as a chief protagonist of Descartes' 'clear and distinct ideas,' and the 'geometric method' of reasoning, as criteria of truth in theology.15 Brink disdainfully brackets Leenhof with Bekker as a writer who claims comets are purely natural phenomena, not divine portents, and with Wittichius and Burman, as an advocate of Cartesian heliocentrism.16

From the 1680s Leenhof lived and worked in Zwolle, outwardly championing a tolerant, scientifically tinged Calvinism while privately cultivating Spinozism. His radical ideas were philosophical and moral but also extended to social issues, education, sexuality, and politics. It was indeed in the sphere of political ideas that he first revealed his Spinozistic leanings more openly in 1700, publishing two remarkable treatises on the life and views of King Solomon, both ostensibly about the Biblical figure but actually propounding a thinly veiled republican ideology.17
…

The ill-fated text appeared simultaneously in Zwolle and Amsterdam in June 1703 and again the following year. Nowhere does the book refer explicitly to any forbidden philosopher or doctrine. **But this was virtually Leenhof's only precaution.** Otherwise, it is fairly obvious throughout that he is using familiar theological terms in an unorthodox manner to propagate ideas which had little connection with Christianity as commonly understood. Individually, his unconventional way of putting things and double meanings would have aroused no great concern. But the frequency and variety of such expressions, and their cumulative effect, persuaded almost everyone that he was using coded language to disseminate an undeclared, illicit system of philosophy, morality, and social thought.31
…

Leenhof replied with a new work – his 107-page *Hemel op Aarden Opgeheldert* (Heaven on Earth Clerified) commonly called the *Opheldering*. **Likening his detractors' conduct to Voetius' vilification of Descartes as an 'atheist**,'46 he acknowledged having written the now infamous letters sent to Wittichius in 1681, but insisted these were private texts not intended for publication, which, moreover, had been doctored by the editor. **He admitted having 'read *that* philosopher attentively,' but saw no justification for his critics' reproaches there, since good as well as reprehensible things are found in his writings.**47 **Many scholars, he claimed, privately acknowledged that Spinoza had improved on Descartes' account of the passions.** From the outset, as Oldenburg's correspondence with him in the *Opera Posthuma* shows, upright God-fearing men had found valuable things in Spinoza.48
…

The Zwolle *Articles of Satisfaction* in 1704 represent a remarkable attempt to fortify religion against radical philosophy by erecting a high wall between the Churches' teaching and Spinozism. Defining 'Spinozism' as a movement or quasi-religion engaged in universal conflict with Christian belief and values, **the admirably concise ten articles, submitted to the Zwolle city government on 1 September, represent a remarkable feat of intellectual compression. In particular Article 3 is noteworthy, listing as it does seventeen core Spinozist tenets identified as fundamentally at odds with Christianity.** The first five are that there is only one substance which encompasses everything, including God, that there is no God distinct from Nature, that all creatures belong to this single whole, **that there is therefore only one infinite order of causes which determines everything that occurs, necessarily, so that Nature is an independent and separate cause of itself which, through a fixed necessity, produces and creates itself.**84 Sixth is the doctrine that body and soul are not separate entities but one and the same thing, and that there are no *anima separata*, that is, spirits separate from bodies, and thus no ghosts, apparitions, angels, or Devil.85

Seventh is the doctrine that **there is, in the human understanding, no natural innate distinction between good and evil, these notions being human inventions designed to 'keep the common, ignorant people in obedience.'**86 Eighth is the concept that everything derives from nature, following an eternally necessary order, so that there is no moral responsibility 'whereby the reasonable creature stands under the Law of God as his true Lord and Lawgiver.'87 Ninth comes the doctrine **that the power of nature, irrespective of the Fall, governs all men under the same play of passions, so that the moral status of mankind is always the same.** Next follows Spinoza's teaching that the human will is exclusively determined by natural causes and always determined necessarily – a point heavily emphasized in the *Redenkundige Aanmerkingen*.88 Eleventh is the doctrine that the 'highest good' is the pure understanding of God's eternal order, leading to 'mastery of passions and self-conservation in joy and cheerfulness.'89 That death is the end of the individual with no resurrection of bodies, or Last Judgement, follows next; after which, thirteenth, comes the doctrine that **there is 'no divine Revelation and that it is the political authority which institutes all organized religion, Holy Scripture accordingly having no more authority than the writings of Hermes, Plato, Aristotle, Epicurus, Cicero, Seneca, and other such moralists' and being 'written according to the understanding of the common people to inculcate obedience.'**90 Next is the claim that Biblical prophecy and other Biblical books were written on the basis of 'imagination' and confused ideas. **Fifteenth is the concept that there is a philosophical 'general religion' (Algemene Gods-dienst), superior to revealed religion,** which permits the free expression of all views and which has

few or no points of doctrine other than love of God and one's neighbour, the pursuit of salvation without Christ, and obedience to the secular law and the State.91 Penultimately comes the doctrine that grace is the innate tendency of our nature towards acceptance of God's eternal order;92 and finally, seventeenth, the claim that it is permissible to tell lies to preserve oneself.
…

A strong impression had been made, by a book published back in May at Enkhuizen, by a preacher there, Franciscus Burmannus, who claimed that Spinozism was spreading rapidly in the Netherlands and that there were now many 'Spinozists, that is wicked God-forsaking atheists in our Fatherland who even hold meetings in some principal cities where … under pretext of philosophical debate, the principles of Spinoza and his atheism are inculcated into our silly, undisciplined youth, as everyone knows and is all too true.'98 Proclaiming Spinoza the 'most godless atheist the world has ever seen,' Burmannus warns that the further spread of Spinozism would bring the Republic to the very brink of religious, moral, and social disaster. **Among the most pernicious of Leenhof's principles, he claimed, were his political ideas, and not least his Spinozist doctrine of toleration.** If the 'highest happiness in so far as it can be derived from reason' means Salvation is of this world then, as Leenhof holds, the laws of the State must be directed solely to enabling citizens to live safely in accordance with reason and the pursuit of this worldly 'highest good.' Such a concept of politics means prizing social peace and stability, avoiding war, and regulating religion so as best to instil reverence for the laws of the State. **In such a society, warned Burmannus, all religions would be equally valid. What could be more reprehensible, he asks, than that the secular authorities should permit 'freedom of thought and speech' to everyone, including atheists and Spinozists, on the ground that toleration promotes stability and social peace?**99
…

Spinoza, held Burmannus, introduces the carnal and base doctrines of Epicurus, so that men, 'guided by bodily needs, which he considers the foundation of everything, should seek tranquillity of mind and lasting happiness, making this life (which is followed by no other) the most that is possible for human beings.'101
…

The chief significance of the Leenhof furore was that it demonstrated more clearly than any comparable episode **the feasibility of distilling from Spinoza a complete system of social, moral, and political ideas** built of philosophical principles totally incompatible with authority, tradition, and revealed religion, **which could be effectively popularized and infiltrated into the consciousness of the non-academic reading public, without readers necessarily even realizing they were imbibing Spinozism.**
…

The book which undoubtedly caused the greatest offence to the synods in the closing stages of the Leenhof affair, however, was the clandestinely and anonymously published *Philalethes Brieven* (Letters of Philalethes) which appeared at Amsterdam in 1712. Extracts from *Philalethes* were circulated at the meeting of the South Holland Synod in July 1712. Typically of Goeree, who was probably the author, this text ridicules the belief in angels and spirits, questions the divine authorship of Scripture, denies the Trinity, and, following Beverland, reduces the Fall to an allegory of sexual desire.186 **Regarded as exceptionally offensive was the author's contention that because Christ and his Apostles were concerned only to instil obedience, and not to teach the people truth, they made no effort to counter superstitious belief in magic, demons, and the Devil** even though such credence is complete nonsense.187
…

Highlighting the concept of the eternal and necessary order of things, or causes, as a prime component of Leenhof's thought, in his *Modesta Disquisitio* (Halle, 1723) Lange postulates a general parallelism of the systems of Spinoza and Leenhof, which he terms fatalism 'Spinoziano-Leenhofianum.'207 For them, God is no legislator or Lord of the universe, he contends, **while Scripture's account of the Almighty is just a colourful allegory adjusted to the notions of the common people.**208 In another onslaught on Wolffianism, published in German in Halle in 1724, Lange again stresses Leenhof's fatalism, and this-worldly conception of the *summum bonum*, again linking him with both Spinoza and Wolff.209 **Especially pernicious in Leenhof, he argues, is the cunning concealment he had practised until 1703 and his having surreptitiously 'brought [his Spinozism] to the pulpit.'**210

https://archive.org/details/radicalenlighten0000isra/page/550/mode/2up?view=theater

Wolff's contention that his system is eminently compatible with Christian truth, Lange likens to the fraudulent pretensions of **the anonymous author of the preface to Spinoza's *Opera Posthuma* (Jelles) who has the impudence to claim Spinoza's philosophy is 'Christian' in essence.**72

https://books.google.nl/books?id=X_1MAQAAMAAJ&hl=nl&pg=PP65#v=onepage&q&f=false

And lastly, It hath very much engag'd the *Anabaptists* and *Quakers* in its Praises, because the Author hath written with all his Might and Malice, against *Tythes*; and discovered that noble Saying and *Theorem* of *Spinoza*, that in the Christian Religion, *no one more than another can be a Priest*.

https://www.gutenberg.org/cache/epub/2613/pg2613-images.html#linknoteref-21

Fox insisted much on the not less weighty argument that the Turks never show their bare heads to their superiors; and he asked, with great animation, whether those who bore the noble name of Christians ought not to surpass Turks in virtue.29
…

Passages, which had been, in the apprehension of all the readers of the Gospels during sixteen centuries, figurative, he construed literally. Passages, which no human being before him had ever understood in any other than a literal sense, he construed figuratively. **Thus, from those rhetorical expressions in which the duty of patience under injuries is enjoined he deduced the doctrine that selfdefence against pirates and assassins is unlawful.** On the other hand, the plain commands to baptize with water, and to partake of bread and wine in commemoration of the redemption of mankind, he pronounced to be allegorical.
…

And thus it was that Fox made some converts to whom he was immeasurably inferior in every thing except the energy of his convictions. By these converts his rude doctrines were polished into a form somewhat less shocking to good sense and good taste. No proposition which he had laid down was retracted. No indecent or ridiculous act which he had done or approved was condemned; but what was most grossly absurd in his theories and practices was softened down, or at least not obtruded on the public; whatever could be made to appear specious was set in the fairest light; his gibberish was translated into English; meanings which he would have been quite unable to comprehend were put on his phrases; **and his system, so much improved that he would not have known it again, was defended by numerous citations from Pagan philosophers and Christian fathers whose names he had never heard.**37

> 37. "Especially of late," says Leslie, the keenest of all the enemies of the sect, "**some of them have made nearer advances towards Christianity than ever before;** and among them the ingenious Mr. Penn has of late refined some of their gross notions, and brought them into some form, and has made them speak sense and English, of both which George Fox, their first and great apostle, was totally ignorant. ... They endeavour all they can to make it appear that their doctrine was uniform from the beginning, and that there has been no alteration; and therefore they take upon them to defend all the writings of George Fox, and others of the first Quakers, and turn and wind them to make them (but it is impossible) agree with what they teach now at this day." (The Snake in the Grass, 3rd ed. 1698. Introduction.) **Leslie was always more civil to his brother Jacobite Penn than to any other Quaker. Penn himself says of his master, "As abruptly and brokenly as sometimes his sentences would fall from him about divine things; it is well known they were often as texts to many fairer declarations."** That is to say, George Fox talked nonsense and some of his friends paraphrased it into sense.

https://www.gutenberg.org/files/1468/1468-h/1468-h.htm#linknoteref-292

The Quakers were also guiltless of all offence against James and his House. They had not been in existence as a community till the war between his father and the Long Parliament was drawing towards a close. They had been cruelly persecuted by some of the revolutionary governments.
…

Though, as a class, they mixed little with the world, and shunned politics as a pursuit dangerous to their spiritual interests, one of them, widely distinguished from the rest by station and fortune, lived in the highest circles, and had constant access to the royal ear. This was the celebrated William Penn. **His father had held great naval commands, had been a Commissioner of the Admiralty, had sate in Parliament, had received the honour of knighthood, and had been encouraged to expect a peerage.** The son had been liberally educated, and had been designed for the profession of arms, but had, while still young, injured his prospects and disgusted his friends by joining what was then generally considered as a gang of crazy heretics.
…

The French philosophers of the eighteenth century pardoned what they regarded as his superstitious fancies in consideration of his contempt for priests, and of his cosmopolitan benevolence, impartially extended to all races and to all creeds.

https://www.gutenberg.org/cache/epub/2439/pg2439-images.html#linknoteref-435

Nothing had amazed or mortified the King more than the enthusiasm which the Dissenters had shown in the cause of the Bishops. **Penn, who, though he had himself sacrificed wealth and honours to his conscientious scruples, seems to have imagined that nobody but himself had a conscience,** imputed the discontent of the Puritans to envy and dissatisfied ambition. They had not had their share of the benefits promised by the Declaration of Indulgence: none of them had been admitted to any high and honourable post; and therefore it was not strange that they were jealous of the Roman Catholics.

The conduct of Penn was scarcely less scandalous. **He was a zealous and busy Jacobite; and his new way of life was even more unfavourable than his late way of life had been to moral purity.** It was hardly possible to be at once a consistent Quaker and a courtier: but it was utterly impossible to be at once a consistent Quaker and a conspirator. **It is melancholy to relate that Penn, while professing to consider even defensive war as sinful, did every thing in his power to bring a foreign army into the heart of his own country.** He wrote to inform James that the adherents of the Prince of Orange dreaded nothing so much as an appeal to the sword, and that, if England were now invaded from France or from Ireland, the number of Royalists would appear to be greater than ever. Avaux thought this letter so important, that he sent a translation of it to Lewis.635 A good effect, the shrewd ambassador wrote, had been produced, by this and similar communications, on the mind of King James. His Majesty was at last convinced that he could recover his dominions only sword in hand. **It is a curious fact that it should have been reserved for the great preacher of peace to produce this conviction in the mind of the old tyrant**.636

https://www.gutenberg.org/cache/epub/2613/pg2613-images.html#linknoteref-37

Penn came to the rendezvous, and spoke at length in his own defence. He declared that he was a faithful subject of King William and Queen Mary, and that, if he knew of any design against them, he would discover it. Departing from his Yea and Nay, he protested, as in the presence of God, that he knew of no plot, and that he did not believe that there was any plot, unless the ambitious projects of the French government might be called plots. Sidney, **amazed probably by hearing a person, who had such an abhorrence of lies that he would not use the common forms of civility, and such an abhorrence of oaths that he would not kiss the book in a court of justice, tell something very like a lie, and confirm it by something very like an oath,** asked how, if there were really no plot, the letters and minutes which had been found on Ashton were to be explained. This question Penn evaded.
...

After about three years of wandering and lurking he, by the mediation of some eminent men, who overlooked his faults for the sake of his good qualities, made his peace with the government, and again ventured to resume his ministrations. The return which he made for the lenity with which he had been treated does not much raise his character. **Scarcely had he again begun to harangue in public about the unlawfulness of war, when he sent a message earnestly exhorting James to make an immediate descent on England with thirty thousand men.**39

https://oll.libertyfund.org/titles/murphy-the-political-writings-of-william-penn#lf6418_head_067

For, *First,* The *Jews,* that had most to say for their Religion, and whose Religion was *Twin* to their State, (both being joined, and sent with Wonders from Heaven) *Indulged* Strangers in their Religious Dissents. **They required but the Belief of the *Noachical* Principles, which were common to the World:
No *Idolater,* and but a *Moral Man,* and he had his *Liberty,* ay, and some *Privileges* too, for he had an Apartment in the Temple, and this without Danger to the Government. Thus *Maimonides,* and others of their own Rabbies, and *Grotius* out of them.**9

The *Wisdom* of the *Gentiles* was very admirable in this, that though they had many Sects of Philosophers among them, each dissenting from the other in their Principles, as well as Discipline, and that not only in Physical Things, but Points *Metaphysical,* in which some of the Fathers were not *free,* the School-men *deeply engaged,* and our present Academies but too much *perplexed;* yet they *indulged* them and the best Livers with singular Kindness: The greatest Statesmen and Captains often becoming *Patrons* of the Sects they best affected, honouring their *Readings* with their Presence and Applause. **So far were those Ages, which we have made as the Original of Wisdom and Politeness, from thinking
Toleration an Error of State, or dangerous to the Government.** Thus *Plutarch, Strabo, Laertius,* and others.10

To these Instances I may add the Latitude of Old *Rome,* that had almost as many Deities as Houses:
For *Varro* tells us of no less than *Thirty Thousand* several *Sacra,* or Religious Rites among her People, and yet without a Quarrel:11 **Unhappy Fate of *Christianity!* the best of Religions, and yet her Professors maintain less Charity than Idolaters, while it should be peculiar to them. I fear, it shews us to have but little of it at Heart.**

But nearer Home, and in our own Time, we see the Effects of a discreet *Indulgence,* even to Emulation. *Holland,* that *Bog* of the world, neither Sea nor dry Land, now the *Rival* of tallest Monarchs; not by *Conquests, Marriages,* or Accession of *Royal Blood,* the usual Ways to Empire, but by her own superlative *Clemency* and *Industry;* for the one was the Effect of the other: She cherished her People, whatsoever were their *Opinions,* as the reasonable Stock of the Country, the Heads and Hands of her Trade and Wealth; and making them easy in the main Point, their *Conscience,* she became Great by them; This made her fill with *People,* and they filled her with *Riches* and *Strength.*
…

I will begin with that of *Israel,* the most exact and sacred Pattern of *Monarchy,* begun by a valiant Man, translated to the best, and improv'd by the wisest of Kings, whose Ministers were neither *Fools,* nor *Fanaticks:* Here we shall find Provision for Dissenters: **Their *Proselyti Domicilii* were so far from being compelled to their National Rites, that they were expresly forbid to observe them.** Such were the *Egyptians* that came with them out of *Egypt,* the *Gibeonites* and *Canaanites,* a great People, that after their several Forms, worshipt in an *Apartment* of the same Temple. The *Jews* with a Liturgy, they without one: The *Jews* had *Priests,* but these none: The *Jews* had Variety of Oblations, these People burnt Offerings only. **All that was required of them was the natural Religion of *Noah,*** in which the Acknowledgment and Worship of the true God, was, and it still ought to be, the main Point**; nay, so far were they from Coercive Conformity, that they did not so much as oblige them to observe their *Sabbath,*** though one of the Ten Commandments: *Grotius* and *Selden* say more.
…

Valentinian the Emperour (we are told by *Socrates Scholasticus*) *was a great Honourer of those that favoured his own Faith;* ***but so, as he molested not the*** **Arrians *at all.*** And *Marcellinus* farther adds in his Honour, *That he was much Renown'd for his Moderate Carriage during his Reign; insomuch, that amongst sundry Sects of Religion, he troubled no Man for his Conscience, imposing neither This nor That to be observed; much less, with menacing Edicts and Injunctions, did he* compel *others, his Subjects, to bow the Neck, or* conform *to that which himself Worshipped, but left such Points as clear and untoucht as he found them.*13
…

The *Grand Seignior, Great Mogul, Czars* of *Muscovia, King* of *Persia;* the Great *Monarchs* of the *East* have *long allow'd and prosper'd with a Toleration:* And who does not know that this gave Great *Tamerlane* his mighty Victories? In these Western Countries we see the same Thing.

Cardinal d'Ossat in his 92d Letter to *Villeroy,* Secretary to *Henry* the Fourth of *France,* gives us Doctrine and Example for the Subject in hand;14

> Besides (says he) that Necessity has no Law, be it in what Case it will; our *Lord Jesus Christ* instructs us by his Gospel, *To let the Tares alone, lest removing them may endanger the Wheat.* That other *Catholick* Princes have allow'd it without *Rebuke.* That particularly the Duke of *Savoy,* who (as great a Zealot as he would be thought for the Catholick Religion) Tolerates the Hereticks in three of his Provinces, namely, *Angroyne, Lucerne* and *Perone.* That the King of *Poland* does as much, not only in *Sweedland,* but in *Poland* it self. That all the Princes of the *Austrian* Family, that are celebrated as Pillars of the *Catholick Church,* do the like, not only in the Towns of the Empire, but in their proper Territories, as in *Austria* it self, from whence they take the Name of their Honour. In *Hungary, Bohemia, Moravia, Lusatia, Stirria, Camiolia* and *Croatia* the like. That *Charles* the Fifth, Father of the King of *Spain,* was the Person that taught the King of *France,* and other *Princes,* how to yield to such Emergencies. **That his Son, the present King of *Spain,* who is esteemed *Arch Catholick,* and that is, as the *Atlas* of the *Catholick Church, Tolerates* notwithstanding at this Day, in his Kingdoms of *Valentia* and *Granada,* the *Moors* themselves in their *Mahometism,*** and has offered to those of *Zealand, Holland,* and other *Hereticks* of the Low Countries, the *free Exercise* of their pretended Religion, so that they will but *acknowledge* and *Obey* him in *Civil Matters.*

It was of those Letters of this extraordinary Man, for so he was (whether we regard him in his Ecclesiastical Dignity, or his greater Christian and Civil Prudence) **that the great Lord *Fulkland* said, *A Minister of State should no more be without* Cardinal d'Ossat's *Letters, than a Parson without his Bible.***

>
> French cardinal, diplomat, and writer, b. at Larroque-Magnoac (Gascony), 20 July, 1537; d. at Rome, 13 March, 1604, **was the son of a blacksmith.** He was sent to the College of Auch as tutor to the sons of a nobleman, then to Paris, **where he became the pupil and friend of the famous Ramus, whom he defended in two pamphlets against Charpentier, rector of the university. He next studied law at Bourges under Cujas and became an advocate before the Parliament of Paris,** while acting as tutor to Jean de la Barrière, the future reformer of the Feuillants.
> …
>
> Villeroy, the minister of foreign affairs, himself consulted him on all matters in any way connected with Rome. d'Ossat, through his influence and talents, secured for Henry IV the pope's aid and, when necessary, **induced the Holy See to accept, at least, without public protest, such measures as the expulsion of the Jesuits, the non-publication of the Council of Trent, the**

> **Edict of Nantes, the Franco-Turkish and Franco-English alliances, the annulment of Henry IV's marriage with Margaret of Valois, and the conclusion of that between the Duc de Bar and Catherine de Bourbon, Henry's sister and a stubborn Calvinist. At the same time d'Ossat used his influence at Rome for the benefit of the historian de Thou, the philosopher Montaigne, and the savant Peiresc.**
> ...
>
> Wiquefort in his "Mémoires sur les ambassadeurs" finds in them "the clearest and most enlightened judgment ever displayed by any minister", and Lord Chesterfield wrote to his son that the "simplicity and clearness of Cardinal d'Ossat's letters show how business letters should be written".

...

The several *Species of Christians,* that this *Genus* divideth it self into, are those divers Perswasions we have within this Kingdom; The *Church of England, Roman-Catholicks, Grecians, Lutherans, Presbyterians, Independents, Anabaptists,* ***Quakers, Socinians:*** **These I call so many Orders of Christians, that unite in the Text, and differ only in the *Comment;* All owning *One Deity, Saviour and Judge, Good Works, Rewards and Punishments:*** Which Bodies once Regulated, and holding of the Prince as *Head of the Government, Maintaining Charity, and Pressing Piety, will be an Honour to Christianity, a Strength to the Prince, and a Benefit to the Publick:* For in Lieu of an unattainable, (at best an unsincere) *Uniformity,* we shall have in *Civils Unity, and Amity in Faith.*

The *Jews* before, and in the Time of *Herod,* were divided into divers Sects. There were *Pharisees, Sadducees, Herodians,* and
Essenes. They maintain'd their Dissent without Ruin to the Government: And the Magistrates fell under no Censure from Christ for that *Toleration.*
...

I have cited other Emperors in the Body of this Discourse; but because the Worst are to be commended when they do well, *Valens* himself, **charm'd with the Sweetness and Strength of the Philosopher *Themistius,*** in his Elegant Oration, grew Moderate towards the Orthodox, whom a little before he had severely treated: Of which these were the Heads; *That he Persecuted without Reason People of Good Lives: That it was no Crime to think or believe otherwise than the Prince believed: That he ought not to be troubled at the Diversity of Opinions: That the* Gentiles *were much more divided in their Judgment than the* Christians: *That it sufficeth, that every Sect aimed at the Truth, and lived virtuously.*50

https://archive.org/details/mystryfoxcraft00leedrich/page/14/mode/2up?view=theater

Nay, I could shew wherein the Jews own more of Christ then the Quakers own; for the Quakers would make nothing of Christ but moral virtues. *What is Christ* (says W. Penn) *but Meekness, Justice, Mercy, Patience, &c. Address to Protestants*, pag. 119. where also he declares moral men to be Christians; and you see before, he calls it a deadly Poison to make any distinction between Christian and Moral. **Thus the Quakers are forced upon this shift to allow moral heathens, Turks and Jews to be Christians, because they have no other way in the world to prove themselves Christians; there is only this difference, the Jews and Infidels are the better, as being more free from deceit, because they make no pretence to Christianity, and the Quakers do.**

But how strange is their delusion, who cannot see that at this rate there was no need at all of the holy Apostles being sent to the Jews and Heathens to preach the Gospel of Peace and Salvation by Christ crucifyed. **Nor indeed could there be any need of Christ's coming, and being crucifyed. But the Quakers plainly say as much, for their Books tell us that his coming in the flesh, and being crucifyed was but a figure, and for our example, as I have formerly shewed.**

https://www.google.fi/books/edition/Spinoza_Life_and_Legacy/4snKEAAAQBAJ?hl=en&gbpv=1&pg=PA827&printsec=frontcover

Plainly, Spinoza along with members of his circle, the Koerbaghs, Meyer, and Bouwmeester prominent among them, were intent on changing the meaning of the word "atheist" just as they sought to change the meaning of the terms "heretic" and "religion." An "atheist" is certainly correctly defined as a God-denier, agree the Koerbaghs, but if correct understanding is the sole path of true knowledge of God and few possess that true knowledge, while those not knowing God correctly are "atheists," as most of their opponents seem to think, **then the "great majority including the theologians are atheists, since the name of God is known by all, his reality but by few. For it is the theologians who teach the people untruth, notably that the world was created from nothing by a knowing God." True theology, by contrast, teaches that nothing can come from nothing and is part of worldly philosophy because in worldly philosophy alone is found "[true] knowledge of God."**77
...

“Muhammed was indeed an impostor,” affirms Spinoza, “since he completely abrogates that freedom which the universal religion concedes and which I have shown on every ground, by the natural light and by what the prophets revealed, should be wholly conceded.” As for Islam as a religion, the case was exactly as with the pagans. Where Muslims worship God on the basis of “justice and charity towards their neighbour, I believe that they have the spirit of Christ and are saved whatever beliefs they may possess based on ignorance and oracles.”78
…

The “spirit of Christ [spiritus Christi],” remained Spinoza’s regular circumlocution, later used when replying to Albert Burgh, negating not just Christ’s divinity, like the Socinians, but also his miracles, resurrection, special access to the divine, special Scriptural status, status as Redeemer, **and even his identification with the biblical Jesus, effectively redefining “Christ” as essentially a symbol of “justice and charity”** so that every believing Muslim or Jew possesses exactly the same access to the “spirit of Christ” as the most meticulous churchgoer.

https://books.google.fi/books?id=Mau9wgEACAAJ&lpg=PP1&hl=fi&pg=PA21#v=onepage&q&f=false

But even among sincere believers, following the path of moderation, **it had always been the non-religious component of their plans for improvement that rendered their efforts integral to the Enlightenment. The category “Religious Enlightenment” only meaningfully applies to reformers who, while sincere believers or at least defenders of ecclesiastical authority (not at all the same thing), nevertheless aimed to reform Christendom, or in the case of Moses Mendelssohn, Judaism,** by rejecting, or greatly toning down, confessional barriers, intolerance, and dogmatism. Religious Enlightenment qualified as Enlightenment specifically through advancing toleration and inter-confessional dialogue, by banishing religious conflict, and espousing strands of modern science, **Newtonianism above all,** suited to reconciling religion with science, and hence religion with philosophy.50

https://americanvision.org/22483/thomas-paine-and-his-reliance-on-the-bible/

Mark A. Noll, formerly Francis A. McAnaney Professor of History at the University of Notre Dame now holds the position of Research Professor of History at Regent College, makes a similar argument:

> If Paine’s *Age of Reason* (with its dismissive attitude toward the Old Testament) had been published before *Common Sense* (with its full deployment of Scripture in support of republican freedom), the quarrel with Britain may have taken a different course. **It is also likely that the allegiance of traditional Christian believers to republican liberty might not have been so thoroughly cemented.** And it is possible that the intimate relation between republican reasoning and trust in traditional Scripture, which became so important after the turn of the new century, would not have occurred as it did. (Mark A. Noll, *America’s God: From Jonathan Edwards to Abraham Lincoln* (New York: Oxford University Press, 2002), 84.)

https://books.google.fi/books?id=L50vDwAAQBAJ&lpg=PP1&hl=fi&pg=PT486#v=onepage&q&f=false

In return, **I only laughed heartily at him, and rallied him upon his grave arguments from the Old Testament to prove that monarchy was unlawful in the sight of God. “Do you seriously believe, Paine,” said I, “in that pious doctrine of yours?”** This put him in good humor, and he laughed out. “The Old Testament!” said he, “I do not believe in the Old Testament. I have had thoughts of publishing my sentiments of it, but, upon deliberation, I have concluded to put that off till the latter part of life.”

> RC (DLC); in Dodge's hand, signed by all; at head of text: "The address of the Danbury Baptist Association, in the State of Connecticut; assembled October 7th. 1801. To *Thomas Jefferson* Esqr: President of the united States of America"; endorsed by TJ as received 30 Dec. and so recorded in SJL.
>
> A Baptist elder in Connecticut, Nehemiah Dodge began his career in the ministry in Hampton in 1788 before moving on to Southington. He published many tracts and orations **and fought for disestablishment. About 1820, upon becoming a Universalist, he served as pastor of the Universalist Church in New London.**

https://kdhist.sitehost.iu.edu/H105-documents-web/week11/Owen1826.html

Robert Owen, **"Oration Containing a Declaration of Mental Independence,"** Public Hall, New Harmony, Indiana (July, 4, 1826).
…

Still, however, these men, whose minds were in advance of the age in which they lived, were encircled by the prejudices which they and their fathers brought from Europe, and which had descended to the inhabitants of those regions through many ages of despotism, superstition and ignorance. And although a few of these highly-gifted men of the Revolution saw a stronger and clearer light at the distance, as they supposed, of some ages before them; they were too conscious of the extent of the old errors around them to attempt more than to secure the means in the Constitution which they formed, by which their successors might work their way to the superior distant light, and gain for themselves the innumerable advantages which real mental liberty could bestow upon them.
…

Upon an experience, then, of nearly forty years, which owing to a very peculiar combination of circumstances, has been more varied, extended and singular, than perhaps has ever fallen to the lot of any one man, and, during which period, my mind was continually occupied in tracing the cause of each human misery that came before me to its true origin;—I now declare, to you and to the world, that Man, up to this hour, has been, in all parts of the earth, a slave to a TRINITY of the most monstrous evils that could be combined to inflict mental and physical evil upon his whole race.

I refer to PRIVATE, OR INDIVIDUAL PROPERTY—ABSURD AND IRRATIONAL SYSTEMS OF RELIGION—AND MARRIAGE, FOUNDED ON INDIVIDUAL PROPERTY COMBINED WITH SOME ONE OF THESE IRRATIONAL SYSTEMS OF RELIGION.
…

The revolution, then, to be now effected, is the destruction of this HYDRA OF EVILS—in order that the many may be no longer poor, wretched beings,—dependent on the wealthy and powerful few; that Man may be no longer a superstitious idiot, continually dying from the futile fear of death; that he may no longer unite himself to the other sex from any mercenary or superstitious motives, nor promise and pretend to do that which it depends not on himself to perform.
…

Rejoice, then, with me, my friends, that this light is now set upon a hill, for it will increase daily, more and more, until it shall be seen, felt, and understood, by all the nations of the earth.

https://archive.org/details/selectionsfromw00fourgoog/page/n132/mode/2up?view=theater

Owen's scheme of communism had some vogue at first, because it was a mask for party spirit, a veil to cover the secret plan which tends to destroy the clergy and religion. That perspective caused the whole *coterie* of atheism to rally round the preacher Owen. As for his other two dogmas, that of community of goods is so pitiful that it is not worthy of refutation; that of the sudden abolishment of marriage is also a monstrosity.
…

However, it is a proof of the intellectual convulsion of the age that it has allowed itself to be deluded in regard to the most important problem of the social world, in regard to the associative mechanism, **by a preacher who has neither new doctrines nor distinct dogmas. His scheme of destruction of the clergy is a residue of revolution:** if all the classes that abused their functions were to be abolished, I know not what class among the civilised could be maintained. **His dogma of communism is a rehash of Sparta and Rome; that of free love is likewise a plagiarism from various peoples, among others the Nepaulians, the Otaheitans, etc.**—(N. M., 473.)

https://archive.org/details/worldrevolutionp00webs/page/106/mode/2up?view=theater

Like Robert Owen, Saint-Simon frankly declared that the existing social system was dead and must be completely done away with. The French Illuminatus, however, did not fall into the error of his English contemporary, of alienating public opinion by the repudiation of Christianity; **on the contrary, faithful to the directions of Weishaupt, Saint-Simon, in his book *Le Nouveau Christianisme*, set out to prove that his system was simply the fulfilment of Christ's teaching on the brotherhood of man, which had become perverted by the belief in the necessity for subduing the flesh; "therefore in order to re-establish Christianity on its true basis it was necessary to restore its sensual side, the absence of which strikes its social action with sterility."**1
…

The wild-eyed revolutionary waving a red flag will never gain so many converts as the mild philosopher who preaches peaceful revolution carried out on the principles of Christian love and brotherhood. **It was this old deception of representing Christ as a Socialist which made the strength of Saint-Simonism, and that, practised later on by the so-called Christian Socialists of our own country, not only drew countless amiable visionaries into Socialism, but at the same time drove many virile minds from Christianity to seek relief in Nietzscheism.**

https://www.marxists.org/archive/marx/works/1843/10/23.htm

It is, however, curious, that whilst the English Socialists are generally opposed to Christianity, and have to suffer all the religious prejudices of a really Christian people, the French Communists, being a part of a nation celebrated for its infidelity, are themselves Christians. One of their favourite axioms is, that Christianity is Communism, "*le Christianisme c'est le Communisme*". This they try to prove by the bible, the state of community in which the first Christians are said to have lived, etc. But all this shows only, that these good people are not the best Christians, although they style themselves so; **because if they were, they would know the bible better, and find that, if some few passages of the bible may be favourable to Communism, the general spirit of its doctrines is, nevertheless, totally opposed to it, as well as to every rational measure.**

https://www.marxists.org/subject/art/lit_crit/works/belinsky/gogol.htm

That you base such teaching on the Orthodox Church I can understand: it has always served as the prop of the knout and the servant of despotism; but why have you mixed Christ up in it? What have you found in common between Him and any church, least of all the Orthodox Church? He was the first to bring to people the teaching of freedom, equality, and brotherhood and to set the seal of truth to that teaching by martyrdom. **And *this* teaching was men's *salvation* only until it became organized in the Church and took the principle of Orthodoxy for its foundation.** The Church, on the other hand, was a hierarchy, consequently a champion of inequality, a flatterer of authority, an enemy and persecutor of brotherhood among men – and so it has remained to this day. **But the meaning of Christ's message has been revealed by the philosophical movement of the preceding century. And that is why a**

man like Voltaire who stamped out the fires of fanaticism and ignorance in Europe by ridicule, is, of course, more the son of Christ, flesh of his flesh and bone of his bone, than all your priests, bishops, metropolitans, and patriarchs – Eastern or Western.

https://www.garynorth.com/ProductiveChristians.pdf

The abolitionist movement was, it is true, a religious movement. But its religion was antichristian humanism.
...

And Charles Grandison Finney, "the Billy Graham of the nineteenth century," was at the heart of the movement. Theologically, he was a Pelagian, a heretic. Bennet Tyler observed, in 1854, that "no orthodox body of Christians could receive him into their pulpit. No doubt he published works that contained rousing and startling truths; **but even truth was given forth alongside of much error which counteracted all.** And now he seems to be drifting no one can tell whither. ... He adjusts whatever he finds in the Bible to his own preconceived metaphysical determinations, instead of submitting his metaphysical musings to the test of unerring wisdom."13

> https://chalcedon.edu/resources/books/noble-savages-exposing-the-worldview-of-pornographers-and-their-war-against-christian-civilization
>
> The revivalist Charles G. Finney provided Americans, according to B.B. Warfield, with **“less a theology than a system of morals. God might be eliminated from it entirely without essentially changing its character. All virtue, all holiness is made to consist in an ethical determination of Will.”**11

https://archive.org/details/DiscussionsOfRobertLewisDabneyVol.3Philosophical/page/n367/mode/2up?view=theater

(4.) The best argument for any creed is the godly living of its professors. Protestantism used to have a grand and victorious advantage on that point. She is ceasing to wield it. **The wealth begotten by her very virtues of industry, thrift, and probity has debauched many of her children. "Jeshurun has waxen fat, and kicked."** An unbounded flood of luxury sweeps Protestant families away. **[April, 1894]**
...

The statesmen and divines of the Reformation, the Luthers, Calvins, Knoxes, Winthrops, and Mathers, were strong advocates of State education; they were such because they believed in the close union of church and State; because their conception of the State was thoroughly theocratic. Had these men been asked, What think you of a theory of education which should train the understanding without instructing the religious conscience; which should teach young immortal spirits anything and everything except God; which should thus secularize education, a function essentially spiritual, and should take this parental task from the fathers and mothers, on whom God imposed it, to confer it on the human and earthly organism, expressly secular and godless? they would have answered with one voice, It is pagan, utterly damnable. But they thought that the State might educate, because the State with them was Christian. **Thus State education was firmly grafted into the Puritan colonies. New England, with her usual aggressiveness, has pushed her usage all over the empire. Meantime the Jeffersonian doctrine of the absolute severance and independence of church and State, of the entire secularity of the State, and the absolutely equal rights, before the law, of religious truth and error, of paganism, atheism, and Christianity, has also established itself in all the States; and still the politicians, for, electioneering ends, propagate this State education everywhere. By this curious circuit "Christian America" has gotten herself upon this thoroughly pagan ground;** forcing the education of responsible, moral, and immortal beings, of which religion must ever be the essence, into the hands of a gigantic human agency, which resolves that it cannot and will not be religious at all.

https://www.garynorth.com/freebooks/docs/pdf/the_failure_of_american_baptist_culture.pdf

The poor have no claim on Christians simply by virtue of being poor; to assert the contrary is to fall into a manicheanism which identifies goodness or election with external position. **Liberal concern for the poor, for racism, for women, etc., does not develop out of Scripture but out of Enlightenment humanism and Marxism. The agendas are set long before the Scriptures are consulted,** and the Scriptures are generally grossly distorted. (How often, for instance, do we hear anything about righteous Job, the "richest man in the east," whose riches were doubled by God after his trial? Or of wealthy Abraham?) **Liberalism has always gone to Scripture to pick and choose phrases which support**

the humanistic agenda. This has nothing to do with Christianity. It is simply an intellectual form of occultist Bible-mancy. Nor will it do to say that conservative Christians also pick and choose (though this is very true), because orthodox Christians at least try to do justice to what the Bible actually says, treating it as God's Word (infallible and inerrant).

But as for you, ye thought evil against me; but God meant it unto good, to bring to pass, as it is this day, to save much people alive.

https://www.newadvent.org/cathen/12517c.htm

He practised law with some success, and in later life deplored the zeal he had devoted to his profession.
...

"Contra Symmachum" must have been written at Rome; **the second book belongs to the period between 29 March and December, 403.** All other works antedate the journey to Rome.
...

Prudentius identifies the Church with Rome and, in thus transforming it, preserves that ancient belief in the eternity of the city. He can be impartial towards the pagan and praise him for services rendered the State. He is proud of the senate, seeing its majority Christian. **Christianity is come to crown the Roman institutions.**

https://archive.org/details/L398PrudentiusIISymmachusCrownsOfMartyrdomScenesFromHistory/page/n63/mode/2up?view=theater

Shall I tell you, Roman, what cause it was that so exalted your labours, what it was that nursed your glory to such a height of fame that it has put rein and bridle on the world? God, wishing to bring into partnership peoples of different speech and realms of discordant manners, **determined that all the civilised world should be harnessed to one ruling power and bear gentle bonds in harmony under the yoke, so that love of their religion should hold men's hearts in union;** for no bond is made that is worthy of Christ unless unity of spirit leagues together the nations it associates. Only concord knows God; it alone worships the beneficent Father aright in peace. The untroubled harmony of human union wins his favour for the world; by division it drives Him away, with cruel warfare it makes Him wroth; it satisfies Him with the offering of peace and holds Him fast with quietness and brotherly love. In all lands bounded by the western ocean and lightened by Aurora at her rosy dawning, the raging war-goddess was throwing all humanity into confusion and arming savage hands to wound each other. **To curb this frenzy God taught the nations everywhere to bow their heads under the same laws and become Romans** — all whom Rhine and Danube flood, or Tagus a with its golden stream, or great Ebro, those through whose land glides the horned river of the western world, those who are nurtured by Ganges or washed by the warm Nile's seven mouths. **A common law made them equals and bound them by a single name, bringing the conquered into bonds of brotherhood.** We live in countries the most diverse like fellow-citizens of the same blood dwelling within the single ramparts of their native city, and all united in an ancestral home. Regions far apart, shores separated by the sea, now meet together in appearing before one common court of law, in the way of trade in the products of their crafts they gather to one thronged market, **in the way of wedlock they unite in legal marriage with a spouse of another country; for a single progeny is produced from the mixed blood of two different races.**

https://archive.org/details/newscienceofgiam030174mbp/page/n399/mode/2up?view=theater

1097 Let us now conclude this work with Plato, who conceives a fourth kind of commonwealth in which good honest men would be supreme lords. This would be the true natural aristocracy. **This commonwealth conceived by Plato was brought into being by providence from the first beginnings of the nations. For it ordained that men of gigantic stature, stronger than the rest, who were to wander on the mountain heights as do the beasts of stronger natures, should, at the first thunderclaps after the universal flood, take refuge in the caves of the mountains, subject themselves to a higher power which they imagined as Jove, and, all amazement as they were all pride and cruelty, humble themselves before a divinity.** For in this order of human things we cannot conceive how divine providence could have employed any other counsel to halt them in their bestial wandering through the great forest of the earth, in order to introduce among them the order of human civil things.

1098 Here was formed a state so to speak of monastic commonwealths or of solitary sovereigns under the government of a Greatest and Best whom they themselves created for their faith out of the flash of the thunderbolts, in which this true light of God shone forth for them: that He governs mankind. Hence they came to imagine that all the human benefits supplied to them and all the aids provided for their human needs were so many gods, and feared and revered them as such. Then, between the powerful restraints of frightful superstition and all the goading stimuli of bestial lust (which must both have been extremely violent in such men), as they felt the aspect of the heavens to be terrible to them and hence to inhibit their use of vencry, they must have learned to hold in check the impulse of the bodily motion of lust. **Thus they began to use human liberty, which consists in controlling the motions of concupiscence and giving them another direction;** for since this liberty does not come from the body, whence comes concupiscence, it must come from the mind and is therefore properly human. The new direction took the form of forcibly seizing their women, who were naturally shy and unruly, dragging them into their caves, and, in order to have intercourse with them, keeping them there as perpetual lifelong companions. Thus, with the first human, which is to say chaste and religious, couplings, they gave a beginning to matrimony. Thereby they became certain fathers of certain children by certain women. Thus they founded the families and governed them with a cyclopean family sovereignty over their children and their wives, such as was proper to such proud and savage natures, so that later as cities arose men might be found disposed to stand in awe of the civil sovereignty. Thus providence ordained certain household commonwealths of monarchic form under fathers (in that state princes) best in sex, age and virtue. These fathers, in the state we must call that of nature (which was identical with the state of the families), must have formed the first natural orders, as being those who were pious, chaste and strong. Since they were settled on their lands and could no longer escape by flight (as they had previously done in their feral wanderings), in order to defend themselves and their families they had to kill the wild beasts that attacked them. And in order to provide sustenance for themselves and their families, as they had ceased foraging, they had to tame the earth and sow grain. **All this for the salvation of the nascent human race.**

1099 **Meanwhile, scattered through the plains and valleys and preserving the infamous communism of things and of women, there remained a great number of the impious, the unchaste and the nefarious—impious in having no fear of gods, unchaste in their use of shameless bestial venery, and nefarious in their frequent intercourse with their own mothers and daughters.** After a long time, driven by the ills occasioned by their bestial society, weak, astray and solitary, relentlessly pursued by the robust and violent **because of quarrels engendered by their infamous communism, they came at last to seek refuge in the asylums of the fathers.** The latter, taking them under their protection, proceeded to extend their family kingdoms to include these *famuli* through the clienteles. Thus they developed commonwealths on the basis of orders naturally superior by reason of virtues certainly heroic. First, piety, for they adored divinity, though because of their little light they multiplied and divided it into many gods formed according to their various apprehensions. (This is worked out and confirmed by Diodorus Siculus and more clearly by Eusebius in his *De praeparatione Evangelica* and by St. Cyril of Alexandria in his *Adversus Iulianum imperatorem*.) And in the virtue of their piety they were also endowed with prudence, taking counsel from the auspices of the gods; with temperance, coupling each with the one woman whom he had taken under the divine auspices as a perpetual companion for life; with strength for slaying beasts and taming the earth; and with magnanimity in giving succor to the weak and aid to those in danger. **Such was the nature of the Herculean commonwealths, in which the pious, wise, chaste, strong and magnanimous cast down the proud and defended the weak, which is the mark of excellence in civil governments.**

1100 But finally the family fathers, having become great by the religion and virtue of their ancestors and through the labors of their clients, began to abuse the laws of protection and to govern the clients harshly. **When they had thus departed from the natural order, which is that of justice, their clients rose in mutiny against them. But since without order (which is to say without God) human society cannot stand for a moment, providence led the family fathers naturally to unite themselves with their kindred in orders against their clients.** To pacify the latter, they conceded to them, in the world's first agrarian law, the bonitary ownership of the fields, retaining for themselves the optimum or sovereign family ownership. Thus the first cities arose upon reigning orders of nobles. And as the natural order declined which had been based, in accordance with the then state of nature, on

[superiority of] kind, sex, age and virtue, providence called the civil order into being along with the cities. And first of all [civil orders], that which approximated most closely to nature: that in virtue of nobility of humankind **(for in that state of affairs nobility could be based only on generating in human fashion with wives taken under divine auspices)** and thus in virtue of a heroism, the nobles should rule over the plebeians (who did not contract marriage with such solemnities), and now that divine rules had ceased (under which the families had been governed by divine auspices) and the heroes had to rule in virtue of the form of the heroic governments themselves, that the principal basis of these commonwealths should be religion safeguarded within the heroic orders, and that through this religion all civil laws and rights should belong to the heroes alone. But since nobility had now become a gift of fortune, providence caused to arise among the nobles the order of the family fathers themselves, as being naturally more worthy because of age. And among the fathers it caused the most spirited and robust to arise as kings **whose duty it should be to lead the others and gird them in orders to resist and overawe the rebellious clients.**

1101 But with the passage of the years and the far greater development of human minds, **the plebs of the peoples finally became suspicious of the pretensions of such heroism and understood themselves to be of equal human nature with the nobles,** and therefore insisted that they too should be taken into the civil orders of the cities. Since in due time the peoples were to become sovereign, providence permitted a long antecedent struggle of plebs with nobility over piety and religion in the heroic contests for the extension of the auspices by the nobles to the plebeians, with a view to securing thereby the extension of all public and private rights regarded as dependent on the auspices. Thus the very care for piety and attachment to religion brought the people to civil sovereignty. In this respect the Roman people went beyond all others in the world, and for that reason it became the master people of the world. In this way, as the natural order merged more and more with the civil orders, the popular commonwealths were born. In these everything had to be reduced to lot or balance, and providence therefore, in order that neither chance nor fate should rule, ordained that the census should be the measure of fitness for office. Thereby the industrious and not the lazy, the frugal and not the prodigal, the provident and not the idle, the magnanimous and not the faint-hearted—in a word, the rich with some virtue or semblance thereof, and not the poor with their many shameless vices—were considered the best for governing. In such commonwealths the entire peoples, who have in common the desire for justice, command laws that are just because they are good for all. Such a law Aristotle divinely defines as will without passions, which would be the will of a hero who has command of his passions. These commonwealths gave birth to philosophy. By their very form they inspired it to fashion the hero, and for that purpose to interest itself in truth. **All this was ordained by providence to the end that, since virtuous actions were no longer prompted by religious sentiments as formerly, philosophy should make the virtues understood in their idea, and by dint of reflection thereon, if men were without virtue they should at least be ashamed of their vices.** Only so can peoples prone to ill-doing be held to their duty. And from the philosophies providence permitted eloquence to arise and, from the very form of these popular commonwealths in which good laws are commanded, to become impassioned for justice, and from these ideas of virtue to inflame the peoples to command good laws. Such eloquence, we resolutely affirm, flourished in Rome in the time of Scipio Africanus, when civil wisdom and military valor, which happily united in establishing at Rome on the ruins of Carthage the empire of the world, must necessarily have brought in their train a robust and most prudent eloquence.

1102 But as the popular states became corrupt, so also did the philosophies. **They descended to skepticism. Learned fools fell to calumniating the truth. Thence arose a false eloquence, ready to uphold either of the opposed sides of a case indifferently.** Thus it came about that, by abuse of eloquence like that of the tribunes of the plebs at Rome, when the citizens were no longer content with making wealth the basis of rank, they strove to make it an instrument of power. And as furious south winds whip up the sea, so these citizens provoked civil wars in their commonwealths and drove them to total disorder. Thus they caused the commonwealths to fall from a perfect liberty into the perfect tyranny of anarchy or the unchecked liberty of the free peoples, which is the worst of all tyrannies.

1103 To this great disease of cities providence applies one of these three great remedies in the following order of human civil things.

1104 It first ordains that there be found among these peoples a man like Augustus to arise and establish himself as a monarch and, by force of arms, take in hand all the orders and all the laws, which, though sprung from liberty, no longer avail to regulate and hold it within bounds. On the other hand providence ordains that the very form of the monarchic state shall confine the will of the monarchs, **in spite of their unlimited sovereignty, within the natural order of keeping the peoples content and satisfied with both their religion and their natural liberty. For without this universal satisfaction and content of the peoples, monarchic states are neither lasting nor secure.**

1105 Then, if providence does not find such a remedy within, it seeks it outside. And since peoples so far corrupted had already become naturally slaves of their unrestrained passions—of luxury, effeminacy, avarice, envy, pride and vanity—and in pursuit of the pleasures of their dissolute life were falling back into all the vices characteristic of the most abject slaves (having become liars, tricksters, calumniators,

thieves, cowards and pretenders), providence decrees that they become slaves by the natural law of nations which springs from the nature of such nations, and that they become subject to better nations which, having conquered them by arms, preserve them as subject provinces. **Herein two great lights of natural order shine forth. First, that he who cannot govern himself must let himself be governed by another who can. Second, that the world is always governed by those who are naturally fittest.**

1106 But if the peoples are rotting in this last civil illness and cannot agree upon a monarch from within, and are not conquered and preserved by better nations from without, then providence for their extreme ill has its extreme remedy at hand. For such peoples, like so many beasts, have fallen into the custom of each man thinking only of his own private interests and have reached the extreme of delicacy, or better of pride, in which like wild animals they bristle and lash out at the slightest displeasure. **Thus in the midst of their greatest festivities, though physically thronging together, they live like wild beasts in a deep solitude of spirit and will, scarcely any two being able to agree since each follows his own pleasure or caprice.** By reason of all this, providence decrees that, through obstinate factions and desperate civil wars, they shall turn their cities into forests and the forests into dens and lairs of men. In this way, through long centuries of barbarism, rust will consume the misbegotten subtleties of malicious wits, that have turned them into beasts made more inhuman by the barbarism of reflection than the first men had been made by the barbarism of sense. For the latter displayed a generous savagery, against which one could defend oneself or take flight or be on one's guard; but the former, with a base savagery, under soft words and embraces, plots against the life and fortune of friends and intimates. Hence peoples who have reached this point of premeditated malice, when they receive this last remedy of providence and are thereby stunned and brutalized, are sensible no longer of comforts, delicacies, pleasures and pomp, but only of the sheer necessities of life. **And the few survivors in the midst of an abundance of the things necessary for life naturally become well behaved and, returning to the primitive simplicity of the first world of peoples, are again religious, truthful and faithful. Thus providence brings back among them the piety, faith and truth which are the natural foundations of justice as well as the graces and beauties of the eternal order of God.**

1107 The clear and simple observation we have made on the affairs of the entire human race, if we had been told nothing more by the philosophers, historians, grammarians and jurisconsults, would lead us to say certainly **that this is the great city of the nations founded and governed by God.** Lycurgus, Solon, the decemvirs and the like have been eternally praised to the skies as wise legislators, because it has hitherto been believed that by their good measures and laws they had founded Sparta, Athens and Rome, the three cities that outshone all others in the fairest and greatest civil virtues. Yet they were all of short duration and even of small extent as compared with the universe of peoples, which was constituted by such orders and secured by such laws that even in its decay it assumes those forms of states by which alone it may everywhere be preserved and perpetually endure. And must we not then say that this is a counsel of a superhuman wisdom? **For without the force of laws (whose force, according to Dio as cited in the Axioms [308], is like that of a tyrant), but making use of the very customs of men (in the practice of which they are as free of all force as in the expression of their own nature, whence the same Dio said that customs were like kings in commanding by pleasure), it divinely rules and conducts [the aforesaid city].**

1108 It is true that men have themselves made this world of nations (and we took this as the first incontestable principle of our Science, since we despaired of finding it from the philosophers and philologists), **but this world without doubt has issued from a mind often diverse, at times quite contrary, and always superior to the particular ends that men had proposed to themselves; which narrow ends, made means to serve wider ends, it has always employed to preserve the human race upon this earth.** Men mean to gratify their bestial lust and abandon their offspring, and they inaugurate the chastity of marriage from which the families arise. The fathers mean to exercise without restraint their paternal power over their clients, and they subject them to the civil powers from which the cities arise. The reigning orders of nobles mean to abuse their lordly freedom over the plebeians, and they are obliged to submit to the laws which establish popular liberty. The free peoples mean to shake off the yoke of their laws, and they become subject to monarchs. **The monarchs mean to strengthen their own positions by debasing their subjects with all the vices of dissoluteness, and they dispose them to endure slavery at the hands of stronger nations.** The nations mean to dissolve themselves, and their remnants flee for safety to the wilderness, whence, like the phoenix, they rise again.

https://archive.org/details/historicallectur00king/page/164/mode/2up?view=theater

But in any case, government by a ruling caste, whether of the patriarchal or of the feudal kind, is no ideal or permanent state of society. So far from it, it is but the first or second step out of primeval savagery. For the more a ruling race becomes conscious of its own duty, and not merely of its own power—the more it learns to regard its peculiar gifts as entrusted to it for the good of men—so much the more earnestly will it labour to raise the masses below to its own level, by imparting to them

its own light; **and so will it continually tend to abolish itself, by producing a general equality, moral and intellectual; and fulfil that law of self-sacrifice which is the beginning and the end of all virtue.**

https://en.wikipedia.org/wiki/Aufheben

Hegel stated that *aufheben* is uniquely exempt from the historical process in that it is supposed to be true for all time and never changes or develops further as in *das absolute Wissen* ("absolute knowledge"). **The synthesis both abolishes and preserves the thesis and the antithesis,** an apparent contradiction which leads to difficulties in interpreting this concept (and to translate *aufheben*). In Hegel's logic self-contradiction is legitimate and necessary.

The French Revolution acted, with regard to things of this world, precisely as religious revolutions have acted with regard to things of the other. It dealt with the citizen in the abstract, independent of particular social organizations, just as religions deal with mankind in general, independent of time and place.
…

By seeming to tend rather to the regeneration of the human race than to the reform of France alone, it roused passions such as the most violent political revolutions had been incapable of awakening. It inspired proselytism, and gave birth to propagandism; **and hence assumed that quasi religious character which so terrified those who saw it, or, rather, became a sort of new religion, imperfect, it is true, without God, worship, or future life, but still able, like Islamism, to cover the earth with its soldiers, its apostles, and its martyrs.**

https://www.marxists.org/reference/archive/blanqui/1849/to-mountain.htm

Citizens, the Mountain had sublime inspirations, daughters of the gospels and philosophy. But it never possessed those positive theories that only grow slowly from a close analysis of the social body, just as the art of healing is born of the revelations of anatomy. Nevertheless, if it was lacking in the organizing force of science, the impulses of the heart sufficed to dictate to it the immortal slogan of the future: Liberty, Equality, Fraternity, **and that admirable symbol, the Declaration of Rights, which broadly interpreted contains the seed of all that will come in the future society.**

Unfortunately, it's the fate of the works of genius that have shaken the world to perish asphyxiated under the clouds of incense under which superstitious admirers drown them. The vivifying spirit of the master dies suffocated by the narrow observance of the text. **The Law of Moses succumbed to the desperate embrace of the Pharisees. The Koran will be extinguished, turned into stone by the**

immobility of its imbecilic sectarians. And the Gospels themselves would have been sealed in their tomb by the idolatrous hands of its disciples – who had become its gravediggers – if their immortal ideas, escaping from the icy corpse around which they knelt, had not reappeared ever more shining in the new incarnation that will perpetuate them among humanity. The Declaration of Rights, a formula born yesterday, is already suffering the fate of the old dogmas which in their period of decrepitude almost always become instruments of reaction against the redemptory labors of their revealers. **The Judaic cult of the letter killed the revolutionary spirit of the symbol.**

https://books.google.fi/books?id=R12wB-fUdkoC&lpg=PP1&hl=fi&pg=PA73#v=onepage&q&f=false

One of the features of the French Enlightenment's dominant ideology thesis was the view that lurking behind lofty, idealistic phrases were self-interested motives. According to the *philosophes*, political elites "conspired" to create ideologies which would rationalize and disguise their self-interested motives and help them deceive and manipulate their subordinates. **Hence, on this view, political elites were well aware of the deceptive nature of their ideologies.**

> https://www.gutenberg.org/files/1232/1232-h/1232-h.htm#chap15
>
> **But, it being my intention to write a thing which shall be useful to him who apprehends it, it appears to me more appropriate to follow up the real truth of the matter than the imagination of it; for many have pictured republics and principalities which in fact have never been known or seen,** because how one lives is so far distant from how one ought to live, that he who neglects what is done for what ought to be done, sooner effects his ruin than his preservation; for a man who wishes to act entirely up to his professions of virtue soon meets with what destroys him among so much that is evil. **Hence it is necessary for a prince wishing to hold his own to know how to do wrong, and to make use of it or not according to necessity.**
>
> https://iep.utm.edu/machiave/#SH2e
>
> However, he is most famous for his claim in chapter 15 of *The Prince* that **he is offering the reader what he calls the "effectual truth" (*verità effettuale*), a phrase he uses there for the only time in all of his writings.** Although the effectual truth may pertain to military matters (e.g., P 14 and P 17), it is comprehensive in that it treats all the things of the world and not just military things (P 18). **Surprisingly, there is still relatively little work on this fundamental Machiavellian concept.**
> …
>
> Unlike Machiavelli himself, **those who damn the tumults of Rome do not see that these disorders actually lead to Roman liberty** (D 1.4).
> …
>
> Some commentators believe that effects are only effects if they are seen or displayed. They thus see the effectual truth as proto-phenomenological. Others take a stronger line of interpretation and believe that effects are only effects if they produce actual changes in the world of human affairs. Touching rather than seeing might then be the better metaphor for the effectual truth (see P 18).

Hegel, however, introduced a radically new step in the theory of ideological false consciousness when he suggested that **even the great political rulers of history – the Caesars and Napoleons – were themselves deceived by their ideologies and ignorant of the real motives behind their political thoughts and actions.**

According to Hegel's philosophy of history, **historical actors were agents or instruments of a historical process which transcended their conscious minds yet motivated their passions and ideas.**
…

As a historical materialist, Engels's objective was to demonstrate that

> **the political and religious theories were not the causes … [of the] so-called religious wars of the 16th century** [but in fact] very positive material class-interests were at play … [And] if the class struggles of that time appear to bear religious earmarks, if the interests, requirements and demands of the various classes hid themselves behind a religious screen, it little changes the actual situation, and is to be explained by conditions of the time.37

…

According to Engels, sixteenth-century Germany was ripe for the overthrow of feudalism and the political ascendancy of the nascent bourgeoisie; it was not ready, however, for the kind of revolutionary programs advanced by the more radical elements of the peasant movement. Furthermore, what was

clearly impossible was any attempt to realize a history-ending apocalypse. Hence, if Münzer had had a clearer, nonideological consciousness of the historical and social forces present in his epoch, he would have seen that the real interests of the peasantry would have been best served by an alliance with the reformist German middle class against the feudal and Church aristocracy. But outraged by the injustice and impiety of his society, and motivated by an irrational belief in the approach of the Last Judgment, Münzer would not accept an alliance with any group which did not share the same intense religious feelings and radical chiliastic aspirations as himself. **Münzer's ideological beliefs and decisions led to the political isolation of the peasantry,** and their ultimate defeat.
…

While such alliances made sense in the French Revolution of 1789, which was wedged against feudal absolutism, it no longer was in the rational interests of the proletariat to continue such alliances in the changed social circumstances of the early nineteenth century, according to Marx. In their ideological commitment to the "republican-democratic" ideology, Marx argued, the French proletariat was failing to perceive its real interests.

> https://www.marxists.org/archive/marx/works/1844/08/07.htm
>
> Proof: the first outbreaks of the French proletariat.[8] **The workers in Lyons imagined their goals were entirely political, they saw themselves purely as soldiers of the republic, while in reality they were the soldiers of socialism.**

https://www.revolutionarydemocracy.org/rdv3n2/ivant.htm

Molotov. It is necessary to show historical incidents in a comprehensive way. For example the incident with the drama of Demyan Bedny *Bogatyp.* Demyan Bedny mocked the baptism of Russia, **but in reality acceptance of Christianity was a progressive event for its historical development.**

Stalin. Of course, we are not good Christians but **to deny the progressive role of Christianity at that particular stage is impossible.** This incident had a very great importance because this turned the Russian state to contacts with the West, and not to an orientation towards the East.

---

https://bmcr.brynmawr.edu/1997/1997.03.16/

Irwin shows, with an historical acumen too rare in most discussions of such topics, that Kant (and Reid as well) significantly misunderstood ancient eudaimonism. Kant's central criticism of ancient ethics is that it tends to subordinate morality and the practical reason which accompanies it to non-moral considerations, such as 'inclination' or indeed any conception of the highest good which is not itself defined by a moral law. **This criticism hits the Epicurean position hardest; but, as Irwin points out, Kant recognizes sporadically that Stoicism can escape it, since the Stoics do acknowledge the supremacy of morality even within the framework of eudaimonistic thinking.** (Irwin claims that Aristotle and Plato would escape on the same grounds.)
…

[Annas] finds the Stoics taking clearer and sharper-edged positions than Aristotle in moral philosophy; **in this they resemble Kant more than Aristotle, who is methodologically committed to respecting widely held moral beliefs. The Stoic tendency is rather to press theoretical distinctions until they conflict with such common beliefs.**

https://books.google.fi/books?id=mTdUtsbybqkC&lpg=PP1&hl=fi&pg=PA45#v=onepage&q&f=false

The result of all this is that (to employ anachronistic modern categories) Stoic ethics comes to resemble a strange amalgam of elements familiar to us from utilitarianism and Kantian ethics. On the one hand, because the life according to nature is one in which we ought to act in ways likely to secure more rather than fewer preferred indifferents, and because the cosmopolitan sage is unconcerned about prioritising the securing of preferred indifferents for him- or herself rather than for other people, **it's not implausible to see the sage as engaging in the kinds of calculations utilitarians make about the likely real-world welfare consequences of the actions they are considering performing.** And just as there is a debate within utilitarian ethics as to whether utilitarianism is best understood in terms of acts or rules, **there is a debate within the Stoicism literature about whether the Stoics though that 'natural laws' were general, universal, and exceptionless** (as Julia Annas, Phillip Mitsis, and Gisela Striker contend) or whether they are better understood as heuristics, which the Stoic sage would have set aside when it was appropriate so to do (which is the view of A.A. Long and Brad Inwood).42 **On the other hand, the Stoics agree with Kantian moralists that two otherwise identical actions can have entirely different moral values, since morality is relevant to the intentions or dispositions with which a person acts and had nothing to do with the actual consequences of one's actions.**

"Two things fill the mind with ever new and increasing admiration and reverence: [...] *the starry heavens above me and the moral law within me*" (*KpV* 5:161).1 While through the study of nature we become aware of our animal nature, our moral condition raises us above animality and makes us aware of our dignity as persons. This is the famous dictum which summarizes Kant's philosophical stance. **In writing these beautiful words, he was probably inspired by Seneca** (*Ep.* 64.5-7; *Constant.* 8.2-4; Santozki 2006: 226-7; Seidler 1981: 674-6).

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_64

6. **And virtue herself will have the same effect upon you, of making you admire her and yet hope to attain her. In my own case, at any rate the very contemplation of wisdom takes much of my time; I gaze upon her with bewilderment, just as I sometimes gaze upon the firmament itself, which I often behold as if I saw it for the first time.** 7. Hence I worship the discoveries of wisdom and their discoverers; to enter, as it were, into the inheritance of many predecessors is a delight. It was for me that they laid up this treasure; it was for me that they toiled. But we should play the part of a careful householder; we should increase what we have inherited. This inheritance shall pass from me to my descendants larger than before. **Much still remains to do, and much will always remain, and he who shall be born a thousand ages hence will not be barred from his opportunity of adding something further.**

https://books.google.fi/books?id=5ZOPCwAAQBAJ&lpg=PP1&hl=fi&pg=PT377#v=onepage&q&f=false

Kant retains the Stoic notion of virtue, while rejecting its natural basis (Santozki 2006: 180). He strongly denied that morality could be based upon nature or anthropology (*MS* 6:216-7). The realm of nature (to which human nature belongs) and the realm of freedom (or morality) have different and heterogeneous forms of legislation.
…

For Kant, living in agreement with nature is not a valid moral principle, because it is heteronomous: here reason plays only an instrumental role, since the end of actions is already given. As he claimed in his university lectures, it is not a principle of morality but of prudence, and not even a good one, since it is unclear whether it is really good to do what accords with nature (Kant 2004: 51-2 [page-numbering of Kaehler's manuscript]).

Despite the structural parallelism regarding the moral point of view that can be traced between both philosophies, they diverge when it comes to *oikeiôsis* as the grounding of morality. Even though Kant never explicitly referred to this Stoic doctrine, the following words might be interpreted as a direct critique of it: "In a being that has reason and a will, if the proper end of nature were its *preservation*, its *welfare*, in a word its *happiness*, then nature would have hit upon a very bad arrangement in selecting the reason of the creature to carry out this purpose" (*GMS* 4:395; Himmelmann 2003: 129-30). **Since instinct would have been a more appropriate means for that end, Kant considers that we have reason for something other than achieving happiness.**
…

For Kant, the specific function of reason in morality is to grasp the heterogeneous nature of duty and happiness and establish the proper order between them.
…

In the beginning of the second part of *Religion*, Kant praises the Stoic conception of virtue. Virtue "designates courage and valour [...] and, hence, presupposes the presence of an enemy" (*Religion* 6:57). Seneca's maxim *vivere militare est* (*Ep.* 96.5) resounds here. **However, Kant criticizes the Stoics for taking the natural inclinations as the enemy, instead of acknowledging that evil lies in our own will.** It is "the *malice* (of the human heart) which secretly undermines the inner attitude with soul-corrupting principles" (*Religion* 6:57, translation modified).

…

Being good amounts to having a virtuous inner attitude, i.e. a "subjective determining ground to fulfill one's duty" (*MS* 6:410). **However, Kant is careful not to define virtue as the "*possession* of a complete *purity* of inner attitudes," but as an "inner attitude *in struggle*"** (*KpV* 5:84, translation modified). **The moral level that corresponds to human beings is progress towards virtue and not its full possession (sanctity). Since virtue, considered objectively, is an "ideal and unattainable," morality commands "constant approximation to it."** From the perspective of the subject of virtue (ourselves), we are always starting "from the beginning" because we are affected by our inclinations (*MS* 6:409).

Kant deems the Stoic notion of virtue to be in real danger of leading into "moral enthusiasm" (*KpV* 5:84). **The problem is that the Stoic ideal of the sage raises "himself above the animal**

nature of the human being" and "is not subject to any temptation to transgress them moral law" (*KpV* 5:127). The sage carries out actions "not from duty but as bare merit" (*KpV* 5:85). Such actions, for Kant, lack moral value. In his understanding, virtue (as strength) is what allows us to overcome the incentives of our inclinations and, thus, to carry out actions *from duty*, which is precisely what gives them moral value.
…

> 8. **In his pre-critical writings, Kant's frequent references to the highest good respond to a slightly different interest.** He sees in it the answer to the articulation between the *principium diiudicationis* and *principium executionis*, that is, the definition of the moral standard and its capacity to move the will. **For Kant, "Epicurus wanted to give virtue an incentive and took from it its inner worth. Zeno wanted to give virtue an inner worth and took from it its incentive. Only Christ gave it inner worth and also an incentive. […] The incentive based on the other world is also in itself the same as renunciation of all advantages"**(*R* 6838, 19:176). **However, in his critical works, Kant introduces the notion of respect for the moral law as a sufficient incentive and, thus, the articulation of *diiudication* and *execution* completely changes** (Seidler 1981: 185-94).

Kant follows the Stoics in taking virtue as the supreme moral principle, but he strongly criticizes them, firstly, for their superhuman representation of the sage and, secondly, for downplaying the role of happiness in human volition. Regarding the first critique, the problem is that the Stoic sage, in claiming that virtue, as moral perfection, can be fully achieved in this life, exceeds the limits of human nature (*KpV* 5:127). Seneca even claimed that the sage has an advantage over the gods, since he is virtuous by merit (*Ep*. 3.14, 52:6; 53.11-12; *Prov*. 6.6). **For Kant, as has been explained, it is only possible to conceive an endess progress towards moral perfection.** Interestingly enough, such progress is "the *real* object of our will" (*KpV* 5:122, emphasis added). In contrast with the idealism of the Stoic sage, Kant's approach offers a more *realist* conception of morality, consistent with our finite nature. **We have a intermediate status: between our inclinations (happiness) and duty (moral law).** Since inclinations "do not of themselves accord with the moral law, which has quite different sources" (*KpV* 5:84), human beings are located at an intersection (Seidler 1981: 145).
…

In both approaches, virtue is the apex of morality and always within our power. Therefore, being moral is not a chimera, but a real possibility. However, **in the philosophical tradition, such a possibility has frequently been spurned as other-worldly or as Stoic, in a pejorative sense.** The way Kant appropriates Stoicism, it has been argued, demonstrates that purity of virtue is attainable for intermediate beings like us and that **the enemy of morality is not our natural inclinations (including emotions and desire for happiness), but lack of rational control over them. Virtue requires us not to suppress, but to subordinate them.** Subordination establishes a kind of order. The principle of such order lies within the agent, in our person. In the capacity to establish that order we discover our freedom and dignity. **In Stoicism Kant found an outstanding catalyst to channel his powerful intuitions.**

https://iow.eui.eu/wp-content/uploads/sites/28/2013/03/13-De-Frouville-Background-Kant-and-Stoic-Cosmopolitanism.pdf

Kant's debt to Stoic cosmopolitanism cannot be well understood if we confine our discussion to the political sphere and to the political writings. That is why, in my own characterization of Stoicism, I have started from the moral core of their ideas about reason and personhood, rather than from a more superficial description of their institutional and practical goals. **It is this deep core that Kant appropriates, the idea of a kingdom of free rational beings equal in humanity, each of them to be treated as an end no matter where in the world he or she dwells.** As in Stoicism, this idea is less a specific political proposal than a regulative ideal that should be at the heart of both moral and political reflection and that supplies constraints upon what we may politically will. It also supplies moral motives of respect and awe that will provide us with powerful incentives to fulfill the moral law. We can easily recognize these ideas as formative in the *Grundlegung*, where, as Reich has argued, Kant's way of connection the Formula of Universal Law to the Formula of Humanity is his own non-teleological recasting of the argument of *De Officiis* Book III, where Cicero interprets the Stoic idea of life in accordance with nature as entailing a universal respect for humanity (III. 26-7). (As Reich shows, there are many other points of contact between the works, so much so that it appears that Kant closely followed Cicero's argument.) **We may also recognize Stoic ideas as formative in the Second Critique, where famous conclusion concerning the mind's awe before the starry sky and the moral law within closely echoes the imagery of Seneca's Letter 41, expressing awe before the divinity of reason within us.**
…

Again, **both the Stoics and Kant have blind spots, and not always in the same place. Kant's cosmopolitanism allows him to fall short of the Greek and even the Roman Stoics with regard to the equal personhood and dignity of women,**41 **while we are especially shocked by the**

Stoics' general tendency to accept the institution of slavery, if not all of the practices associated with it.42

> 41. On the equality of women in the Stoic ideal community, see Schofield, *The Stoic Idea*, and, for the Roman Stoics, Musonius Rufus' two short treatises, "That Women Too Should Do Philosophy," and "Should Sons and Daughters Have the Same Education?"

Cosmopolitanism and International Relations Theory by Richard Beardsworth (2011).

1. The Historical Background to the Cosmopolitan Disposition.

There are three major moments of cosmopolitan thought prior to recent and current re-engagement with its problematic and disposition. The first is the Stoic moment, the second that of natural law theory, the third that of European Enlightenment thought, in general, and Kantian cosmopolitanism, in particular.

As a specific way of thinking the world as a *polis* (literally, a city-state or polity), cosmopolitanism emerges, from out of religious and mythical cosmology, in the Greek Stoic writings of Diogenes (c. 413-327 BCE), Zeno the Stoa (c. 334-262 BCE) and Chrysippus (c. 280-206 BCE). Diogenes the Cynic is considered the first to describe himself as 'a citizen of the world'. 'When anyone asked him what country he came from, he said, "I am a citizen of the world (*kosmopolitês*)"', that is, a member of the *polis* of the universe (Laertius, n.d.). The self-description meant specifically, for Diogenes, that all natural or man-made borders are morally contingent. A citizen, by chance, of the Athenian *polis*, Diogenes belonged morally to the universe. The cosmopolitan disposition emerges out of this ironic, moral outlook on the contingency of Athenian citizenship and political empire. This outlook leads to two conceptions of the *polis*: one transcendent and borderless; the other contingent and bounded. Outside the terms of myth and religion, it provides the intellectual framework that permits the normative critique of empirical politics and loyalties. For Zeno and Chrysippus, the universe constitutes a *polis* because it is organized under law in distinction to chaos (Schofield, 1991, pp. 67-86). Members of the *cosmopolis* are gods and men only insofar as they obey laws through reason. Wider citizenship requires greater rationality. In Stoic cosmopolitanism a relation of identity is thereby set up among the universe (*cosmos*), reason (*logos*), law (*nomos*) and citizenship (*cosmopolitein*). **This identity, together with the moral and normative framework it endorses, is refined in Roman Stoicism at the historical moment of violent transition from the Roman republic to the Roman *imperium*, in the authorships of Cicero (106-43 BCE), Seneca (4 BCE-65 CE), and Marcus Aurelius (121-180 CE).** Seneca writes for example:

> Let us embrace with our minds two commonwealths (*res publicae*): one great and truly common – in which gods and men are contained, in which we look not to this or that corner, but measure the bounds of our state (*civitas*) with the sun; the other the one to which the particular circumstances of birth have assigned us – the commonwealth of the Athenians or the Carthaginians or some other city (*urbs*) which pertains not to all men but to a particular group of them. Some give service to both commonwealths at the same time – some only to the lesser, some to the greater. (Seneca, *De otio,* Book 4, quoted in Schofield, 1991, p. 91)

Seneca's conception of the two cities offers not only a critique of empire, but, again, the terms within which the lesser, contingent *polis* can be appraised through a rational understanding of humanity and a moral conception of community and solidarity. This conception ultimately places the field of politics under the normative horizon of rational moral constraint. **The Greek and Roman variants of Stoic cosmopolitanism provide therefore the embryonic language through which ethical behaviour is untied from religious custom and retied to political and legal system.**

With the Christianization of the Roman Empire of the fourth century CE, the moral tenor of cosmopolitanism is resituated within the universality of Judeo-Christian monotheism. Augustine's *The City of God*, for example, pits the city of the Christian God and its moral duties against those of Rome when Augustine restricts himself to the power relations between them; when he attempts to lay out a comprehensive political theory, he subordinates the laws of the latter to those of the former (Augustine, 1972, Book V). **With the European dissemination of Christian institutions (dogma, diocese, church, monastery) Stoic moral cosmopolitanism fuses with Christian universalism to forge, from the late European medieval age through to the Renaissance, the critical language of natural law theory. From Aquinas to important Thomists like Francisco di Vitoria (1492-1546 CE) and Francisco Suârez (1548-1617 CE), natural laws are deemed those given to humans as rational offspring of divinely-inspired creation** (Finnis, 1992). These laws are those of 'natural' justice to which positive legal laws should bend: they are, most importantly, those of moral equality, of peaceful co-belonging, of just war (Brown et al., 2004, pp. 311-23). **Despite its evident ambiguities and hypocrisies ensconced within the language of Christendom (to which I return), natural law theory thereby prepares the ground for modern political egalitarianism.**

In the third moment, of European Enlightenment thought, a consequent and more systematic cosmopolitanism emerges. I claim that it provides the overall framework within which contemporary cosmopolitan ideas are, in general, discussed, even if weaker forms of cosmopolitanism resist the move to universalize moral personhood. This framework is best found in the work of Immanuel Kant and his ethical and political writings (1784, 1785,

1788, 1793, 1795, 1797). Kant constitutes such an instrumental figure in modern cosmopolitanism and its contemporary reconfigurations that this chapter returns to him several times; here I situate his thought in the context of this brief history. **Indebted to the Stoics (Nussbaum, 1997), Kant aims to maintain the identity posited between human nature, reason and law *within* modernizing processes.** The cosmos can no longer be placed under the rule of law. Human cognitive agents know nothing of its internal workings as a whole. Rational concepts of the world are accordingly 'speculative ideas' only; they have no real relation to the empirical and cannot be verified (Kant, 1781/1929, pp. 315-26). These ideas have, conversely, speculative interest: they are thoughts of totality that testify to the rational vocation of the human species. More importantly, this interest is not only speculative, it is also practical. Reason has, for Kant, an immediate effect on the human will (1788/1956, pp. 74-91). As both rational and sensible beings, humans necessarily take a pure moral interest in the moral law. If human beings feel guilt when they believe that they have behaved wrongly, if they admire examples of virtue in both the moral and political domains, it is because they have a rational will, however overriding their inclinations to self-interest prove to be in everyday life (1785/1987, pp. 55). For Kant, the existential 'fact' of the rational will places ethical motivation immediately in the empirical field. Kant then extrapolates that human beings are members of a 'kingdom of ends'. Transposed from the ethics of the New Testament – for Kant, the most moral of all religious writings – this kingdom constitutes an ethical realm in which each has an absolute worth in himself or herself (ibid., p. 56). **It is this absolute worth of the individual that makes the New Testament morally outstanding.** When taken as means to others' ends, individuals have a 'price'. When considered as ends in themselves – that is, autonomous givers to themselves of their own ends – they have 'value' and 'dignity' (ibid.). Bearing dignity, individuals constitute 'moral persons' with their own agency (ibid., pp. 57 and 63). Moral personality anticipates a system of universal laws in which it is both subject of, and subject to, these laws (self-determination).

Kant's moral community of ends is a direct translation of the Stoic cosmopolitan *polis*, supplemented by Christian individuality, in the context of modernity. The dignity of the moral person organizes the moral and normative critique of hierarchical societies. It leads Kant, politically, to a liberal republicanism: the political philosophy of a liberal community in which each person is free to the extent that his freedom does not harm the freedom of others under the rule of 'public law' (in Kantian terms, *das Recht*). I come back to this critical understanding of liberalism several times in my responses to IR critiques of cosmopolitanism. Morality is thus harnessed to politics through the mechanism of law (*das Recht*) (Kant, 1793 and 1795).

Kant's liberal republicanism is both consistent and systematic. If the category of moral personality is universal for all rational human beings, then, for Kant, the moral critique of empirical polity must itself be universal. The universality of personal dignity is therefore a given at all levels of political organization. In his essay 'Perpetual Peace', for example, the ideology of liberal republicanism leads Kant to posit, beyond the international laws of states' mutual obligations to each other, a cosmopolitan law (*ius cosmopoliticum*) of states *and* individuals, and a world republic in which both states and individuals achieve political personality as 'world citizens' (Kant, 1795/1991, pp. 98-104).

> https://meduza.io/en/news/2024/02/12/governor-of-russia-s-kaliningrad-says-german-philosopher-immanuel-kant-directly-tied-to-war-in-ukraine
>
> **According to Alikhanov, it was German philosophy, whose "godlessness and lack of higher values" began with Kant, that created the "sociocultural situation" that led, among other things, to the First World War.**
>
> > Today, in 2024, **we're bold enough to assert that not only did the First World War begin with the work of Kant, but so did the current conflict in Ukraine.** Here in Kaliningrad, we dare to propose—although we're actually almost certain of it—that it was precisely in Kant's *Critique of Pure Reason* and his *Groundwork of the Metaphysic of Morals* [...] that the ethical, value-based foundations of the current conflict were established.
>
> **The governor went on to call Kant one of the "spiritual creators of the modern West," saying that the "Western bloc, which was shaped by the U.S. in its own image," is an "empire of lies."** Kant, he said, is referred to as the "father of almost everything" in the West, including freedom, the idea of the rule of law, liberalism, rationalism, and "even the idea of the European Union."

216. "GERMAN VIRTUE."—There is no denying that from the end of the eighteenth century a current of moral awakening flowed through Europe. **Then only Virtue found again the power of speech. She learnt to discover the unrestrained gestures of exaltation and emotion, she was no longer ashamed of herself,** and she created philosophies and poems for her own glorification. If we look for the sources of this current, we come upon Rousseau, **but the mythical Rousseau, the phantom formed from the impression left by his writings (one might almost say again, his mythically interpreted writings)** and by the indications that he provided himself. He and his public constantly worked at the fashioning of this ideal figure. **The other origin lies in the resurrection of the Stoical side of Rome's greatness, whereby the French so nobly carried on the task of the Renaissance. With striking success they proceeded from the reproduction of antique forms to the reproduction of antique characters.** Thus they may always claim a title to the highest honours, as the nation which has hitherto given the modern world its best books and its best men. How this twofold archetype, the mythical Rousseau and the

resurrected spirit of Rome, affected France's weaker neighbours, is particularly noticeable in Germany, which, in consequence of her novel and quite unwonted impulse to seriousness and loftiness in will and self-control, finally came to feel astonishment at her own newfound virtue, and launched into the world the concept "German virtue," as if this were the most original and hereditary of her possessions. The first great men who transfused into their own blood that French impulse towards greatness and consciousness of the moral will were more honest, and more grateful. **Whence comes the moralism of Kant? He is continually reminding us: from Rousseau and the revival of Stoic Rome.** The moralism of Schiller has the same source and the same glorification of the source. The moralism of Beethoven in notes is a continual song in praise of Rousseau, the antique French, and Schiller. **"Young Germany" was the first to forget its gratitude, because in the meantime people had listened to the preachers of hatred of the French.** The "young German" came to the fore with more consciousness than is generally allowed to youths. When he investigated his paternity, he might well think of the proximity of Schiller, Schleiermacher, and Fichte. **But he should have looked for his grandfathers in Paris and Geneva, and it was very short-sighted of him to believe what he believed: that virtue was not more than thirty years old.** People became used to demanding that the word "German" should connote "virtue," and this process has not been wholly forgotten to this day.—Be it observed further that this moral awakening, as may almost be guessed, has resulted only in drawbacks and obstacles to the *recognition* of moral phenomena. **What is the entire German philosophy, starting from Kant, with all its French, English, and Italian offshoots and by-products? A semi-theological attack upon Helvetius,** a rejection of the slowly and laboriously acquired views and signposts of the right road, which in the end he collected and expressed so well. To this day Helvetius is the best-abused of all good moralists and good men in Germany.

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n839/mode/2up?view=theater

We must now turn our attention to a new species of Jacobins who are making an amazing progress in Germany. These are the disciples of a Doctor KANT, who, rising from darkness, and from the chaos of his Categories, proceeds to reveal the mysteries of his Cosmopolitism. According to this system, I. It *is melancholy* to be obliged to seek, *in the hopes of another world*, for the end and destiny of *the human species*.—II. It is not of man conducted by reason, as it is of brutes led by instinct. The former has each for his end the development of all his faculties; while in the latter, the end is accomplished in each individual brute. Among men, on the contrary, the end is for the species, and not for the individual; for the life of man is too short to attain the perfection and the complete development of his faculties. In the class of man, *all the individuals pass and perish; the species alone survives, and is alone immortal*.—III. With respect to man again, the end of the species cannot be accomplished; that is to say, his faculties can only be entirely developed in *the most perfect state of society*.—IV. **That perfect state of society would be *a general confederacy* of the inhabitants of the earth, so united together, that dissentions, jealousies, ambition, or wars, would never be heard of.**—V. Thousands and thousands of years may elapse before this happy period of perpetual peace may come; but, "whatever may be the idea conceived of the free exercise of our will, *it is nevertheless certain, that the apparent result of that volition, the actions of man, are, as well as all the other facts of nature, determined by general laws*." This nature proceeds with a slow but certain step toward its object. Vices, virtues, sciences, the dissentions of mankind, are in her hands but the sure and infallible means by which she leads the human species from generation to generation to the most perfect state of civilization. Sooner or later the epoch of the general confederation, of universal peace, must come; nevertheless, even at that period, *the human species will have proceeded but half way toward its perfection*.27—**I know not whether this doctrineer Kant will inform us in what the other half of the way toward perfection consists; but in the meantime his disciples, who are daily increasing, tell us, "that Europe must necessarily dissolve itself into as many republics as there are now monarchies; and then only will the human species show itself in all its strength and grandeur; then people incapable of governing will no longer be seen at the head of nations; *they will then rise to that high state of perfection at present attained by the French nation, where birth is nothing, but genius and talents every thing.*"**28 **Other adepts, however, perfectly understand what is alluded to by the other half way toward perfection; and these acknowledge man only to be in a state of perfection when he recognizes no other master but himself, no other law but his reason. In short, it is man according to the professor of *Jena*, it is the *Magus* of Weishaupt or of Baboeuf.**29

Notwithstanding the different methods of proceeding, it is easy to see that the system of *Kant*, at present Professor at *Konigsberg*, ultimately leads to the same end as that of *Weishaupt*, heretofore Professor at *Ingolstadt*. The same hatred for revelation is to be found in both, as well as the same spirit of impiety, which cannot brook the idea of a world to come, where all delusion must cease in the presence of the Creator, and where the end of man and of the human species will be proclaimed at the tribunal of a remunerating and avenging God. ***Kant* and *Weishaupt*, with similar pretensions to superior genius, are equally baffled in their attempts, falling into the most voluntarily absurd propositions, that leave the present generation no other consolation in its afflictions, than the empty Cosmopolites who, in thousands and thousands ot years, are, as we are told, to inhabit this earth.** In both we may observe that same hypocrisy pretending to great sensibility and virtue, pretending not to know, that every individual who shall be persuaded that he is not born for any fixed or personal end, will soon shape his conduct according to his views or to his pleasures, and will little regard the future Cosmopolites, their universal peace, or the happiness that is to be spread over the

earth twenty or thirty ages after his death. The same inept fatalism is taught by them both, wishing to represent nature as acting exactly as it pleases, in spite of our volition, and prevailing over our passions by its *general laws*; and nevertheless represent mankind as slow in seconding the grand object of Nature, just as if we were free to accelerate or to retard its views, by our actions. The only difference that can be perceived between these two prototypes of German Jacobinism, is, that the one at Konigsberg envelopes his views in a pacific cant; while the other, in his mysteries, animates and infuriates his Epopts, teaching that the day is not far distant when the adepts are to resort to force, in order to crush and stifle every thing that should dare to resist them. But notwithstanding the pacific cant of the former, his doctrines also make his hearers thirst after that great day when the children of Equality and Liberty are to reign. His colleagues in the universities do not teach his principles with his coolness; the disciples become violent; the Jacobins smile; and as the system spreads, the offspring of both these teachers unite and form alliances in their tenebrous abodes. **Under pretence of this perpetual peace that is to be enjoyed by future generations, they have begun by declaring a war of cannibals against the whole universe; nor is there to be found scarcely one of their offspring, that is not ready to betray his country, his laws, and his fellow-citizens, to erect that Cosmopolitan Empire announced by the Professor Kant, or to enthrone the *Man-king* of the modern *Spartacus*.**

25. **No! You can't get round me with science, when I search for the natural antagonists of the ascetic ideal,** when I put the question: "*Where* is the opposed will in which the *opponent ideal* expresses itself?" Science is not, by a long way, independent enough to fulfil this function; in every department science needs an ideal value, a power which creates values, and in whose *service* it *can believe* in itself—**science itself never creates values.** Its relation to the ascetic ideal is not in itself antagonistic; speaking roughly, it rather represents the progressive force in the inner evolution of that ideal. Tested more exactly, its opposition and antagonism are concerned not with the ideal itself, but only with that ideal's outworks, its outer garb, its masquerade, with its temporary hardening, stiffening, and dogmatising—it makes the life in the ideal free once more, while it repudiates its superficial elements. These two phenomena, science and the ascetic ideal, both rest on the same basis––I have already made this clear––the basis, I say, oft the same over-appreciation of truth (more accurately the same belief in the *impossibility* of valuing and of criticising truth), and consequently they are *necessarily* allies, so that, in the event of their being attacked, they must always be attacked and called into question together. **A valuation of the ascetic ideal inevitably entails a valuation of science as well; lose no time in seeing this clearly, and be sharp to catch it!**
...

Considered physiologically, moreover, science rests on the same, basis as does the ascetic ideal: a certain *impoverishment of life* is the presupposition of the latter as of the former––add, frigidity of the emotions, slackening of the *tempo*, the substitution of dialectic for instinct, *seriousness* impressed on mien and gesture (seriousness, that most unmistakable sign of strenuous metabolism, of struggling, toiling life). **Consider the periods in a nation in which the learned man comes into prominence; they are the periods of exhaustion, often of sunset, of decay—the effervescing strength, the confidence in life, the confidence in the future are no more. The preponderance of the mandarins never signifies any good, any more than does the advent of democracy, or arbitration instead of war, equal rights for women, the religion of pity, and all the other symptoms of declining life.** (Science handled as a problem! what is the meaning of science?—upon this point the Preface to the *Birth of Tragedy*.) No! this "modern science"—mark you this well—is at times the *best* ally for the ascetic ideal, and for the very reason that it is the ally which is most unconscious, most automatic, most secret, and most subterranean! They have been playing into each other's hands up to the present, have these "poor in spirit" and the scientific opponents of that ideal (take care, by the bye, not to think that these opponents are the antithesis of this ideal, that they are the *rich* in spirit—that they are *not*; I have called them the *hectic* in spirit). As for these celebrated victories of science; there is no doubt that they are *victories*—but victories over what? There was not for a single minute any victory among their list over the ascetic ideal, rather was it made stronger, that is to say, more elusive, more abstract, more insidious, from the fact that a wall, an outwork, that had got built on to the main fortress and disfigured its appearance, should from time to time be ruthlessly destroyed and broken down by science. **Does any one seriously suggest that the downfall of the theological astronomy signified the downfall of that ideal?**—Has, perchance, man grown *less in need* of a transcendental solution of his riddle of existence, because since that time this existence has become more random, casual, and superfluous in the *visible* order of the universe? Has there not been since the time of Copernicus an unbroken progress in the self-belittling of man and his *will* for belittling himself? Alas, his belief in his dignity, his uniquenesses irreplaceableness in the scheme of existence, is gone—he has become animal, literal, unqualified, and unmitigated animal, he who in his earlier belief was almost God ("child of God," "demi-God"). Since Copernicus man seems to have fallen on to a steep plane—he rolls faster and faster away from the centre—whither? into nothingness? *into the "thrilling sensation of his own nothingness"*—Well! this would be the straight way—to the *old* ideal?—***All* science (and by no means only astronomy, with regard to the humiliating and deteriorating effect of which Kant has made a remarkable confession, "it annihilates my own importance"), all science, natural as much as *unnatural*—by unnatural I mean the self-critique of reason—nowadays sets out to talk man out of his present opinion of himself, as though that opinion had been nothing but a bizarre piece of conceit; you might go so far as to say that science finds its peculiar pride, its peculiar bitter form of stoical ataraxia, in preserving man's *contempt of himself*, that state which it took so much trouble to bring about, as man's final and most serious**

claim to self-appreciation (rightly so, in point of fact, for he who despises is always "one who has not forgotten how to appreciate"). But does all this involve any real effort to *counteract* the ascetic ideal? Is it really seriously suggested that Kant's *victory* over the theological dogmatism about "God," "Soul," "Freedom," "Immortality," has damaged that ideal in any way (as the theologians have imagined to be the case for a long time past)?––**And in this connection it does not concern us for a single minute, if Kant himself intended any such consummation. It is certain that from the time of Kant every type of transcendentalist is playing a winning game––they are emancipated from the theologians; what luck!**––he has revealed to them that secret art, by which they can now pursue their "heart's desire" on their own responsibility, and with all the respectability of science.

https://www.gutenberg.org/files/19322/19322-h/19322-h.htm

"Virtue," "duty," "good for its own sake," goodness grounded upon impersonality or a notion of universal validity—these are all chimeras, and in them one finds only an expression of the decay, the last collapse of life, the Chinese spirit of Königsberg. Quite the contrary is demanded by the most profound laws of self-preservation and of growth: to wit, that every man find his *own* virtue, his *own* categorical imperative. **A nation goes to pieces when it confounds *its* duty with the general concept of duty. Nothing works a more complete and penetrating disaster than every "impersonal" duty, every sacrifice before the Moloch of abstraction.**—To think that no one has thought of Kant's categorical imperative as *dangerous to life*!... The theological instinct alone took it under protection!—**An action prompted by the life-instinct proves that it is a *right* action by the amount of pleasure that goes with it: and yet that Nihilist, with his bowels of Christian dogmatism, regarded pleasure as an *objection*. ...** What destroys a man more quickly than to work, think and feel without inner necessity, without any deep personal desire, without pleasure—as a mere automaton of duty?
...

Didn't Kant see in the French Revolution the transformation of the state from the inorganic form to the *organic*? Didn't he ask himself if there was a single event that could be explained save on the assumption of a moral faculty in man, so that on the basis of it, "the tendency of mankind toward the good" could be *explained*, once and for all time? **Kant's answer: "That is revolution."** Instinct at fault in everything and anything, instinct as a revolt against nature, German *décadence* as a philosophy—*that is Kant*!—

http://aynrandlexicon.com/lexicon/kant,_immanuel.html

As to Kant's version of morality, **it was appropriate to the kind of zombies that would inhabit that kind of [Kantian] universe: it consisted of total, abject *selflessness*.** An action is moral, said Kant, only if one has no desire to perform it, but performs it out of a sense of *duty* and derives no benefit from it of any sort, neither material nor spiritual; a benefit destroys the moral value of an action. (Thus, if one has no desire to be evil, one cannot be good; if one has, one can.)

Those who accept any part of Kant's philosophy—metaphysical, epistemological or moral—deserve it.
...

The arch-advocate of "duty" is Immanuel Kant; he went so much farther than other theorists that they seem innocently benevolent by comparison. "Duty," he holds, is the only standard of virtue; but virtue is not its own reward: if a reward is involved, it is no longer virtue. The only moral motivation, he holds, is devotion to duty for duty's sake; only an action motivated exclusively by such devotion is a moral action (i.e., an action performed without any concern for "inclination" [desire] or self-interest).
...

If a man *wants* to be honest, he deserves no moral credit; as Kant would put it, such honesty is "praiseworthy," but without "moral import." **Only a vicious represser, who feels a profound desire to lie, cheat and steal, but forces himself to act honestly for the sake of "duty," would receive a recognition of moral worth from Kant and his ilk.**

This is the sort of theory that gives morality a bad name.

The widespread fear and/or resentment of morality—the feeling that morality is an enemy, a musty realm of suffering and senseless boredom—is not the product of mystic, ascetic or Christian codes as such, but a monument to the ugliest repository of hatred for life, man and reason: the soul of Immanuel Kant.

http://rebirthofreason.com/Articles/Younkins/Immanuel_Kant_Ayn_Rands_Intellectual_Enemy.shtml

Kant says that an act is moral only if no benefit of any kind is derived from it. He excludes all personal desires and benefits from the realm of morality. To be moral, a man must perform his duty

without reference to any personal goals, values, or effects on his own life and happiness. A benefit destroys the moral value of an action.

https://archive.org/details/ambivalenceofber0000monr/page/132/mode/2up?view=theater

> **Mandeville always insists that there is no virtue without self-denial,** and sneers at Shaftesbury for maintaining the contrary. It might seem to follow from this (and Mandeville seems to imply it, often enough) **that apparently virtuous behaviour is not genuinely so if it has its origin in a 'passion' and is merely a disguised form of self-liking, The self has not been denied: vanity has been pandered to.** The moral virtues whose origin is described in *An Enquiry into the Origin of Moral Virtue* are not, on this view, really virtues at all. **True virtue occurs only when human nature has been transcended altogether, and that is possible only with divine assistance.** When Mandeville says that he does not deny that virtue sometimes occurs, he may merely mean to acknowledge that a few saints may, with God's help, rise above human limitations. He says more than once that he is talking about 'Men in Nature' and not 'Devout Christians, who alone are to be excepted here, being preternaturally assisted by the Divine Grace.'57 He always insists that Devout Christians are extremely rare, even in the religious houses. Whether he is sincere in this or not, **it is obviously a useful ploy, since it enables him to dispose of any counter-examples that may be brought against him without abandoning the thesis that human nature, as such, is completely selfish.**

https://archive.org/details/in.ernet.dli.2015.157427/page/n11/mode/2up?view=theater

IF you asked twenty good men to-day what they thought the highest of the virtues, nineteen of them would reply, Unselfishness. But if you asked almost any of the great Christians of old he would have replied, Love. You see what has happened? A negative term has been substituted for a positive, and this is of more than philological importance. The negative ideal of Unselfishness carries with it the suggestion not primarily of securing good things for others, but of going without them ourselves, as if our abstinence and not their happiness was the important point. I do not think this is the Christian virtue of Love. The New Testament has lots to say about self-denial, but not about self-denial as an end in itself. We are told to deny ourselves and to take up our crosses in order that we may follow Christ; and nearly every description of what we shall ultimately find if we do so contains an appeal to desire. **If there lurks in most modern minds the notion that to desire our own good and earnestly to hope for the enjoyment of it is a bad thing, I submit that this notion has crept in from Kant and the Stoics and is no part of the Christian faith.**

https://archive.org/details/theistsatheiststst0000moln/page/92/mode/2up?view=theater

According to Alexander Kojève's analysis of Kant's life-work, an analysis supported by strategically placed although exceedingly subtle passages found in Kant's writings, the Königsberg philosopher posited the extra-empirical objects (of practical reason) in order merely to bolster his own personal preferences and moral discipline, still only insufficiently disengaged from traditional religious belief. **Without free will, God, and an immortal soul, Kant would have felt that his moral sense of duty was groundless, and this feeling, in turn, would have led, according to Kojève, to 'self-contempt.' Kojève goes as far as to say that Kant was a 'hypocritical sceptic,' unable to choose between his theoretical conclusions and his self-imposed moral stance.**1

https://archive.org/details/godknowledgeofre0000moln/page/164/mode/2up?view=theater

Positive religion has no longer any meaning for enlightened mankind, Kant writes. **The church's faith was perhaps necessary earlier in order to bring all men to the moral view.**25 **Now, however, the philosopher's task is to make the church's faith superfluous:** through education men may be brought to live without a religious faith, while the philosopher makes new contributions toward the approaching pure religion of reason in which God will be all in everything.

Kant envisages then the gradual impact of practised free thought on people's sentiments so that they will experience an increase of their aptitudes to behave freely and change the foundations of government.26 There is here a whole conscious strategy to reach this goal, **although, as Karl Barth remarked, Kant's works are so demanding that most readers remain unaware of the "cold deliberateness" with which he pursued his "enthusiasm" for the new world.** The foundation stone of the strategy, as expressed in Kant's entire lifework, is the hope to place reason on such a firm basis that it may serve the main objective: the formulation of a natural religion as the organizing principle of the new community of men. Three stages may be distinguished in this strategy: **first, the removal from the religious purview of all those elements that hinder the universal union of all religions into one single church.** For this purpose Christianity must be stripped of superstitions, miracles, revelation, atonement, grace, and hierarchy.
…

Once the main roadblocks (faith and hierarchy) are eliminated, **there will be no obstacle left before the public use of individual reason. By this Kant understood the philosophers' books and the reading public studying these books with an emancipated mind.**27 We recognize the pattern suggested by the Renaissance magi and taken up, more elaborately, by Hegel a little later. Bruno's *capitano*, Campanella's Sun Priest, Andreae's metaphysician-God, **Hegel's all-comprehending sage,** and the *duces* and emperor-figures of Joachites and others are varities of the type to which Kant's savant can now be added.28
…

And there was also the Königsberg philosopher's fear of censorship, eventually of the loss of his chair. **True, he had vowed never to write and publish what he did not believe to be true, but he preferred to confide his innermost thoughts to his notes which were published in 1920 only. Therein we find a much more radical Kant, one for whom man's inner moral autonomy is justified by the God within him.** Two passages from the somewhat disjointed notes – Kant was obviously searching for the correct and definitive formulation of his thought – show that he too believed in an ontologically promoted man, a complete self-legislator. "**The proposition: There is a God, says nothing more than: There is in the human morally self-determining Reason a highest principle which determines itself, and finds itself compelled unremittingly to act in accordance with such a principle.** God can only be sought in us." And: "**God must be represented not as a substance outside me, but as the highest moral principle in me.** … The Idea of that which human reason itself makes out of the World-All is the active representation of God. Not as a special personality, substance outside me, but as a thought in me."29
…

In a letter written in 1793 to a Berlin editor, he refused to share his correspondent's abhorrence before the turn the Revolution was taking, reaffirming his faith in the kind of social theories Rousseau and Abbé de St. Pierre were proposing. The *ought to happen*, he argued, can be made to happen – if only governments are willing to act with this conviction in mind, "making things possible by this very action."30 **Thus the cautious Kant, always governed by reason, adopted the view that the virtuous and perfect republic cannot be realized through gradual reform but must be effected through a revolution in man's disposition.** He can become "a new man by a kind of rebirth, as it were a new creation." Granted, he writes in *The Conflict of the Faculties*, that the revolution in France accumulates miseries and horrors, the kind that a sensible man would not plan at any price; **but this is unimportant, the revolution finds in the minds of uninvolved spectators a *sympathy* (Kant's italics), a spiritual participation bordering on enthusiasm. This proves that the moral disposition of mankind inclines in this direction.**

https://archive.org/details/BarruelMemoirsIllustratingTheHistoryOfJacobinism/page/n29/mode/2up?view=theater

If there was a mercy for which Barruel was most grateful, it was the restoration of the Society of Jesus and his official readmission into it on October 18, 1815. The five years left for him he devoted to the continuation of his campaign to shed light on the thinking of the antagonists of the Church. He started writing a long book along the lines of his *Helviennes*. **In it he was to expose, on a grand scale, the deadly threat which the philosophy of Kant posed to genuine Catholicism.** This is not a mere conjecture. In the closing part of the *Memoirs* (see pp. 802-03), Barruel held Kant's rationalism to be of no less a threat to Christianity than the one posed by Weishaupt's illuminism. **For as Barruel rightly saw, the chief motivation of Kant the philosopher was the same as that of Weishaupt: to make the idea of Revelation appear utterly irrational and establish the total autonomy of human reason, thereby setting up man as his own sovereign and god.**

That book of Barruel on Kant would have become a prophetic work, though unbeknownst to him. **He could hardly suspect that a century or so later, many among his fellow Jesuits would take the view that Aquinas cannot be made meaningful to modern man unless Kant is grafted on him. Were Barruel alive today, he would perhaps write a huge "Memoirs Illustrating the History of Aquikantism."** He certainly would not be taken in by a Boutroux or a Blondel, nor even by such confreres of his as Maréchal, Coreth, or Rahner.

http://edwardfeser.blogspot.com/2010/10/catastrophic-spider.html

> *Taken as a whole, the Kantian influence on modern Christianity is so deep and pervasive that I believe in makes sense to speak of three great periods of Christian theology, each associated with a dominant philosopher. (1) The first period is the Platonic or Neoplatonic Christianity of the early church fathers; (2) The second is the Aristotelian Christianity of medieval or Scholastic theology; (3) and the third is the Kantian Christianity of the modern age …*

> *As I see it, the validity of the new synthesis depends entirely on one issue: the ability to control Kant, to keep 'Kant-in-a-box,' as it were.* ***For pure Kantianism is incompatible with Christianity... [I]f a Kantian conception of autonomy prevails, then God has become the servant of modern humanism and the synthesis is invalid.***
>
> Robert P. Kraynak, *Christian Faith and Modern Democracy*

As I noted in my recent post on God and obligation, from an Aristotelian-Thomistic point of view, God only ever wills in accordance with reason and thus, given that reason is of its nature directed towards the good, only ever wills what is good. **But He does so, not in obedience to a law outside Himself, but rather in accordance with His own nature.** For He does not "have" rationality or goodness; rather, He *is* His infinite Intellect, He *is* perfect Goodness. To use the language central to Kant's ethics, you might say that He is "autonomous," that He is a "self-legislator" – that He follows no law save that which is dictated by His own rational nature.

But of course, Kant himself applies these concepts to *us*. *We* must in his view be "autonomous" if we are to be truly free – not lawless, to be sure, but not "heteronomous" either, not bound by a law external to us. Rather, we must be "self-legislators," bound only by a law that is somehow of our own making. Kant also famously describes us as "ends in ourselves," and holds that a truly moral community is one whose members strive to create a "kingdom of ends," an order in which all are treated as self-legislating ends in themselves.

These ideas have been enormously influential. They inform the egalitarian liberalism of John Rawls, the libertarianism of Robert Nozick, and even the conservatism of Roger Scruton. As Kraynak emphasizes, they have also permeated contemporary Catholic and Protestant thought. **Modern people of all political and religious persuasions have come to see "respect for persons," "human rights," "human dignity,""freedom," and the like – rather than, say, submission to the natural law or to the will of God – as the fundamental categories in terms of which to address moral and political issues. To this extent, "We are all Kantians now."**
…

Or as Someone once put it, "Not my will, but Thine, be done." If that is heteronomy, so much the worse for Kantian autonomy.
…

Nietzsche famously characterized Kant as a "catastrophic spider" because he took him to have insinuated an essentially Christian morality into the secular German philosophical tradition. The truth is that he insinuated an essentially un-Christian morality into the Christian tradition, and into Western civilization as a whole. Rather than appropriating this work, conservatives and Christians should strive to undo it. Kraynak is right, we need to keep Kant in a box. A pine box, with a stake through his heart.

---

https://www.academia.edu/13367123/Review_of_Runar_M._Thorsteinsson_Roman_Christianity_and_Roman_Stoicism_A_Comparative_Study_of_Ancient_Morality_Oxford_Oxford_University_Press_2010_2013_

Unlike most early Christians, Musonius 'is optimistic about human capacity to live virtuously' and 'believes that human beings are born with an inclination towards virtue, and that they are good by nature' (p. 44; see Stobaeus 2.38.1-3). This traditional Stoic belief contrasts so sharply with early Christian 'negative' views of human nature that one wonders it is not given lengthy treatment here.
…

Thorsteinsson challenges traditional views in Chapter 10 (the conclusion). He argues that whereas one usually considers Stoics haughty egotists and Christians social activists, it was Stoic teachings that stressed universal social ethics while Christian morality was introverted. **Traditional reading of the Christian letters mistakes pan-ecclesial language for universal. Universal humanitarianism is endemic to Stoicism and *not* Christianity. The latter retains a 'fundamental distinction between "us" and "them"'** (p. 209). Thorsteinsson's approach is thus original in method and conclusion.

In the beginning of *Discourses* 4.7, Epictetus speaks of children and lunatics who do not fear the tyrant, his guards, and their swords. Because of their lack of understanding, children and lunatics can be fearless before such threats (sections 1–5). From lunatics Epictetus proceeds to the Galileans, who are also fearless: **"Therefore, if madness can produce this attitude of mind toward the things which have just been mentioned, and also habit, as with the Galileans, cannot reason and demonstration teach a man that God has made all things in the universe?"** (εἶτα ὑπὸ μανίας μὲν δύναταί τις οὕτως διατεθῆναι πρὸς ταῦτα καὶ ὑπὸ ἔθους οἱ Γαλιλαῖοι· ὑπὸ λόγου δὲ καὶ ἀποδείξεως οὐδεὶς δύναται μαθεῖν ὅτι ὁ θεὸς πάντα πεποίηκεν τὰ ἐν τῷ κόσμῳ, *Discourses* 4.7.6; trans. W.A. Oldfather, LCL). **The reference to God as a creator is the beginning of an extensive argumentation that one can attain fearlessness through philosophical demonstration** (sections 6–11).

https://ccel.org/ccel/schaff/anf07/anf07.iii.iii.v.html

The Stoics and some others are supposed to have entertained much better sentiments respecting the divine nature, who say that there is kindness in God, but not anger. A very pleasing and popular speech, that God is not subject to such littleness of mind as to imagine that He is injured by any one, since it is impossible for Him to be injured; so that that serene and holy majesty is excited, disturbed, and maddened, which is the part of human frailty. For they say that anger is a commotion and perturbation of the mind, which is inconsistent with God. Since, when it falls upon the mind of any one, as a violent tempest it excites such waves that it changes the condition of the mind, the eyes gleam, the countenance trembles, the tongue stammers, the teeth chatter, the countenance is alternately stained now with redness spread over it, now with white paleness. But if anger is unbecoming to a man, provided he be of wisdom and authority, how much more is so foul a change unbecoming to God! And if man, when he has authority and power, inflicts widespread injury through anger, sheds blood, overthrows cities, destroys communities, reduces provinces to desolation, how much more is it to be believed that God, since He has power over the whole human race, and over the universe itself, would have been about to destroy all things if He were angry.

Therefore they think that so great and so pernicious an evil ought to be absent from Him. And if anger and excitement are absent from Him, because it is disfiguring and injurious, and He inflicts injury on no one, they think that nothing else remains, except that He is mild, calm, propitious, beneficent, the preserver. **For thus at length He may be called the common Father of all, and the best and greatest, which His divine and heavenly nature demands.** For if among men it appears praiseworthy to do good rather than to injure, to restore to life rather than to kill, to save rather than to destroy, and innocence is not undeservedly numbered among the virtues,—and he who does these things is loved, esteemed, honoured, and celebrated with all blessings and vows,—in short, on account of his deserts and benefits is judged to be most like to God; **how much more right is it that God Himself, who excels in divine and perfect virtues, and who is removed from all earthly taint, should conciliate the whole race of man by divine and heavenly benefits! Those things are spoken speciously and in a popular manner, and they allure many to believe them**; but they who entertain these sentiments approach nearer indeed to the truth, but they partly fail, not sufficiently considering the nature of the case. For if God is not angry with the impious and the unrighteous, it is clear that He does not love the pious and the righteous. Therefore the error of those is more consistent who take away at once both anger and kindness. For in opposite matters it is necessary to be moved to both sides or to neither.

> https://www.cslewisinstitute.org/wp-content/uploads/2021/05/Reflections_2012_07-What-if-God-is-Alive-Not-the-Impersonal-Life-Forc-1630.pdf
>
> **An "impersonal God"—well and good. A subjective God of beauty, truth and goodness, inside our own heads—better still. A formless life-force surging through us, a vast power which we can tap—best of all.** But God Himself, alive, pulling at the other end of the cord, perhaps approaching at an infinite speed, the hunter, king, husband—that is quite another matter.

https://archive.org/details/nativistprophets0000cron/page/352/mode/2up?view=theater

There is no evidence that those who envisaged the afterlife as a release of the individual soul to the world of endless light combined it with belief in collective purification for life on a transfigured earth until we reach the third/ninth-century evidence. In principle it could have been in response to Islam that the Zoroastrians began to combine the two ideas. More probably, however, they had begun to do so under the Sasanians, in tandem with their sponsorship of bodily resurrection. **Christianity integrated elite and masses in the same moral community on a scale hitherto unknown in the ancient world. To be competitive the Zoroastrians now had to emphasise the communal nature of their own religion too: those who considered themselves righteous could not simply escape to their private world of bliss; all adherents of the good religion had to be assembled for collective purification and transformation.** Since the idea of individual ascent to

heaven was well entrenched in the tradition it could not simply be eradicated, so life in heaven (and hell) was accepted as a phase on the way to collective judgement – **or, if the combination already existed, this was the only view that was deemed acceptable now.**

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Fragment_of_a_letter_to_a_priest#cite_ref-18

Now it would perhaps have been well to say earlier from what class of men and by what method priests must be appointed; **but it is quite appropriate that my remarks should end with this. I say that the most upright men in every city, by preference those who show most love for the gods, and next those who show most love for their fellow men, must be appointed, whether they be poor or rich. And in this matter let there be no distinction whatever whether they are unknown or well known.** For the man who by reason of his gentleness has not won notice ought not to be barred by reason of his want of fame. **Even though he be poor and a man of the people, if he possess within himself these two things, love for God and love for his fellow men, let him be appointed priest.** And a proof of his love for God is his inducing his own people to show reverence to the gods; a proof of his love for his fellows is his sharing cheerfully, even from a small store, with those in need, and his giving willingly thereof, and trying to do good to as many men as he is able. We must pay especial attention to this point, and by this means effect a cure. **For when it came about that the poor were neglected and overlooked by the priests, then I think the impious Galilaeans observed this fact and devoted themselves to philanthropy.**

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Letters/Letter_22

In every city establish frequent hostels in order that strangers may profit by our benevolence; I do not mean for our own people only, but for others also who are in need of money. I have but now made a plan by which you may be well provided for this; for I have given directions that 30,000 modii of corn shall be assigned every year for the whole of Galatia, and 60,000 pints[4] of wine. I order that one-fifth of this be used for the poor who serve the priests, and the remainder be distributed by us to strangers and beggars. **For it is disgraceful that, when no Jew ever has to beg, and the impious Galilaeans support not only their own poor but ours as well, all men see that our people lack aid from us.**[5] Teach those of the Hellenic faith to contribute to public service of this sort, and the Hellenic villages to offer their first fruits to the gods; **and accustom those who love the Hellenic religion to these good works by teaching them that this was our practice of old.** At any rate Homer makes Eumaeus say: "Stranger, it is not lawful for me, not even though a baser man than you should come, to dishonour a stranger. For from Zeus come all strangers and beggars. And a gift, though small, is precious."[6]

https://books.google.fi/books?id=tLLx3hfc6UYC&lpg=PP1&hl=fi&pg=PA246#v=onepage&q&f=false

Secondly, **the new humanism has taken over universalism from its Christian roots; or else moves to retrieve it from Stoic sources,** as with an influential modern school of thought in the sixteenth and seventeenth centuries (often called “neo-Stoicism”).
…

For Aristotle, even distributive justice only makes sense within the framework of the common project of the polis. Only Stoicism offers an exception to this narrow focus of beneficence among the ancients. But even here, the Stoics, who really did conceive of solidarity as species-wide, in a sense held to the same framework; they simply extended it, seeing us as part of the great cosmopolis of all Gods and humans.

> https://sacred-texts.com/cla/fsgr/fsgr08.htm#an_fr_124_1
>
> In the realm of thought, on the whole, the Polis triumphed. Aristotle based his social theory on the Polis, not the nation. Dicaearchus, Didymus, and Posidonius followed him, and we still use his language. Rome herself was a Polis, as well as an Empire. **And Professor Haverfield has pointed out that a City has more chance of taking in the whole world to its freedoms and privileges than a Nation has of making men of alien birth its compatriots. A Jew of Tarsus could easily be granted the civic rights of Rome: he could never have been made an Italian or a Frenchman. The Stoic ideal of the World as 'one great City of Gods and Men' has not been surpassed by any ideal based on the Nation.**
>
> https://sacred-texts.com/cla/fsgr/fsgr06.htm#an_fr_73_1
>
> **The real religion of the fifth century was, as we have said, a devotion to the City itself.** It is expressed often in Aeschylus and Sophocles, again and again with more discord and more criticism in Euripides and Plato; for the indignant blasphemies of the Gorgias and the Troades bear the same message as the ideal patriotism of the Republic. **It is expressed best perhaps, and that without mention of the name of a single god, in the great Funeral Speech of Pericles.**

…

Once again, Montesquieu says it best:

> *Rien n'est plus près de la Providence divine que cette bienveillance générale et cette grande capacité d'aimer qui embrasse tous les hommes, et rien n'approche plus de l'instinct des bêtes que ces bornes que le coeur se donne lorsqu'il n'est touché que de son intérêt propre, ou de ce qui est autour de lui.*47
>
> (Nothing is closer to divine Providence than this general benevolence and this great capacity to love that encompasses all men; and nothing comes nearer to animal instinct than these limits that the heart gives itself when it is affected only by its own interest or by that which is around it.)

And so the new humanism needed, and found, inner sources of benevolence. And this in more than one way.

One was through **a strong sense of the powers of disengaged instrumental reason, whose dispassionate impersonality was taken as sufficient for universal beneficence. This is where modern humanism shows its roots in neo-Stoicism;** except, of course, that what has been lost is the idea of a providential course of things, designed by a beneficent God, which the wise person must learn to accept and endorse.
…

Bertrand Russell has given expression to this in our century. In "The Essence of Religion," he distinguishes two natures in human beings, one **"particular, finite, self-centred; the other universal, infinite, impartial."** The infinite part "shines impartially":

> Distant ages and remote regions of space are as real to it as what is present and near. **In thought, it rises above the life of the senses, seeking always what is general and open to all men.** In desire and will, it aims simply at the good, without regarding the good as mine or yours. In feeling, it gives love to all, not only to those who further the purposes of the self. Unlike the finite self, it is impartial; its impartiality leads to truth in thought, justice in action, and universal love in feeling.48

Another way of immanentizing moral power was through a sense of a pure, universal will, an inner power before which we stand in awe, as with Kant. **This is a close relation to the disengaged reason I have just described,** except that the source of benevolence is not the width of things surveyed. It is rather that the very power to act by universal law is an object of wonder and infinite respect.
…

After all, some of the earlier views also placed these sources in a sense within us; **the neo-Stoic idea, for instance, that reason was a spark of God within us. Doesn't a Kantian sense the same spark, and just give a different explanation for it?**

Now there is undoubtedly something to this idea. There are, for instance, clearly continuities between Kantian moral experience and that of the Stoics and neo-Stoics, on whom Kant drew heavily. But it is quite wrong to think that the difference is *just* a matter of background explanations; that there is something like a raw feel which Lipsius and Kant share, only differing in their attributions of underlying causal mechanisms; as two people might have the same sore throat while proposing different aetiologies of their malady.

https://en.wikipedia.org/wiki/Anne_Robert_Jacques_Turgot

Anne Robert Jacques was educated for the Church, and at the Sorbonne, to which he was admitted in 1749 (being then styled
abbé de Brucourt). He delivered two remarkable Latin dissertations, *On the Benefits which the Christian Religion has conferred on Mankind*, and *On the Historical Progress of the Human Mind*.[6] **In 1750 he decided not to take holy orders, giving as his reason that "he could not bear to wear a mask all his life."**[7]

https://books.google.fi/books?id=E2G6wM-yRmEC&lpg=PP1&hl=fi&pg=PA478#v=onepage&q&f=false

By contrast moral behavior was clearly subject to improvement, **though what he meant by the moral implied a set of fixed criteria, ideals common to the wise philosophers of his age, generally accepted by Hume and Montesquieu, Beccaria, Lessing, and Kant. The moral was a combination of Stoic virtues and rules of general conduct with a measure of utility, the whole suffused with Christian love and charity.** Future moral progress signified the end of war, cruelty, and crime, and the extension of virtues throughout all strata of European society and among all the nations of the world. It entailed the general practice of tolerance and leniency and obedience to reason, **acceptance of law out of rational conviction rather than any dread of worldly punishment or**

superstitious fear of torments in Hell. If men acted solely on grounds of utility and reason, if they extended free inquiry and assimilated its scientific findings into the practical sphere of everyday action, then they were progressing. To the degree that man became mild, gentle, loving, tranquil, his moral behavior was improving.

Turgot never fell in with the rabid anticlericalism of some of his Encyclopedist friends, even after he had left the Church. He retained a profound respect for the moral virtues of Christianity, which he considered a further purification and not a corruption of natural religion. **Under the canopy of the medieval Church the bestial nature of the northern barbarians had been tamed and in time they had been transformed into polite, reasonable, well-behaved, compassionate members of society.**35 Christianity had abolished slavery, prohibited infanticide, established asylums for the sick and the weak, preached brotherhood and love. **The church had been one of the great civilizing and moralizing forces in the history of mankind.** His friend and loyal disciple Condorcet, alive to the bloody religious persecutions, inquisitions, massacres, and crusades, was unable to stomach this summation of the historical evidence.

https://biblehub.com/deuteronomy/31-20.htm

For when I shall have brought them into the land which I sware unto their fathers, that floweth with milk and honey; and they shall have eaten and filled themselves, and waxen fat; then will they turn unto other gods, and serve them, and provoke me, and break my covenant.

> https://www.the-highway.com/Another_Gospel.html
>
> **The gospel of Satan is not a system of revolutionary principles, nor yet a program of anarchy. It does not promote strife and war, but aims at peace and unity.** It seeks not to set the mother against her daughter nor the father against his son, but fosters the fraternal, spirit whereby the human race is regarded as one great “brotherhood”. It does not seek to drag down the natural man, but to improve and uplift him. It advocates education and cultivation and appeals to “the best that is within us”. **It aims to make this world such a congenial and comfortable habitat that Christ’s absence from it will not be felt and God will not be needed.**

https://archive.org/details/enlightenmentint0000unse_i6k5/page/332/mode/2up?view=theater

In his famous *Erziehung des Menschengeschlechts*, that gnomic, inspired, not wholly translucent product of his last years, Lessing recognizes the history of Christianity as a stage in the development of mankind, an essential and temporary stage, like adolescence in the cycle of life.
…

The Old Testament is the primer of humanity, **containing one great truth, the unity of God,** and hints and anticipations of truths reserved for later years. Then Christ appeared, a better pedagogue, bringing the second dispensation, teaching immortality, original sin, and justification. But this, even at its purest, is not man’s goal. When mankind is ready and the time is ripe, a third dispensation will come forth, the third gospel predicted by medieval enthusiasts.
…

For all its concern with religious figures and religious experience, it foresees a time when men will act morally not from hope of reward or fear of retribution, not in obedience to higher commands, but from an inner freedom, as autonomous self-directed ethical beings. The *Erziehung* confirms the scanty reports of Lessing’s friends, who testified that he felt bound to no sect, no creed: it makes explicit what he had implied in his other theological writings: the heart of religion is ethics. **Christian mysteries are symbols and allegories, aids to understanding.** In 1777, when he had completed most of the *Erziehung*, he published his moving short dialogue *Das Testament Johannis*, which reiterates this lesson over and over again, like a litany: “Little children, love each other.” That is the beginning and the end. It is “enough if men hold on to Christian love; what happens to the Christian religion does not matter.”7 **It is here that Lessing, for all his stress on *Christian* love, openly joins the deists of the British and French Enlightenments; the love he calls for is universal, it is the love human beings feel for each other not as children of God, not as brothers in Christ, but as fellow men; a love implicit in Stoic cosmopolitanism, achieved only after man has liberated himself from all sects, including Christianity.** This is the gospel of fraternal love, born in religious emotion but emancipated from all sectarian loyalties, that Lessing preaches in his finest work, *Nathan der Weise*, the masterpiece in the didactic theatre of the Enlightenment.
…

It is in this dual humanism that Lessing’s radicalism resides: **it is a philosophical religion which uses tradition only to transcend it.** Its vocabulary retains the flavor of Christian expressions; it echoes the

apocalyptic vision of Joachim of Floris and takes Leibniz's speculations seriously. And yet all these traces are like haunting memories which recede before its daylight reality. **Lessing's God is immanent in the world: He realizes Himself as men realize themselves;** revelation is a grand metaphor with purely naturalistic significance: it is intuitive insight into supreme moral truths.

http://www.tischner.org.pl/Content/Images/tischner_7_salij.pdf

After all, in its first meaning "solidarity" pointed at a legal capability of every member of a group of people to accept all due benefits or to take responsibility for all its debt.1

> 1. "**Solidarity obligations (*in solidum*, *pro solido*) occurred when there were many subjects either on the side of debtors (passive solidarity) or on the side of creditors (active solidarity),** while there was only one service rendered. Fulfilling the service by one of the debtors freed others of the debt, similarly, accepting the service by one of the creditors meant that the liabilities of the others expired." *Prawo rzymskie. Słownik encyklopedyczny* [The Roman Law: Encyclopedic Dictionary], ed. Witold Wołodkiewicz, Warszawa 1986, p. 142, entry: SOLIDUM.

...

In France the adherents of de-christianization and of the secularization of morality chose solidarity as the successor to Christian love. Christian love, they argued, is a waste of moral energy as it is divided between God and one's neighbors. Moreover, they claimed that it is marked with egoism and bigotry. **Already Kant imputed self-interest to people that are prompted to do good by the hope for their eternal reward.** On the other hand, Comte, who perceived as mean-spirited loving others "as one's self" (in addition mediated by the love of God), **proposed to the people of the new epoch the attitude of altruism, which he defined as loving others "more than oneself," loving others for their own sake, not for God's.** Solidarity then would be love purified from the waste, bigotry and egoism allegedly typical of Christianity.

Such a program of overcoming Christian love was explicitly formulated by August Comte's disciple, Pierre Leroux (d. 1871):

> **I was the one who first borrowed the concept of solidarité from the legal usage so as to introduce it to philosophy, that is, according to my idea, to religion. I wanted to replace Christian caritas with human solidarietas ... Christianity is the greatest religion of the past, but there exists something greater than Christianity: humanity. ... Today's society is able to organize the love of one's neighbor with the help of the principle of mutual solidarity, as the love of one's neighbor is, in fact, egoism.** So at last from now on society has a religious principle. The Church may cease to exist. ... The age of humanity supersedes the age of Christianity. What is it that this new religion requires? Similarly to the Greek mathematician Archimedes, it requires nothing else but strength, leverage and a place to stand. We are the strength, the lever is the idea of progress. Give me an ontological certainty, and we shall have an unfailing place to stand. What is this certainty? It is the interdependence of all people.2

No wonder that this first usage of the word "solidarity" caused mistrust toward this concept in francophone Christian circles. **As late as the inter-war period, the most important contemporary French theological encyclopedia upheld, from the Christian perspective, the alleged opposition between solidarity and love.**3 However, this usage of the term "solidarity" disappeared, perhaps even in the French-speaking countries.

> 3. **"Social solidarity, as secularized and systematically in opposition toward Christian love, is not able to bring the good effectively neither to individuals nor to nations, for it does not take into account their true, eternal aim."** *Dictionnaire de la Théologie Catholique*, vol. 2, Paris 1932, c. 2260, entry CHARITÉ; quoted after P. J. Cordes, ibid. **It is worth noting that such extreme supernaturalism would have never been promoted by Aquinas who unambiguously valued natural virtues (*virtutes acquisitae*),** although in the present state of the fall they do not reach the eternal aim and their ultimate objective is only the earthly common good. (Cf. *Summa Theologiae*, 1-2 q. 63

It is remarkable, however, that while some of the early Fathers were the undoubted precursors of Beccaria, their teaching, unlike that of the philosophers in the eighteenth century, had little or no appreciable influence in mitigating the severity of the penal code. Indeed, the more carefully the Christian legislation of the Empire is examined, and the more fully it is compared with what had been done under the influence of Stoicism by the Pagan legislators, the more evident, I think, it will appear that the golden age of Roman law was not Christian, but Pagan. **Great works of codification were accomplished under the younger Theodosius, and under Justinian; but it was in the reign of Pagan emperors, and especially of Hadrian and Alexander Severus, that nearly all the most important**

measures were taken, redressing injustices, elevating oppressed classes, and making the doctrine of the natural equality and fraternity of mankind the basis of legal enactments. Receiving the heritage of these laws, the Christians, no doubt, added something; but a careful examination will show that it was surprisingly little. **In no respect is the greatness of the Stoic philosophers more conspicuous than in the contrast between the gigantic steps of legal reform made in a few years under their influence, and the almost insignificant steps taken when Christianity had obtained an ascendancy in the Empire, not to speak of the long period of decrepitude that followed.** In the way of mitigating the severity of punishments, Constantine made, it is true, three important laws prohibiting the custom of branding criminals upon the face, the condemnation of criminals as gladiators, **and the continuance of the once degrading but now sacred punishment of crucifixion, which had been very commonly employed; but these measures were more than counterbalanced by the extreme severity with which the Christian emperors punished infanticide, adultery, seduction, rape, and several other crimes, and the number of capital offences became considerably greater than before.**1 **The most prominent evidence, indeed, of ecclesiastical influence in the Theodosian code is that which must be most lamented.** It is the immense mass of legislation, intended on the one hand to elevate the clergy into a separate and sacred caste, and on the other to persecute in every form, and with every degree of violence, all who deviated from the fine line of Catholic orthodoxy.2

https://archive.org/details/romanlawinmoder01shergoog/page/n163/mode/2up?view=theater

Just what Roman law owes to Christianity has been long and greatly obscured by the religious feeling and prejudice of investigators. The ecclesiastical writers on the one hand would make us believe that all that is good in Roman law can almost always be predicated as derived from Christianity. But this is too sweeping an assertion and does not recognize the influence of Greek culture, philosophy, and ethics,636 which—long before the Empire became Christian—had already given to Roman law that vigor, strength, justice, and supreme excellence of spirit which made Roman law pre-eminently just.

The writers prejudiced against Christianity on the other hand belittle its influence and maintain that scarcely any good results came from it into Roman law,—an erroneous view, perhaps arising through a spirit of criticism deservedly passing judgment on the intolerance, scandals, and quarrels of Christian sects in the Latin Roman Empire.

The correct appreciation of the influence of Christianity lies between these two extreme points of view. It is Christianity as a system of highest ethical truths whose influence is shown in the Roman law. Christianity perfected, and at times transformed under the higher influence of Christian ideals of justice, the work of Greek philosophy in fashioning Roman law. **Greek culture had already laid the foundations and nearly all of the superstructure of Roman law as a universal law of rational ethics fitted for the whole world: *the work of Christianity was to perfect* the system of law erected upon such a solid foundation** by adding to the beauty of the superstructure, strengthening it by removing structural weaknesses, and enlarging or transforming Roman law in the spirit of Christian ethics so as to produce greater justice and benefit to mankind.

This [attempt to ban divorce] was perhaps the only department in which the Church exercised an influence on the civil law. It did not aim at nor desire any change in the laws concerning slaves, for slavery was an institution which it accepted and approved.[47] In practice, of course, **it encouraged mitigation of the slave's lot, but there it was merely in accord with general public opinion. Enlightened pagans had been just as emphatic in their pleas for humanity to slaves as enlightened Christians,[48] and for the growing improvement in the conditions of slavery since the days of Cicero, the Stoics are perhaps more responsible than any other teachers.**

> 48. Take, for instance, the views expressed by the pagan Praetextatus in the *Saturnalia* of Macrobius Macrob. *Sat.* (I.11). **Dill observes (*Roman Society*, p136): "The contempt for slaves expressed by S. Jerome and Salvianus is not shared by the characters of Macrobius."**

When Rutilus delights in the sound of a cruel flogging, deeming it sweeter than any siren's song, and being himself a very Antiphates,[1] or a Polyphemus, to his trembling household, is he inculcating gentleness, and leniency to slight faults; **does he hold that the bodies and souls of slaves are made of the same stuff and elements as our own;** or is he inculcating cruelty, never happy until he has summoned a torturer, and he can brand some one with a hot iron for stealing a couple of towels?

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Alexander*/4.html#ref50

3 At a later time, however, when he had been hit by an arrow and was suffering great pain, he said: **"This, my friends, that flows here, is blood, and not**

'Ichor, such as flows from the veins of the blessed gods.'"[51]

https://www.accesstoinsight.org/tipitaka/mn/mn.093.than.html

"But, Assalayana, **the brahmans' brahman-women are plainly seen having their periods, becoming pregnant, giving birth, and nursing [their children]. And yet the brahmans, being born through the birth canal, say,** 'Brahmans are the superior caste; any other caste is inferior. Only brahmans are the fair caste; any other caste is dark. Only brahmans are pure, not non-brahmans. Only brahmans are the sons & offspring of Brahma: born of his mouth, born of Brahma, created by Brahma, heirs of Brahma.'"
…

"What do you think, Assalayana? **Have you heard that in Yana & Kamboja and other outlying countries there are only two castes—masters & slaves—and that having been a master one (can) become a slave, and that having been a slave one (can) become a master?**"

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Sikhism

Amar Das preached the doctrine of forgiveness and endurance, upheld Guru Nanak's abrogation of caste distinctions, and his precepts were implicitly followed by his successors. He used to place all his Sikhs and visitors in rows and cause them to eat together, not separately, as is the practice of the Hindus. He said: "**Let no one be proud of his caste,** for this pride of caste resulteth in many sins. He is a Brahman who knoweth Brahma (God). Every one prateth of four castes. **All are sprung from the seed of Brahm. The whole world is formed out of one clay, but the Potter hath fashioned it in various forms.**"

---

https://archive.org/details/theistsatheiststst0000moln/page/42/mode/2up?view=theater

The Stoics drank at the same source: distinguishing the passive principle, inert, formless matter, and the active principle, reason or logos, which is inherent in matter, they concluded that the logos organizes all things in and through matter. The universe alone exists, said Zeno (as quoted by Cicero in *De Natura Deorum*), and it makes use of reason since the universe is the best thing that exists and it is better to use reason than not use it. The universe is, therefore, god, at work immanently in matter. **In this way, we discover the double origin of materialist atheism,** mentioned before: the Greek atomists formulated one version, which cannot account for beings possessing the plus of life, of psychic phenomena, and of thought; **the Greek Stoics formulated the other version which admits an immanent organizing principle, and turns, as a consequence, into a materialistic pantheism.**22

https://books.google.fi/books?id=5X-46TqjDv0C&lpg=PP1&hl=fi&pg=PA81#v=onepage&q&f=false

The fundamental assertion underpinning all of Stoic physics is the claim that only bodies exist, a claim that dates back to Zeno himself. This may be seen as a direct challenge to the Platonic claim that the material world that we experience is merely a shadow of another realm where real existence lies. Indeed, it echoes a position attributed to one of the parties in the discussion of the nature of existence in Plato's dialogue the *Sophist* (on this see Brunschwig 1988).

In the *Sophist* Plato mounts a famous attack on materialism as an ontological position (245e-249d). **He refers to a battle between giants and gods over whether "being" pertains only to physical**

objects or whether it pertains to non-physical entities. The materialist giants insist that being is "the same as body." Anything that they cannot touch or squeeze in their hands, as they can with bodies, does not exist at all. Thus they must deny the existence of non-bodily entities such as soul, intelligence, justice and virtue. For Plato, these conclusions are not only unpalatable but also probably disingenuous, for no one seriously denies the reality of these things. This extreme position is tempered, Plato suggests, by more moderate materialists who claim that the soul does exist but that in order to exist it must be a special kind of body.

For Plato, it will be possible to catch out the materialists, of whatever sort they may be, if he can force them to admit the existence of something that is not a body (247c). Such an admission would destroy the materialist claim that being a body is the only true mark of existence. Notice that Plato explicitly assumes that for something to be something at all it must have "being" or existence (237d). Now, with regard to intelligence, justice and virtue, Plato's more moderate materialists find themselves embarrassed, and have to accept that perhaps these things can exist without being bodies. Plato then expands upon his conception of existence but characterizing it as a capacity to act or be acted upon, and suggests to the moderate materialists that perhaps this should be the true mark of existence rather than being a body. Yet Plato's materialists appear to have rejected this characterization (248a).

Now let us turn to the Stoics. **Zeno follows the giants in the *Sophist* by insisting that being or existence should be identified with body, despite the concession by Plato's moderate materialists. He reaffirms that only bodies exist. Rather than fall into the Platonic trap of being forced to admit that the soul or justice or virtue do not exist, however, he is prepared to claim that all these things exist and are indeed bodies.** He also accepts Plato's characterization of existence as the capacity to act or be acted upon, but reserves this solely for bodies, against Plato's intention. Finally, he calls into question Plato's assumption that for something to be something at all it must exist. For Zeno, there can be real things that are not bodies, and so do not exist according to his materialist ontology, but yet are nevertheless in some sense real, as we shal see shortly.

So, for the Stoics if anything exists or has the capacity to act or be acted upon then it is a body (see e.g. Cicero, *Acad*. 1.39). This will be as true for the soul, justice, virtue or wisdom as it will be for more tangible physical objects such as sticks and stones. **In this way, Zeno faces Plato's challenge to materialism head on, refuses to compromise as Plato's moderate materialists had, and reaffirms the uncompromising materialism of the giants.**

Despite this fairly uncompromising materialism, there are a few entities that cannot be conceived as bodies and yet that the Stoics would not want to say are nothing at all. One such example would be the sense or meaning of an utterance, the "sayables" that we encountered in the previous chapter. Another would be void, which is clearly not a body but yet is presumably something in some sense if it is to be an object of thought at all. In fact, the Stoics suggest four types of entity that fit into this category of being "something" (*ti*) yet not being bodies: void, time, place and "sayables" (*lekta*). **As they claim that only bodies exist, these other entities are in some sense real but cannot be said to exist. Instead, they are said to "subsist."**
…

So, only bodies exist, and these four incorporeals subsist. It is worth noting what this ontological scheme leaves out. **Significantly it leaves out universals in the form of Platonic Ideas. For the Stoics, such Ideas neither exist nor subsist.** As existence and subsistence appear to be the only two categories of "something," such entities are dismissed as "not-something" (Simplicius, *in Cat*. 105,9-11), and classed alongside hallucinations and phantoms of the imagination. However, it would perhaps be a mistake to think of "not-something" as another clearly defined category within the Stoic ontological scheme. Instead, being labeled "not-something" precisely means that the item in question has no place at all in Stoic ontology, failing to find a place under the Stoic supreme genus of "something."

The Stoics thus explicitly reject universals conceived as Platonic Ideas. Every entity that falls under their highest genus of "something" must be something particular: only individual particulars exist (Syrianus, *in Metaph*. 104,21). **Consequently they have often been presented as the first nominalists,** rejecting the existence of universal concepts altogether. But presumably they, like anyone else, would want to be able to give at least *some* sort of account of universal concepts such as the colour "red," an account of what it is that this particular red object and that one share in common.
…

For Chrysippus there are no universal entities, whether they be conceived as substantial Platonic Forms or in some other manner.

https://books.google.fi/books?id=5X-46TqjDv0C&lpg=PP1&hl=fi&pg=PA74#v=onepage&q&f=false

Everything that we have seen thus far would lead one to conclude that the Stoics are empiricists, claiming that all of our knowledge derives from experience. In Chapter 4 we shall see that the Stoics

also reject the existence of universals, adding further weight to this conclusion. Indeed, many commentators have suggested that the Stoics are broadly speaking empiricists and some have drawn parallels between Stoicism and ideas in Locke and Hume (see e.g. Hankinson 2003: 63). Beyond the general character of their epistemology that we have just considered, **probably the most important piece of evidence in support of the claim that the Stoics are empiricists is a passage from the doxographer Aetius: "When a man is born, the Stoics say, he has the commanding part of his soul like a sheet of paper ready for writing upon.** On this he inscribes each one of his conceptions. The first method of inscription is through the senses" (4.11.1-2).

> http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A2008.01.0404%3Abook%3D4%3Achapter%3D11
>
> **THE Stoics affirm that every man, as soon as he is born, has the principal and commanding part of his soul, which is in him like a sheet of writing-paper, to which he commits all his notions.** The first manner of his inscribing is by denoting those notions which flow from the senses. Suppose it be of a thing that is white; when the present sense of it is vanished, there is yet retained the remembrance; when many memorative notions of the same similitude do concur, then he is said to have an experience; for experience is nothing else but the abundance of notions that are of the same form met together. Some of these notions are naturally begotten according to the aforesaid manner, without the assistance of art; the others are produced by discipline, learning, and industry; these only are properly called notions, the others are prenotions. But reason, which gives us the denomination of rational, is completed by prenotions in the first seven years. The conception of the mind is the vision that the intelligence of a rational animal hath received; **when that vision falls upon the rational soul, then it is called the conception of the mind, for it hath derived its name from the mind (ἐννόημα from νοῦς). Therefore these visions are not to be found in any other animals; they are appropriated only to Gods and to us men.**

This clearly pre-empts Locke's famous characterization of the mind as a blank sheet of paper in his *Essay Concerning Human Understanding* (2.1.2). Locke's intention was to argue against those who claimed that there exist in the mind innate ideas at the time of birth:

> It is an established opinion amongst some men that there are in the Understanding certain innate principles, some primary notions, *koinai ennoiai*, characters, as it were stamped upon the mind of man, which the Soul receives in its very first being and brings into the world with it. (*Essay* 1.2.1, in Locke 1975: 48)

But here we face an apparent problem. The *koinai ennoiai* that Locke refers to here also have their origin in Stoicism. They are the Stoics' "common conceptions," these being generalizations held by everyone. **So, although the Stoics appear to pre-empt Locke in presenting the mind as a blank sheet of paper, they also appear to be the source of the position that Locke is explicitly attacking.** Indeed, Leibniz was well aware of this, as we can see in the Preface to his *New Essays on Human Understanding*, conceived as a reply to Locke:

> There is the question about **whether the soul in itself is completely empty like tablets upon which nothing has been written (*tabula rasa*), as Aristotle and the author of the *Essay* maintain,** and whether everything inscribed on it comes solely from the sense and from experience, or whether the soul contains from the beginning the source of several notions and doctrines. … The Stoics call these principles *prolepses*, that is, fundamental assumptions, or what is taken as agreed in advance. **Mathematicians call them common notions (*koinai ennoiai*).** (Leibniz 1989: 292)

How does Leibniz arrive at this image of the Stoics as innatists, given the evidence that we have already seen from Aetius?
…

Seneca briefly addressed this issue in a letter dealing with question of how we first acquire knowledge of goodness. **He says that Nature does not teach this to us directly; Nature does supply us with the *seeds* of knowledge of goodness, but not with that knowledge itself** (*Ep.* 120.4). If Nature does not furnish us with knowledge of goodness directly then this suggests that we do not have innate moral concepts (option (a)), despite Epictetus' claim. We might understand Seneca's reference to a *seed* as referring to an innate tendency or disposition, one that might lead us to develop knowledge of goodness after birth, via observation (option (b)). Alternatively we might understand this as a reference to a naturally arising unconscious preconception, a postnatal *product* of experience that forms the foundation of a fully developed conception of goodness (a version of option (c)). It is difficult to be sure which of these last two readings is best, given how brief the discussion is.

It has been suggested that despite the shared "blank sheet" imagery, the Stoic position is in an important sense innatist, and as such is quite different from that of Locke. **Although the Stoics may**

not be conceptual innatists, it has been suggested that they are "dispositional innatists," proposing the existence of innate appetites and aversions (Scott 1988: 146), option (b).

https://books.google.fi/books?id=uSEIrw6QryoC&lpg=PP1&hl=fi&pg=PA170#v=onepage&q&f=false

Aristotle also believed in natural law. In the *Rhetoric* (1.1375a.25-b.8) he accepted the legitimacy of the "higher law" argument in court, whenever the law conflicted with justice. But Aristotle believed that humans used their reason to deduce natural law from experience. In Book I of the *Politics* he claimed regarding the human: **"Justice which is his salvation belongs to the polis: for justice, which is the determination of what is just, is an ordering of the political association." Virtue was not innate, but the product of training by the polis. Epicurus** (Diogenes Laertius, *History of Philosophy*, 10.122-135) **supported Aristotle's position. He claimed: "It is wise, however, to evaluate all these things by measuring one against other and discovering what is beneficial and what is harmful. For sometimes we consider good to be evil and also the opposite." Reason, not intuition, led humans to moral truth.**

But it was the Stoics who placed natural law theory at the center of their philosophy. Cleanthes, a third-century B.C. disciple of Zeno, the fourth-century B.C. founder of Stoicism, taught that virtue lay in "living agreeably to nature in the exercise of right reason." **In Cleanthes' "Hymn to Zeus," God's reason flowed through the universe, giving order to everything.** Humans were distinct from other species in possessing a reason of their own, though it was connected to the divine reason. Many were destined to spurn the divine gift and lead a senseless, wicked life. (In this view, humans appear at a disadvantage to the other species. They are made distinct not only by consciousness but also by their ability to err.) Cicero concurred. In *De legibus (*1.33) he defined law as "right reason applied to command and prohibition." He conceived of the universe as "one commonwealth of which both gods and men are members." **Natural law was not handed down by the gods, but was the glue which connected them to humans in the one great organism of the universe. Reason and matter were two parts of the same whole, the former acting upon the latter. The first-century Roman philosopher and statesman Seneca (*Epistles*, 65.2) defined God as "creative reason," both the "First Cause" and the universal glue.** Both Cicero and Seneca found evidence of God's existence in the alleged consensus concerning it. Seneca wrote: "In our eyes the fact that all men agree upon something is proof of its truth. For instance, we infer that the gods exist, for this reason, among others – that there is implanted in everyone an idea concerning deity, and there is no people so far beyond the reach of laws and customs that it does not believe at least in gods of some sort." Cicero added: **"On every matter the consensus of all peoples is to be regarded as the law of nature."** Similarly, Epictetus (*Discourses*, 1.22.1) believed that humans were born with common, consistent preconceptions. Two of these preconceptions were that righteousness is good, and that good is more profitable and worthy of choice than evil.1

The Stoics assumed a middle position between Plato and Aristotle concerning the mechanics of natural law. Although the Stoics portrayed natural law as embedded in human nature through a sort of intuition, they argued that it could be accessed only with the help of reason acting upon sensory information. Maryanne Cline Horowitz aptly summarized this aspect of Stoic philosophy: "They believed that the mind is born predisposed to certain ideas which are not yet consciously held. These ideas are evoked and developed through the stimulus of sense impressions and the development of reason." Cicero wrote regarding nature and man: "It is true that she gave him a mind capable of receiving every virtue, and implanted at birth and without instruction some small intimations of the greatest truths, and thus, as it were, laid the foundation for education and instilled into those faculties which the mind already had what may be called the germs of virtue. But of virtue itself she merely furnished the rudiments; nothing more. Therefore it is our task (and by when I say 'our' I mean that it is the task of art) to supplement those mere beginnings by searching out the further developments which were implicit in them, until what we seek is fully attained." Cicero used the two analogies of sparks and seeds to clarify his position. **At one point he stated that human souls were all sparks temporarily separated from the Great Flame (the World Soul), but that a spark might be extinguished by a bad upbringing.** At another he argued (*De legibus*, 26.4) that the seeds of virtue manifested themselves in the social nature of humans, in their "gregarious impulses." (The two analogies differed somewhat: nurturing a seed into a full-grown plant generally requires more conscious effort than keeping a flame lit.) Similarly, Seneca claimed (*Epistles*, 49.11): "At our birth, nature made us teachable, and gave us reason, not perfect, yet capable of being perfected." He added: "Every living being possessed of reason is inactive if not first stirred by some external impression; then the impulse comes, and finally assent confirms the impulse." Regarding virtue he wrote (120.4-8): "Nature could not teach us this directly; she has given us the seeds of knowledge, but not knowledge itself." He contended (110.46): "Even in the best of men, before you refine them by instruction, there is but the stuff of virtue, not virtue itself." **The Stoics believed that humans possessed the requisite experience to trigger innate impulses by about age seven. Only Epictetus seemed to favor the Platonic doctrine of innate ideas. He asked (*Discourses*, 2.11.3): "Who has come into being without an innate concept of what is good and evil, honorable and base, appropriate and inappropriate?"** Epictetus insisted (1.22.1; 4.1.41-43) that disagreements between humans did not concern general principles, but merely regarded their application to specific situations. **Everyone understood the idea of evil, but only through the aid of philosophy could humans learn that death was not evil.** Even so, this was an admission that only through the medium of reason could natural law be brought down to earth and play a meaningful role in human life.2

https://books.google.fi/books?id=5X-46TqjDv0C&lpg=PP1&hl=fi&pg=PA108#v=onepage&q&f=false

Here is part of Diogenes' version, in which he quotes from Chrysippus:

> **An animal's first impulse, say the Stoics, is to self-preservation,** because Nature from the outset endears it (*oikeiousēs*) to itself, as Chrysippus affirms in the first book of his work *On Ends*; his own words are, "The dearest thing (*prōton oikeion*) to every animal is its own constitution and its consciousness thereof." (DL 7.85)

According to the theory of *oikeiōsis* the basic desire or drive in all animals (including human beings) is for self-preservation. The one thing that is most important to us is our own existence and its continuation. Consequently our most primitive choices and actions are shaped byt what we think will enhance or damage our own physical constitution. We choose what we think will be good for us and we avoid what what we think will be bad for us. **This seemingly selfish (or at least self-centred) attitude is the basis for all of Stoic ethics. Although this may seem to be paradoxical it is arguably one of the strengths of the Stoic position, for it is an ethical theory that takes seriously the primitive behaviour of animals and human beings,** and does not try to pretend that selfish motivations are not at the heart of most people's actions.

On the basis of this instinct for self-preservation, individuals ascribe value. Thus what will enhance our constitution we term "good" and what will damage it we term "bad." **Unlike Platonism, which posits the existence of an absolute, transcendent concept of "the Good" to which all value ascriptions may be referred, Stoicism grounds value ascriptions in this naturalistic and physiological theory of *oikeiōsis*.**
…

If I am doing my best to be a rational being who is free and independent of others, then I will sometimes have to make choices that may *appear* not to further my own self-preservation. For instance, if a tyrant threatens to kill me if I do not agree to do certain things that I find objectionable or think to be wrong – If I am to preserve myself as a rational being – I should stand up to the tyrant even if this may mean the loss of my life (see e.g. Epictetus, *Diss.* 1.2). But why? How could getting myself killed possibly contribute to my self-preservation? Well, it may not contribute to my self-preservation in so far as I am merely a living animal, but giving in to the tyrant will equally destroy me as an independent rational being. I may remain biologically alive if I give in to the tyrant, but I will have lost something far more important, having reduced myself to a slave. Thus the Stoic doctrine of self-preservation will, in cases of rational beings – that is, philosophers working towards the ideal of the sage – sometimes lead to choices that may actually threaten an individual's physical existence. **But then as Socrates famously put it, it is not merely living, but living well that matters** (Plato, *Crito* 48b). This thought stood behind Socrates' decision to face his execution rather than take advantage of the opportunity to escape. It should be stressed, however, that such choices are not *against* our natural impulse for survival; they remain the product of a desire for self-preservation, simply operating with a different conception of the self, one above basic animal needs and everyday human preferences. **Cicero reports that as one develops one's understanding, one places greater priority on being consistent in what one does than on mere material benefits** (*Fin.* 3.21). In the case of Socrates, living by a consistent set of principles was far more important than merely living at whatever the price. As Epictetus put is, **"such a man is not to be saved by any shameful means; he is saved by dying, and not by running away"** (*Diss.* 4.1.165).

Paradoxically, then, it is the Stoic theory of self-preservation that forms the basis for their later infamous defence of suicide (see Rist 1969: ch. 13). Suicide may well be the end for an individual *qua* animal, but it may be the most appropriate act of the individual *qua* rational human being. **In some circumstances, suicide may be the only rational action.**

> https://www.lacan.com/zizhollywood.htm
>
> True freedom is not a freedom of choice made from a safe distance, like choosing between a strawberry cake or a chocolate cake; **true freedom overlaps with necessity, one makes a truly free choice when one's choice puts at stake one's very existence – one does it because one simply "cannot do it otherwise." When one's country is under a foreign occupation and one is called by a resistance leader to join the fight against the occupiers, the reason given is not "you are free to choose," but: "Can't you see that this is the only thing you can do if you want to retain your dignity?"** No wonder that all early modern egalitarian radicals, from Rousseau to Jacobins, admired Sparta and imagined the republican France as a new Sparta: there is an emancipatory core in the Spartan spirit of military discipline which survives even when we subtract all historical paraphernalia of Spartan class rule, ruthless exploitation of and terror over their slaves, etc.

https://books.google.fi/books?id=5X-46TqjDv0C&lpg=PP1&hl=fi&pg=PA91#v=onepage&q&f=false

It is possible to give two quite different readings of Stoic physics. One reading would focus on the role of *pneuma* as a force that, in various degrees of tension, forms the material objects of Nature. The Stoics outline three principal conditions of *pneuma*, each reflecting a different level of "tension" (*tonos*). The first is "cohesion" (*hexis*), and this is the force that gives unity to a physical object; it is the force that holds together a stone, for instance. The second is "nature" (*phusis*), and this is the force by virtue of which something may be said to be alive. It is *pneuma* as *phusis* that constitutes the principle of life in biological organisms such as plants. The third is "soul" (*psuchē*), and this form of *pneuma* constitutes the principle of life in animals that have the powers of perception (impressions), movement (impulses)

and reproduction (see Philo, *Legum Allegoriacum* 2.22-3). The difference between these three types of natural entity is simply one of differing levels of tension in their *pneuma*. This has been characterized as a difference in organizational complexity. They stand on a continuum, the difference between them being one of degree rather than kind. One could thus imagine an evolutionary account of the development of life and higher forms of life purely in terms of increasing complexity within Nature. **It is thus possible to make Stoic physics sound quite modern and thoroughly naturalistic** (see e.g. Sambursky 1959). **And such a reading seems perfectly reasonable given that, as we have seen, the Stoics are uncompromising materialists.**

Alternatively one might read the Stoics as quite religious philosophers, as pantheists who conceive God as the providential ruling force in Nature, echoing the role played by the Demiurge in Plato's *Timaeus*. Such a reading has plenty of support in the ancient texts, such as the discussion of Stoic theology in Cicero's *On the Nature of the Gods* and in Cleanthes' *Hymn to Zeus*. Here is an extract from Cleanthes' *Hymn* in order to give a flavour of this aspect of Stoicism:

> Zeus, giver of all, you of the dark clouds, of the blazing thunderbolt,
> save men from their baneful inexperience
> and disperse it, father, far from their souls; grant that they may achieve
> the wisdom with which you confidently guide all with justice
> so that we may requite you with honour for the honour you give us
> praising your works continually, as is fitting for mortals …
> (translated in IG II-21)

These sort of sentiments are seemingly a world away from the naturalistic account of Stoic physics. For us, there is a strong tendency to want to distinguish sharply between the philosophical or scientific on the one hand and the religious on the other.
…

Whereas the late ancient Church Fathers and early modern Christian readers of Stoicism were often keen to stress the *difference* between God and Nature in the light of Christian teaching (and so stress the distinction between the two principles), numerous ancient sources note that the Stoics were happy to *identify* God with Nature, even if that claim might sometimes be qualified to say that God is the active force *within* Nature. For the Stoics, the cosmos is a living being (DL 7.142). So our question is as much about whether the cosmos as a living being is conscious or not. **We should also bear in mind that some ancient critics took the Stoic identification of God with Nature to be a manoeuvre designed to enable them to continue to use the label "God" even though their naturalistic philosophy had no need of it. As Plotinus put it, "they bring in God for the sake of appearances, [a God] who has his being from matter in a certain state" (*Enneads* 6.1.27).**

> https://ccel.org/ccel/plotinus/enneads/enneads.vii.i.html
>
> 27. On other grounds also, it is indefensible not to have reserved the high place for the true first-principle of things but to have set up in its stead the formless, passive and lifeless, the irrational, dark and indeterminate, and to have made this the source of Being. **In this theory God is introduced merely for the sake of appearance: deriving existence from Matter he is a composite, a derivative, or, worse, a mere state of Matter.**

Similar criticisms were later raised against Spinoza's identification of God with Nature, for whenever one uses the word "God" one could simply replace it with "Nature" and so "God" no longer has any explanatory force. **Spinoza was attacked by his early readers as being an atheist who held on to the label "God" merely for the sake of appearances, just as Plotinus had criticized the Stoics for doing the same.**

---

https://en.wikisource.org/wiki/1911_Encyclop%C3%A6dia_Britannica/Stoics

It remained for Zeno to carry this to a much greater extent and to seek out or invent "natural principles" (λόγοι φυσικοί) and moral ideas in all the legends and in the poetry of Homer and Hesiod. In this sense he was the pattern if not the "father" of all such as allegorize and reconcile. Etymology was pressed into the service, and the wildest conjectures as to the meaning of names did duty as a basis for mythological explanations. The two favourite Stoic heroes were Hercules and Ulysses, and nearly every scene in their adventures was made to disclose some moral significance.

> https://books.google.fi/books?id=nVBDDwAAQBAJ&lpg=PR1&hl=fi&pg=PA181#v=onepage&q&f=false
>
> **Given the fame of Stoic allegory in the Hellenistic period, it bears emphasis that this school has not shaped Philo's allegorical method because it ignored authorial intention.** Aiming to

> “accommodate fables” to their scientific notions, Stoics “converted [them] into physiological terms.” They extrapolated “scientific theory” even from “impious fables” because they assumed that their authors were unaware of the deeper meanings of their own texts. A key role in justifying such allegories is played by etymologies, which point beyond an author’s intention to a larger reservoir of unintended meanings. While Philo sometimes uses etymology as an additional justification for allegory, such instance have been overemphasized.

https://en.wikisource.org/wiki/Ante-Nicene_Fathers/Volume_IV/Minucius_Felix/The_Octavius_of_Minucius_Felix/Chapter_21

“Read the writings of the Stoics,[1] or the writings of wise men, you will acknowledge these facts with me. On account of the merits of their virtue or of some gift, Euhemerus asserts that they were esteemed gods; and he enumerates their birthdays, their countries, their places of sepulture, and throughout various provinces points out these circumstances of the Dictæan Jupiter, and of the Delphic Apollo, and of the Pharian Isis, and of the Eleusinian Ceres. **Prodicus speaks of men who were taken up among the gods, because they were helpful to the uses of men in their wanderings, by the discovery of new kinds of produce. Persæus philosophizes also to the same result;** and he adds thereto, that the fruits discovered, and the discoverers of those same fruits, were called by the same names; as the passage of the comic writer runs, that Venus freezes without Bacchus and Ceres.

https://archive.org/details/in.ernet.dli.2015.21897/page/n109/mode/2up?view=theater

Though the Stoics were religious to the point of superstition, yet they did not invoke the terrors of theology to enforce the lesson of virtue. **Plato does this even in the very work, the professed object of which is to prove the *intrinsic* superiority of justice to injustice. But Chrysippus protested against Plato's procedure on this point, declaring that the talk about punishment by the gods was mere ‘bugaboo.’**3

https://oll.libertyfund.org/title/goodwin-the-morals-vol-4#lf0062-04_head_038

15. Moreover, in his books against the same Plato, concerning Justice, [Chrysippus] immediately at the very beginning leaps into a discourse touching the Gods, and says, that Cephalus did not rightly avert men from injustice by the fear of the Gods, and that his doctrine is easily misrepresented, and that it affords to the contrary many arguments and probabilities **impugning the discourse concerning divine punishments, as nothing differing from the tales of Acco and Alphito (or Raw-Head and Bloody-Bones), with which women are wont to frighten little children from their unlucky pranks.**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A2007.01.0048%3Abook%3Dpos%3D3%3Asection%3D44

[44] But when he comes to pronounce the verdict under oath, he should remember that he has God as his witness—**that is, as I understand it, his own conscience, than which God himself has bestowed upon man nothing more divine. [id est, ut ego arbitror, mentem suam, qua nihil homini dedit deus ipse divinius]**

http://www.perseus.tufts.edu/hopper/text?doc=Perseus%3Atext%3A2007.01.0048%3Abook%3Dpos%3D3%3Asection%3D102

[102] “What significance, then,” someone will say,[1] “do we attach to an oath? It is not that we fear the wrath of Jove, is it? Not at all; **it is the universally accepted view of all philosophers that God is never angry, never hurtful.** This is the doctrine not only of those[2] who teach that God is Himself free from troubling cares and that He imposes no trouble upon others, but also of those[3] who believe that God is ever working and ever directing His world.
…

But in taking an oath it is our duty to consider not what one may have to fear in case of violation but wherein its obligation lies: an oath is an assurance backed by religious sanctity; and a solemn promise given, as before God as one's witness, is to be sacredly kept. **For the question no longer concerns the wrath of the gods (for there is no such thing) [quae nulla est] but the obligations of justice and good faith.**

>
> "What? Is there to be no punishment for that perjured soul and his impious fraud?" Well, suppose him to have been hurried off in heavy chains, and slain (what more could anger ask?) at our good pleasure; yet your loss still remains, your deposit will not be saved; and the smallest drop of blood from that headless body will bring you hatred along with your consolation. **"O! but vengeance is good, sweeter than life itself." Yes; so say the ignorant,** whose passionate hearts you may see ablaze at the slightest cause, sometimes for no cause at all; any occasion, indeed, however small it be, suffices for their wrath. **But so will not Chrysippus[23] say, or the gentle Thales,[24] or the old man[25] who dwelt near sweet Hymettus, who would have given to his accuser no drop of the hemlock-draught which was administered to him in that cruel bondage.** Benign Philosophy, by degrees, strips from us most of our vices, and all our mistakes; it is she that first teaches us the right. **For vengeance is always the delight of a little, weak,**

> **and petty mind; of which you may straightway draw proof from this—that no one so rejoices in vengeance as a woman.**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Plutarch/Lives/Pericles*.html#ref65

> 2 And it seems to me that his otherwise puerile and pompous surname is rendered unobjectionable and becoming by this one circumstance, that it was so gracious a nature and a life so pure and undefiled in the exercise of sovereign power which were called Olympian, **inasmuch as we do firmly hold that the divine rulers and kings of the universe are capable only of good, and incapable of evil.** 3 In this we are not like the poets, who confuse us with their ignorant fancies, and are convicted of inconsistency by their own stories, **since they declare that the place where they say the gods dwell is a secure abode and tranquil, without experience of winds and clouds, but gleaming through all the unbroken time with the soft radiance of purest light,**—[66] implying that some such a manner of existence is most becoming to the blessed immortal; **and yet they represent the gods themselves as full of malice and hatred and wrath and other passions which ill become even men of any sense.**

https://penelope.uchicago.edu/Thayer/E/Roman/Texts/Strabo/1B1*.html#ref51

And what is new is pleasing, and so is what one did not know before; and it is just this that makes men eager to learn. But if you add thereto the marvellous and the portentous, you thereby increase the pleasure, and pleasure acts as a charm to incite to learning. At the beginning we must needs make use of such bait for children, but as the child advances in years we must guide him to the knowledge of facts, when once his intelligence has become strong and no longer needs to be coaxed. **Now every illiterate and uneducated man is, in a sense, a child, and, like a child, he is fond of stories; and for that matter, so is the half-educated man, for his reasoning faculty has not been fully developed, and, besides, the mental habits of his childhood persist in him. Now since the portentous is not only pleasing, but fear-inspiring as well, we can employ both kinds of myth for children, and for grown-up people too. In the case of children we employ the pleasing myths to spur them on, and the fear-inspiring myths to deter them;** for instance, Lamia[52] is a myth, and so are the Gorgon, and Ephialtes,[53] and Mormolyce.[54] Most of those who live in the cities are incited to emulation by the myths that are pleasing, when they hear the poets narrate mythical deeds of heroism, such as the Labours of Heracles or Theseus, or hear of honours bestowed by gods, or, indeed, when they see paintings or primitive images or works of sculpture which suggest any similar happy issue of fortune in mythology; but they are deterred from evil courses when, either through descriptions or through typical representations of objects unseen, they learn of divine punishments, terrors, and threats—or even when they merely believe that men have met with such experiences. **For in dealing with a crowd of women, at least, or with any promiscuous mob, a philosopher cannot influence them by reason or exhort them to reverence, piety and faith; nay, there is need of religious fear also, and this cannot be aroused without myths and marvels. For thunderbolt, aegis, trident, torches, snakes, thyrsus-lances,—arms of the gods—are myths, and so is the entire ancient theology. But the founders of states gave their sanction to these things as bugbears wherewith to scare the simple-minded.** Now since this is the nature of mythology, and since it has come to have its place in the social and civil scheme of life as well as in the history of actual facts, the ancients clung to their system of education for children and applied it up to the age of maturity; and by means of poetry they believed that they could satisfactorily discipline every period of life. **But now, after a long time, the writing of history and the present-day philosophy have come to the front. Philosophy, however, is for the few, whereas poetry is more useful to the people at large and can draw full houses**—and this is exceptionally true of the poetry of Homer. And the early historians and physicists were also writers of myths.

> **To see anything honest in such a man as Paul, whose home was at the centre of the Stoical enlightenment,** when he converts an hallucination into a *proof* of the resurrection of the Saviour, or even to believe his tale that he suffered from this hallucination himself—this would be a genuine *niaiserie* in a psychologist.

https://www.academia.edu/35754657/Only_natural_John_Toland_and_the_Jewish_question

Methodologically, Toland's concern in the *Origines* is not so much to put other historical sources on the same footing as Scripture (the kind of approach adopted in the *Hodegus*); instead, his treatment denies *any role whatsoever* for Scriptural account. **Ostensibly a commentary on Strabo's *Geographica*, the text in fact presents a wholly non-Biblical account of Moses, using Classical authors alone** – Diodorus of Sicily and Cicero (*De Divinatione* and *De Natura Deorum*), for example, as well as Strabo himself. Sacred history becomes subsumed by secular history.
…

As Toland's highly significant citation of Strabo has it,

> Moses taught that the Aegyptians were mistaken in representing the Divine Being by the images of beasts and cattle, as were also the Libyans; and that the Greeks were also wrong in modelling

> gods in human form; for, according to him, God is this one thing alone that encompasses us all and encompasses land and sea – the thing which we call heaven, or universe, or the nature of all that exists.57

Moses (or even "Moses Strabonicus", as Toland now styles him) was "in fact" a pantheist – which means, in more up-to-date terms, a Spinozist: "*Mosem enimvero fuisse Pantheistam, sive, ut cum recentioribus loquar, Spinosistam.*"58 **This Tolandian Moses teaches us that there is no divinity or divine presence (*Numen*) distinct from matter and the unified structure of the world; he shows that nature itself is the one and supreme Deity (*unicum esse & supremum Deum*);** and he shows that "creation" is the parts, "the creator" the whole. Moses, or "Moses Strabonicus", is taken to have instigated an essentially civil religion, built around the *Naturae lex*, or natural law, consisting only of moral commandments, and bereft of ritual, rite and sacrifice. Furthermore, **this Tolandian Moses never mentions the immortality of the soul (*animorum immortalitatis*) or any post-mortem rewards or punishments; and the term "Jehovah" that he employs simply means "what exists in itself [*quod per se existit*]", by necessity – much like the Greek *to hon*.**59 In effect, then, this is Moses *becoming-Spinoza*.

> http://www.attalus.org/translate/diodorus40.html
>
> 4 He made no representation or image of gods, because he considered that nothing of a human shape was applicable to God; **but that heaven, which surrounds the earth, was the only God, and that all things were in its power.**

---

https://archive.org/details/influenceofgreek00hatc/page/248/mode/2up?view=theater

The relation of the *Logos* to God, as distinguished from its functions, is expressed by several metaphors, all of which are important in view of later theology. They may be gathered into two classes, corresponding to the two great conceptions of the relation of the universe to God which were held respectively by **the two great sources of Philo's philosophy, the Stoics and the Platonists. The one class of metaphors belongs to the monistic, the other to the dualistic, conception of the universe. In the former, the *Logos* is evolved from God; in the other, created by Him.**1

https://plato.stanford.edu/entries/philo/#ScepPythPlat

Philo's many allusions to the theme of "assimilation to God" prove how conscious he was of the difference between Stoic immanence and Platonic transcendence. At the core of Stoic ethics lay the concept of *oikeiôsis*, which required both adaptation to Nature and absolute obedience to her guidance. The word *oikeiôsis* derives from *oikos*, meaning house. **The goal of a Stoic's life was to know every hidden recess of "Nature's house" and to dwell respectfully therein. On the contrary, for Middle Platonists who were readers and commentators of the *Theaetetus*, the goal was to depart from nature, a dwelling of sensations and injustice, in order to become as similar as possible to God.**

> http://www.vatican.va/content/pius-x/en/encyclicals/documents/hf_p-x_enc_04101903_e-supremi.html
>
> While, on the other hand, and this according to the same apostle is the distinguishing mark of Antichrist, man has with infinite temerity put himself in the place of God, raising himself above all that is called God; in such wise that although he cannot utterly extinguish in himself all knowledge of God, he has contemned God's majesty and, **as it were, made of the universe a temple wherein he himself is to be adored. "He sitteth in the temple of God, showing himself as if he were God"** (II. *Thess*. ii., 2).
>

>
> If, on the other hand, the middle years prove prosperous, our position is even stronger. Prosperity knits a man to the World. **He feels that he is "finding his place in it", while really it is finding its place in him.** His increasing reputation, his widening circle of acquaintances, his sense of importance, the growing pressure of absorbing and agreeable work, **build up in him a sense of being really at home in earth which is just what we want.**

…

Similarly, Philo's focus on *logos* should never suggest that he feels a temptation toward Stoicism. Themes and language of immanence are for him only a means to better understand the world created by God. When he praises the philosophers who recommend "living according

to nature", he uses a famous Stoic formula, but immediately after explains that this means "to follow God" (*Migr.* 128). For a Stoic, the two formulae were strictly synonymous. In Philo's thought, the former is valid only if it is followed by a reference to God, who is transcendent by definition.
…

In *Opif.* 117, soul is compared to a puppet show, the seven puppets being manipulated by the *hègemonikon*, the central rational element. **This metaphor strongly reminds us of the Stoic comparison with the octopus, but is also very different from this image. The octopus is a living unity, while the puppet master is essentially different from his puppets. The Stoic metaphor of the octopus is a monist one, but the Philonian image, inspired from Plato (*Laws* 644d), is strongly dualistic.** The puppets are not even irrational beings as they are mere objects.

> Let us suppose that each of us living creatures is an ingenious puppet of the gods, whether contrived by way of a toy of theirs or for some serious purpose—for as to that we know nothing;

…

One major intellectual revolution in the passage from the Hellenistic period to Middle Platonism was a relative abandoning of the concept of *oikeiôsis* (natural kinship) which, originating with the Stoics, became a foundation of ethics not only in Stoicism but also in Epicureanism and the late Aristotelianism of Antiochus of Ascalon. The Hellenistic period was that of a naturalism that only the sceptic Academy undertook to fight it. The great change brought by Middle Platonism was the irruption of transcendence which seemed to have been forgotten for at least two centuries. And in the case of Philo, transcendence was not only philosophical, but also religious, mainly that of the God of the Bible. Philo sometimes uses the term *oikeiôsis*, but never in the Stoic meaning, always with semantic transformations. He could not accept the idea, central in the dogma of *oikeiôsis*, that children as well as animals are the image of nature. His own description of the world of childhood is a frightening one, a description Sigmund Freud would not have spurned. For him the main ethical purpose is to become closer and closer to God, and so to be in a spiritual kinship with Him. **At this point, Philonian *oikeiôsis* is not different from the Platonic *omoiôsis*.** It is not, as in Stoicism, an initial impulse, indicating the path of nature, but the result of a pious asceticism, getting rid of desire and passionate impulses.
…

In his allegorical interpretation of *Det.* 119-120, Philo contrasts bad and good passions, but he introduces hope and repentance, biblical virtues, among the latter. **It was not simply a terminological change, but the sign of a deep ontological change. In Stoic doctrine, only the present exists. To be a sage means to understand that the past and the future have no real existence, but are mainly spaces of projection for passions.**
…

In the treatise *De virtutibus*, *metanoia* (repentance) and *eugeneia* (nobility) have special importance. **The first concept, considered an unhappy passion by the Stoics,** is the equivalent of the Jewish concept of *teshuva.* In Philo, it expresses the strong connection between theological and moral reflection.
…

In Stoicism, virtue, or human perfection, is the natural end (*telos*) of the programming of mankind by Providence. In Philo, things are more complex because of Original Sin. **For the Stoics, there was no ontologisation of evil in a world which was entirely rational, and to become as perfect as God was not an absurd project.**

https://plato.stanford.edu/entries/philo/supplement1.html

Philo defines himself as a thinker of his time by drawing intensely upon the topic of becoming like God to the greatest extent possible, the famous formula of Plato's *Theaetetus* 176b. **This was the motto of the Middle Platonic period, a transcendental substitute for the Stoic theme of *oikeiôsis*, i.e. the adaptation to nature. This latter theme was based on the idea that the *alpha* and *omega* of ethics were located in nature, without any reference to an extra-natural transcendence.** Philo is one of the major protagonists of an intellectual and spiritual change that reintroduced the idea of transcendence into the philosophical tradition.

> *Socrates:* But it is impossible that evils should be done away with, Theodorus, for there must always be something opposed to the good; and they cannot have their place among the gods, but must inevitably hover about mortal nature and this earth. **Therefore we ought to try to escape from earth to the dwelling of the gods as quickly as we can;** [176b] **and to escape is to become like God, so far as this is possible; and to become like God is to become righteous and holy and wise.**

> An anonymous, running commentary on the dialogue, the first of its kind extant from antiquity, has been dated by Harold Tarrant to the first century BCE. **The author opposes the prevailing Skeptic tendency of the Platonic school and shows that even Plato's most Skeptical dialogue, the *Theaetetus*, can be interpreted in dogmatic fashion.** The commentator criticizes those who "consider Plato as an Academic [i.e., a Skeptic], who expounds nothing by way of dogma." In response to this approach he offers a close reading of the *Theaetetus* and argues that Plato did not disawow knowledge as such, but only refrained from teaching it in a manner of dogmatic instruction, preferring instead a dialogical style.3 The digression, which orients the reader to search for secure knowledge in god, naturally assumes new significance.
>
> Another Alexandrian interpreter of the *Theaetetus* is known to us, namely, Eudorus, active in the first century BCE.5 This Platonist also highlights the digression and explores its precise meaning in the following way: "Plato describes this [the ideal of godlikeness] most clearly by adding 'as far as possible,' wisely referring only to what was possible, namely, [becoming like god] through virtue. **The creation and government of the world belong to god, while the organization of life and the management of one's existence belong to the wise man.**"6
> …
>
> Eudorus's keen interest in the topic of godlikeness is shared by the anonymous commentator on the *Theaetetus*. While the latter's explanations on the relevant lines are lost, **we still possess his statement that "godlikeness," rather than the Stoic ideal of *oikeiosis*, or familiarity with oneself, is the basis of justice. The commentator distinguishes between Plato's transcendental approach, which points to higher spiritual realms, and the Stoic demand that humans should derive the pattern of right action from their own nature.** This sharp distinction warns us that modern assumptions about a pervasive syncretism may be exaggerated in the Alexandrian context. **John Glucker criticizes scholars who attribute too much importance to Antiochus's brief visit to Alexandria, when he supposedly founded an influential school of Stoicizing Platonism.**7 The interpretations of Plato's *Theaetetus* suggest that Alexandrian intellectuals enthusiastically focused on transcendental ethics, self-consciously distancing themselves from the Stoic approach and its emphasis on the immanence of values.

The Platonic philosopher Cotta rejects Stoic theology because of its emphasis on monotheism and divine immanence. In his view, the orderliness of the cosmos cannot be explained by reference to a single god who permeates the world like a breath. **While Philo in the *Allegorical Commentary* is sympathetic to Cotta's reservations, in the *Exposition* he adopts the Stoic approach, without, however, fully accepting its implied immanence.** He now stresses the importance of the creation for grasping the nature of the monotheistic God. **Whereas he earlier conceived of God as essentially beyond the creation, he now identifies God primarily as the demiurge.**
…

Philo's move from a distinctly transcendent approach, which marginalizes the creation, to a Stoic position, which emphasizes it, throws important light on subsequent intellectual developments. **Judaism and orthodox Christianity adopted a perspective close to Philo's views in the *Exposition*, while pagan authors in the Greek East and "Gnostics" assumed a transcendent perspective congenial to Philo's approach in the *Allegorical Commentary*.**
…

Subsequent pagan authors are no longer known to advocate a literal creation of the world. A distinctly Greek community emerges around the metaphorical readings of the *Timaeus*. Two figures throw important light on these developments in the Greek East: the philosopher and scholar Porphyry (late third century CE) and the emperor Julian the Apostate (fourth century CE) Both criticized Christianity and wrote treatises to revive the Greek heritage. Porphyry wrote the first extant running commentary on the *Timaeus* which has been characterized as "undoubtedly the most comprehensive and thorough of its kind." **He dismissed the literal interpretation of the text as "impious" because it assumes an imperfect demiurge, either unable or unwilling to shape a perfect world.** Porphyry's polemical tone suggests that he made these statements in contrast to Christian claims. Moreover, Julian refers to the *Timaeus* as "our account" of the creation, which he distinguishes from the biblical story embraced by the Christians. The *Timaeus* in its metaphorical sense has become the pagan counterpart ot the book of Genesis. **Not surprisingly, Sallustius, close friend of Julian and mastermind of his effort to restore the old cults in a world turned Christian, raised the notion of an eternal cosmos to the level of a pagan dogma.**28

(178) What then shall we say? **The Chaldeans appear beyond all other men to have devoted themselves to the study of astronomy and of genealogies; adapting things on earth to things sublime, and also adapting the things of heaven to those on earth, and like people who, availing themselves of the principles of music, exhibit a most perfect symphony as existing in the universe by the common union and sympathy of the parts for one another, which though separated as to place, are not disunited in regard of kindred.** (179) These men, then, imagined that this world which we behold was the only world in the existing universe, and was either God himself, or else that it contained within itself God, that is, the soul of the universe. **Then, having erected fate and necessity into gods, they filled human life with excessive impiety, teaching men that with the exception of those things which are apparent there is no other cause whatever of anything, but that it is the periodical revolutions of the sun, and moon, and other stars, which distribute good and evil to all existing beings.** (180) **Moses indeed appears to have in some degree subscribed to the doctrine of the common union and sympathy existing between the parts of the universe,** as he has said that the world was one and created (for as it is a created thing and also one, it is reasonable to suppose that the same elementary essences are laid at the foundations of all the particular effects which arise, as happens with respect to united bodies that they reciprocally contain each other); (181) **but he differs from them widely in their opinion of God, not intimating that either the world itself, or the soul of the world, is the original God, nor that the stars or their motions are the primary causes of the events which happen among men;** but he teaches that this universe is held together by invisible powers, which the Creator has spread from the extreme borders of the earth to heaven, making a beautiful provision to prevent what he has joined together from being dissolved; for the indissoluble chains which bind the universe are his powers. (182) On which account even though it may be said somewhere in the declaration of the law, **"God is in the heaven above, and in the earth beneath," let no one suppose that God is here spoken of according to his essence.** For the living God contains everything, and it is impiety to suppose that he is contained by any thing, but what is meant is, that his power according to which he made, and arranged, and established the universe, is both in heaven and earth.

> Among historians of philosophy and science, the verse is often understood as a reference to the supposed effects of
> celestial mechanics upon terrestrial events. This would include the effects of the Sun upon the change of seasons, or those of the Moon upon the tides, but also more elaborate astrological effects.[4]
>
> According to another common interpretation,[5] the verse refers to the structural similarities (or 'correspondences') **between the macrocosm (from Greek *makros kosmos*, "the great world"; the universe as a whole, understood as a great living being) and the microcosm (from Greek *mikros kosmos*, "the small world"; the human being, understood as a miniature universe).**[6] This type of view is found in many philosophical systems world-wide,[7] the most relevant here being ancient Greek and Hellenistic philosophy, where notable proponents included Anaximander (c. 610-c. 546 BCE),[8] Plato (c. 428 or 424-c. 348 BCE),[9] the Hippocratic authors (late fifth or early fourth century BCE and onwards),[10] and the Stoics (third century BCE and onwards).[11]

https://books.google.fi/books?id=nVBDDwAAQBAJ&lpg=PR1&hl=fi&pg=PA227#v=onepage&q&f=false

Discussing Abraham's departure from Chaldea (Gen 11:31), he attributes to its inhabitants Stoic tenets, which the patriarch appropriately leaves behind. "These men," he complains, "assumed that this visible cosmos was the only thing in existence, either considering it to be a god or containing god in itself as the soul of the whole. Having divinized fate and necessity, they filled the life of man with much impiety, teaching that nothing except the phenomena exists as the cause of everything, and that the circuits of the sun and the moon and the other heavenly bodies portion out good things and their opposite to each of the existing thing." Philo has outlined here a central Stoic doctrine embraced by Zeno, Chrysippus, and Posidonius, according to which the cosmos is

penetrated by the divine rather than subordinated to it. Rejecting this approach, Philo stresses that Moses "differs from [this] opinion about God and holds neither the cosmos nor the soul of the cosmos to be the primal God." The visible world is instead held together by the invisible bonds of God, who takes "forethought that what was well bound should not be loosened." **The notion of divine bonds providentially holding together the cosmos and thus negating the laws of nature, according to which every creation implies destruction, echoes Plato's *Timaeus*.**6 In this dialogue the demiurge keeps the created cosmos bound together and protects its from destruction. Philo relies on this Platonic image when opposing Stoic cosmology and insisting on God's transcendence.

Given Philo's strong objections to Stoic cosmology, it is not surprising that he dismisses the Stoics' proof of the demiurge from the observance of nature. **He personally appeals to his readers to stop looking at heaven and earth, turning inward instead to an exploration of their own nature. It is in their souls that they will perceive God, as if through a mirror.** Here, too, Philo uses Platonic terms and recommends divine frenzy as a state of higher perception. He is still far removed from the later stages of his career, when he praises the Stoic Panaetius for rejecting the idea of the world's conflagration, raises the creation to the level of a Jewish dogma, and uses it as the main proof of God, deducing divine providence from the observation of nature.7

Stoic Ethics Subverted

Most of Philo's engagements with Stoic philosophy belong in the category of subversion. He is clearly familiar with Stoic ethics and ostensibly approves of them, but then clearly refrains from using the ideas in a Stoic sense.
…

Philo uses the notion of *apatheia* in a highly idiosyncratic manner. Most conspicuously, he applies it in the context of a divided soul, assuming that the material part, or the *thumos*, is metaphorically cut out rather than subdued. **The Platonic idea of a divided soul is thus once more affirmed. The Stoics, by contrast, argued that freedom from the emotions can be achieved because all passions result from rational assent and are therefore completely under human control.** Cicero often mentions this ideal as a key aspect of Stoic ethics, focusing on its positive outcome, namely, peace of mind and a life according to nature.14 **While the Stoics appealed to individuals to take personal responsibility for their emotions and liberate themselves from material constraints, Philo impresses on his readers God's strict demands.** Whereas the Stoics warned of a departure from reason and nature, Philo identifies the "disobedient" part as an element rebelling against God. *Apatheia* becomes a goal in itself rather than a way to achieve personal tranquility. **In Philo's interpretation the person conforming to God's will enjoys freedom from the emotions, and *apatheia* is connected to the "waiting for salvation by God."** The discussion culminates in a prayer that the soul "having waited for God's salvation may attain happiness." Philo adds a biblical verse from the book of Exodus, where God is depicted as casting horse and rider into the sea. According to Philo's allegorical interpretation God throws away the four passions. Philo thus has translated Stoic ethics into Jewish theology with a Platonic flavor.15

Philo's subversive reading of Stoic notions of passion and *apatheia* implies significant criticism. **He is obviously unable to accept the idea of a unified soul that operates on rational grounds, sometimes judging things wrongly and thus producing passion.** He instead holds onto Platonic ethics and systematically assumes the division of the soul, with its characteristic tension between the different parts.
…

Upon arrival in Rome, however, Philo embraces the Stoic approach more wholeheartedly and develops an ethical theory oriented toward the immanent world. As we saw in chapter 8, he then speaks about passion as a "movement contrary to nature" and describes in thoroughly Stoic terms the intellectual process that goes into the experience of desire, namely, wrongly assuming something to be good that is actually indifferent. **In his mature and more Roman period Philo more rarely refers to the division of the soul,** avoiding such Platonic terminology even in the context of the creation of human beings in God's image, where he stresses that only humanity's good aspects can be ascribed to the deity. Regarding the passions, he thus moves from a superficially Stoic yet basically Platonic approach to a more Stoic position.17
…

Philo uses the term *oikeiosis* eleven times in the *Allegorical Commentary*, *kathekonta* sixteen times, and *katorthomata* seventeen times. He is obviously interested in engaging Stoic discourses and once explicitly refers to the distinction made "by philosophers" between righteous actions and the first appropriate acts. Such philosophers were undoubtedly Stoics, as Philo echoes their definition of these terms. **He associates the appropriate acts with the first stage of life, when a person automatically acts with a view to self-preservation, while righteous acts belong to the mature stage of life and are consciously chosen for their own sake.** Reason, he moreover stresses with the Stoics, is the source of right acts.20

Philo, however, does not fully embrace Stoic concepts. Unlike Chrysippus, **he never presents the primary stage of life as a positive starting point that reveals a person's true nature and provides a guideline for ethics. He equally ignores the classical Stoic position that "notions of justice and goodness come naturally."** Philo instead offers a highly idiosyncratic interpretation of the terms *katorthomata* and *kathekonta*. In his scheme they are diagonally opposed approaches, signifying secularism and religious devotion, respectively. Primary acts amount to inferior human opinions, while righteous acts are

“sacred and holy and purified notions.” God, Philo explains, nourishes the human soul with sacred ideas.21 **Stoic terms, which emphasize the individual human mind, have been translated into religious concepts, which deprecate human autonomy and celebrate divine beneficence.** Philo’s implied criticism of the primary acts corresponds to his outspoken rejection of Protagoras’s principle that “man is the measure of all things.”

…

The notion of *oikeiosis* undergoes a similar transformation. Under Philo’s pen it comes something like fellowship or even union with God. Taking as his starting point the biblical command to “love God and listen and cleave to him” (Deut. 30:20), he offers the following explanations: “His [Moses’s] way of calling them [the Israelites] to give honor to him [God], who is the worthy object of strong longing and love, is most expressive, showing the constant and continuous and unbroken nature of the harmony and union that comes through making God our own (*oikeiosis*).” Philo does not explain what exactly he means by “making God our own.” **It is clear, however, from the context that his idea fundamentally differs from the Stoic notion of a person’s affinity with his or her own nature as part of the universe.**

…

Philo uses additional theological and Platonic notions to develop his highly idiosyncratic understanding of the term *oikeiosis*. He once equates it with fellowship with God, as opposed to indulgence in sense perception. The righteous person, who is symbolized by Leah, Jacob’s hated wife, will distance himself or herself from everything created and material in order to make God his or her own. **Philo translates the Stoic concept, which relies on the immanence of virtue, into a strongly transcendent theology in Platonic style. Instead of implementing one’s own, natural constitution, one is asked to alienate oneself from the world and strive for the utterly Other.** Human insights come from divine impregnation rather than an observation of nature.

…

Philo is clearly aware of these Stoic discussions. He speaks of the mind distinguishing between “the good and the indifferent and the bad.” He moreover mentions that Jacob, who eliminates the passions, possesses self-mastery and “a sense of utter indifference to the things that are indifferent.” **Philo takes these categories for granted to the extent that he never explains them. He does not even discuss the most complicated of them, namely, indifferent things.** At the same time, however, he also does not mention nature or processes o self-evaluation, so central to the Stoic argument. This arouses questions about Philo’s intentions. While familiar with these Stoic notions, he evidently has no interest in their precise meaning and theoretical underpinnings. **Once he even uses the term “indifferent” as a synonym to counterfeit good and evil, thus collapsing Stoic categories.**25

…

In the case of ethics, too, Philo shows a more Stoic orientation in his later writings, **as can be seen in his detailed discussion of individual choice in the treatise *Every Good Man Is Free*.** He repeats here the distinction between good, bad and indifferent things but now supplies some explanations missing in his earlier works. The reader learns that good things derive from virtue and are consciously chosen. The righteous person, Philo adds, always acts thus, while not even contemplating bad acts. **Concerning indifferent things, “the mind as on a balance preserves equipoise, having been trained neither to yield to them, as if they have compelling power, not to feel annoyed by them, as if they are worthy of escape” (*Prob*. 61).** The righteous preserve their inner freedom, not being compelled to do anything contrary to virtue. In his later career Philo fully embraces the Stoic terms, which he briefly mentions in the *Allegorical Commentary* without yet exploring their full meaning. **It is clear that in his youth Philo had just begun to recognize Stoic ethics, making some gestures toward it within an otherwise Platonic and decidedly theological system.**

…

When Philo in the *Allegorical Commentary* discusses the ideal of living in agreement with nature, he also expresses views similar to those of Cleanthes. **Once he says that “the first men said the goal of happiness is to be able to live in accordance with nature.”**27 **These “first men” are undoubtedly Stoics, as they are uniquely known in antiquity for this definition of life’s goal.**

https://www.jewishvirtuallibrary.org/maimonidean-controversy

In the view of H.A. Wolfson, all of Western religious philosophy, whether in Hebrew, Latin, or Arabic "garb," is essentially the same regarding the problematical relationship between revelation and reason. In Wolfson's scheme, *Philo was the first "synthetic" philosopher, **and the greatest figure in the history of Western philosophy after Plato and Aristotle, because he attempted to synthesize biblical revelation (which did not know philosophy) and philosophy (which was pagan and did not know revelation), and all subsequent philosophy in the Middle Ages was "Philonic" in structure, until Spinoza destroyed that structure and made possible modern philosophy by freeing philosophy from revelation** (Wolfson, *Philo: Foundations of Religious Philosophy in Judaism, Christianity and Islam* (1947)).

https://en.wikisource.org/wiki/On_Benefits/Book_IV#7

7. "Nature," says my opponent, "gives me all this." **Do you not perceive when you say this that you merely speak of God under another name? for what is nature but God and divine reason, which pervades the universe and all its parts? [Non intellegis te, cum hoc dicis, mutare nomen deo? Quid enim aliud est natura quam deus et divina ratio toti mundo partibusque eius inserta?]** You may address the author of our world by as many different titles as you please; you may rightly call him Jupiter, Best and Greatest, and the Thunderer, **or the Stayer, so called, not because, as the historians tell us, he stayed the flight of the Roman army in answer to the prayer of Romulus, but because all things continue in their stay through his goodness.** If you were to call this same personage Fate, you would not lie; for since fate is nothing more than a connected chain of causes, he is the first cause of all upon which all the rest depend. **You will also be right in applying to him any names that you please which express supernatural strength and power: he may have as many titles as he has attributes. [tot appellationes eius possunt esse, quot munera]**

8. Our school regards him as Father Liber, and Hercules, and Mercurius: he is Father Liber because he is the parent of all, who first discovered the power of seed, and our being led by pleasure to plant it; he is Hercules, because his might is unconquered, **and when it is wearied after completing its labours, will retire into fire; [in ignem recessura]** he is Mercurius, because in him is reasoning, and numbers, and system, and knowledge. **Whither-soever you turn yourself you will see him meeting you:** nothing is void of him, he himself fills his own work. Therefore, most ungrateful of mortals, it is in vain that you declare yourself indebted, not to God, but to nature, **because there can be no God without nature, nor any nature without God; they are both the same thing, differing only in their functions. [nec natura sine deo est nec deus sine natura, sed idem est utrumque, distat officio]** If you were to say that you owe to Annaeus or to Lucius what you received from Seneca, you would not change your creditor, but only his name, because he remains the same man whether you use his first, second, or third name. **So whether you speak of nature, fate, or fortune, these are all names of the same God, using his power in different ways.** So likewise justice, honesty, discretion, courage, frugality, are all the good qualities of one and the same mind; if you are pleased with any one of these, you are pleased with that mind.

https://en.wikisource.org/wiki/On_Benefits/Book_IV#18

Take away union, and you will rend asunder the association by which the human race preserves its existence; yet you will take it away if you succeed in proving that ingratitude is not to be avoided for itself, but because something is to be feared for it; for how many are there who can with safety be ungrateful? **In fine, I call every man ungrateful who is merely made grateful by fear. [Denique ingratum voco, quisquis metu gratus est.]**

19. **No sane man fears the gods; for it is madness to fear what is beneficial, and no man loves those whom he fears. [Deos nemo sanus timet; furor est enim metuere salutaria, nec quisquam amat, quos timet.] You, Epicurus, ended by making God unarmed; you stripped him of all weapons, of all power, and, lest anyone should fear him, you banished him out of the world.** There is no reason why you should fear this being, cut off as he is, and separated from the sight and touch of mortals by a vast and impassable wall; he has no power either of rewarding or of injuring us; he dwells alone half-way between our heaven and that of another world, without the society either of animals, of men, or of matter, avoiding the crash of worlds as they fall in ruins above and around him, but neither hearing our prayers nor interested in us.

https://en.wikisource.org/wiki/On_Benefits/Book_VI#21

21. "I should be sure," replies he, "that the sun and the moon wished to do us good, if they were able to refuse to do so; **but they cannot help moving as they do.** In short, let them stop and discontinue their work." See now, in how many ways this argument may be refuted. One who cannot refuse to do a thing may nevertheless wish to do it; **indeed there is no greater proof of a fixed desire to do anything, than not to be able to alter one's determination. [immo maximum argumentum est firmae voluntatis ne mutari quidem posse]** A good man cannot leave undone what he does: for unless he does it he will not be a good man.
...

"Let the sun and moon cease to wish to benefit us," says our adversary. I answer, "Remember what has been said. **Who can be so crazy as to refuse the name of free-will [ut eam neget voluntatem esse] to that which has no danger of ceasing to act, and of adopting the opposite course, since, on the contrary, he whose will is fixed for ever, must be thought to wish more earnestly than any one else.** Surely if he, who may at any moment change his mind, can be said to wish, **we must not deny the existence of will in a being whose nature does not admit of change of mind.**

22. "Well," says he "let them stop, if it be possible." What you say is this:--Let all those heavenly bodies, placed as they are at vast distances from each other, and arranged to preserve the balance of the universe, leave their appointed posts: let sudden confusion arise, so that constellations may collide with constellations, that the established harmony of all things may be destroyed and the works of God be shaken into ruin; let the whole frame of the rapidly moving heavenly bodies abandon in mid career those movements which we were assured would endure for ages, and let those which now by their regular advance and retreat keep the world at a **moderate temperature, [aequo temperantia]** be instantly consumed by fire, so that instead of the infinite variety of the seasons all may be reduced **to one uniform condition; [eant in unum omnia]** let fire rage everywhere, followed by dull night, and let the bottomless abyss swallow up all the gods." Is it worth while to destroy all this merely in order to refute you? **Even though you do not wish it, they do you good, and they wheel in their courses for your sake, though their motion may be due to some earlier and more important cause.**

23. Besides this, **the gods act under no external constraint, but their own will is a law to them for all time. [quod non externa cogunt deos, sed sua illis in lege aeterna voluntas est] They have established an order which is not to be changed, and consequently it is impossible that they should appear to be likely to do anything against their will, since they wish to continue doing whatever they cannot cease from doing, and they never regret their original decision. [nec umquam primi consilii deos paenitet] No doubt it is impossible for them to stop short, or to desert to the other side, but it is so for no other reason than that their own force holds them to their purpose. It is from no weakness that they persevere; no, they have no mind to leave the best course, and by this it is fated that they should proceed.** When, at the time of the original creation, they arranged the entire universe, they paid attention to us as well as to the rest, and took thought about the human race; **and for this reason we cannot suppose that it is merely for their own pleasure that they move in their orbits [itaque non possunt videri sua tantum causa decurrere]** and display their work since we also are a part of that work. We are, therefore, under an obligation to the sun and moon and the rest of the heavenly host, because, although they may rise in order to bestow more important benefits than those which we receive from them, yet they do bestow these upon us as they pass on their way to greater things. Besides this, they assist us of set purpose, and, therefore, lay us under an obligation, because we do not in their case stumble by chance upon a benefit bestowed by one who knew not what he was doing, but they knew that we should receive from them the advantages which we do; so that, **though they may have some higher aim, though the result of their movements may be something of greater importance than the preservation of the human race, [servare mortalia] yet from the beginning thought has been directed to our comforts, and the scheme of the world has been arranged in a fashion which proves that our interests were neither their least nor last concern.** It is our duty to show filial love for our parents, although many of them had no thought of children when they married. Not so with the gods: they cannot but have known what they were doing when they furnished mankind with food and comforts. Those for whose advantage so much was created, could not have been created without design. **Nature conceived the idea of us before she formed us, [Cogitavit nos ante natura, quam fecit]** and, indeed, we are no such trifling piece of work as could have fallen from her hands unheeded. See how great privileges she has bestowed upon us, how far beyond the human race the empire of mankind extends; consider how widely she allows us to roam, not having restricted us to the land alone, but permitted us to traverse every part of herself; consider, too, the audacity of our intellect, the only one which knows of the gods or seeks for them, and how we can raise our mind high above the earth, and commune with those divine influences: you will perceive that man is not a hurriedly put together, or an unstudied piece of work. Among her noblest products nature has none of which she can boast more than man, and assuredly no other which can comprehend her boast. What madness is this, to call the gods in question for their bounty? If a man declares that he has received nothing when he is receiving all the while, and from those who will always be giving without ever receiving anything in return, how will he be grateful to those whose kindness cannot be returned without expense? **and how great a mistake is it not to be thankful to a giver, because he is good even to him who disowns him, or to use the fact of his bounty being poured upon us in an uninterrupted stream, as an argument to prove that he cannot help bestowing it. [necessario dantis]** Suppose that such men as these say, "I do not want it," "Let him keep it to himself," "Who asks him for it?" and so forth, with all the other speeches of insolent minds: still, he whose bounty reaches you, although you say that it does not, lays you under an obligation nevertheless; indeed, perhaps the greatest part of the benefit which he bestows is that he is ready to give even when you are complaining against him.

https://en.wikisource.org/wiki/On_Benefits/Book_VII#1

The cynic Demetrius, who in my opinion was a great man even if compared with the greatest philosophers, had an admirable saying about this, that one gained more by having a few wise precepts ready and in common use than by learning many without having them at hand. "The best wrestler," he would say, "is not he who has learned thoroughly all the tricks and twists of the art, which are seldom met with in actual wrestling, but he who has well and carefully trained himself in one or two of them, and watches keenly for an opportunity of practising them. **It does not matter how many of them he knows, if he knows enough to give him the victory; and so in this subject of**

ours there are many points of interest, but few of importance. You need not know what is the system of the ocean tides, why each seventh year leaves its mark upon the human body, why the more distant parts of a long portico do not keep their true proportion, but seem to approach one another until at last the spaces between the columns disappear, how it can be that twins are conceived separately, though they are born together, whether both result from one, or each from a separate act, why those whose birth was the same should have such different fates in life, and dwell at the greatest possible distance from one another, although they were born touching one another; **it will not do you much harm to pass over matters which we are not permitted to know, and which we should not profit by knowing. Truths so obscure may be neglected with impunity.**[1] **Nor can we complain that nature deals hardly with us, for there is nothing which is hard to discover except those things by which we gain nothing beyond the credit of having discovered them; whatever things tend to make us better or happier are either obvious or easily discovered.** Your mind can rise superior to the accidents of life, if it can raise itself above fears and not greedily covet boundless wealth, but has learned to seek for riches within itself; **if it has cast out the fear of men and gods, and has learned that it has not much to fear from man, and nothing to fear from God; [si deorum hominumque formidinem eiecit et scit non multum esse ab homine timendum, a deo nihil]** if by scorning all those things which make life miserable while they adorn it, the mind can soar to such a height as to see clearly that death cannot be the beginning of any trouble, though it is the end of many; if it can dedicate itself to righteousness and think any path easy which leads to it; **if, being a gregarious creature, and born for the common good, it regards the world as the universal home, [si sociale animal et in commune genitus mundum ut unam omnium domum spectat]** if it keeps its conscience clear towards God and lives always as though in public, fearing itself more than other men, then it avoids all storms, it stands on firm ground in fair daylight, and has brought to perfection its knowledge of all that is useful and essential. All that remains serves merely to amuse our leisure; yet, when once anchored in safety, the mind may consider these matters also, though it can derive no strength, but only culture from their discussion."
...

Let him say to himself, "Pleasure is uncertain, short, apt to pall upon us, and the more eagerly we indulge in it, the sooner we bring on a reaction of feeling against it; we must necessarily afterwards blush for it, or be sorry for it, **there is nothing grand about it, nothing worthy of man's nature, little lower as it is than that of the gods;** pleasure is a low act, brought about by the agency of our inferior and baser members, and shameful in its result. True pleasure, worthy of a human being and of a man, is, not to stuff or swell his body with food and drink, nor to excite lusts which are least hurtful when they are most quiet, **but to be free from all forms of mental disturbance, both those which arise from men's ambitious struggles with one another, and those which come from on high and are more difficult to deal with, which flow from our taking the traditional view of the gods, and estimating them by the analogy of our own vices.**" **[et ea, quae intolerabilis ex alto venit, ubi de dis famae creditum est vitiisque illos nostris aestimavimus]**

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_9

16. People may say: "But what sort of existence will the wise man have, if he be left friendless when thrown into prison, or when stranded in some foreign nation, or when delayed on a long voyage, or when cast upon a lonely shore?" **His life will be like that of Jupiter, who, amid the dissolution of the world, when the gods are confounded together and Nature rests for a space from her work, can retire into himself and give himself over to his own thoughts.**[10] **In some such way as this the sage will act; he will retreat into himself, and live with himself.**

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_47

You should therefore not be deterred by these finicky persons from showing yourself to your slaves as an affable person and not proudly superior to them; they ought to **respect [colant]** you rather than fear you. 18. Some may maintain that I am now offering the liberty-cap to slaves in general and toppling down lords from their high estate, because I bid slaves respect their masters instead of fearing them. They say: "This is what he plainly means: slaves are to pay respect as if they were clients or early-morning callers!" **Anyone who holds this opinion forgets that what is enough for a god cannot be too little for a master. Respect means love, [Qui colitur, et amatur] and love and fear cannot be mingled.**

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_48

For that is exactly what philosophy promises to me, that I shall be made equal to God. [ut parem deo faciat] For this I have been summoned, for this purpose have I come. Philosophy, keep your promise!

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_73

12. Yes, that is what I mean, Lucilius; **and I invite you to heaven by a short cut. [et te in caelum compendiario voco] Sextius used to say that Jupiter had no more power than the good man. [plus non posse quam bonum virum]** Of course, Jupiter has more gifts which he can offer to mankind; but when you are choosing between two good men, the richer is not necessarily the better, any more than, in the case of two pilots of equal skill in managing the tiller, you would call him the better whose ship is larger and more imposing. 13. **In what respect is Jupiter superior to our good man?** His goodness lasts longer; but the wise man does not set a lower value upon himself, just because his virtues are limited by a briefer span. Or take two wise men; he who has died at a greater age is not happier than he whose virtue has been limited to fewer years: **similarly, a god has no advantage over a wise man in point of happiness,[8] [sic deus non vincit sapientem felicitate]** even though he has such an advantage in point of years. That virtue is not greater which lasts longer. 14. Jupiter possesses all things, but he has surely given over the possession of them to others; the only use of them which belongs to him is this: he is the cause of their use to all men. **The wise man surveys and scorns all the possessions of others as calmly as does Jupiter, and regards himself with the greater esteem [se magis suspicit] because, while Jupiter cannot make use of them, he, the wise man, does not wish to do so.**
...

16. Do you marvel that man goes to the gods? God comes to men; nay, he comes nearer, – he comes into men.[10] No mind that has not God, is good. Divine seeds are scattered throughout our mortal bodies; **if a good husbandman receives them, they spring up in the likeness of their source and of a parity with those from which they came. [quae si bonus cultor excipit, similia origini prodeunt et paria iis ex quibus orta sunt surgunt]** If, however, the husbandman be bad, like a barren or marshy soil, he kills the seeds, and causes tares to grow up instead of wheat. Farewell.

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_95

47. Precepts are commonly given as to how the gods should be worshipped. **But let us forbid lamps to be lighted on the Sabbath, since the gods do not need light, neither do men take pleasure in soot.** Let us forbid men to offer morning salutation and to throng the doors of temples; mortal ambitions are attracted by such ceremonies, but God is worshipped by those who truly know Him. Let us forbid bringing towels and flesh-scrapers to Jupiter, and proffering mirrors to Juno;[24] **for God seeks no servants. Of course not; he himself does service to mankind, everywhere and to all he is at hand to help.** 48. **Although a man hear what limit he should observe in sacrifice, and how far he should recoil from burdensome superstitions, he will never make sufficient progress until he has conceived a right idea of God, –** regarding Him as one who possesses all things, and allots all things, and bestows them without price. 49. And what reason have the gods for doing deeds of kindness? It is their nature. One who thinks that they are unwilling to do harm, is wrong; they *cannot* do harm. **They cannot receive or inflict injury; for doing harm is in the same category as suffering harm. The universal nature, all-glorious and all-beautiful, has rendered incapable of inflicting ill those whom it has removed from the danger of ill.**

50. The first way to worship the gods is to believe in the gods; the next to acknowledge their majesty, to acknowledge their goodness without which there is no majesty. Also, to know that they are supreme commanders in the universe, controlling all things by their power **and acting as guardians of the human race, even though they are sometimes unmindful of the individual.** They neither give nor have evil but they do chasten and restrain certain persons and impose penalties, and sometimes punish by bestowing that which seems good outwardly. **Would you win over the gods? Then be a good man. Whoever imitates them, is worshipping them sufficiently.**

https://en.wikisource.org/wiki/Moral_letters_to_Lucilius/Letter_123

"No man is good by chance. Virtue is something which must be learned. Pleasure is low, petty, to be deemed worthless, shared even by dumb animals – the tiniest and meanest of whom fly towards pleasure. Glory is an empty and fleeting thing, lighter than air. Poverty is an evil to no man unless he kick against the goads.[5] Death is not an evil; why need you ask? **Death alone is the equal privilege of mankind. Superstition is the misguided idea of a lunatic; it fears those whom it ought to love; it is an outrage upon those whom it worships. [Superstitio error insanus est: amandos timet, quos colit uiolat.] For what difference is there between denying the gods and dishonouring them?**"

https://archive.org/details/in.ernet.dli.2015.231118/page/n333/mode/2up?view=theater

Therefore Seneca has little use for metaphysics or theology. One may prove out of his writings that he was a monotheist, a polytheist, a pantheist, a materialist, a Platonist, a monist, a dualist. Sometimes God is to him a personal Providence who watches over all, “loves good men,”[33] answers their prayers, and helps them by divine grace;[34] in other passages God is the First Cause in an unbroken chain of causes and effects, and the ultimate force is Fate, “an irrevocable cause which carries along human and divine

affairs equally ... leading the willing and dragging the unwilling along."[36] A like indecision obscures his conception of the soul: it is a finely material breath animating the body; but it is also "a god dwelling as a guest" in the human frame.[37] He speaks hopefully of a life beyond death, where knowledge and virtue will be perfected;[38] and again he calls immortality "a beautiful dream."[39] **In truth Seneca has never thought these matters out to a consistent (or public) conclusion; he talks of them with the cautious inconsistency of a politician who agrees with everybody. He has followed too successfully his father's oratorical lessons, and expresses every point of view with irresistible eloquence.**

https://en.wikisource.org/wiki/Nicene_and_Post-Nicene_Fathers:_Series_I/Volume_II/City_of_God/Book_VI/Chapter_10

That liberty, in truth, which this man wanted, so that he did not dare to censure that theology of the city, which is very similar to the theatrical, so openly as he did the theatrical itself, was, though not fully, yet in part possessed by Annæus Seneca, whom we have some evidence to show to have flourished in the times of our apostles. **It was in part possessed by him, I say, for he possessed it in writing, but not in living.** For in that book which he wrote against superstition,[1] he more copiously and vehemently censured that civil and urban theology than Varro the theatrical and fabulous. For, when speaking concerning images, he says, "They dedicate images of the sacred and inviolable immortals in most worthless and motionless matter. They give them the appearance of man, beasts, and fishes, and some make them of mixed sex, and heterogeneous bodies. They call them deities, when they are such that if they should get breath and should suddenly meet them, they would be held to be monsters." Then, a while afterwards, when extolling the natural theology, he had expounded the sentiments of certain philosophers, he opposes to himself a question, and says, "Here some one says, Shall I believe that the heavens and the earth are gods, and that some are above the moon and some below it? **Shall I bring forward either Plato or the peripatetic Strato, one of whom made God to be without a body, the other without a mind?"** In answer to which he says, "And, really, what truer do the dreams of Titus Tatius, or Romulus, or Tullus Hostilius appear to thee? Tatius declared the divinity of the goddess Cloacina; Romulus that of Picus and Tiberinus; Tullus Hostilius that of Pavor and Pallor, the most disagreeable affections of men, the one of which is the agitation of the mind under fright, the other that of the body, not a disease, indeed, but a change of color." Wilt thou rather believe that these are deities, and receive them into heaven? But with what freedom he has written concerning the rites themselves, cruel and shameful! "One," he says, "castrates himself, another cuts his arms. **Where will they find room for the fear of these gods when angry, who use such means of gaining their favor when propitious? But gods who wish to be worshipped in this fashion should be worshipped in none.**
...

This liberty Varro did not enjoy. It was only the poetical theology he seemed to censure. The civil, which this man cuts to pieces, he was not bold enough to impugn. But if we attend to the truth, the temples where these things are performed are far worse than the theatres where they are represented. Whence, with respect to these sacred rites of the civil theology, Seneca preferred, as the best course to be followed by a wise man, to feign respect for them in act, but to have no real regard for them at heart. **"All which things," he says, "a wise man will observe as being commanded by the laws, but not as being pleasing to the gods."** And a little after he says, "And what of this, that we unite the gods in marriage, and that not even naturally, for we join brothers and sisters? We marry Bellona to Mars, Venus to Vulcan, Salacia to Neptune. Some of them we leave unmarried, as though there were no match for them, which is surely needless, especially when there are certain unmarried goddesses, as Populonia, or Fulgora, or the goddess Rumina, for whom I am not astonished that suitors have been awanting. **All this ignoble crowd of gods, which the superstition of ages has amassed, we ought," he says, "to adore in such a way as to remember all the while that its worship belongs rather to custom than to reality."** Wherefore, neither those laws nor customs instituted in the civil theology that which was pleasing to the gods, or which pertained to reality. But this man, whom philosophy had made, as it were, free, nevertheless, because he was an illustrious senator of the Roman people, **worshipped what he censured, did what he condemned, adored what he reproached,** because, forsooth, philosophy had taught him something great,—namely, not to be superstitious in the world, but, on account of the laws of cities and the customs of men, **to be an actor, not on the stage, but in the temples,**—conduct the more to be condemned, that those things which he was deceitfully acting he so acted that the people thought he was acting sincerely. But a stage-actor would rather delight people by acting plays than take them in by false pretences.

Seneca's *spuria* merit independent discussion. The *Epistulae Pauli et Senecae* were a set of fourteen letters supposedly exchanged between Seneca and St Paul, in which Seneca expresses support for Christian thought and sympathy for victims of Nero's persecution. They probably date to the fourth century, and were the backbone of medieval attempts to reframe Seneca as a Christian martyr (Ker 2009). *De quattuor virtutibus cardinalibus* is the *Formula vitae honestae* of St Martin of Braga (d. 579), still considered valuable today because it is probably based on a real lost work of Seneca (Ott 1910: vol. 9). It was usually accompanied by *De moribus*, a collection of 145 maxims, sometimes falsely attributed to Martin of Braga, but probably the work of an unknown Christian author before 657. Another maxim collection called *Proverbia* (or *Sententiae*) consists of the maxims of Publilius Syrus – a first-century BC Latin author and mime, originally a slave from Syria – which had been mixed with pieces of the *De moribus*. **The authenticity of these four texts was challenged by Erasmus in 1515, who excluded them from his new *Opera Omnia*, but that by no means ended their popularity.**

…

Petrarch was ahead of his peers by recognizing that the *De quattuor virtutibus* was not genuine Seneca (Kraye 2001: 22), **but his 1348 letter to Seneca (*Familiares* [*Fam.*] XXIV.5) demonstrates perfectly how spurious and peripheral sources transformed Renaissance reading. Petrarch hails Seneca as an "incomparable teacher of moral philosophy" citing Plutarch who, he says, in comparing Greek and Latin excellence in different arenas,** comparing Virgil to Homer, Cicero to Demosthenes, Caesar to Alexander, **admits that the Greeks are wholly inferior in moral philosophy having no one to match Seneca.** This is spurious already, since no such passage exists in Plutarch, and Petrarch did not have Plutarch, only the medieval fabrication *Institutio Traiani* (Petrarch 1910: 55-6). Most of Petrarch's letter treats his distress at Seneca's dangerous choice to remain so close to Nero. **He criticizes Seneca for inviting disaster by writing *Octavia* criticizing Nero while remaining in his power, and for serving and flattering someone he thought so wicked.** Petrarch acknowledged that the attribution of *Octavia* to Seneca may be wrong, but his characterization of Seneca's opinion of Nero is clearly based on the *Octavia* throughout the letter. Seeking some higher motive for Seneca's choice to remain at Nero's side, Petrarch suggests that he might have been thought it was important to persecute the strange and dangerous new Christian cult: but he rejects that, citing the Pauline letters. Petrarch laments that Seneca did not pursue his friendship with Paul far enough to become a martyr himself, and dates the letter in the 1348th year from the birth of "Him Whom I do not know whether you knew or not."

Petrarch's use of sources is particularly telling. Suetonius and the *Octavia* are the dominant voices by far (Petrarch 1910: 55-68). Petrarch draws once each upon the *Tristia*, Martial and Dante, on some of his own works, and adds the spurious Plutarch and Pauline letters, though he likely also had in mind references to the Seneca-Paul correspondence in Jerome (*De viris illustribus* 12) and Augustine (*Ep.* 153.14; cf. Petrarch 1910: 66 n. 68). Seneca's own voice appears only in two allusions to the *De clementia* and two extracts from the letters, both chosen for references to other figures, Cicero (Seneca, *Ep.* 40; Petrarch 1910: 55 n. 1) and Cleanthes (Seneca, *Ep.* 107; Petrarch 1910: 57 n. 7). **There is practically no Seneca in this letter to Seneca, but there is firm confirmation that Seneca merits the title "prince of moral philosophers."** Petrarch's impassioned exploration made the question of why the greatest authority on virtue would serve at the right hand of a tyrant central for the reading of thousands of later students who would approach Seneca – or what they thought was Seneca – because Petrarch told them to. **Even after the *Octavia* left Seneca's corpus, Petrarch's letter remained.**
…

Only Cicero and Virgil rivaled Seneca in primacy on early humanist reading lists, and so unique was his status as a moral philosopher by the end of the 1300s that the University of Piacenza had a professor of philosophy and a separate Professor of Seneca (Seneca 1910: ci). **And in the first decades of Seneca's publication, more often than not, volumes for sale were actually the spurious Pauline letters, *De Moribus* or *De quattuor virtutibus cardinalibus*, even better than any real Seneca to satisfy readers who wanted advice on morals and virtues from the quasi-Christian prince of moral philosophers.** Well may we understand why Petrarch in his *De remediis utriusque fortunae* – possibly the most Stoic work produced in the entire Renaissance – devoted an entire dialogue to the burden of having too many books, lamenting that one who owns countless books owns countless errors which a lifetime's industry can never sort from truth (Petrarch 1967: 35). And Petrarch's *De remediis* was in turn based on the spurious *De remediis fortuitorum*, a genuinely classical work whose attribution to Seneca went unquestioned in an era when the Roman Stoic was as much a genre as a person: the genre of virtue-cultivating moral philosophy.

https://archive.org/details/enlightenmentint0000unse_i6k5/page/264/mode/2up?view=theater

Seneca, who was still called a Father of the Church at the Council of Trent, was restored to his pagan stature in two important editions of his works, one by Erasmus in 1515, the other by Justus Lipsius in 1605. Neither of these editors intended to stir up conflict between Stoicism and Christianity, but their scrupulous work on Seneca's text enabled later readers to understand his thought without any fictitious pieties.

https://archive.org/details/naturesgodhereti0000stew_o9j9/page/166/mode/2up?view=theater

Gassendi was much more careful than Bruno and Vanini in insisting on a separation of God and Nature, yet he seemed unable to prevent himself from making all the wrong insinuations. "Nature cannot be without God, nor God without Nature; … God and Nature are the same thing, the very same Being; for these different Names are only different Titles of the same God," he wrote – **and then dutifully hid those words in a fabricated citation from Seneca.**122

https://archive.org/details/enlightenmentcon0000isra/page/468/mode/2up?view=theater

Stoic ideas of the soul's corporeality and mortality, and their marked divergence from Plato here, previously heavily understated by generations of Christian Stoic commentary, were shown to be crucial to Greek Stoicism by Jakob Thomasius.255

---

https://www.academia.edu/855421/Is_God_a_Mindless_Vegetable_Cudworth_on_Stoic_Theology

In 1598 Thomas James, the first Librarian of the Bodleian and translator of the 'Neostoic' author Guillaume Du Vair, proclaimed that 'no kinde of philosophie is more profitable and nearer approaching unto Christianitie than the philosophie of the Stoicks'.1
...

By 1765 – just over a century and a half later – Stoicism had undergone a dramatic transformation. Far from being the most 'godly and christianly'4 philosophy that Lipsius, James, and others had presented to the public in the late sixteenth century, Stoicism was now presented by Diderot and d'Alembert in their *Encyclopédie* as a form of materialism, determinism, and atheism.5

> 5. See *Encyclopédie, ou Dictionnaire Raisonné des Sciences, des Arts et des Métiers*, 17 vols (Neufchastel, 1751-65), vol. 15, 528: **'Il n'est pas difficile de conclure de ces principes, queles stoïciens étoient matérialistes, fatalists, & à proprement parler athées'.**

...

The reasons for this dramatic and unexpected shift in the assessment of Stoicism are of course complex. **One important strand appears to have been a move away from reading the primarily moral works of the late Stoic authors Seneca and Epictetus (as Lipsius and Du Vair had done) and towards a concern with the fragments of the earlier Stoics such as Zeno and Chrysippus. This shift is especially clear in Brucker's history, which warns readers not to be impressed by the apparently noble accounts of God, the soul, and other topics in Seneca, Epictetus, and Marcus Aurelius without first gaining a proper understanding of the philosophical principles that stand behind them.** It is only by grasping Stoicism as a philosophical system that we shall be able to judge it properly, and we can only do that via a patient reconstruction of the doctrines of the early Stoa involving the collation of fragments from the doxographical reports of Diogenes Laertius, Cicero, Plutarch, Sextus Empiricus, and others.7

> 7. See Brucker, *Historia Critica Philosophiae*, vol. 1, 909 (in the translation of Enfield, vol. 1,323): 'Great care should be taken, in the first place, not to judge of the doctrine of the Stoics from words and sentiments, detached from the general system, but to consider them as they stand related to the whole train of premises and conclusions. **For want of this caution, many moderns, dazzled by the splendid expressions which they have met with in the writings of the Stoics concerning God, the soul, and other subjects, have imagined that they have discovered an invaluable treasure: whereas, if they had taken the pains to restore these brilliants to their proper places in the general mass, it would soon have appeared, that a great part of their value was imaginary**' (*expendenda esse verba & sententias Stoicorum non extra systematis nexum, sed juncto toto consequentiarum syrmate, quo ex principiis semel admissis conclusions derivantur,*
> *Accidit enim viris magnis, ut speciosis Stoicorum*
> *dictis de Deo, de animo, de officiis seducti, nescio quos thesaurus se invenisse putaverint, qui intra systematis nexum & ex vero eius sensu considerati carbones exhibebant*). **Brucker goes on to suggest,** vol. 1, 911 (in Enfield, vol. 1, 324), **that the works of Seneca, Epictetus, and Marcus Aurelius are not adequate to illustrate the essential doctrines of Stoicism; to do that one must examine the reports in Cicero, Plutarch, Diogenes Laertius, Sextus Empiricus, Simplicius, and Stobaeus.**

...

It is precisely this sort of dialogue between the ancient and the modern that marks Ralph Cudworth's monumental *True Intellectual System of the Universe* (hereafter *TIS*), published in 1678.10 **This work deserves to stand alongside Hobbes's *Leviathan* and Locke's *Essay* as the third great work of seventeenth century English philosophy.** It has not received that accolade as widely as it might, no doubt in part due to its length (900 folio pages), but also due to its detailed and extensive (if not laborious and relentless) quotation from and discussion of a bewildering array of ancient philosophical texts, from the earliest Presocratics through to the last Neoplatonists.
...

The *TIS* was published roughly in the middle of the period during which Stoicism was transformed from theism to atheism (i.e. 1584-1765). It also contains what must be the most sustained discussion of Stoic theology from the early modern period.
...

Ironically, what we find in the *TIS* is arguably the finest history of philosophical atheism ever written, a veritable textbook of atheism.20 In fact, some of his contemporaries came to a similar assessment, attacking him for stating the reasons in favour of atheism a little too clearly, as Shaftesbury noted in his attempt to defend Cudworth.21

> 20. Detailed philosophical responses have often proved counterproductive: Galen inadvertently preserved important information about Stoic psychology otherwise lost in his polemic against it in *De Placiticis Hippocratis et Platonis,* and John Philoponus did the same for Proclus in his *Contra Proclum*.

…

The second new type, the fourth and final type of atheism, Cudworth calls variously Spermatick or Cosmo-Plastick atheism and like Hylozoick atheism is built upon a conception of living matter. **The difference between these two is that while Hylozoick atheism attributes a life principle or force to each material entity, Spermatick or Cosmo-Plastick atheism posits just one living principle animating all of the corporeal world. This principle is, however, 'without any sense or conscious understanding'.**28

…

The Atomical, Hylopathian, Hylozoick, and Cosmo-Plastick, are associated with Democritus, Anaximander, Strato, and the Stoics respectively.30 What all these forms of atheism share in common is corporealism; they admit no other substance beyond body or matter. Cudworth writes:

> **all atheists are possessed with a certain kind of madness, that may be called pneumatophobia, that makes them have an irrational but desperate abhorrence from spirits or incorporeal substance, they being acted also, at the same time, with an hylomania, whereby they madly dote upon matter, and devoutly worship it, as the only numen.**31

In fact, perhaps the key characteristic of atheism for Cudworth is that:

> all animality, sense and consciousness, is a secondary, derivative and accidental thing, generable and corruptible, arising out of particular concretions of matter organized and dissolved together with them.32

The essence of atheism, then, is the claim that consciousness is an emergent property. As he puts it elsewhere, all forms of atheism share the claim that all conscious life, all souls and minds, is generated out of matter or 'educed out of nothing, and reduced into nothing'.33 Theism, by contrast, places animalish, sentient, and conscious nature as the first principle of the universe, in the form of God.

The other characteristic that Cudworth attributes to all four types of atheism is a belief in the necessity of events (we already seen that determinism is Cudworth's greatest concern), although he says that there are in fact two types of atheistic necessity. **The Anaximandrians and Democritists posit a material necessity or absolute necessity, while the Stoics and Stratonists posit a plastic necessity or hypothetical necessity.**34 **While the former can include fortune or chance, the latter is methodical and orderly.**

Although Cudworth does not explicitly rank these different forms of atheism there is a sense in which he is far more upset by the Stoic and Stratonic forms. While Democritical and Anaximandrian atheists may appear to be more thoroughgoing insofar as they deny the existence of any principle of life within their dead matter, making both life and consciousness emergent properties, Cudworth *qua* Cartesian sees this mechanical view of nature the natural complement of theism, to the extent that this dead matter requires transcendent intervention to account for its motion. **Stoic and Stratonic atheism, by contrast, have no need for a first cause for they have their own immanent principle of movement.**

…

Zeno, the founder of Stoicism, was not an atheist; rather he was a 'corporeal theist', albeit an 'ignorant, childish, and unskillful theist':40

> **Heraclitus and Zeno […] are not accounted Atheists, because they supposed their fiery matter, to have not only life, but also a perfect understanding originally belonging to it, as also the whole world to be an animal.**41

…

However, if Zeno had claimed that the whole of Nature was not conscious then he would have been an atheist, claiming that:

> **the whole world is no animal, but as it were, one huge plant or vegetable, a body endued with one plastick or spermatick nature, branching out the whole, orderly and methodically, but without any understanding or sense.** And this must needs be accounted a form of atheism, because it does not derive the original of things in the universe from any clearly intellectual principle or conscious nature.43

Zeno did not claim this, though, and nor did a number of his immediate successors, the most significant of whom was Chrysippus.44 Diogenes Laertius informs us that:

> The doctrine that the cosmos is an animal, rational, animate, and intelligent, is laid down by Chrysippus in the first book of his treatise *On Providence*, by Apollodorus in his *Physics*, and by Posidonius. **It is an animal in the sense of an animate substance endowed with sensation;** for animal is better than non-animal, and nothing is better than the cosmos, *ergo* the cosmos is an animal. **And it is endowed with soul, as is clear from our several souls being each a fragment of it.**45

On Cudworth's own terms, the most important of the early Stoics are clearly not atheists. **Their cosmos is rational, ensouled, and intelligent (λογικὸν καὶ ἔμψυχον καὶ νοερὸν).** If their god is an animal, as it seems to be, then the Stoics are theists. Only if their god has merely vegetative life without consciousness – only if the Stoic god is a mindless vegetable – should Stoicism be classed as a type of atheism.

So why did Cudworth associate one of his four principal types of atheism with Stoicism? Cudworth draws on two ancient pieces of evidence. The first is a passage from Seneca's *Natural Questions* in which Seneca appears to waver between the competing claims that the world is either an animal or a vegetable:

> **Whether the world is an animal, or a body governed by nature, like trees and plants, there is incorporated in it from its beginning to its end everything it must do or undergo.**46

46. Seneca, *Naturales Quaestiones* III.29.2: *Sive animal est mundus, sive corpus natura gubernabile, ut arbores, ut sata, ab initio eius usque ad exitum quicquid facere quicquid pati debeat, inclusum est.*

Cudworth acknowledges that Seneca appears unwilling or unconcerned to choose between the two options, but this makes him all the more suspicious. He pushes this suspicion further by noting that some earlier scholars have also doubted whether Zeno really ever held the cosmos to be an animal, although he doesn't name them.47

It should also be noted that Cudworth amends the text of Seneca in this passage: *sive animal est mundus*, 'whether the world is an animal', is Cudworth's own emendation of the text, which the manuscript tradition records as *sive anima est mundus*, 'whether the world is a soul'. Although this might look as if Cudworth is amending the text to fit his own concerns, in fact the contrast he wants to make is clear in both readings, **and a number of subsequent editors of the *Natural Questions* have adopted Cudworth's reading.**48

Seneca's indecision, suspicious as it may look, is hardly grounds on its own to cast the Stoics as one of the archetypal groups of ancient atheists. Cudworth's second piece of evidence for Stoic atheism is more forthright. Earlier we saw Diogenes Laertius report that a whole series of important Stoics, including Chrysippus, Apollodorus, and Posidonius, all affirmed that the cosmos was indeed a rational, animate, and intelligent animal. The next line of Diogenes' account adds that:

> Boethus, however, denies that the cosmos is an animal.49

Boethus of Sidon was a relatively minor Stoic of the second century BC with heterodox views on a number of points of Stoic physical theory: he rejected the doctrine of periodic conflagration, posited the eternity and incorruptibility of the world, and denied that the world was an animal.50 Cudworth, however, calls him

> an eminent and famous Stoical Doctor [who] did plainly deny the world to be an animal, that is, to have any sentient, conscious or intellectual nature presiding over it, and [who] consequently must needs make it to be but […] a body governed by a plastick or vegetative nature, as trees, plants and herbs.51

Cudworth goes on to claim, with no real grounds at all, that other Stoics may well have made this claim before Boethus, and that 'it is very probable' that Boethus had many followers. It is certainly doubtful that any Stoics before Boethus made this claim, as Diogenes' report explicitly singles him out as the sole exponent of this heterodox view. Moreover, **Cicero's account of Stoic theology in *De Natura Deorum*, written in 45 BC, makes no mention of Boethus and repeats the standard Stoic argument reported by Diogenes that if there is rational mind in humans then there must surely be rational mind in Nature.**52 **Among later Stoics, Epictetus certainly does not follow Boethus' lead and if anything goes the other way, embracing a more personalistic conception of god rather than reducing him to a mindless vegetable.**53 In Cudworth's defence, he does acknowledge that Boethus'position, like all forms of atheism, is a corruption of a once theistic worldview and he labels this degenerate position 'pseudo-Stoical'.54

Cudworth's objection to this pseudo-Stoical atheism is that it reduces consciousness to an emergent property. The ancient sources don't mention 'consciousness' of course **(and in fact Cudworth may have coined the English word in this very discussion),** but they do mention sensation (αἴσθησις, distinguishing animals from plants and vegetables) and reason (λόγος, distinguishing humans from other animals). What Cudworth insists on is that:

> the sensitive souls of brute animals, and the rational souls of men, could never possibly emerge out of one single, plastic and vegetative soul in the whole universe.55

On this point he is in complete agreement with the early Stoics and in particular with a series of theological arguments made by Zeno and reported by Cicero:

> Nothing that is inanimate and irrational can give birth to an animate and rational being; but the world gives birth to animate and rational beings; therefore the world is animate and rational.56

So, despite branding Stoicism as one of the four principal types of atheism, **Cudworth's own position is in fact quite close to the orthodox Stoic view in rejecting the idea that sensation, intelligence, or consciousness might be an emergent property.**
…

The same conjunction can be found later in the eighteenth century in the *Encyclopédie*: **the article on Spinoza opens by contrasting Spinoza's philosophy with Epicurus and Strato before identifying it with Stoicism. The only significant difference between Stoicism and Spinozism, the article's author suggests, is Spinoza's rejection of providence.**63

Despite this later tradition of identifying Stoicism with both Spinozism and atheism one thing is hopefully clear, namely that while Stoicism may not be easily assimilated to Christianity, it is not straightforwardly a form of atheism either. Cudworth is the only author of this period to offer a thorough analysis of these issues with clear definitions and conditions for what it means to be a theist or an atheist. **Despite the reputation as atheists that the Stoics acquired in the eighteenth century, Cudworth shows well before that tradition even became established that it is mistaken, even if he may have contributed to its development himself.** According to his definitions of theism and atheism the orthodox early Stoics remain theists, even if their theism is far from orthodox Christianity, because their god is sentient. **For the orthodox Stoa consciousness is not an emergent property for that would imply that a part might have greater perfection than the whole, and nothing, they claim, can be better than the cosmos.**64

https://oll.libertyfund.org/title/goodwin-the-morals-vol-4#lf0062-04_head_036

One may perhaps light upon some nations so barbarous and savage as not to think there is a God; but there was never found any man who, believing a God, did not at the same time believe him immortal and eternal. Certainly, those who were called Atheists, like Theodorus, Diagoras, and Hippo, durst not say that the Divinity is corruptible, but they did not believe that there is any thing incorruptible; not indeed admitting the subsistence of an incorruptibility, but keeping the idea of a God. **But Chrysippus and Cleanthes, having filled (as one may say) heaven, earth, air, and sea with Gods, have not yet made any one of all these Gods immortal or eternal, except Jupiter alone, in whom they consume all the rest;** so that it is no more proper for him to consume others than to be consumed himself. For it is alike an infirmity to perish by being resolved into another, and to be saved by being nourished by the resolution of others into himself. **Now these are not like other of their absurdities, gathered by argument from their suppositions or drawn by consequence from their doctrines; but they themselves proclaim it aloud in their writings concerning the Gods, Providence, Fate, and Nature, expressly saying that all the other Gods were born, and shall die by the fire, melting away, in their opinion, as if they were of wax or tin.** It is indeed as much against common sense that God should be mortal as that man should be immortal; nay, indeed, I do not see what the difference between God and man will be, if God also is a reasonable and corruptible animal. **For if they oppose us with this subtle distinction, that man is mortal, and God not mortal but corruptible, see what they get by it.** For they will say either that God is at the same time both immortal and corruptible, or else that he neither is mortal nor immortal; the absurdity of which even those cannot exceed who set themselves industriously to devise positions repugnant to common sense. I speak of others; for these men have left no one of the absurdest things unspoken or unattempted.

To these things Cleanthes, contending for the conflagration of the world, says, that the sun will make the moon and all the other stars like to himself, and will change them into himself. Indeed, if the stars, being Gods, should contribute any thing to the sun towards their own destruction by contributing to its conflagration, it would be very ridiculous for us to make prayers to them for our salvation, and to think them the saviors of men, whose nature it is to accelerate their own corruption and dissolution.

https://oll.libertyfund.org/title/goodwin-the-morals-vol-4#lf0062-04_head_038

And a little after, **taking away all ambiguity, he says: "For no particular thing, not even the least, can be otherwise than according to common Nature and its reason."** But that common Nature and the common reason of Nature are with him Fate and Providence and Jupiter, is not unknown even to the antipodes. For these things are everywhere inculcated by the Stoics; and Chrysippus affirms that Homer said very well,

> Jove's purposes were ripening,*

having respect to Fate and the Nature of the universe, according to which every thing is governed. How then do these agree, both that God is no way the cause of any dishonest thing, and again, that not even the least thing imaginable can be otherwise done than according to common Nature and its reason? For amongst all things that are done, there must of necessity be also dishonest things attributed to the Gods. **And though Epicurus indeed turns himself every way, and studies artifices, devising how to deliver and set loose our voluntary free will from this eternal motion, that he may not leave vice irreprehensible; yet Chrysippus gives vice a most absolute liberty, as being done not only of necessity or according to Fate, but also according to the reason of God and best Nature.**
…

If then he who esteems the Gods corruptible is equally absurd with him who thinks them not to be provident and gracious to men, **Chrysippus is no less in an error than Epicurus. For one of them deprives the Gods of beneficence, the other of incorruptibility.**

39. And moreover, Chrysippus, in his Third Book of the Gods treating of the other Gods being nourished, says thus: “The other Gods indeed use nourishment, being equally sustained by it; but Jupiter and the World are sustained after another manner from those who are consumed and were engendered by fire.” Here indeed he declares, that all the other Gods are nourished except the World and Jupiter; but in his First Book of Providence he says. “**Jupiter increases till he has consumed all things into himself.** For since death is the separation of the soul from the body, and the soul of the World is not indeed separated, but increases continually till it has consumed all matter into itself, it is not to be said that the World dies.”

https://www.angelfire.com/nb/shestov/ijb/jb33_5.html

I will quote here a small section out of Epictetus's *Diatribes*, in which the essence of Stoicism is expressed more accurately than in Seneca's interminable writings, or in all the meditations of the Stoics that have come down to us. Epictetus says: **"Verily this is the wand of Mercury; all that thou touchest with it will become gold. Give me what thou wilt and I will turn it into a Good (*ho theleis phere, kagô auto agathon poiêsô*). Bring hither sickness and death, poverty and suffering, condemnation to death; through the magic wand all this shall be turned to profit."** (*Diatr*. III, 20.)

https://www.angelfire.com/nb/shestov/ijb/jb33_6.html

Epictetus was the philosopher whom Pascal loved best. He esteemed in him the man who had grasped the idea of duty better than any other. In so far as Epictetus preached submission to fate and readiness to accept from the gods, without murmur, the difficulties of life, Pascal was altogether on his side. **Yet something repelled him from Epictetus. And this "something" he called, in a very strong phrase, "*superbe diabolique*".** We may, I think, assume that Pascal found this "diabolical pride" in the words which I quoted above. Epictetus believed that he was the most modest of men, and that his gift of working miracles, far from being in contradiction with his general doctrine of our duties towards the gods, grew, on the contrary, logically and naturally out of his doctrine. Our duty, our very first duty, was to live "in accordance with nature", and thus he who lives in accordance with nature achieves most. The teaching of Plotinus appears at first sight to be the same. For him too the miracle of final union with God is only possible for those who by *katharsis*, by faultless fulfillment of supreme duty, have put their souls in a state in which the barriers which divide man from the higher world drop away automatically. To be able to perceive supreme beauty our soul must first itself become beautiful. And just like the Stoics, Plotinus sees *katharsis* in liberation from the power of the body. And Plotinus – I emphasize this now because it is of decisive importance – hymned his miracle of the final liberation and union with God incomparably better than Epictetus his Mercury's wand. But they were both seeking the miracle. The manner of seeking was the same with both; **both were convinced that it is only after overcoming the self-evident truths transmitted to us by the senses that we can attain the last freedom, the freedom of creation out of nothingness which Epictetus calls the good and Plotinus union with God.**

Pascal did not know Plotinus; but I think that if he had known him, he would have spoken of *superbe diabolique* in his case also. And he would have kept this opinion, even if his learned friends from Port Royal had pointed out that St. Augustine himself had been unable to withstand the charm of the last great Greek philosopher, and that the works of the leading Fathers of the Church and of the incomparable mediaeval mystics are full of Plotinus's spirit; he would – strange as it may seem at first sight – have cried out with fear and horror that behind this lies without doubt an "*enchantement et assoupissement surnaturel*"; in other words, that the ambition entertained both by the Stoics and also by the Neo-Platonists and the Early Fathers and mystics who were influenced by Greek philosophy, of overcoming self-evident truth, has been transformed by supernatural force into its contrary. Both Epictetus, who believed that he possessed Mercury's magic wand, **and Plotinus, who thought that after liberation from the body he would climb up to heaven and unite with the Divine Essence, were victims of their pride. They wanted to be as God and to create out of nothingness; and they created out of nothingness and thought that their creation could be ranked with God's creation or even above it.**

https://www.angelfire.com/nb/shestov/ijb/jb33_7.html

I quoted a saying of Spinoza's that daily experience teaches us that success and failure fall in like measure on the just and unjust. Are these words correct? They contain an objective truth known to mankind for many thousands of years past; but can we admit this truth? **We have just heard from Socrates that no one can do harm to a good man.** How reconcile these two mutually contradictory assertions? For in our world, in which the law of contradiction is omnipotent, they cannot exist side by side. Either the truth of daily experience will devour Socrates' truth, or it will be devoured by it; the same is true also for a whole series of other truths for which there is no salvation possible either in

dream or in reality. From these truths we cannot awake; they have permeated our whole being; the animate and the inanimate world are in their power. What are we to do? How accept the inacceptable, overcome the invincible? **There was only the one answer, which Socrates gave to the Cynics and which the Stoics exalted into a theory.** The inevitable and the invincible must in some way be recognized as acceptable; or, as Epictetus says, "Give me what thou wilt, and I will turn it into a good." The philosopher becomes a worker of miracles; he must become one! **Not among the Stoics alone, as is usually assumed, but in all systems of antiquity and modernity ethics becomes the fundamental and central part of philosophy, which in its turn feeds all the rest, even ontology.**

What then, is ethics? After all that we have said no one will deny that **ethics at the present time, as also in the past and the future, is the art of performing natural miracles, i.e. miracles which agree with reason and submit to the necessity which reason recognizes in the world order.** Read Epictetus' *Diatribes* or Plotinus's *Enneads*, and you will be convinced; then, too, you will understand why Pascal speaks of Epictetus's *superbe diabolique*, and feel how significant is the specific gravity of his exclamation: "The God of Abraham, Isaac, and Jacob, but not the philosophers' God."

https://www.angelfire.com/nb/shestov/ijb/jb33_8.html

The Middle Ages and modern times, up to our day, intoxicate themselves with the ideas of the Stoics transmitted through Plotinus. St. Augustine and Master Eckehardt, Spinoza, Leibniz, and Hegel, like the philosophers living today, all feel the more or less clearly expressed conviction that we must content ourselves with natural miracles, since the supernatural are impossible. This thought is, of course, never expressed in these words. The proof of the impossibility of the supernatural miracle is not generally connected in any way with the assertion that we must content ourselves with natural miracles. Even among the Stoics the words which we quoted about Mercury's wand are isolated. The theory of knowledge, i.e. the doctrine of objective truth, is usually worked out quite independently of ethics and theodicy, the purpose of which is the justification of the world and the Creator.

Yet it is not for nothing that so much is said of the "unity" of the philosophic outlook. Ethics has always been indissolubly bound up with the theory of knowledge; it proceeded from it and was conditioned by it. When that theory set out its principle of natural necessity or the impossibility of the miraculous, nothing remained for ethics and theodicy except to offer in place of the impossible supernatural miracles their own natural and possible miracles. Self-evident truth shows that two idlers, Anytus and Meletus, poisoned Socrates, whom Plato calls the best of all men, and the Delphic god the wisest of all men. Man cannot alter this, for as reason tells us, what once has been done cannot be undone. Reason, and surely reason alone, knows what is possible and what impossible. And it knows, too, that our business is only to strive for the possible and not to yearn after the impossible. **There is nothing left for ethics but, having taken over ready-made reality from reason, to declare that that reality never existed; that it is not even reality but only appearance; that genuine reality is not that which is given to man, but that which man himself creates. For, as the Stoics taught, only that which we have in our power is of value to us, while everything which we have not in our power is indifferent to us and is thus as though it did not exist for us; or more simply still, as though it did not exist at all.**
...

Even Plotinus, who knows that a mystery can never become a universally accessible truth, is as clear and honest in his ethics and theodicy as the Stoic sages. **To work miracles, he teaches, one has only to deny the body; not only one's own body, but the whole physical world.** The world of bodies is not subject to man. We cannot make lonely Socrates become stronger than Anytus and Meletus, with the Athenians who stood behind them. We cannot make the blind to see, the deaf to hear, conquered conquerors, the dead to live, etc. But we can, as the Stoics teach, say to ourselves: It is one to us whether we are blind or see, conquered or conquerors, whether we live or die. All this does not touch us, but only our bodies. Even if the fatherland perishes, we can say that it is one to us. Everything that happens in the physical, sensuous world is indifferent to us. The human soul is not called on to obey but to command. The Good is independent and follows its own laws. **The Good does not acquire its principles from the outer world, it subjects the outer world to its principles. All impressions coming from without are only messengers (*angeloi*) who report what happens; but the soul is the king (*basileus*),** to whom supreme power is given to rule over all. But if this is so, if the power to bind and to loose belongs to the soul, *whom or what should it fear*? **There is nothing in the universe which he need fear whose soul has denied the physical world.**

Both for the Stoics and for Plotinus it was absolutely self-evident that battle against the "natural necessity" which the world begets is vain. We can only fight against the human ego, against our valuation of that which is given us. We grumble, are angry, rejoice, weep, triumph, despair, hope, etc., according to whether fate brings us success or failure. Every one believes that this must be so and cannot and ought not to be altered. But this is just what can and must be altered. **We only need to transfer that which men treasure or fear into the sphere of the indifferent and we turn ourselves from slaves into kings, from men into gods.** The free being, king or God, takes and

expects nothing from any one. He fears neither poverty nor sickness nor banishment, nor even death. The toad is crushed, Socrates is poisoned, the fatherland perishes; all that must be so, it does not touch the sage and does not affect him. The magic wand works its natural miracles and the reasonable man despises the words which Job in the Bible pours out in the belief that his sorrow could in some supernatural balances prove itself heavier than the sand of the sea. "*Was wirklich ist, ist vernünftig.*" ("What is real is rational.")

I keep on speaking of Plotinus and Epictetus as though I were identifying Stoicism with Neo-Platonism. I think this should have been done long ago; not, of course, an identification, but a much closer assimilation than has hitherto been usual. The "doctrines" of the Stoics and of the Neo-Platonists spring without any doubt from the same root.
…

According to Thomas Aquinas, God Himself can achieve nothing which does not accord with the principles of human reason. ***Ex nihilo nihil fit*; accordingly that which is has always been, and nothing will ever be added to that which has been. Therefore, only natural miracles are possible and God Himself, as Spinoza proved so brilliantly in his *Tractatus Theologico-politicus*, can only be a natural miracle created by man.** But since man can only create "ideal" entities, only principles and ideas, then God Himself, whom man has created, must be a purely ideal entity.

Man has no power over the world of realities; not merely can he create no single living creature, he cannot even call into being a lifeless thing, not even an atom which barely achieves reality. Thus God too can create nothing; the world exists of itself from all eternity, in virtue of the same "natural necessity". **Yes, but does the world exist at all? Is it not merely a deceptive veil, a mirage, of which we must free ourselves at all costs?** The Biblical tradition that God created the world out of nothing is completely inacceptable to our reason, it runs counter to the true essence of reason; the scientific truth that *ex nihilo nihil fit* will never bow its proud head before this theological truth. Since the law of contradiction, in its turn, will never yield, it is inevitable that the two truths should have sooner or later to fight out together a supreme final battle. (*agôn megistos kai eschatos tais psychaîs prokeitai*. *Enn*. I, vi, 7.)
…

Hegel was able to defend the ontological proof of God with a good conscience; he knew that his Logos suffered nothing from it, and that the sovereign rights of reason, so far from suffering, received new confirmation, while Mercury's wand remained in his hands. **God will be robbed of the possibility of achieving supernatural miracles; but man will keep all the more safely that power of his to do natural miracles of which Epictetus boasted.**

https://books.google.fi/books?id=mTdUtsbybqkC&lpg=PP1&hl=fi&pg=PA97#v=onepage&q&f=false

It is striking, in fact, **that many of the seventeenth- and early eighteenth-century editions of the *Meditations* that were published in England and France begin with remarks in their various prefaces about why readers should prefer the Stoic emperor to the (then) far better-known Seneca.**

If Isaac Casaubon had been the first modern scholar to understand the significance of the *Meditations* as an important source of Stoic philosophy in his commentary on Persius of 1605, his son Meric was the first editor to give the work its modern title, *Meditations concerning Himself*, publishing the first English translation in 1634 (dedicated to the royalist archbishop William Laud), and a Greek-Latin edition in 1643 (dedicated to the parliamentarian John Selden),105 **and in his preface he observed that 'Yet shall you not find in him [Marcus Aurelius] those blasphemies, in exaltation of this humane power and libertie, which you shall in Seneca, and other Stoics.'**106 Thomas Gataker's Greek-Latin edition of 1652 was a remarkable feat of scholarship – indeed, the history of the Cambridge University Press judges that it was 'the single major scholarly achievement of the press' during the period of the Civil War and interregnum.107
…

Gataker discusses the three surviving Stoic authors – Marcus Aurelius, Epictetus, and Seneca – and opines that 'Of these three, Seneca is the first in Time, but in my Opinion, the least in Value, and Merit.'109 Gataker concedes that Seneca has his strong points: 'He has a great many shining Sentences, his Precepts are admirable, his Manner noble, and his way of arguing very acute in many places.'110 These were, however, outweighed by his vices, which were enumerated as flattery and hypocrisy with respect to the emperors and **an inconsistency of attitude with respect to the Epicureans,** and Gataker, also registers his dislike of the aspects of Seneca's philosophical style, anticipating, to my mind, Nietzsche's later description of Seneca as the 'toreador of virtue (*der Toreador der Tugend*):111
…

But it was Gataker who presented the most elaborate account of the confluence of Marcus Aurelius's Stoicism and Christian teaching, arguing that **'it may be boldly asserted, there are no remaining monuments of the ancient strangers, which none nearer to the doctrine of CHRIST, than the writings and admonitions of these two; Epictetus and Antoninus.'**
…

Asking why Christians should take instruction from this pagan author, Gataker answers that ‘A careful perusal and serious reflection on these Meditations of Antoninus, are several ways useful,’ **for what was ‘summarily proposed’ in the New Testament is ‘more extensively applied’ and ‘more fully explained’ by Marcus Aurelius.** ‘Further, in these following books, the good Providence and kindness of God shines forth; and He did not suffer his own image to be quite worn out and lost in man who had falled off from him.’116
…

Gataker in turn passes swiftly over the Stoic emperor’s less Christian opinions, such as ‘his ambiguity on the immortality of the soul.’118

https://www.gutenberg.org/files/17147/17147-h/17147-h.htm#page263

217. **[Bayle] observes also that the Stoics derived a blasphemy from this principle, saying that evils must be endured with patience, or that they were necessary, not only to the well-being and completeness of the universe, but also to the felicity, perfection and conservation of God, who directs it.** The Emperor Marcus Aurelius gave expression to that in the eighth chapter of the fifth book of his *Meditations*. 'Duplici ratione', he says, 'diligas oportet, quidquid evenerit tibi; altera quod tibi natum et tibi coordinatum et ad te quodammodo affectum est; altera quod universi gubernatori prosperitatis et consummationis atque adeo permansionis ipsius procurandae (της ευοδιας και της συντελειας και της συμμονης αυτης) ex parte causa est.'
…

But the principal error of this emperor and of the Stoics was their assumption that the good of the universe must please God himself, because they imagined God as the soul of the world. This error has nothing in common with my dogma, according to which God is *Intelligentia extramundana*, as Martianus Capella calls him, or rather *supramundana*.

https://en.wikisource.org/wiki/The_Works_of_the_Emperor_Julian/Fragment_of_a_letter_to_a_priest#cite_ref-16
